Z.

We transfer to our columns, from the last number of the American Quarterly Review, a narrative of the descent of the British army upon Louisiana, and of the attack and defence of New Orleans. It is said, and we believe correctly, to be from the pen of the Secretary of War, and we have reason to know that its statements are confirmed by the opinions of General Jackson. In this point of view, it becomes an interesting detail, and we believe we shall gratify our military readers by placing before them an authentic account of one of the greatest military events in the history of our country.

SIEGE OF NEW ORLEANS.

FROM THE AMERICAN QUARTERLY REVIEW.

We are not about to dissect this work for the benefit of our readers. We have merely appropriated the title to our use, that, agreeably to the approved canons of criticism, we may tell our own story of the eventful inroad which it describes, rather than make our journal a vehicle for the narrative of another. Yet the work is not without interest. The author relates occurrences which passed before his eyes, during a period of active military service in Europe and America, and when "great events were on the gale." Many of his descriptions are spirited. Some of the views are new. His style is at times forcible, though frequently loose, and not always free from affectation. But there is about him a commendable effort at impartiality, for which we may vainly seek in many military journalists, particularly in those who mingled in the adventures they describe; and a spirit of free investigation, which we should suppose would prevent him becoming a fool at the Horse Guards. He criticizes the operations before New Orleans with equal freedom and severity, and with no little ability. And independently of the judgment to be formed of this ill-fated expedition by its results, it is impossible to rise from the perusal of these sketches, without being struck with the amazement and admiration which the subject suggests in every reader. The neglect of the plainest principles of their profession. Still, the disclosure of truths, humbling to national and professional pride, cannot always be looked for, and the higher claim have those, who perform this duty with stern indifference to the consequences.

Our last war with Great Britain was precipitated and accompanied by peculiar circumstances. There were evil propensities abroad, far more than the usual accompaniment of a belligerent attitude. Society was in commotion, and principles were advanced, and practically enforced, which startled the common sense of mankind, and broke down, for a time, the most salutary barriers of international law. The jargon of that day is not, even yet, quite obsolete, and once in a while a writer is found, who talks seriously about the battles of the world being then fought by England, and the ingratitude of her step-children, in acquiescing in her demands; about their duty to surrender every attribute of their own independencia, because England was fighting for hers: as though such was a war, which put it in the power of an nation to assume at pleasure the character of a universal champion; and annihilate all commerce but her own, that that of others may be free. And recent political events have shown that the other doctrine, practically established in that day of lawless aggrandizement, that priority of injury becomes the test of right, is not yet abandoned to the musty shelves of decrees and orders in council; but has found advocates in a French representative chamber. It is said that the ablest and most enlightened nations of the world, in the face of all Christendom, were preying with unbridled license upon the commerce of the United States, and that each was seriously justifying its wanton aggressions, upon the pretext that the other committed the first wrong. What a ground for vindictive retaliation, a ground for that signal of instant resistance and reprisal, if, as Mr. Jefferson beautifully expresses it, the deed does not bring the public sensibility to a crisis, and the forbearance of the government to a necessary pause, we shall deserve to pass sub judice, and merit the contempt of the world.

We are led to these remarks, not from any feeling with regard to the past. That is matter of history only. But we are seeking instruction for the future. The struggle in which England was engaged in Europe, withdrew the attention of her people from the operations here. And satisfied we are, that they are not, to this day, aware of the manner in which the contest was waged. The spectator of occurrences here, be he naval or military, who shall tell, in this day of quietude, the things he saw, and as he saw them, must expect that something worse than incredulity will follow from his narrative. So the author of the "Life of a Sailor," who is understood to be Capt. Chamberlain, has found it. He accompanied the expedition under Admiral Cockburn, which so long desolated the shores of the Chesapeake, and carried plunder and devastation into almost every harbour and river and creek and inlet of that extensive estuary. He tells of the houses that were burned, the stock that was killed, the furniture and valuables that were taken, and of the families that were incorporated. Again, in the author's words, as an eye witness, his patriotism has been impugned, and his statements disgraced; and Captain Scott, of the British Navy, has come forward and publicly contradict ed, under his own name, and as an eye witness also, the truth of the allegations. Verily we may well join in the plaudits which are showered on the author of this story. Here are two officers of high rank, both engaged in a great expedition, affirming and denying the truth of certain general statements, which must have been known to every man and boy on the ship's books, and which were known to the people of a whole continent.

That these repudiations were committed, and are frequent ly under circumstances of much acrimony, is a fact as certain as that war then prevailed between the two countries. They were bruited in every paper on the continent, communicated to Congress by President Madison, made the subject of a special and detailed report in the Senate, accompanied by precise and authenticated statements, and seen and felt by the people.

If Captain Scott, the gallant but indirect champion of Admiral Cockburn, will turn to the Appendix of Le Tour's history of the war in Florida and Louisiana, he will find copies and extracts of letters, written by British officers to their companions, and speaking with equal freedom and levity of these depredations. These documents have been preserved to the present year, and we have never heard that their authenticity has been disputed. They were found on board the British armed schooner St. Lawrence. Lient. James E. Gordon, commander, when that vessel was captured on the 20th February 1813, by the privateer Chasseur, Capt. Eagles. We shall quote a few extracts from them.
ARMY AND NAVY CHRONICLE

From Mr. Swainson to Lieut. Douglass of H. M. Brig Sophie—off New Orleans.

"9th February, 1815."

"We had some fine fun at St. Mary's; the bombs were at the town, and had plenty of plunder. How are you off for tables, chests of drawers?&c."

From J. Gallon to J. O. Reilly, Esq., on board his Majesty's Ship Tonnant—off New Orleans.

"Cumberland Island—9th February, 1815."

"We have had fine fun since I saw you. What with the Rappahannock and various other places, we have continued to fetch up a few trifling things, such as mahogany tables, chests of drawers, &c."

Admiral Cockburn himself, in a letter to Captain Evans, dated 23d December, and Island, and such pieces, speaks in the true Dalgetty style of this expedition to St. Mary's, where glory and Rappahorn were gained. He says,—

"We have been more fortunate in our small way. We have taken St. Mary's, a tolerably rich place, &c."

And Sir Thomas Cochrane, in a letter to Sir Thomas Trowbridge, off New Orleans, dated North end of Cumberland Island, February 12, 1815, expresses a pang of disappointment, that he had missed the present of St. Mary's, saying, "just too late to share in the good things going on."

Mr. J. R. Glover, in a letter to Captain Westfall of the Anacosta, dated Cumberland Island, 1st February, 1815, wishes, like Westmoreland, though not like Westmoreland for patriotism, but for profit, that he had more men from England. Not to baptize in blood a new field of Agincourt, but to reap a harvest of plunder, of tables and drawers and geese, &c. "We have established our head quarters here, after RANSACKING St. Mary's," says this frank marauder, "from which we have brought property to the amount of fifty thousand pounds, and had we two thousand troops, we might yet COLLECT A GOOD HARVEST before peace takes place." Harvest indeed! How his feelings must have struggled between a wish for more labourers at the gathering of the crop, lest the hopes of these military husbandmen should fail, and a fear, that in conformity with the principles of political economy, the wages might decrease, as the labourers increased. All this is admirably stated, with his usual learning and the Rittenhour already quoted. "I care for myself," says this RANSACKER in a small way, "never saw twenty dollars of my own all the time I served the invincible Gustavus, unless it was from the chance of a storm, or victory, or the fetching in some town or doory, when a cavalier of fortune, who knows the usage of wars, sells his plunder at some small price."

But we have found one Oasis in this desert, one bright spot for the eye to rest upon. And we cannot resist the temptation of bringing it to the notice of our readers.

A detachment belonging to the British Ship Saracen, commanded by Captain Dixie, landed at St. Inigo's, a religious establishment upon the St. Mary's river in Maryland, belonging to the incorporated Catholic clergy of that state, and plundered the houses of the Religious and the Church. A contemporaneous publication says:—

"On returning to the house it was pitiful to view the different rooms they had ransacked, particularly the chapel; they left the crucifix on the altar, broke the cruets, and scattered the pieces over the floor; they carried off six finer beds, sheets, blankets and some arrow—bed curtains, an alarm clock, silver spoons, knives and forks, glass, the reverend gentleman's watch, the candlesticks belonging to the altar, kitchen furniture, and almost all the clothing belonging to the persons who reside in the house, two trunks with clothing, books and medicine, several pairs of new shoes made for the people, and a quantity of leather; even the linen which was at the wash, and many other articles not yet known."

We have been at the trouble to copy this catalogue raisonne, because it exhibits, we presume, a pretty fair sketch of the plundering upon these occasions. It is more extensive than that furnished by the author of the "Life of a Sailor," but with the exception of the sacred utensils, which may be considered an accidental treasure, it is, in the general character of the articles, essential to the taste and manners of the times.

To the honour of Captain Dixie, he returned this ill-gotten plunder with the following creditable letter:—

"To the Clergyman belonging to the Chapel of St. Inigoes, and the other residences there, to whom this letter refers.

"Gentlemen,"

"An officer and boat's crew belonging to his Britannic Majesty's Ship Saracen, under my command, having landed at St. Inigoes on the 30th ultimo, and taken several articles of furniture and other things from the house and chapel there, and having the property being unauthorized by me, I have taken the earliest opportunity of causing restoration to be made of the property so taken, and now send one of my Lieutenants with this letter and the property above mentioned to you, under a flag of truce, hoping this instance of justice will effect any prejudicial sentiment towards the British from your minds, and that the injured parties will express their satisfaction at our present conduct in this matter.

"I beg you to believe, gentlemen, it is matter of great regret to me, that the proceedings complained of should have been performed by those under my command, and with sentiments of consideration,"

"I am, gentlemen, your very obedient servant, ALEXANDER DIXIE, Captain.""His Britannic Majesty's Sloop Saracen—off George's Island."

"11th November, 1814."

It is obvious, however, that no officer would have ventured to collect and carry off such a mass of property, had he not been a system of rapine established in the fleet, which, by its example, would protect him from punishment, as well as secure to him, in his own expectation, his proper share of these acquisitions. In this expectation, however, he was in this instance disappointed.

Whether this restoration took place in consequence of the property being rifled from religious edifices, or from the personal indisposition of Captain Dixie to participate in such a dishonourable mode of warfare, or from whatever other cause, the act is the more creditable to him, as the predaory examples around him would have sanctioned any course of rapine, and as the procedure much better adapted to draw forth the senses, than the commendation of his superior officer, Admiral Cockburn; unless the character of that officer has been greatly misunderstood in the United States. Admiral Cockburn has left behind him a most unenviable fame. Time has, indeed, done its usual office, and mellowed the feelings of that period; but the impression of his unworthy conduct has been as lasting, as it was deep and general. His adventures, or more properly his ventures in the Chesapeake, were, as he himself describes those at St. Mary's in Georgia, in "a small way," if we regard his rank, and the kind of property, belonging inordinately to males and females, adults and infants; but in a small way, if we regard the extent of country where this harvest was collected, the number of persons pillaged, or the misery inflicted upon the exposed, and in too many instances, defenceless inhabitants. That the involuntary and unfavourable emotion, which the name of Admiral Cockburn to this day excites in an honourable and respectable man, is not the result of his vigorous and vigorous execution of his duty to his own country, by carrying on war against this, is shown by the example of General Brock, who inflicted the most serious injury upon the United States by the capture of a territory and an army, and whose memory, notwithstanding, is held in honourable recollection by his enemies, as it is by his own countrymen. We have ourselves, stood upon the monument erected to him by a grateful community upon the spot which he defended and where he fell, and recalled his praiseworthy conduct, of which we were an eye witness, in the hour of his triumph.
How unworthy of honourable warfare is this spirit of expediency! Long may we remain at peace with the land and sea, and let the land and sea eternally be the benefactors to us by so many natural sympathies, by so many proud recollections, by so many bonds of interest and affection. But should it be otherwise, and if the evil day of war must again come, we hope it will be prosecuted in a spirit of honourable emulation, and not be waged against the countries with whose people we have such close connexion in every degree of national felicity and natural antipathy. The war is the war, and the wardrobe is the wardrobe; against the articles which Captain Chamer saw taken, against the geese, the ducks, the pigs, the clocks, the knife and fork case, the books, etc. Will the writer style this a *Swinging warfare*, and reprobate it as "disgraceful." And sure we are that even Englishmen, now the frenzy of those times has passed away, will justify these scenes, or desire their recurrence.

If the spirit of the age cannot miterate the system of maritime plunder, it can at all events, prevent its transference from the ocean to the land. And there is, certainly, in the British army, enough of principle and patriotism, to furnish all the necessary stimulus for exertion, without holding out the hope of plunder, and rendering honourable men mercenary and predatory.

But it is time to proceed to the object we have more directly in view. That object is to present a sketch of the military operations connected with the invasion and defense of Louisiana, particularly in relationship to the invasion of New Orleans. We have been induced, by recent circumstances, to look back with some attention to the stormy events of that anxious period. We found the leading facts recorded by authors who had favourable opportunities for investigating the truth, and who have creditably performed their voluntary tasks. But our purpose has not been forestalled. A sketch of the occurrences, making the great conflict of the 8th of January the prominent object, and presenting such a view of the accessories as is necessary to give interest and proper effect to the whole picture, we cannot ascertain has been properly and sufficiently described; that if it had been properly executed, would not prove unacceptable. Whether this is so, must be left to the judgment of those who may find sufficient interest in our article to lead them to its perusal.

The defense of New Orleans is a prominent object in our military history. It closed, with the most brilliant success, a war undertaken in self defence, and whose progress had been marked by signal disasters, as well as by signal victories. It gave tone to the national feeling, and elevation to the spirit of the nation; and has other results of as political, as well as of more immediate, consequence.

The tale of this defense is the tale of a gallant and heroic place, "Life of a Sailor" will allow us to correct him. The gentleman whose house was thus plundered in the most approved style, was not Bolinbrook, but Bolinbrook, Dr. Cockenbrooke, one of the most respectable of the inhabitants of the country. The gentleman was stripped as completely as Captain Chamer has represented, and that, in the mere wantonness of devastation, the noblest asset of the "poor medico" were broken, and all the ornaments of the mansion carried off.

The account of the battle of Bolinbrook has been pleased to designate Sir George Cockenbrooke's "sailorly to prevent as much as possible, the miseries attendant on war, from falling upon the more harmless portion of the community, and the ready attention and humane consideration he always granted to an aggrieved or injured party."
mous were at that time rife, that Louisiana was to be permanently annexed to the British dominions, and that we were not wanting sufficient reasons to give countenance to this opinion. It is said, that many of the arrangements, connected with the expedition, indicated not a mere conquest or temporary occupation of the country, but its annexation to the British dominions. The London Times, of December 3d, 1814, evidently looked to this ulterior state of things. The permanent occupation of New Orleans would be a source of very great interest to the inhabitants of Louisiana, the most of whom live upon the river, or on the lakes, and are subject to the Spaniards living upon the waters, or subject them, as in the case of the Spanish rule, to vexatious restrictions and interruptions.

A Barbadoes paper, of November 7th, 1814, issued while General Keane, with his troops, was at that island, and spoke, no doubt, the feelings of the expedition, discloses visions of conquest, which were fair and beautiful in the prospect, but, in the retrospect, prove not only their saugine hopes of success, but a lamentable ignorance of the country they came to subdue. After stating the number of troops which were to accompany General Keane, and which were estimated at six thousand, and announcing that this was the largest army which had ever left England, the chronicle continues, "it is but fair to conjecture, that it is the purpose of our ministers to extend the line of military operations along the Mississippi river, and to communicate our forces contiguous to Lakes Michigan, Erie, and Ontario, or Upper Canada—and thus completely encircle the United States."

The coincidence between this "conjecture," and the orders made about this time by the British Commissioners, that an unalterable boundary should be established for the Indians, which, running from Cleaveland, on the line of Wayne's treaty, to Fort Recovery, and thence to the mouth of Kentucky river, and across that state, would have severed forever from the United States all the country north of the Ohio river, except about a moiety of the State of Ohio, and perhaps a tenth of the State of Indiana, short of its connection with the Mississippi. The Yazoo Bill was modified at the conference; but a treaty of limits has been signed. A Montreal paper, of January 14th, 1815, while making known to its readers the arrival of the British fleet upon the coast of Louisiana, ventures still further, this patriotic second night. "It may be of some consequence," the editor says, "that hot work would soon follow, or that the place (New Orleans) would be an easy conquest. We may calculate upon the latter," &c.

After adding that the conquest of New Orleans will be the means of strengthening the British friendship with the people, "whose ruling passion," he says, "is interest," he subjoins: "They will be loyal to the nation which can best protect them, and secure to them the most gain." Thus professing British loyalty, the British were the principal agents in the political and moral obstacles in the way of the success of the expedition, which was to march from New Orleans to the lakes on our north western border, and to find a loyal people ready to receive them with open arms. Instead of twenty degrees on the great circle of the globe, thus traced out for them, their march was limited to three miles. Still however, these extravagant speculations show what was the probable final object of this formidable force. It is a well known fact, that there was a bevy of civil officers, to be employed in the administration of the conquered States, who accompanied the expedition. Some of these were captured and executed, with characteristic sneer, refused to recognise them as entitled to surrender.

It was idle now to speculate on the consequences of this invasion, had the British succeeded in their attempt upon New Orleans, and enslaved an intention to retain permanent possession of the country, which, in the event of the British being driven from the Mississippi, was looked upon as certain. The British government, in 1814, aware of the physical force which even then occupied the valley of the Ohio—a force which, if it had been even moderately supported, would have descended like the pounding of their own rivers and swept before them every opposing obstacle. [To be continued.]

SURVEY OF THE COAST.
FIRST REPORT OF MR. HASSELL.

TO THE HON. LOUIS McLANE,
Secretary of the Treasury of the United States.

Washington City, July 1822.

Most Honored Sir:—The President having committed to your department the execution of the laws of the 10th July, 1822, reviving that of 10th February, 1807, to provide for the Survey of the Coast of the United States, I take the liberty to present to you herewith the principles and views of my plan of operation, which, in 1807, was selected from among the thirteen, under the consideration of a committee of gentlemen purposely convened, by the order of the late President Jefferson, under the late Robert Patterson, Esq., Director of the United States at Philadelphia, and which principle that has since elapsd appears to have oblitered the re-collection of its nature and tendency, which then procured for it the preference, as capable of giving the necessary accuracy of results, and as uniting the greatest public usefulness with economy in time and expense. To the minute accuracy with which, if I may say so, I must take the liberty to enter into details, occasioning repetitions of things that I have formerly stated; for which I hope I may be excused.

1. In all the applications of exact sciences to practical purposes, the main aim must always be to obtain the most accurate and easily obtained results, and to obtain the means of proving them to be the principles of the science itself; it is even necessary to aim at a still more minute accuracy than might be considered satisfactory, if that degree of accuracy shall be secured which is absolutely requisite in the ultimate results.

2. As the principles dictate positively for the foundation of the work of the extensive survey, the necessity of a triangulation, made with all the best means that science and its auxilliary arts afford; therefore, also, there is not upon this subject a single dissenting voice among men of science in these branches. The peculiarities of the application of this ground-work according to the means and times in a given case, directs the further use to be made of it; and, in the present state of improvement in practical mathematics, no difference of any consequence could be found in the choice of means and methods to obtain a given aim among professional men of science.

3. Thence came the approbation which my plans and the description of the work received from the most eminent men of science, both of Europe and of this country, when I published them in the Philosophical Transactions of Philadelphia, vol. III., New Series.

4. In the application of these principles to the Survey of the Coast of the United States, it is required to study the shortest route, and therefore by the shortest and most direct lines that the localities of the country may admit of, the whole extent of the coast. This will often compel the work more or less to recede from the outer line of the sea-shore; because a great part of it is a low, level, and uniform line, bordered by forests and marshes presenting no obstacles.

The large inland bays and rivers that empty into the sea, and keep, most generally, at no great distance from the actual sea-shore, for a considerable extent nearly parallel with it, will present the main facilities for this operation: their outlets and remarkable headlands, capes, and thence also the light-houses, will thus be united in the most accurate, and shortest manner, so as to receive their precise determination and relative situation.

5. This triangulation will be grounded upon an appropriate number of base lines, measured with the utmost accuracy, distributed over its whole extent in the most favorable and convenient situations. The apparatus provided for this purpose, as described in my papers on the Survey of the Coast, is peculiarly adapted to accuracy and has been much approved as such.

6. The station points of this main triangulation must be permanently secured for any future use, of extending the work, or applying its data to other surveys; as, for instance, to the determination of the successive changes...
in the soundings and channels, of the entrances of the bays and rivers, the shifting of the shoals, bars, &c., to which they all are more or less subject; insomuch that at a future period it will be found advantageous in some places to determine them anew, at regular intervals of time. A history of these changes which would be thus obtained, must guide in any work that may be undertaken for the improvement of the navigation of these places; and other useful applications will certainly present themselves.

By this precautionary measure, which I took at the time of the interruption of my former work, even one of my triangle-points can now be made available in the future work.

5. To the trigonometrical operations are to be joined all the astronomical determinations that are required to locate the Survey, in respect to its position upon the curved surface of the earth: these must be made with the greatest nicety, and with all the means that the science presents.

They consist chiefly in determinations of latitudes, azimuths, and longitudes, made, as often as time and circumstances will admit, upon all the principal stations; their reference to one another; by means of the trigonometrical determinations, with reference to the mutual verification that they afford, furnish very interesting data for the figure of the earth, that are indispensable for this work itself, on account of their great influence upon our coast, in consequence of its geographical position, under a considerable angle with the meridians and the parallels for it.

It hardly needs mentioning, that a properly qualified operator will observe such momentaneous celestial phenomena as may occur during the time of his work; these will afford data for his purpose, if his otherwise laborious task allows him to take advantage of them. The establishment of an astronomical observatory, as I had proposed in my plan of 1816, would be of great assistance in this part of the work, besides its general utility; it was therefore, in fact, economy in time and money.

7. At each of the principal stations, the magnetic bearings of the compass are to be observed at regular stated times of the day; for this purpose there can be no collection for the Coast Survey, instruments, azimuth compasses, of proper construction, as described in my papers. It will be proper also to provide other apparatus for experiments upon magnetic intensity, dip, &c. &c. I had some of my own, when I was at this work before; but the press of time and circumstances forced me to cast aside these instruments with the proper regularity.

8. The many and varied observations and other works, requiring scientific knowledge and practical skill, that are included in the large triangulation, and the works connected with it, can, evidently, not be the work of a single individual; it is therefore absolutely necessary, that the chief of the work shall, besides his own work, have the assistance of able and, as much as possible, well-instructed men, having real zeal for the science itself, as well as for the object they are engaged in: these qualifications alone can command that constant assiduity, under all circumstances, which is the essential requisite for success. The activity upon the part of the Survey for a large mass of important information, of great and special utility for the navy, the general use of the Government, and those branches of science which touch the public utility so closely as to be indispensable to any government.

9. Of this operation, a full, clear, and minute scientific account must be published, from the very observations up to the final results, with a description of the instruments, means, and methods employed in it, such as has been published of all such surveys in Europe, in East India, &c., by which such an interesting mass of documents is now so hand, that any man of science, or a government, may see upon the field the result of the labour of the operator, and having a particular interest in that, shall know that the proposed work shall take an honorable rank; without such a public and satisfactory account, a work like the Coast Survey could never meet either confidence or approbation; therefore, it would be deprived of all usefulness, and of all credit, in the eyes of the public.

We might, perhaps, even say, that, possibly, some parts of our coast may be laid down in the common sea-charts with sufficient accuracy for common seafaring purposes; but the want of any account of the manner and means by which, if ever, they were surveyed, causes the whole to be considered as of no credit.

10. But only of such a systematic trigonometrical operation, with its accompanying astronomical part, is it possible to render such a satisfactory account: all determinations grounded upon necessary means, as astronomical determinations, needle surveys, and such like, do not admit of it. The laborious and repeated approximations that always leave an uncertainty, inadmissible in a concatenation of determinations, and keep every result in a floating condition, rendering the whole unsatisfactory. While, on the contrary, the accounts of triangulations that are extant, such, for instance, as those of the ancient Ptolemy, of a century old, are such, that they could be, and actually have been, calculated over again, by the newer scientific means, to a satisfactory comparison with the newest works. In fact, such descriptions, and the results of such works, never die for the sciences and for future usefulness; and such must be the aim of the Coast Survey, if it shall deserve the attention of the nation, and the expenses inseparable from it.

11. In point of economy of time and money, it must be at once obvious, that only that method can be economical in both respects, which gives directly accurate and constant unchangeable results, and the most in a given time: this is only by the trigonometrical operations above described, and by no other.

To presume upon stating a precise time within which such a work, undertaken in any way whatsoever, will be fully accomplished, is altogether preposterous, and might be considered as a proof of a want of acquaintance with the real difficulties of the country, which has never yet been closely investigated; the peculiarities of the ground of the soundings; the more or less favorable seasons of circumstances; and the means in operators, instruments, and accessories, that may be disposable, have too great an influence, to allow one to speak upon that otherwise than for giving detail parts. The men in whose trust the work is given must, by their honesty and zeal for the work, deserve the confidence of the Government in this respect, as well as in all others: their honor and credit are too closely enlisted in the task, not to call forth all their exertions towards presenting honorable and satisfactory results: in this, and in their ability, lie the principles of all possible deliberation, as well as of the successful execution of the work.

12. Those parts of the sea-shore that do not admit of being taken up directly in the large triangulation, and which lie intermediate between any two points of the same, will be accessible, from the one or the other of them, by secondary triangles, receiving their determination and verification from the large triangulation. Thus the errors which a close following of the sea-shore, by too small triangles, might introduce, will be avoided, as well as the local difficulties which those localities present; this proceeding will relieve the operators from all these parts to the great advantage of the influence of all those local difficulties upon the great main results of the work; it will therefore greatly accelerate the work, and it will be possible to execute these parts with much less expensive means.

13. Besides this interpolation of the less accessible outer sea-shore, the intermediate parts of the main triangulation will be filled up with similar secondary triangles, receiving their determination from the larger chain, and forming the trigonometrical canvass of the detail surveys of the bays and large rivers, which must be inserted in the general work by their means.

14. These two parts will be the works of able assistants or engineers, to be under the command of an officer from the army, the navy, or civil engineers, who may present sufficient guarantee for accuracy; they shall give a proper scientific account of the part of the work committed to them, proving the accuracy of their results from the very observation up, in a similar manner as in the large triangulation; and these
THE DANISH WARRIOR'S DEATH SONG.

By L. E. L.

Away, away! your care is vain;
No leech could aid me now;
The chill of death is at my heart,
Its damp upon my brow.

WEEP not—I shame to see such tears
Within a warrior's eyes;
Away! how can ye weep for him
Who in the battle dies.

If I had died with idle head
Upon my lady's knee—
Had Fate stood by my silken bed,
Then might ye weep for me.

But I lie on my proud deck
Before the sea and sky;
The sun with sword and sable sails
Will have my latest sigh.

My banner floats among the clouds,
Another drowns below;
Well with my heart's best blood is paid
Such purchase of a foe.

Go ye and seek my halls, there dwells
A fair-haired boy of mine;
Give him my sword blade yet the blood
Darkens that falchion's shine.

Tell him that only other blood
Should wash such stains away;
And if he be his father's child,
There needs no more to say.

Farewell, my bark! farewell, my friends!
Now fling me on the wave;
One cup of wine, and one of blood,
Four on my bounding grave.

THE PHANTOM.

By L. E. L.

From the "Drawing Room Scrap Book."

I come from my home in the depth of the sea,
I come from the bottom of the deep;
Thy dreams may be haunted by me; no
Not as we parted, the rose on my brow,
But shadowy, silent, I visit thee now.

The time of our parting was when the moon shone,
Of all Heaven's daughters the loveliest one;
No cloud in her presence, no star at her side,
She smiled on her mirror and vassal, the tide.

Unbroken its silver, undreamed of its swell,
There was hope, and not fear, in our midnight farewell;
While drooping around were the wings white and wild,
Of the ship that was as sleeping, the numbers a child.

I turned to look from it, to look on the bower,
Which thou hast been training in sunshine or shower—
So thick were the green leaves, the sun and the rain
Sought to pierce through the shelter from summer in vain.

It was not the ash-tree, the home of the wren,
And the haunt of the bee, I was thinking of them;
Nor yet of the violets, sweet on the air,
But I thought of the true love who planted them there.

I come to thee now, my long hair on the gale,
Its white with the red rose, is bound with no veil,
It is dark with the sea dews, yet bright with the spray—
The gold of its amber has long past away.

And dark is the cavern wherein I have slept;—
There the seal and the dolphin their vigil have kept;
And the roof is encrusted with white coral cells,
Wherein the strange insect that buildeth them dwells.

There is fear in the eyes that gleam o'er the sands,
Not filled, but with music, as on our own strands;
Around me are whistling the bones of the dead,
And a star fish hath grown to the rock overhead.

Sometimes a vast shadow goes darkly along,
The shark or the sword-fish, the fearful and strong;
There is life in the eyes that gleam o'er the sands,
As they pass, like the spectres of death without sound:

Over rocks without summer, the dull sea-woods trail,
And the blossoms that spring there are scentless and pale,
Amid their dark garlands the water-snake glides,
And the sponge, like the moss, gathers thick at their sides.
WASHINGTON CITY;

THURSDAY, JANUARY 7, 1886.

The appearance of the first number of a new volume, or series, of any work, is a suitable occasion for offering to the reader a few general remarks upon the nature and objects of the publication, and the path which the editor has marked out for himself.

According to general practice, it will be expected that we should submit our own views of the peculiar features of the paper under our charge, and of the general principles by which we profess to be guided.

Of all matters purely professional—such as opinions of public measures—suggestions for alteration or improvement—the expediency of changes in any policy or arrangement—evils or inconveniences to be remedied—abuses to be rectified—and the numerous topics that will suggest themselves to active and enquiring minds—we prefer that officers of the Army and Navy should be the expositors; limiting ourselves to matters of fact—to collecting and arranging intelligence—to the selection of interesting articles—and to a controlling supervision of all communications offered for insertion. The officers possess all the requisite practical information and experience, which it cannot be supposed we have had suitable opportunities to acquire.

It is not because we have no opinions of our own, or are unwilling to avow them; but because it will be impossible to express them freely without espousing one or the other side, into which men of all professions and stations in life are divided, upon questions presented for discussion. In every profession, there will be prejudices, partialities, and opposite views. In a service so limited as ours, the support must be general, cordial and spirited, to render it available; and a publication devoted to its interests, in order to be useful, must be neutral, impartial, candid, and accessible to all—"open to all parties, influenced by none." Every reasonable allowance should therefore be made for, and indulgence extended towards an editor thus situated. While granting to all as free a scope for scrutinizing public measures and the official conduct of men in power, as a wholesome discussion will warrant or demand, it cannot be expected of us to espouse the cause of any party that may choose to make the Chronicle a medium for promulgating its own particular views.—With party politics, we have uniformly avowed we have nothing to do, and they will find no place in the columns of the Chronicle.

For the defence of our seaports and towns on navigable waters, a standing army to a certain extent will always be necessary; and for the protection of our commerce and maintenance of our rights abroad, a navy is indispensable. In the organization, character and operations of these two principal arms of national defence, the people, for whose general benefit they are intended, must always feel a strong and abiding interest. It is not the officer solely, therefore, who will derive information from the columns of the Chronicle; it will form a valuable historical record of the progress of our army and navy, as by means of a copious index any subject can be easily traced.

We have enjoyed an uninteruppted peace of more than twenty years, during which period our population, wealth and resources have multiplied beyond any former precedent; we have acquired and increased the respect of all nations with which we have had intercourse; our flag is respected wherever it floats; and we are now in the full tide of prosperity. But we must not expect to enjoy this calm uninteruptedly. As the interests of our country will be at times opposed to these of other countries, jealousy and ill will may be engendered; misunderstandings may be so fomented by evil disposed minds, as to render a resort to arms for the maintenance of our rights and national honor, unavoidable. In such an event, to be deplored whenever it may occur, and to be shunned as long as it can be shunned without discredit, our army would be disgraced if a foreign foe were allowed to plant a foot upon our territory; and our navy would be shorn of its lustre, if her former exploits were not rivalled. We must keep pace with the progress of military science, and in naval tactics we must not be outstripped by any maritime power in the world. What can tend more effectually to the diffusion of knowledge on these points, to the interchange of ideas, and to the promotion of good fellowship between members of the military profession, than a publication like the Army and Navy Chronicle?

The tokens of confidence and approbation which have been bestowed upon our labors, are sure indications of the propriety of the course we have pursued; and while promising to use all our faculties to render the Chronicle worthy of continued support, we would ask from our friends and the friends of the service their fostering smiles, their cheering aid and influence to extend its circulation.

ARMY PAY.—A memorial having been presented to Congress, asking an increase of the pay of the army, it is probable that efforts will be made to strengthen the claims of the applicants by means of communications through the Chronicle.

We hope it is unnecessary to avow our willingness to grant every facility for such a purpose; but we must express a hope and desire that our correspondents will omit every allusion to, or comparison with the pay of the navy. Forcible arguments can be found, in the inadequacy of the present pay, the long services of a large portion of the officers, and the slow process of promotion, without a reference to the other branch of the service. We have ever been strenuous advocates for harmony and cordiality between the members of the two services, and we believe there is a mutual disposition to cultivate and maintain the kindest feelings.

The officers of the navy, as we have reason to know, will do nothing to impede the progress of the present application through both Houses of Congress; on the contrary, they would rejoice at its success. Nor is it probable that they will take any notice of the communications on this subject which have appeared in the Chroni-
ile; but they cannot do otherwise than feel that any
allusion to their pay and situation will be unkind and
ungenerous.

Looking to the possible contingency of a rupture with
France, every movement of her navy is at this time of
great interest. Operations which, under ordinary cir-
cumstances, would pass without notice, are now scruti-
nized with a vigilance that would penetrate into the very
motives and designs of the French ministry.

We shall omit no opportunity to make our readers ac-
quainted with every thing on this subject that comes
within our observation.

SEMINOLE INDIANS.—As the period stipulated in the
Treaty for the removal of this tribe to the country west
of the Mississippi approached, the repugnance manifest-
ated by a large portion to the removal increased. Some
blight acts of hostility to the white settlements near them,
were only at first committed; but within a very short
period, several bands have collected and committed de-
predations and murders which required the application of
a military force to suppress. The Indians were roving in
parties of from ten to thirty. Volunteers and militia have
been called out and marched to the scene of war, to assist
the regular forces under Gen. Clinch.

We have no doubt that order will shortly be restored.

COAST SURVEY.—The several reports of Mr. Hassler,
the scientific and able superintendent of the coast survey,
have not been very generally before the public. They con-
tain so much information respecting this great national
work, that we have thought we should render an acceptable
service to our readers by their insertion in the Chronicle.
We intended to have published the whole of the first report
in the present number, but our limits forbid. We shall
continue the publication, until the whole are completed.

For the convenience of those who wish the Chronicle in
a more permanent form for preservation, the numbers for
each month will be stitched in a colored cover. Should
any, who receive it weekly, prefer to have it monthly, they
will be pleased to notify the editor.

Our especial thanks are tendered to those subscribers,
who have with becoming promptitude remitted the amount
of their subscriptions for the first year of the new series.
We have not, thus far, heard a single objection to the
union of the Magazine and Chronicle.

A Lieutenant General in the British army is entitled
to only two aides-de-camp; and a commander-in-chief,
when serving abroad, to three.

The valuable essays, signed “Hindman,” (three of
which have already appeared in the Chronicle) contain
so much historical information respecting our own sys-
tems of Infantry Tactics, and a complete exposition of
the new French System, recently incorporated into our
own, that we have concluded to reprint the three first
numbers, for the benefit of those subscribers who com-
mence with the new series. No. IV is in type, but re-
served until the publication of the three previous num-
bers is completed. There will be eight altogether; the
subsequent ones will appear in regular order.

The Chronicle will be forwarded to all subscribers to
the Magazine, who have not requested a discontinuance,
extcept to such as owe one or more years’ subscription.
To those, the first number only will be sent as a specimen.

Aides-de-camp, and adjutants of regiments, are in-
vited to communicate monthly, or as often as convenient,
all such intelligence as may be useful or desirable.

TO CORRESPONDENTS.—We have several communica-
tions on file, which we have not time to notice at length.
The greater part of them (perhaps all) will be inserted
as fast as our limits will allow.

If “Mack” will continue his “Garrison Chat,” we
shall be glad to hear from him on his own terms. His
No. I has too much allusion to ourselves, and we cannot
overcome our diffidence to being made so conspicuous.

“Alcibiades” must be aware that if we publish that
part of his communication, which expresses his opinion
of a certain distinguished individual, we should be bound
to admit the replies of those who entertain adverse
opinions, and this would lead to a political controversy,
foreign to the design of our paper. We have therefore
omitted that portion.

We must here submit one observation, explanatory of
a general rule: it is unimportant to us, and is equally so
to our readers, whether a communication comes from a
subscriber or a non-subscriber; we would publish as
readily for one as for the other, nor does it affect the
decision in the least, that the insertion of an article will
obtain an additional subscriber, or its rejection cause the
loss of one. We frequently admit communications,
which our own judgment does not approve, and with the
views they contain we do not coincide; because we
are of opinion that a paper to be independent, impartial
and of real utility, should allow persons entertaining dif-
ferent sentiments, to express them in a becoming manner.

Extract of a letter from an officer, on board the U. S.
Ship John Adams, dated

“MAHON, Oct. 30, 1855.

“Having once again returned and cast anchor in this
our foreign home, after having drawn to a close a summer
voyage, which has passed off more like fancy than real-
ity, attended too with so much amusement, pleasure and
gratification, and not without some professional ac-
quirements, I avail myself of the occasion to give you a
hasty sketch of our cruise.

“Our summer has been one of mildness and health,
thanks to the Great Dispenser of all goodness. We have
visited many of the most interesting parts of this beau-
tiful lake, Providence so guarding and directing our
course as to keep us in advance of the dark, fatal, mys-
terious track of that monstrous disease which has ravaged
so many fair portions of the globe. Our cruise, as it
began, continued instructive and deeply interesting. We
have cruised this famed sea from the pillars of Hercules,
along the picturesque coast of beautiful Spain, touching at
several of the cities, and mingling in the charming society
of the glancing, languishing, dark-eyed daughters of this
interesting but troubled region. Thence along the icy,
towering Alps, to proud Genoa, and to Leghorn; thence
down the coast of classical Italy, passing in sight of the
isles of Elba and Corsica, at one and the same time gaz-
ing upon the birth-place and prison-house of the great
Carthagian. After a short visit to Naples, we passed to
the southward, gliding through the Straits of Messina,
having a fine view of noisy, flaming Stromboli during
the night. We passed the dangerous strait, carefully
avoiding the monsters Scylla and Charybdis. Next
morning, we were running along, near the lofty beacon,
Mount Etna, which looked like an "altar of the world."
We passed Syracuse in our track, displaying our flag to
the ramparts.

"We reached Malta, where we found the squadron,
Commodore Patterson. Here we met and exchanged
civilities, with a fine specimen of England's navy. That
way and great power has a Levant fleet of considerable
magnitude, under Admiral Rowley; and which, like a
large sentinel, watches the movements of the fleets of
the Great Northern Bear, Russia, ready to poise its wa-
upon and annihilate them for traversing seas and interfer-
ing in matters which do not concern them.

"After a few days delay, we put forth again to sea,
in company with the Delaware; visited the ruins of the
ancient city of Agrigentum, on the south side of Sicily;
then around the western end of the island to the city of
Palermo, where we spent a week pleasantly.

"We returned to Naples, and soon after all hands were
called—up anchor," when we found our destination
was Rome. We proceeded to Civita Vecchia, entered
the mole, and with glad hearts all set out for the Eternal
City, distant forty miles, where we remained ten days,
visiting the many renowned and remarkable ruins, with
her splendid churches and palaces. While there, we at-
tended a very interesting and solemn procession at one
of the chapels, at which the Papa, presided, attended by
his Cardinals and their glittering, gorgeous retinues. The
Pope moves with excessive pomp and show; his chariot
drawn by eight black horses; the car itself one mass of
rich gilt work, and the Holy Father reclining on a chair
of crimson velvet, and blessing the anxious crowd, all
kneeling in his course to and from the Pontifical pal-
ace.

"We left the land of Romulus and Caesar, and returned
to Civita Vecchia, proceeding without delay to Naples
again, where the squadron still lay moored. Our anchor
was quickly a-weight, when we found ourselves destined
to Marseilles, for intelligence from the United States.
We sailed from Marseilles on the 8th inst, for this place,
where we arrived after a passage of some days, and found
Commodore Elliott had arrived in the favorable barque
"Old Ironsides.""

LETTERS ADVERTISED,
Washington, Jan. 1, 1836.

NAVY.

ARRIVALS AT WASHINGTON

COMMUNICATIONS.

THE NEW INFANTRY TACTICS.

No. I.

This work being now in the hands of the army, a general
exposition of the changes which it proposes on the
book of 1825, together with a defence of those changes,
may not be unacceptable to the profession; and, in order
to a clearer comprehension of the whole subject, a brief
history of our tactical mutations will first be attempted.
The volunteers who, in 1778, hastened to the stand-
ard of Resistance, destined soon to become that of In-
dependence, were drawn up and exercised according to
the then system of the mother country, with which very
many of the colonists had been, either by actual ser-
vice, or with the British army, rendered perfectly familiar.
About the middle of the war, the Baron de Steuben
brought over with him the better system of Prussia,
which, in an abridged form, was adopted by Congress,
March 29, 1779.

Steuben's book being again sanctioned by Congress,
(under the new constitution,) May 8, 1792, continued
in force, in the army, till after the commencement of
the war of 1812; and, in the militia, as will be seen in the
sequel, down to 1820.

In the mean time, and particularly after the augmenta-
tion of the army in 1808, many of our regular officers,
each at his choice and on his own authority, began to in-
struct his company, or battalion, in certain foreign sys-
tems—a few in the French tactics of 1791, and a greater
number according to the official Bureau ordered system by
General Dundas, first published about the year 1786, and
which, though more bulky, methodical and in detail, was,
like the work of Steuben, professedly derived from the
school of the Great Frederick.

This open and general departure from our authorized
system, being tolerated by the loose discipline of that
period, and, in a great degree rendered unavoiadable by
the total neglect of the Government to furnish copies,
the tactics of the revolution had, by 1812, become almost
obsolete in the army.

Early in 1812, Steuben's book having been long out of
print, and not a copy of the French or British tactics to
be found in our booksellers shops, Mr. Alexander
Smyth published his system for infantry, under the san-
cion of the War Department.

This book was but an abridgment of the French tac-
tics of 1791, taken from an English translation (pub-
lished in London) by Macdonald, some few copies of which had, as stated above, found their way into our army.

Any system derived from the French could not fail, in our dearth of books, and at the beginning of an offensive war, to be of some value. Smyth's work was no doubt, marked with blunders, in spite of the unavoidable results of the wretched translation before him, and his own want, not only of field experience, but of all acquaintance with camps of instruction. But, whatever may have been the faults or merits of this abridgment, it was not long permitted to remain in the hands of the army before the House of Representatives (on whose suggestion it was now useless to speculate) passed the following resolution: "That the President of the United States be, and he is hereby requested to cause to be prepared and laid before Congress, as soon as practicable, a military system of discipline for the infantry of the army and militia of the United States, March 3, 1815.

The officers capable of executing the resolution were all actively employed in the field. The Hand Book was the result! This, if memory may be trusted, did not even profess to extend beyond the drill of the squad and company. It was printed in 1813, but it is not recollected that it received any sort of sanction either from Congress or the Executive. In short, fell still-born from the press.

The effect of the resolution was, however, to throw back the tactical instruction of the army, in the midst of an arduous war, into all the confusion that existed, in this respect, at the commencement of hostilities. Smyth's book, however, though not formally considered the time, was considered as abrogated, and each officer was left, for the remainder of the war, to find such means for the instruction of his men, as he might.

About this time a man by the name of Lacroix re-published at Boston, without the correction of one material error, Macdonald's translation of the French Tactics. It literally retained the greater number of typographical errors which abounded in the London impression. Macdonald does not appear to have understood either French or tactics, and Lacroix was evidently ignorant of the English language;^ this republication was, it proved, in the paucity of our means of instruction, of some value to the country.

In the month of March, 1814, a camp of instruction was formed at Buffalo, which remained under the command of General Scott, till the return of Gen. Brown, late in the month of May, before the peace. Aided by one copy of Lacroix's book, and one copy in the original language, Gen. Scott thoroughly instructed, in person, the two brigades of which the army was composed, (his own and Ripley's) in that system, and to those exercises may fairly be attributed, in great part, the many glorious victories gained by our arms in the campaign of the Niagara.

This was the first introduction in extenso, of the French tactics, into the American army.

Congress met in the autumn of 1814; and one of the earliest measures of the House of Representatives was, the passage of a resolution requesting the Executive to cause to be printed the rules and regulations for the field exercise and manoeuvres of the French infantry, as translated by Macdonald," to be so modified as to make them correspond with the organization of the army of the United States, with such additions and retracements as might be deemed proper.

This resolution, it is believed, was penned by the distinguished William Lowndes; but whence the restriction to the translation of the French work, is not known.

The subject was referred to a board consisting of Major General Scott, president, with Brig. Gen. Swift, Colonels Fenwick, Cummings, and Drayton, members.

This board met in January, 1815, and was, at first, much hurried, in order that its report might be out in time for the camp which every body believed to be impending. Quickened by this impulse, and in the middle of its labors, the treaty of peace (about the 20th of February,) was received at Washington, and immediately followed by a bill for disbanding the army—a few days only remaining (to the 3d of March) before the dissolution of Congress. The prospect of a speedy disbandment left the board no time for reviewing its labors, which were thus but imperfectly executed. From the necessity of complying with the directions of the President, Macdonald's translation was followed with but few corrections.

The French tactics, so modified, were published by the War Department, and the edition will herein be denominated the American book of 1815.

Steuben's book still continued the guide of the militia till May 12, 1820, when Congress formally repealed the obligation of following those rules (on the supposition it was now useless to speculate) passed the following resolution: "That the system of discipline and field exercise which is, and shall be ordered to be observed by the regular army of the United States, in the different corps of infantry, artillery and riflemen, shall also be observed by the militia, in the exercise and discipline of the said corps, respectively, throughout the United States; and to apply a compendious system of evolutions for light infantry and riflemen.

This board committed the error, not perceived until near the time of closing its session, of attempting, by interfering with the book of 1815, here, there, and everywhere, to correct errors copied from Macdonald; instead of translating the French from left to right, and of modifying the text, to suit our army, in the process. Many important divisions of the system were, however, entirely retranslated and remodelled by the same hand recently employed upon the new tactics; among which, parts may be enumerated to the whole of section (or title) one; diminishing and increasing front by platoons and files; the close column movements, the column in route, &c. &c. &c. The book nevertheless, from the causes mentioned, certainly exhibits rather a patch-work appearance.

It may also be objected that the board, instead of appending, by way of supplement to the schools of the company and battalion, a compendious system for light infantry or rifle, gave a new and duplicate or parallel system of tactics, in which most of the manoeuvres for infantry of the line are reproduced and ordered to be executed as principles, and by entirely different means. This was supererogatory and unnecessary. Both systems could not be the best. The one ought to have been given to the exclusion of the other.

It may be remarked that the French work contained no instruction for firelocks, or skirmishers, and the book of 1815 supplied none.

Such is the history of the American book sanctioned in 1825.

Early in 1834, the question was presented to the War Department—Shall we receive our tactics? No period could have been better chosen for the inquiry. The book of 1825, of which but a small number of copies had been ordered by Government, was out of print; the wants of the service required a new impression; and for the ten preceding years Europe had been teeming, beyond all former example, with works throwing light upon every branch of the military profession. Even the press of Russia had become the rival of that of France, and was, in part, the result of the "Tactiques des principales Combinations de la Guerre," by Jomini, written in Saint Petersburg, and simultaneously published there, and in Paris, in 1830. In this masterly performance almost every question in strategy, grand tactics, and tactics of detail, is discussed and settled by reference to principles, not one of which is likely to be
Far from wishing to increase the "wonder" of a soldier so utterly incensed as to all that may occur in the military world beyond the pale of his immediate post, it nevertheless may be said aside, that, if war begets professional knowledge and science, peace has almost ever been the occasion of its growth, and an end to form, for the farther propagation of knowledge and science. Thus Onsunder, Vegetius, Polybius, Machiavel, Montecuculi, Folard, Puysguer, Lloyd, Saxe, Turpin, Guibert, Jomini, Bulow, Rogniat, Dumas, the Archduke Charles, and a host of others, after serving in the field, published those works with the temple of Janus stood— in all its parts he would have been laid bare to an intelligent student.

Jomini is placed in the above category; for, if some of his volumes on the Grandes Operations Militaires, were published before the final fall of Napoleon, they appeared when France enjoyed a continental peace; and that Duelli were written without which the whole system was in all its parts he would have been laid bare to an intelligent student. The only exceptions to what is asserted above, which occur at the moment, are, The Commentaries of Caesar, and the Essai sur les Etats Major Generaux, by Thieubault; both of which were written in time of war, and in the field.

The head of the War Department entertained an opinion different from that of Clairfait. Believing that in peace, we should prepare for war, and that our intelligent little army ought to be held to that object, it was at his suggestion that the House of Representatives, April 8, 1834, passed the following resolution: "Resolved, That an immediate step be taken to strengthen the establishment of the present system of discipline for the army, and the improvements which have taken place in military science, it is expedient to have a revision of said system; and, therefore, that the Secretary of War be directed to cause a revision thereof to be made, and the same to be reported to Congress at its next session."

The next clause reads: "Suppose the revision to be submitted to a single person, or to many? Reasoning a priori, independent of all experience, it might be safely concluded that, in the case of a scientific work, of five individuals of equal qualifications, either may, singly, execute the task better than the five taken together. With many, the hope of reputation and the fear of censure, are always too much diffused to call forth that mental concentration and lively solicitude without which success is not likely to be attained. Besides, if the parts of the work run into, and reciprocally depend on each other, as in the case in question, how they to be brought into a whole is a matter of difficulty. This difficulty overcome, each co-laborer must run to the others at every moment to learn what is the principle, the precise phrase, nay, word, adopted in the numerous corresponding places. The labor would be almost endless, and at last necessarily unsatisfactory. If it be said that a single man might do all the work and reduce the principles and language to an exact uniformity, the ready reply is—then charge at once, that single pen, with the entire labor and the entire responsibility. It is quite a different case, after a work of the character under consideration is digested and fully written out. The subject is one which can well bear the ordeal of criticism, before finally adopted. This, it is well known, was stipulated for in advance, by Maj. Gen. Scott, whom to the resolution of the House of Representatives was solely submitted; and, also, that twice, at his urgent solicitations, as many boards of high and intelligent officers have passed judgment on his recent labors.

Our new tactics being a close translation of the new edition of the French system, changing the latter so far as was necessary to adapt it to the particular constitution of our infantry; and the two books bearing nearly the same relation to each other that existed between the American book of 1825 and that of France of 1791, I shall, in my next number, and without venturing on some foreseen interruptions,) proceed with the exposition and defence promised at the beginning of this article; giving, by the way, such connecting remarks as will serve to render the whole subject perfectly intelligible to any reader tolerably acquainted with either of the books in
force in France or the United States in the last twenty years.

HINDMAN.

A CHAPTER ON CHANGE.

The hope of the "2d," that the end of their probation in the south was at length at hand, seemed doomed to their wonted annual withering. A few weeks since rumors of change were rife, and each mail was anxiously looked for. But the best antidote to relieve us from our durance hot. The weekly post comes trudging in, but away troop our visions of Northern bliss. The dim, land-like cloud which gladden the mariner's heart with the semblance of his long sought home, has risen, and its baseless heights have melted in the deep blue sky.

It must be understood, and a few articles in the Chronicle, in answer to some ungenerous ones against the change, must constitute, we fear, the full fruition of our high-raised expectations.

Can it be so? Are we, who dreamed of some reprieve for our cutaneous nerves, again to gather our mosquito bars around us, and withstand another eight years be-deviling under this southern sun? Are all our fond anticipations of once more enjoying thanksgiving cheer and Christmas good things—things we have almost forgotten the taste of—to be sent back with the sickening power of disappointment to our hearts, and the last "bit" drained from our attenuated purses for a bite of ham and a pie? A side of beef, for heaven's sake! A little of each for the dining crowd, nor peep in the book of mankind's "proper study," but limiting still our speculations to the errant sand crab, wonder that he runs sideways when he might so well go forward. Whilst bright eyes beam, and beauty sighs, and light feet trip to music's swell, witching the hearts of our fortune comradges,—must we bear about but the loon's wild cry and see but the alligator's plash in the dark lagoon?

But seriously, the justice which keeps one regiment continually here, is the justice that would force part of the Army to accept half-pay, half rations, and double privations to be "for foreign service," in all that makes that service disagreeable, and base—equally. The prices, pests and perspiration, are decidedly West Indian. Sandflies sting, ants destroy, cockroaches eat your boots, jiggers make you dance, and a thousand things else annoy, just as they do there, but the comforts and social advantages of the "sunny isles," are wholly wanting here.

Should duty compel us to travel, a month's pay is requisite to meet the expense. Forty dollars have been demanded for transportation for a distance which Government deems three dollars and a half sufficient. Nay, I mistake, that was thought too liberal, one cent per mile more than is required from the beginning to the grand finale are proportionally high. Negro slaves can give their masters thirty dollars per month for their time, and put as much more in their own pockets. Yet the officer who receives about the same sum must keep up the appearance of a gentleman and sport the aforesaid servant! Ordinary mechanics earn three times as much. The means of living are graduated accordingly. Should the Lieutenant have the profitless honor of acting in the Quarter Master and Commissary departments, he will see clerks with as little writing to do getting double his salary, and merchants with less responsibility making them. Young men around him, with not half his scientific attainments, are engrossed in works of practical improvement, engraving their names on the bosoms of their native states in letters more durable than brass, identifying themselves with the interests of a whole people and rapidly rising to fame and honor. But the officer loses all sectional ties,—has no local habitation or name—nothing that makes him an individual,—is uncared for and forgot, or thought of as a worthless drone,—a species of well-fed pauper on the public bounty.

In the rapid whirl of prosperity,—in the railroad march of all around him, he participates not. He alone, of all his countrymen, is stationary. The young subaltern may look down the vista of twenty years, almost a generation, and view himself, under the most favorable circumstances, about where he is now. Shall these yearly disappointments, and a sense of withheld justice, add to the discontent all these occasion?

This new uniform was a result of a deep speculation upon human motion. We were to be the straw to tickle us into good humor with the service. Admitting the profound penetration here displayed, we would suggest that the main and potent spring be not neglected whilst brightening the smaller wheels of man's incentive. Let us sometimes be placed where the wages of our toil is said to be proportionate to our toil, and let those who bear some decent ratio to the value of life's necessities.

ONE OF THE 2d.

ARMY MEMORIAL.

A Memorial has been presented to Congress for the increase of the pay of the officers of the Army, and to make it an annual one. It is hoped this subject will come up during the session, and that it will be fully and impartially examined. It is of very considerable importance to all grades, and we doubt not that it will receive that attention which, from the character and importance of the petitioners, they have a right to expect. They ask to be put upon the same footing with the Navy, grade for grade, and this is all that is required. Aside from any reference to the Navy allowances, (and these are but reasonable and well deserved by our more fortunate brothers,) the comparison with the Army offers nothing to our claims, with a surety of success, if Congress has time and disposition to listen to us. When the present rates of pay and allowances were fixed, they were considered fair and ample; for such was the comparatively rapid promotion then, to what it now is, that the many expenses incident to maturity years and domestic life, were not incurred by the lower grades, so soon were these grades passed through. This is vastly different now; for, by an examination of the Army rolls for the last ten years, the rate of promotion is found to have been despairingly slow,—thirty-seven years required to advance a Captain, which is but a single third in rank, on comparing with a just-made Lieutenant of the Navy. Nor need any reference be had to rolls or registers to learn this; it may be seen in every garrison throughout the United States, if grey headed subalterns be proof—to say nothing of grandfathers of this low rank.—

It follows then, that it is during our subalternship, if ever, that we form domestic relations, consequences upon which are expenses we little thought of, and which can only be met by the utmost frugality.

Again, such has been the general prosperity of all classes of the community in this country for the last ten or twenty years,—increasing so abundantly the means of social enjoyment, that the average man is a Titan in a world of little men. The Army, now but an evidence of ordinary respectability—and not only are the necessities of life (made so by the practice of the respectable world) greatly multiplied, but these very necessities have become much higher in price—a consequence upon the almost incredible index of foreigners, and the comparison of this by the expenses we have, to all this, the officer must yield to a certain extent, or he (and his family if he has one) must fall in the scale of what the world calls respectability—a despotism more absolute, because of its unrestricted republican growth.

By looking around upon those of our own age and class, who were not, in their boyhood, dazzled by the gilded prospect of conquest, or the dream that Napoleon's laurel crowning, but who have chosen other occupations than ours, we find them, in almost every instance where ordinary industry and talents have been exercised, respectable, and many of them distinguished, citizens, enjoying "the glorious privilege of being independent," accumulating enough of this world's goods to support them when in the "sear and yellow leaf," and leaving behind where-with to stop the cravings of hunger, both mentally and physically, of those they loved when born to them, and blessed when dying. These are considerations that weigh heavily with the old soldier when he nears his three score and ten, and sees his children depending upon his monthly pittance for a support, which, limited
ARMY AND NAVY CHRONICLE.

POLITICS AND OFFICERS.

Mr. Editor:—I have this moment perused a very sensible article in your paper of the 3rd inst., with the caption of "Politics and Officers," and signed "Aristides."

A more egregious error never took possession of the mind of an American than the notion that a military officer, not even a general, has the right to comment on a political affair. I am an officer of the Army, and although I am perfectly aware that honor and honesty require of me the faithful execution of every duty imposed upon me by my office; yet, am I equally convinced that I should be fostering the spirit of an abject hireling, if I did not fearlessly and freely speak and act, in reference to my political rights, as became an American citizen. The love of country should take precedence of the love of glory; and history has abundantly shown that an officer may distinguish himself as much in the forum as in the field. Many of the most distinguished officers of the American Revolution and of the late war, were politicians, actively engaged, in council and at the polls, to preserve the freedom of the very institutions for which they subsequently poured out their heart's best blood on the crimsoned battle-field. The feeling and the opinion that an officer should take no part in politics are conceived in the most servile spirit, and inculcated by heartless military aristocrats, whose interest it is to hold the minds of their subordinates in entire subjection to their domineering propensities. If a military officer feels no interest in the important political struggles of the day, he cannot of course care for the results which they produce; he acknowledges himself at once to be a mere machine, an automaton, a Sénat, a hirpling, a "servant in office," a man who is up for the highest bidder, who would serve the Russian Autocrat, the British King, or even Louis Philippe, provided the pay and the rank were sufficient temptations.

Nearly every officer of any distinction, at the commencement of the American Revolution, was a politician. Politics formed the war of Independence, and glorious have been its results. Politics filled our early councils with those who had so successfully wielded the sword against the enemies of liberty. Washington was a politician of the first order; and so was Lafayette. Look to the late war with England! Were not many of the most distinguished officers of the most prominent politicians, most of whom still live to prove the truth of the assertion? * * * * *

I am glad, Mr. Editor, that "Aristides" has broken ground on this interesting subject, and I trust that his able pen will continue to portray it in its true colors.

What is this strange notion, about officers having nothing to do with politics to be ascended? Where had it its origin, and how is it to be answered? Please, Aristides, give us "more light."

ALCIABIAD.

A "Subscriber" notices an error in the "Schedule" of pay of the Army and Navy, as published in the "Chronicle" of 22d Oct. No. 43. In the Naval grade made to correspond with a "Brigadier General," it should have read as follows—

"Senior Captain, $4,500.
"Leave of absence, or waiting orders, $3,500."

DOMESTIC INTELLIGENCE.

A NATIONAL OBSERVATORY.—We are glad to perceive that the Secretary of the Navy has called the attention of Congress to the erection of a National Observatory—and we sincerely trust his suggestion will not be lost sight of. For the honor of the country we hope Congress will lend a favorable ear to the proposal, and take immediate measures to accomplish so desirable an object. Looking, as a large portion of this great nation does, to navigation for defence in time of peace, with a powerful and increasing navy and a commerce almost unlimited, it is strange that we have to depend on a foreign nation for astronomical calculations and nautical Almanacks. There are twenty millions of surplus money in the Treasury, and no National Observatory, in a nation which claims to be more than any nation under the sun, Great Britain excepted. We hope this want will soon be remedied.

BANGOR ABO.

We regret to learn from the Wilmington Del. Gazette, that a fatal rencontre took place on the evening of the 30th ult. between James H. M. Clayton, Esq. brother of the Hon. John M. Clayton of the U. S. Senate, and Mid. John P. B. Adams of the U. S. Navy, in which the latter was shot in his own office by Mr. Adams, with whom he had had a quarrel, and a personal combat on the night before, shot, and died of the wound a short time after. It appears the Coroner’s Inquest pronounced it an accident rather than a homicide. The pistol of Mr. Clayton was found to have been found loaded within six inches from the left side of Adams’ head, near the temple. About seven eights of the ball was buried in the scull, which caused inflammation to take place, and he died of the wound. The Ball, in about thirty hours afterwards, was very much lamented by all who knew him. Both parties were of high standing in society, and had formerly been intimate friends.

NEW ORLEANS, Dec. 12.—We learn that the forts below the city and on the Lakes have assumed a most warlike attitude. Heavy ordnance has been mounted, and such preparations made as would indicate that the Government is at last ready for war. We understand that all the fortifications on the Gulf and the seaboard have been placed in the same state.

Capt. Baxley, who was despatched from this place some weeks since to apprehend the Indian murderers, has returned, after having effected his object. The Indians were left at Green Bay.

Capt. J. B. F. Russell, who left here some weeks since in charge of the emigrating Indians, has returned. —Chicago American, Dec. 19.

In order to insert the proceedings of Congress entire in the new series of the Chronicle, and as very little is generally done, prior to the holidays, we have postponed our notice until the present number. The proceedings are completed to the last day of December, and will hereafter be regularly reported.

PROCEEDINGS OF CONGRESS,

IN RELATION TO THE ARMY, NAVY, &c.

IN SENATE.

MONDAY, Dec. 7, 1835.

The Vice President of the United States took the chair at 12 o’clock. The little business transacted was altogether preliminary. A committee was appointed to join a committee on the part of the House, to wait on the President of the United States, and inform him that Congress is in session, and ready to receive any communication he may be pleased to make.

TUESDAY, Dec. 8.

The message from the President of the United States was received and read. Mr. TOWLING announced the death of his colleague, the Hon. NATHAN SMITH, of Connecticut, whereupon the usual orders respecting the funeral were passed, and the Senate adjourned.

THURSDAY, Dec. 10.

The Chair laid before the Senate a report from the War Department, in obedience to a resolution of the Senate, and enclosing a report from the Chief Engineer, concerning a bridge over the Wabash river.

Mr. ROBINSON announced the death of his colleague, the Hon. E. K. KANE, of Illinois, whereupon the usual orders were passed respecting the funeral.
ARMY AND NAVY CHRONICLE.

WEDNESDAY, Dec. 16.
The Senate proceeded to ballot for the Chairmen of the several Standing Committees, and on Thursday for the other members; the following were elected—those first named are the Chairmen:
On Naval Affairs.—Messrs. Southard, Tallmadge, Black, Biddle, and Cuthbert.
On the Militia.—Messrs. Robinson, Hendricks, McKean, Swift, and Wall.

MONDAY, Dec. 21.
On motion of the Chairmen of the several Standing Committees, those portions of the President’s Message relating to the Army, Navy, and Militia, were appropriately referred.

TUESDAY, Dec. 22.
A message was received from the President of the United States by Mr. Donelson, his Secretary, transmitting a communication of the War Department, on the condition of the Cumberland Road in Illinois and Indiana; which was referred to the Committee on Roads and Canals.

The Chair presented the petition of sundry officers of the army of the United States in relation to their pay; which was referred to the Committee on Military Affairs.

The Chair also presented the petition of Edmund Fanning, praying that an appropriation may be made by Congress for an expedition to the Bahama Islands, which was referred to the Committee on Commerce.

Mr. LINN submitted the following resolutions, which he declared were adopted:

Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of making an appropriation for the purpose of constructing a military road from the county of Des Moines to cantonment Leavenworth, and to report the result to the Senate.

At 12 o’clock the House was called to order by the Speaker, who proceeded to the election of a Speaker. On the first ballot, JAMES K. POLK, of Tennessee, was elected. A committee was appointed, to join the committee on the part of the Senate, to wait upon the President of the U. S., and then the House adjourned.

TUESDAY, Dec. 22.
Mr. GOLDHORSE offered the following resolution:

Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of making an appropriation for the purpose of constructing a military road from the county of Des Moines to cantonment Leavenworth, and to report the result to the Senate.

Mr. BENTON, pursuant to notice, asked leave to introduce a bill, providing for the increase of the corps of Engineers. Read, and ordered to a second reading.

THURSDAY, Dec. 24.
Mr. SOUTHARD, from the Committee on Naval Affairs, reported a bill to authorise the enlistment of boys in the United States Navy; which was read, and ordered to a second reading.

THURSDAY, Dec. 25.
Mr. LINN presented the following petitions and memorial.

The petition of William Beaumont, praying remuneration for his expense of time, labor, and money, in procuring a series of experiments on the gastric juice, on the person of Alexis San Martin. Referred to the Committee on Finance.

The petition of the claim of Captain Long’s company of Mounted Volunteers, for military services, rendered in 1832. Referred to the Committee on Military Affairs.

On motion of Mr. NAUDAIN, the petitions and papers of Doctor Boyd Riley, praying Congress to purchase the right to use his improvement for the manufacture of vinegar to the public use, the subject last session, was referred to a select committee, consisting of Messrs. NAUDAIN, KENT, LINN, GRUNDY and BROWNING.

The Chair announced a communication from the War Department, transmitting a report from the Commissioner of Pensions, made in compliance with the resolution of the Senate, of the 29th May, 1830; and on motion of Mr. TOMLINSON, it was referred to the Committee on Pensions, and ordered to be printed.

Mr. SOUTHARD, from the Committee on Naval Affairs, to which the subject had been referred, reported the following bills; which were read, and ordered to a second reading:

A bill for the benefit of Henry B. Tyler, executor of Col. Richard Smith, deceased;

A bill for the settlement of the accounts of Michael Hogan, deceased;

A bill to fix the compensation of certain clerks in the Navy Department;

A bill to fix the compensation of Commodore Isaac Hull.

Mr. HENDRICKS submitted the following resolution, which was referred to the table:

Resolved, That the Secretary of War be directed to communicate to the Senate the report of a survey recently made under the direction of the War Department, on the route of a road from the Maumes Bay through the Northern counties of Indiana, to near the Rapids of Illinois River, and thence to the Mississippi River to some point between Rock Island and Quincy.

Mr. BENTON gave notice that he would move, that a bill was introduced in the form of a bill to authorize the Secretary of War to proceed to the making of certain surveys, and to leave to the House the consideration of the same.

WEDNESDAY, Dec. 30.
Mr. BENTON asked and obtained leave to introduce a bill to increase the Corps of Topographical Engineers; which was read, and ordered to a second reading.

A bill to provide for the enlistment of boys for the naval service was taken up as in Committee of the Whole, when the motion of Mr. SOUTHARD, was laid on the table, as he desired to propose some amendments.

THURSDAY, Dec. 31.
The bill for the better regulation of the Corps of Topographical Engineers, was read a second time, and referred to the Committee on Military Affairs.

HOUSE OF REPRESENTATIVES.

WEDNESDAY, Dec. 7.
At 12 o’clock the House was called to order by the Speaker, and the call having been made, proceeded to the election of a Speaker. On the first ballot, JAMES K. POLK, of Tennessee, was elected. A committee was appointed, to join the committee on the part of the Senate, to wait upon the President of the U. S., and then the House adjourned.

THURSDAY, Dec. 8.
A message, written, from the President of the U. S., was received and read, and 20,000 extra copies ordered to be printed.

The standing committees were appointed, among which were the following:

On Expenditures, in the Department of War.—Messrs. Jones of Ohio, Bovee, Johnson of Va., Love, and Healey.

On Expenditures in the Navy Department.—Messrs. Hall of Maine, Sisam, Seymour, Pettigrew, and Mason of N. Y.

THURSDAY, Dec. 17.
Mr. BEARDSLEY offered resolutions, referring to the different subjects contained in the President’s message, to the appropriate committees, which were agreed to.

MONDAY, Dec. 31.
Mr. Jarvis, from the Committee on Naval Affairs, reported a bill for the enlistment of boys for the Naval Service, was read a report; read twice and committed.

Mr. SUTHERLAND, from the Committee on Commerce, reported a bill to regulate the compensation of certain Officers of the Revenue Cutters; which was committed.

TUESDAY, Dec. 29.
Mr. CAMBRELINE, from the Committee of Ways and Means, reported bills making appropriations for the Naval Service for the year 1836—for certain fortifications—and for the support of the army for the year 1836—which were twice read and committed.

Mr. CAMBRELINE, from the same committee, reported the following resolutions, which were agreed to:

Resolved, That so much of the letter of the Navy Com-
II.—The proceedings and opinion in the foregoing case are approved. In examining the proceedings, however, the President has observed certain departures from the rules of service on the part of Gen. Armistead, which he considers, consistently with a sense of duty, unfit to notice with his decided disapprobation. Among these are the practice by commanders of companies of retaining and applying to their own use clothing, blankets, and other public property, to a large amount, to remain exposed in a blacksmith's shop not under the protection of any responsible person; and of causing work to be done at the public shops for the private accommodation of an officer. Although these acts, upon which the President feels it proper to animadvert, were not probably the result of any unworthy motive, and may be regarded, in themselves, as of no great importance, yet, as they are directly contrary to the regulations, and must of necessity, if passed over, lead to abuses more injurious to the Army, it is expected that they will be avoided in the future, and that all officers will see the necessity of a rigid adherence to regulations established for the government of the forces in Army, in every particular.

III.—There is another matter disclosed by the testimony, which reflects no credit on those whose service has been with it. It appears that officers have been in the practice of some of the officers stationed at Fort Monroe, to employ themselves in caricaturing their superiors; a practice in the highest degree injurious to military discipline, to the character of the army, and to that harmony and respect which should subsist among military men. If these attempts serve the purpose of casting ridicule on a superior, it should also be remembered that they cannot be made without injury to the whole force in the public estimation. This practice, to a large extent, regardless of the character of that service as to be solicitous of gratifying his private feelings at its expense.

IV.—Upon a close examination of matters connected with the proceedings of the Court, it is perceived, with regret, that the whole of this investigation appears to have arisen from the unfortunate controversy which recently occurred between Lieut. Col. Bankhead and Brevet Capt. Lee, continuing a political controversy among officers which had been assigned them,—a controversy which has been submitted to a General Court Martial.

Without reviving that controversy, the President cannot refrain from expressing his surprise in learning from the testimony, in that case, that the opinion is entertained that a superior has a right, on his own authority, to interfere with, or appropriate to his own use the privileges or appurtenances belonging to the Quarters of a junior. After Quartermaster officers have been assigned thereto or have been assigned to any superior officer, he ought neither to be dispossessed of them, nor his privileges interfered with, by a superior, except through an assignment by the Quartermaster, under the authority of the commanding officer. In such a case, the commanding officer should exercise his power with the greatest discretion, keeping always in view the regulations of the Army. But, in the case alluded to, it would seem that the convenience of a superior officer was deemed a sufficient reason for an interference with such privileges, without any other sanction whatever. Such opinions are contrary to the usages and interests of the service, and inconsistent with the regulations. The question is, in which case, in which a nice regard for the convenience of others should induce an officer to waive his rights to a superior or even to an inferior officer; of which, however, he must judge. Of these two questions in the case now under consideration, the advice given by Gen. Armistead to Capt. Lee, as to the manner of righting himself in the controversy alluded to, as it is exhibited in the proceedings of the Court of Inquiry, was not such as should have been given by a competent officer; and that, in order to reconcile differences by pacific means alone; those recommended to Capt. Lee were not of this character, and are therefore disapproved.

BY ORDER OF ALEXANDER MACOMBER,
Major General, Commanding in Chief,
R. JONES, Adjutant General.

Lt. D. P. Whiting, 7th Infy., assigned temporarily to duty in the office of the Colonel of Ordnance.
ARMSY AND NAVY CHRONICLE.

RESIGNATIONS.
Captain J. L. Dawson, 7th Infantry, 31 Dec. 1855.
1st Lt. J. S. Gallagher, 3d dr. 30 Sept. 1856.

NAVY.

Extract of a letter to the Secretary of the Navy, from Commodore Alexander J. Dallas, dated

"U. S. S. FRIGATE CONSTELLATION, Puerto Cabello, 30th November, 1855.

Sir: I have the honor to inform you, that I sailed from the Port of St. Thomas on the 30th last, arrived at Fredericksbad, St. Croix, on the 15th, where I was joined on the 18th by the St. Louis, (Master Commandant Rousseau,) from Penascola, via St. Bartholomew. She sailed from the former port on the 5th October.

"After taking in some water at St. Croix, sailed 20th, with the St. Louis in company, for La Guayra, where we arrived on the 24th, communicated with our Consul Mr. Reanhaw, and learning that everything was quiet, and our countrymen at that place not requiring protection, sailed the same day for Puerto Cabello, where we arrived 25th instant.

"The fort and town are in possession of a party calling themselves Reformers, under the command of General Caravaca, Civil and Military Commander.

"The Constitutional party has been driven out, and the larger portion of the town depopulated. General Pace, General-in-chief of the Constitutional forces, is said to be in Valencia, about 37 miles distant, with more than 3,000 men, waiting for further reenforcements, preparatory to making an attack upon the insurgents.

"The standing here, has given me an assurance; that under all and any circumstances, which may grow out of the present struggle, so long as he may have charge of the town, the persons and property of American citizens will be respected.

"I write in haste by a Dutch brig of war, about to sail for Curaçao, and being now in correspondence with the authorities here, and our Consul, I shall communicate more at length in my next.

"As it is quite uncertain when affairs may be brought to a crisis here, and I have little more than a supply of provisions to last me to Pensacola, I purpose sailing in two or three days for St. Jago de Cuba.

"The U. S. S. Vandalia, Captain Webb, arrived at Havana, on the 4th ult. from a cruise of nearly sixty days at sea. Captain W. writes to the Secretary of the Navy, that the officers and crew still continue to enjoy uninterrupted health.

"List of officers on board the Vandalia.

THOMAS T. WEBB, Esq., Commander.
Acting Master, Wm. M. Walker.
Lieutenant of Marines, A. Ross.
Acting Surgeon, C. Hasler.
Purser, J. Brooks.
Captain's Clerk, J. E. Cooks.
Boatswain, John Mills.
Carpenter, Joseph Fox.
Sailmaker, J. Wheedon.
Gunner, Green.

The U. S. S. Ship Warren, Capt. Taylor, was towed down to Hampton Roads, Monday, 23d ult., by the steamboats Thomas Jefferson, whence she proceeded to sea, bound to the West India station.

On the passage from the Delaware to the Chesapeake, the crew of the Warren suffered very much from the cold weather; several of them were so severely frost bitten as to be rendered unfit for duty.

The U. S. S. Ship Adams, Capt. Stingham, sailed from Mobile on the 1st November, for a cruise of four or five months, which it was expected she would visit Malaga, Gibraltar, Cadiz, Lisbon, Madeira, and the Cape de Verd and Canary Islands. All well on board. The J. A. would return to Mobile in March, and it is probable will return to the United States next fall, by way of the coast of Florida and the West Indies. On the 1st Nov. she parted company with the Constitution, Potomac and Shark, all steaming east. The Constitution destined to the Levant.

"GANGPORT, Va., Nov. 18.

"The North Carolina, 74, was taken out of dock the week before last, without the slightest accident; her lower masts and bowspire have been got on board. Her masts weigh upwards of 26 tons. The old crow's nest is set at the North Carolina (a bust of Sir Walter Raleigh) was partly decayed, and has been replaced by a billet head."

Lieut. John Pope, late of the U. S. Ship Erie, has returned to the United States, on Physician's certificate, in consequence of ill health.

Lieut. E. Ppck has been detached from the Receiving ship at Newport, and Lt. T. J. Manning ordered to supply his place.

RESIGNATION.

Lieutenant E. O. Blanchard, 31 Dec. 1855.

MARRIAGES.

In Baltimore, on the 23d ult., by the Rev. Mr. Henshaw Mr. W. M. McCORKIN, of Howard town, to Miss LOUISE A., daughter of Commodore M. Corbin, of the Navy.

At Shelly, Gloucester county, Va., on the 23 Dec, ALBERTO GRIFFITH, of the U. S. Navy, to CORNELIA M., youngest daughter of the late MANN PAGE, Esq., of that county.

DEATHS.

At Fort Smith, (A. T.), on the 12th Nov., Mr. S. B. LEGATE, late a second Lieut. 3d Regiment U. S. Infantry.

At Jefferson Barracks, Mo., on the 1st ult., BUNNEL P. BERRY, a soldier of the 6th regiment U. S. Infantry, a native of White Hall, N. Y.

At Jefferson Barracks, Mo., on the morning of the 6th ult., Mr. REBECCA KIRCHNER, aged 47 years, a private of the relief of Maj. DANIEL KIRCHNER of the 6th Regiment of U. S. Infantry, deceased.

Of scarlet fever, at Detroit, M. T., Oct. 20th, WALTER C., aged 14 months; and at Rochester, N. Y., Nov. 27th, HAWAY R., aged 7 years 2 months and 2 days, sons of Lieut. J. B. Kingbery, U. S. Army.

In Washington, 20th ult., CARY S., 6 months, son of Lieut. JOHN GRAHAM, of the Navy.

E. OWEN,

MERCHANT TAILOR, near the green Buildings, and also a few doors south of Fuller's Hotel, WASHINGTON CITY, D. C.

Begs leave most respectfully to inform his NAVAL and MILITARY friends, and the PUBLIC in general, that he has just received a very large supply of fashionable WINTER GOODS, consisting of WOOLLEN CLOTHS, CASSIMERES, VESTMENTS, &c.

Which for quality and lowness of prices, he feels confident, will be found to be equal to any in the Union. E. O. would respectfully solicit the attention of gentlemen belonging to the ARMY AND NAVY, to his superior mode of fitting uniforms, which, for material and workmanship, cannot be surpassed in the Union. He is constantly on hand a large assortment of articles, as used in the dress of both services, and which it is determined to sell at a lower rate than the same articles can be procured for, in any of the principal cities in the South. He has also just received a quantity of GREEN CLOTH, peculiarly adapted to the dress of the Marine Corps, (a very rare article,) to which he would invite the particular attention of such gentlemen, who belong to that corps, as it will be found to be a very superior article in that respect.

All orders received from distant parts of the country (containing a draft or suitable reference) will be as punctually attended to, as though the party ordering were present, a wire being made and attended with the strictest care.

E. O. embraces the present opportunity, of tendering his sincere acknowledgments to those gentlemen who have already favored him with their commands, and humbly solicit a continuation of such favors, for which he will ever feel grateful.

Jan. 7th.
SIEGE OF NEW ORLEANS.

(Continued.)

The geographical features of Louisianians are peculiar and interesting, and if the nature of the country present some serious difficulties to an invading foe, it offers other advantages to a defensive operation. A river, traversed by the lower Mississippi, has been gained from the ocean by the deposits borne down by the current of that river. During its annual inundations, its surface, when it is not considerably higher than the natural banks; and these, in their turn, are higher than the bed in the rear. Therefore, contrary to the usual fluvial formations, there is an inclined plane, highest at the river and extending to the swamps, which serve as a reservoir for the water that occupies in the period of the inundation. Mansions, labour and industry have counteracted the operations of nature, and a dike or levee has been formed along the river for a great distance or channel of this Mississippi and Chef Menteur. Lake Borgne itself is an indentation of the Gulf of Mexico. An enemy, approaching in this quarter, and being the command of Lake Borgne, sees before him the whole of the interior of the country, and above and below him, the waters of these lakes, or by swamps and marshes overflow with high reeds and thick cypress timber, and intersected in every direction by channels of communication, all lakes. These channels, as they approach gradually shoaling in their course, they multiply in number, and extend their numerous ramifications towards the Mississippi. This marshy waste is inaccessible to human footsteps, except upon the banks of the two largest bayous, or in a season of extremely dry weather.

One of the most remarkable of these bayous, which is traversed by Lake Borgne, is the Bayou Bienvenue, entering on its western side, and extending its branches towards the world of marsh in various directions towards the Mississippi, below the City of New Orleans. A guard was stationed at the outlet of this channel, and its observation was increased by interposing about the mouth a division of the Louisiana militia, and who then his long residence below the city, was well acquainted with the topography of this whole region. South of the bay, to the west of the British army, was the British place at Jamaica, on the 29th of November, 1814, and the next day the fleet sailed, and gained the American coast on the 9th of December. From this time, and until the final catastrophe and retreat of the British army, several reinforcements were received by them; and it would be satisfactory to ascertain the precise necessity of both parties in the various engagements which decided the fate of the country. The scattered state, which are appealed to this narrative, furnish all the information necessary on the part of the American troops, except upon the 31st of December, the report of which day was not received, and which was, therefore, subjoined to the statement of Eustis, founded on information furnished to him by the Adjutant General. But our inquiries have not been so satisfactory in relation to the British army. & The British whole force at about fourteen thousand men, and give them the elements on which the calculation is made. We have seen no accounts, resting on British official authority, which contain the number of the British army. But the naval strength of this expedition. General Jackson's force at the lines upon the left bank of the Mississippi, on the morning of the 9th of January, including all the public and private vessels, is 4504, as the authentic returns show.

During the summer and a part of the autumn of 1814, General Jackson had been engaged in the necessary measures for the defence of the military district instructed to
him, which included the south-western part of the United States. Florida, at that time an appendage of the Spanish province, was rendered with relations to interrupt his communications, and to embarrass his operations. It had proved itself a place of refuge, where his enemies, both white and red, had sought safety, and where they had issued to overcome and devastate the country.

The neutral duties of the Spanish local authorities were openly neglected. They had certainly not the inclination, power, or desire, to contain the reach of his power and their influence to respect their territory. The consequences already felt, and those anticipated, led General Jackson to the adoption of one of those decisive measures which have characterized his public life. He determined upon the responsibility, to enter Florida, and in expelling the British, to teach the local government a salutary lesson. This design he executed with equal promptitude and success. Pensacola was taken, the hostile expedition driven from the province, and the fortifications, upon which they had relied for defence, demolished.

This proceeding, equally wise and just in its conception and vigorous in its execution, was the eye to the nose of the region committed to General Jackson. Had this concentration of British troops and Indians been permitted to continue with impunity, his whole left flank would have been unoverlooked and exposed, Mobile must have fallen, and St. Augustine, associated with it, have been destroyed by the Indians. 10 had, in fact, waved over all the prostrate settlements in that exposed region. We have no taste for pulling sentimentalities, nor have we a wish to revive the embittered feelings of the past. We feel that the British have been, and are, very many noble traits of character in the British nation. And we sincerely believe, that had their government and people been aware of the dreadful nature of the warfare conducted by the North American Indians, they would have rejected with horror any proposition for their employment. The lessons of history, however, are always salutary, and may be read for improvement when the promptitude has passed. It cannot be doubted, but that if the usual routine of diplomatic reparation had been resorted to, and the action of the Spanish authorities, colonial or imperial, awaited, an issue which would have been between the British troops and all the disaffected southern Indians, and their mutual co-operation secured. It has been our fortune to witness the untold horrors of such a warfare. Well may it be said, that eye has not seen; ear has not heard, nor hath it entered into the heart of man to conceive the atrocities of these incursions. Before them, is all that constitutes human happiness. Behind them a ruined country and a murdered people; or a caviary of the most hideous description established. All are at times insalubrious to the health, and at all times insalubrious to the morals. This terrible experience is in the public mind, and the consequences are felt in all parts of the community.

General Jackson, having secured his left flank by the expedition of the British, and prevented any co-operation between them and the Indians, and having conducted a series of decisive operations, which could not but produce a powerful moral effect on the southern tribes, prepared to assume the immediate personal command of the troops collected in the vicinity of New Orleans.

The public indications, which gave warning of the danger to others, were not unheeded by him, and there were some, which reached him confidently, confirming the belief, that a serious attempt against that part of the country was meditated by the British Cabinet. These he had communicated to the government, and he now felt that the promptitude of action, when promptitude was necessary, must meet the impending danger. After making all the necessary arrangements in his power for the defence of Mobile, and for the security of that part of the country, he started on his journey to New Orleans, and reached that city on the 1st of December, 1814.

At this period Louisiana was as defenceless as it was exposed. Both in the person and material, there was an apparent danger of the menace of the safety of the country. He had under his command the skeletons of two regiments of new raised regular troops, but the rest of his force was militia, drawn from the invaded district, from Mississippi, Tennessee, and Kentucky. Of arms and of ordinance stores generally, the supply was wholly inadequate.

A few days before he arrived at New Orleans, his enemy, General Carroll, in transshipping into his boats a part of these equipments which he accidentally possessed, the whole Kentucky reinforcement would have been sent for service. Instead of these units, there were more than from twelve to fifteen hundred of them were mere spectators of the combat, not being able to mingle in it for the want of arms. As another example of the defective state of our military service, in this case, General Jackson, in a report to the Secretary of War, of February 15th, 1815, informs that functionary, that when the army landed he had not a flat except what was procured from the Barbadians.

The works upon the Mississippi below the city, and which were intended to secure the line of communication by the river, were in an unfinished or dilapidated condition, and as a general sketch of the state of the whole community, so far as regards his permanent military defences, it may be remarked, that there was not a respectable fortification in the state; that the bayons were unobstructed; important points left without the defences of batteries; and the City of New Orleans was largely exposed to the enemy. The interior country, the seat of the State government, and the immediate object of the British invasion, was destitute of the slightest entrenchments. But there was a state of moral警务 which would have been unexampled in the West, but for the difficulties arising from the want of the necessary preparations. The tone of public sentiment was depressed. There was an evident want of some central authority; some master-hand to direct them to the combat of the common community. In this he was successful. Order was restored. Discipline was re-established. The fort upon the Mississippi was inspected and repaired. Those upon the passes of the lakes were strengthened. The bayons were obstructed by falls impenetrable. Fortifications were saved. Peace and security pervaded every department of the public service.

In the meantime the British expedition had reached Cat Island, upon the coast of the Gulf, and a powerful division of their fleet had captured the forts of the Gulf, destined for the defence of the lake. Lieutenant Jones and his command fought with great gallantry, but were overpowered by numbers. This result placed it in the power of the British general. Even the most opposed and observed, to any point of debarkation he might select. The sea is here so shallow, that large vessels cannot be employed in the service of transportation, and the boats of the fleet and the captured gun boats finished the only means of conveyance within the power of the enemy. The distance from the fleet to the mouth of Bayou Bienvenue, is about sixty miles, and a small swan could travel in a few hours. The enemy decided on the morning of the 23rd of December, and sailed the mouth of the Bayou, muscle six miles, and landed six miles above. They had been stationed for the security of this communication, but they were surprised, and the pass was thus opened to the British. They availed themselves of their good fortune, that was not necessary for their own improvement, but against the opposition, and it is believed, that it was a great credit to the commander of the British army for this well concerted plan of operations, and to his troops for their exemplary conduct in the circumstances to which they were placed. They had captured all the boats, and exposed to all the dangers and inconveniences of a voyage at an insalubrious season, and upon a dangerous and unknown coast; and it is said that some of them did not leave their boats for general. In the subsequent operations of the campaign been conducted with as much
ARMY AND NAVY CHRONICLE. 19

General Jackson received information of the approach of the enemy between one and two o'clock in the afternoon of the 23d. His troops were scattered into the city. It was possible that this movement was but a feint, designed to attract the attention of the Americans, and that the real effort was to be made in some other quarter. Of the small force, there was no semblance in the vicinity of this exposed city, it was impossible, with any just regard to military principles, to concentrate the whole upon a particular point, till the designs of the enemy were more fully unfolding.

The successful and well-concerted movement of the British, brought the affairs of this interesting region to a close. There was no obstruction to the advance of the enemy. Neither any of his troops were discovered, nor did he appear to expect to offer his march to the city, and a level road upon the bank of the river invited his approach. But he did not avail himself of the opportunity within his reach. He left unattended the fruits of his own enterprise. The British troops halted at the river's bank, and the enemy continued to yield to all those impulses which belong to the life of a soldier, and which led him to enjoy the present, regardless of the future. It is the recklessness of habit—the which occasioned the injudicious order to "hold out at those alternations of safety and danger, that are the inseparable companions of active military operations, and the God's provide," from the face of the Macedonian conqueror to the vigil of Waterloo.

"The most of reve'ry by night
And Belgium's capital has gathered them
Her beauty and her chivalry."

But where too
"there was mounting in hot haste,"

And then:—
"rider and horse—friend, foe—
in one rude burial bent."

By a rapid march the invaders would have reached New Orleans before any other notice of their arrival, and the city might have fallen by a coup de main. There were not wasted enterprising officers in the British camp, who estimated at their full value the advantages of a prompt and decided movement. But more cautious were the Americans, more guarded, and the opportunity thus offered, passed away, no more to return. The British commander found, as all inductive generals will find, the truth of the remark of Plutarch, to seeking more applicable than to unnecessary military delays:

"Elapsum semel
Non ipsa posset Jupiter reprehendere
Occasionem rerum significant brevem."

Happily for himself and his country, the measure adopted by General Jackson, at this juncture, was dictated by another spirit. He might have concentrated his forces in some position below the town with as much promise as possible, and, strengthened by such defiance at the approach of the enemy, might permit him to make, surmounted his appraisal. Had he done so, he would have lost the country. All the moral effect of a vigorous attack, both in elevating the feelings of his own troops and in demoralizing those of his opponents, would have been lost. The enemy not having learned the strength of the American General nor the efficiency of his troops, would have advanced with full confidence, and without sufficient time for any of those preparations which soon began to be prepared, and finally produced the unexpected development. When General Jackson received intelligence that the British had reached the Mississippi, he instantly determined to hold them in check by the movement of the troops. The Inspector General, Col. Hayne, was directed to proceed down the river with such force as could be immediately collected, and if he met the enemy advancing, to attack them and retard their march as much as possible. If, however, he found them encamped at the position where the latest information left them, he was directed to take post in the Orange grove on Larond's plantation, and there await other orders; and he was assured, that he should be supported without delay by the commanding general, and such strength as he could bring into the field.

Hayne moved out within an hour after receiving these decisive orders, and he was assured, that he had about three hundred and fifty men, most of whom were mounted.

General Jackson remained in the city to facilitate, by his presence and directions, the assemblage and movement of the 44th Regiment. The 4th Regiment was on the opposite side of the river. It was brought over with the utmost dispatch. General Coffee, with his command, was four miles above New Orleans. No time was lost in communicating to him, and to the corps of Planche and Daquin, the necessary orders, and requiring their immediate presence. General Carroll and Governor Claiborne, with the militia force under their orders, were stationed upon the Gentilly road in the rear of the city, as it was not yet known where the actual point of approach and attack would be.

The necessary dispositions having been made, and all the disposable force in motion, General Jackson left the city about sunset. The whole force which marched out of New Orleans on this occasion, as was as follows, agreeable to the return furnished to Eaton by the Adjutant General, Colonel Butler.

The 4th Regiment, 468
The 7th and 44th Regiments, 763
Marines and artillery, 82
Planche's and Daquin's battalions, 498
Mississippi Dragoons under Hinds, 186

12167

From which are to be deducted:
Hind's command, not in action, 186
Two companies of Coffee's brigade, left to hold the horses, estimated at 100

1881

Making, probably, about eighteen hundred men, rank and file. Of this force, two of the regiments were regular troops. One had been actually at war for two years, the other was composed of new men, levied the preceding year. The residue were militia. Some belonging to Louisiana and others to Tennessee, who had voluntarily tendered their service, to which they had been induced by a desire of being employed in the service, to that General Coffee's command, having been informed that the enemy were hourly expected in force before New Orleans, and having been urged to hasten their movement, marched, in the last two days, one hundred and twenty miles, in an inclement season, and through a country almost inundated by the annual rains.

This force, about to place itself between the enemy and the object of his campaign, was, in a great measure, the ornament of the rudiments of discipline. Many of them had never seen an opposing weapon; and scarcely one of them had ever been brought into contact with civilized troops. They were now following their leader in a daring and desperate attack upon soldiers, who had fought in many a well contested field, and who were led by officers whose reputation had been acquired in the great schools of war in Portugal and Spain. Of the strength of the enemy at this time, we have no exact statement. Eaton and Tour estimate it between four and five thousand men. Captain Cooke states that the first division consisted of sixteen hundred, and that this was reinforced during the action, so that at its close not less than the number of the British was two thousand, after deducting their loss. But there is an evident mistake in this computation, which is easily shown by a comparison of the accounts.

The whole number of men embarked in this fleet with General Keane is stated by Captain Cooke to have been four thousand seven hundred. But the author of the " Narrative of the Campaigns of the British Army at Washington, Baltimore, and New Orleans," B.C., who was an officer in the expedition, estimates the strength of the army at this time, as follows:

Ch. Guzzi.
The 93d regiment.
Six companies of the 95th.
Two squadrons of dismounted dragoons.
Detachments of artillery, rockets, sappers and engineers, and recruits for the different corps in this part of the world.

The force brought from England and collected in the West Indies, amounting to 3500.
The 4th regiment.
The 44th regiment.
The 85th, which three had been serving in the Chesapeake.
The 21st, which joined at Bermuda.
The whole of these he estimates at 2600.

Making the total amount of force, bayonets we presume, as this is evident from his allusion in the case of the Highlanders, 6000.

Admiral Cochrane, in his despatch of Jan’y. 15th, 1815, reports, that by the 51st all the troops, except the greater part of the two black regiments and the dragoons, were embarked in the boats. The author of the "Narrative," estimates the two black regiments at eight hundred each, making 1800.

Two squadrons of dragoons, say 1700.

We suppose that one thousand may be safely assumed as coming within the fair meaning of the "greater part," and we shall thus have five thousand as the number actually embarked at this time in the boats.

It is impossible to say how many of these were delayed till the action was over. But as it is known that heavy detachments arrived during its continuance, and took part in it, and it is expressly stated that the "sound of the reached them and routed the rowers from its indolence," we may fairly take the estimates of Eaton and La Tour as exhibiting the probable number of the British troops, who took part in this contest during its progress.

Thus, the British upon the Mississippi and their immediate designs were unknown. As soon as General Jackson arrived in their vicinity, he proceeded forward to make a reconnaissance of their position, and to arrange his plan of attack. The light of their fires enabled him to ascertain where they were stationed, and to perceive that they extended from the river into the plain, and that strong picket guards were posted at intervals between their right flank and the river, a distance of about a mile and a half from the Mississippi. Although the usual routine of military duties was observed in the general disposition of the troops, and in the arrangement of the guards, there was still an evident impression among the British troops that they were not in a manner of determining the place of a vessel at sea, or the simple geographical determinations of latitude and longitude, by astronomical observations, which are too well known to need a detailed mention, except that it must be observed, that the chronometric determinations of time on board must always be compared with compass observations. At the nearest well-determined places, and that even without removing the chronometer from the vessel to the shore, or inversely, as the alteration they might undergo by it might easily be more than all the errors of the observations might be. For these observations out of sight of land, the repeating reflecting instrument will be particularly advantageous; the navigator may compare, by different observers and under various circumstances, have given the fullest satisfaction.

Though it might be attempted to try the determination of soundings out of sight of land, by the rate of going of vessels from well-determined points, either with steam or current, there is too much uncertainty, in respect to the steadiness of this rate of going, to allow the expectation of greater, or perhaps even the same, accuracy from such a method, than from the mere geographical determinations just quoted.

22. Otherwise than in the manner and in the case dealt with here, the method is too uncertain, and cannot be used for any determination of distances in an actual survey; though they will be used as the most convenient instrument for the determinations of smaller intervals of time for the astronomical observations connected with.
ARMY AND NAVY CHRONICLE.

21

astronomical observatory, no doubt, with the view to provide, in a more adequate manner, for such an establishment as the state of civilization of the country, and the needs of the science, as well as for the preservation of the public interest, as is so necessary. But, when New Holland and the Cape of Good Hope have such observatories, that they have yielded permanently useful results; and Russia, a country that rose out of complete darkness, at the same epoch when our country received the first impression of civilized footsteps, | the twenty well-endowed public observatories, that we can no longer delay such an establishment. The amount paid annually by the navy, for ascertaining the rates of chronometers, to watch-makers ill provided for accurate determinations, and which ought to be done in such an observatory, would provide a considerable part of the expenses of some observatories. The instruments needed are still in the collection made for the Survey of the Coast. The absence of the assistance of such an establishment for the Coast Survey, must necessarily be supplied, in the mean time, by temporary arrangements, such as I had already begun preliminary to my former operations.

27. Of the mechanical organization of the work it will not be necessary to speak much in detail. It is necessary that the general direction be under a man of proper scientific acquirements in that branch of applied mathematics, in the same manner as all the great works of art of the nature have been in Europe: all originated first and at the head of some one person; and the men of the philosophical societies. For the assistants, the secondary triangulation, and the details, men of sufficient capacity and knowledge in each kind of work must be selected and placed under the direction of the chief, to enable him to accelerate the work gradually more and more, as at first, to further their employment; and the work very properly provides, that naval and military officers, and citizens, should be employed indiscriminately, according to the peculiar direction of their knowledge and the fitness to the different works. A chief to whom the work can be entrusted will know how to make the division of labour, how to combine the different works, and take the best advantage of this disposition of the law, and of the men in the three classes, who undoubtedly will present themselves, to tender their assistance in a work that will be considered as an occasion for useful and honorable employment of their endowments and acquirements.

28. It is, of course, necessary that the assistants be all directed to follow the directions of the chief, who will give them written instructions as to their functions, and the principles most proper to follow in their works; that they deliver all their works, journals, &c. to the chief, and to no other person; that there be no centre of management, until ready for delivery to the Treasury Department, without whose orders or direction, no part of it shall be communicated to any other person. The chief must, by his own work and the organization of the whole, have provided himself with proper means to verify the works of the assistants in each branch.

29. As the results of the works must present, not only the delineation of the shore, the soundings, and what may appertain to the safety of navigation, but also all that can in any way be useful for the direction of the defence of the coast, in any given case or place, it is evident that the entire mass of the results of the work is for the Government of the country alone, and only the part useful for general naval purposes is published in the charts. Thus the works of this nature are always treated in Europe, and this very reason is alone the cause why they are not generally known.

As many of the instructions in this work were already made with all these views, and in conformity to this plan of operation—as the instruments procured by me in time for this work are calculated for such a plan, there are in general more on hand to execute the same than there would be for any other plan; my work of 1817 becomes immediately available for the purpose. It is a plan to present, at a much earlier period and at much less expense of outlay, valuable results. The preliminaries
of such works are, by their nature, always long, and very tedious; these are, in part, made by my former works, and, therefore, so much of time and expense is directly saved; besides that, the approbation which this plan of operation has received from every competent judge; and the public in general, appears to stamp it as the only one that can be adopted with credit and success. I might quote, as additional support, more particular details of the numerous works that have been executed, all invariably upon the same principles; but they may be considered as sufficiently known by the extensive public accounts of them that are printed. I consider it therefore proper to refrain from extending this letter over indelicate particulars, as not properly appertaining to an official paper.

I have the honor to be, with perfect respect and esteem, Most honored Sir, Your obedient servant, F. R. HASSLER.

Hon. Louis M'LANE, Sec. of the Treasury of the U. S. Washington City.

DOMESTIC INTELLIGENCE.

Extract of a letter from on board the U.S. ship Constellation, dated at
PORTO CABELO, 30th Nov. 1835.

The frigate stopped at Santa Cruz for a short time, the wind having set in against our course to Laguira. Nothing can be imagined more beautiful than the Island of Santa Cruz—it is in appearance a perfect paradise. As we approached, it seemed more like a dream than like the real world. We saw the green cliffs of the mountains, rich valleys, and universal cultivation. Governor Von Schloten, during our short stay, gave over to the inhabitants of our cabin passengers were specially invited guests. We sailed thence on the 20th November, and reached Laguira on the fifth day afterwards. The object in coming here was to protect the many Indians who are the property of the frigate, while a sudden and recent revolution continued to rage. The seat of conflict has shifted to where we now are. Porto Cabello, distant from us about half a mile, is in the hands of the insurgents, while the Castle, being well fortified and commandingly situated, holds out against those who are termed the rebels. Our ship lies as it were in some degree between the frost of the town and the Castle, and as they interchange their bomb shells, though safely out of their range, we can hear the reports of these missiles. Yesterday our Commodore was visited by the Insurgent Chief, who explained the origin and grounds of the rebellion—and did the donkeys the right of the regular Government to land.

Last evening I went, with a few others, rowing along the front of the town; it is near by the devasated; many of the houses burnt, and others battered down; a chapel which we visited was stained with the blood of hundreds, killed within its walls, about ten days ago. The rebel fleet, consisting of three schooners, is stationed near us, and a more horrible scene of slaughter looking wretches than their crew I never beheld. They hoisted the piratical flag at half mast, but soon lowered it. We feel entirely safe, though deeply interested. General Pasco is said to be approaching the rebellious town with a large body of troops; he will probably reach it to-morrow. If it comes from our present position we shall overlook the battle, which is expected to be desperate and bloody, though short. This will enable us to quit here very soon; for as soon as the struggle is over, the Ashley, Consul, and persons and property of our citizens esteemed to be agreeably out of the Commodore will sail for Trinidad de Cuba. I long to be moving a little northward—for the heats are intolerable. Such admirable care and spirit prevail, however, throughout our vessel, that we are all in excellent health.

Correspondence of the N. Y. Commercial Advertiser.

WEST END ST. CROIX, Nov. 18.

A duel was fought in this place this morning soon after sunup, between midshipmen Baldwin, of New Jersey, and Mc. of Columbia, and the former fought it out seconds, and each one holding the opposite corner of a silk handkerchief. May's ball did a little mischief, it is said, among the short ribs of his adversary, though nothing serious: while Baldwin's grounded so near as to have given the toes of May a mere hair breadth escape. I should have sooner said that they are attached to the frigate Constellation, which has been now four or five days in this port. The Governor gave the officers a dinner and ball yesterday afternoon, and to-morrow a ball is to be given on board the frigate.

REVENUE CUTTERS.

This is the season of the year when this class of vessels have it in their power to render important aid to merchant vessels approaching the coast, and we are happy to perceive that several of them have thus actively engaged.

The Brig Good Return, (of Baltimore,) Parker, Rio Grande, 96 days, with hides, wool, horses, &c., bound New-York to Norfolk, 14 July, distressed, leaky. The G. R. has experienced very severe weather, and has been blown off from New-York three times—once of her crew was frozen to death, and three others so badly frozen that they were useless to contend with. One of the crew died that morning. The Captain and Mr. McElroy, a passenger, are also badly frostbitten. During the severe weather (for the space of two weeks) the pumps have been constantly going, night and day. Captain Parker takes this method of returning his sincere thanks to Capt. J. A. Webster, of the Revenue Cutter Tammy, for his prompt assistance in sending a part of his crew on board the Good Return, B. R., who worked like good fellows at the pumps until their arrival at Norfolk. To Capt. Derry of Steam Boat Champion, who fell in with off Carrick on Tuesday last, and to the passengers on board, Capt. P. is under many obligations, for their politeness in furnishing him with supplies.

Captain H. D. Hunter, of the Revenue Cutter Jackson, at Baltimore, tends the service of that vessel, and crew to any other which may be in distress, or require assistance during the winter, as long as the Cutter remains on the station, and which may not interfere with other duties. In making this tender, Captain Hunter disclaims all interested motives, and on the contrary, he wishes it is to be understood that every one taken will be given within his reach without reward of any kind.

A CARD.

The subscriber returns his acknowledgments to Jos. Sturgis, Esq., L.C. Consul, of the U.S. Revenue Cutter McLane, on the New Bedford station, and those under his command, for the effective and gratuitous service rendered him in saving his property from the wreck of the brig Hunshingham, which was brought to land, and the gentlemanly treatment he received on board the McLane.

Providence, Dec. 11, 1835.

JOHN OLDFIELD.

NAVAL.—A letter from an Officer of the U.S. ship Ontario, Capt. Salter, to his friend in this city, dated Pernambuco, Nov. 9th, states the arrival of that vessel from St. Thomas, coast of Africa, whither she proceeded from Rio, in August last, to obtain restitution of money, said to have been given by the Piraees, who were executed at Boston, to the Governor of that place, as a bribe. The effort was unattended with success, the Governor denying any knowledge of the facts alleged, or participation in the plunder of the pirate. Shortly after the Ontario left Rio, the Small Fox made its appearance, and captured her, and carried off the property in ten days sail of St. Thomas, when there were about 40 cases on the Surgeon's report. After sustaining a severe gale of wind, the disease became milder, the number of cases diminished, and finally, on the arrival of the ship at St. Thomas, had nearly ceased, but one or two cases remaining. No deaths mentioned. The Ontario was immediately to have sailed from Pernambuco for Bahia and Rio—Courier.

LARGE SHIPS.—The following appears in one of our exchange papers:

It is stated, in the London United Service Journal, that a ship of 110 guns, called the Royal Sovereign, is building at Portsmouth, tonnage 3099, and that the frames of two others to be called Victoria and Algiers, of the same size and model, are preparing at Plymouth.
These ships are to be the commencement of a new class of first rates of tremendous power, to be armed on the lower decks with long 68 pounders."

Hitherto the 32 pounder gun has been the heaviest used in the British navy. In fact, a gun of that size requires as many men to handle as can easily get it round. Forty-two pounder guns have been cast and intended for use in the largest ships of the American line, but the opinions of intelligent officers have been expressed against them. A 42 pound shot has a diameter of only about twice that of an inch greater than that of a 22 pound ball, whilst the shot of course proportionately heavier and more unwieldy. It is therefore probable that the 68 pounder cannon spoken of in the United Service Journal, are upon the plan of M. Paixhans—a sort of long mortars on trunnions, intended to project hollow shot and shells. Cannon on this principle are in experimental use both in the marine and field service of France.

Philadelphia Gaz.

STEAM NAVIGATION TO LONDON.—We have been furnished with a copy of the prospectus of an Association in London, for establishing the “First Line of Steam Ships to run between London and New York.” The capital of the Company is £500,000, in 5000 shares of £100 each. A letter from London of the 6th November, says,—“The prospectus has been out only three days, and already 4700 shares (within 250 of the whole) are already applied for in lots of 3 to 90 shares each.”—New York Mercantile Advertiser.

The conduct of the marines on the morning of the fire and during the night of Thursday, merits all praise. They were called early in the morning of Wednesday to protect the property of our citizens. They were on duty during the whole of that day, and we are informed that it was not until evening that they received the slightest refreshment. The soldiers from Governor’s Island also deserve great credit for their deportment in protecting the property of our citizens. Their orderly but firm demeanour, their strict charge of the property left under their protection and their respectful to all, were the themes of general approval.—New York Times.

WASHINGTON GUARDS.—Frederick Wilkinson Esq. late of the U. S. Army, was on Monday night last unanimously elected first Lieutenant of this new and beautiful Corps. This selection, made by the members of the guard, shows another part of a determination to be commanded by officers in every respect worthy and capable of commanding them. A more efficient drill officer than Lieut. Wilkinson, it would be difficult to have found, nor one who more unites those qualities to endear him to his fellow soldiers, and command their respect.—New Orleans True American, Dec. 9.

MOUNT VERNON.—A fire broke out in the Green House at Mount Vernon on Thursday night, the seventeenth inst. which destroyed part of that building, besides part of the quarters. It was discovered and extinguished before the flames reached the venerable mansion—which escaped wholly uninjured. The destruction of property was not very great, and the whole damage to the Green House and other out buildings can be shortly repaired.

COMMERCIAL AND NAVIGATION.

Collector’s Office, | District of Apalachicola, Nov. 18, 1835.

To Masters of Vessels.—The subscriber takes this method of informing masters of vessels, that he has, since the loss or wreck of the brig Edwin, on the bar at the west cape of the Island of Key West, and has ascertained that the channel has materially altered, so that the bearings as given in Blunt’s Coast Pilot, do not serve, owing to the washing away of Flag Island, and that he has placed a large black buoy (which may be easily seen at the distance of five miles) immediately opposite the entrance over the bar, where the best of the water will be found, keeping the buoy close aboard on either side. The course is due north, which brings the three tall trees on St. Vincent’s Island to bear, and must be run for.—

When the survey was made, the tide was unusually low, and at which time there was 11 feet of water on the outer bar, 40 that in ordinary tides 13 feet may be found, if the above instructions are followed.

GAL. J. FLOYD, Collector.

Captain Hammond, of the ship Amethyst, arrived at New Bedford on the 22d ult. from the Pacific, reports that in passing Kelpia and Boscawen Islands, saw two reefs, one bearing N. E. distance 23 miles, the other S. W. the same distance—was informed by Capt. Wm. Swain, of ship Sarah and Elizabeth, that a rock, bearing from Boscawen’s Island, N. by E. half E. distance 27 miles, is just above water, which is not laid down in any chart.

SELECTED POETRY.

COLUMBIA’S BIRTH-DAY.

BY MISS H. F. COPE.

Air—“O, give me but my Arab steed!”

We hail Columbia’s Nat’l day, And see its glories shine. To light the votive gifts we lay At Freedom’s holy shrine!

This hallowed day our fathers gave The birth of “LIBERTY,” And, by their spirits and the glance, Avowed their country free!

They fearless then, the battle braved, And stood the haughty foe. Where light and high their banner waved, They laid Oppression low.

But, warm the noble hearts that bled, Where Freedom’s vot’ries knelt! Her Altar’s flame with life was fed Their foreign chains to melt.

In blood and death our laurels grew, With verude ne’er to cease: They shone impared with sorrow’s dew, Beside the branch of peace!

On piercing thorns our fathers trod, In this bright land of ours, To soften for their sons, the sods Now strewed with fruits and flowers.

Then, sacred be our Liberty! And may its glory beam On every wave, that man shall see, Of Time’s resistless stream!

We bid the children keep in sight The spirit of the sire— To hold the watch-tower, and to light Beside the beacon fire.

We bid the millions, who shall rise When we have passed away, With joy to hail, and ever prize Columbia’s Nat’l Day!

From the Baltimore Chronicle.

SONG OF THE AMERICAN GIRL.

Our hearts are with our native land, Our song is for her glory! Her warrior’s wish is in our hand, Our lips breathe out her story. Her lofty hills and valleys green Are smiling bright before us; And, like a rainbow sign is seen Her proud flag waving o’er us.

And there are smiles upon our lips For those who meet her foesmen, For Glory’s star knows no eclipse When sung upon by her friends. For those who brave the mighty deep, And scorn the threat of danger, We’ve smiles to cheer—and tears to weep For every ocean ranger.

Our hearts are with our native land, Our song is for her freedom; Our prayers are for the gallant band Who strike where honor leads them.
We love the taintless air we breathe,  
'Tis Freedom's endless dower,  
Who scorns a tyrant's power.

They tell of France's beauties rare,  
Of Italy's proud daughters,  
Of Scotland's lassies—England's fair,  
And nymphs of Shakspeare's vision.  
We heed not all their boasted charms,  
Though lords around them hover—  
Our glory lies in Freedom's arms,—  
A Freeman for a lover.

J. H. H.

WASHINGTON CITY;  
THURSDAY,..........................JANUARY 14, 1836.

INDIAN DISTURBANCES IN FLORIDA.—The threatening attitude of the Seminole Indians produced so much consternation among the inhabitants in the immediate vicinity, that public meetings were called in Charleston, S. C. and at Savannah, Geo. to raise volunteers to aid their fellow citizens in Florida. A requisition was also made on Gen. Eustis, the commanding officer of U. S. troops in Charleston harbor, for arms and ammunition, which were shipped in the schooner George and Mary and steamer Champion.

Gen. Clinch was at Mecincopy on the 21st Dec. with a few regulars; Gen. Call was there also and had about 500 mounted militia and volunteers. Captains Thruston and Lee, and Lieuts. Clark and Jones, of the U. S. army, were to have left Jacksonville on the 31st ult. on horseback for Fort King. Major Dade, of the 4th Infty. had been ordered to Tampa, where five companies of U. S. troops would be assembled, of which, being the senior officer, he would have the command.

The importance attached to a name is often times of more weight than the most forcible arguments from unknown or unheeded sources. The opinions of Washington will ever be held in veneration and received with deference by his countrymen. It was his decided belief, as expressed in a letter to Congress in 1776, (from which an extract will be found below,) that a train of field artillery was highly essential to the success of military operations in the field. The same opinion has been held by many officers of our army, from that day to this; but whether from motives of economy, or from the absence of apparent necessity, the recommendation has never been carried into effect. Perhaps, now that the aspect of our foreign affairs is rather unsettled, the attention of Congress may be brought to this important subject.

[EXTRACT.]  
GENERAL GREENE'S QUARTERS,  
14th NOVEMBER, 1776.

"I would therefore, with the concurrence of all the officers, whom I have spoken to upon the subject, submit to the consideration of Congress, whether immediate measures ought not to be taken for procuring a respectable train. It is agreed on all hands, that each battalion should be furnished at least with two pieces, and that a smaller number than a hundred of three pounds, fifty of six pounds, and fifty of twelve pounds, should not be provided, in addition to those we now have. Besides these, if some eighteen and twenty-four pounders are ordered, the train will be more serviceable and complete. The whole should be of brass, for the most obvious reasons; they will be much more portable, and not half so liable to burst; and when they do, no damage is occasioned by it, and they may be cast over again. The size before described should be particularly attended to; if they are not, there will be great reason to expect mistakes and confusion in the charges in time of action, as it has frequently happened in the best regulated armies. The disparity between those I have mentioned, and such as are of an intermediate size, is difficult to discern."

I have the honor to be, &c.,

GEO. WASHINGTON.

We understand, that, in consequence of some remarks contained in the finding of the Court Martial, held in Baltimore in July last, for the trial of Purser W. P. Zantzinger, Lieut. S. W. Downing has again urged his application to the Navy Department (first presented soon after the adjournment of the said Court) for a Court of Enquiry, or a Court Martial, to investigate the allegations injurious to his character, which, it is understood, were set forth in the finding above referred to.

We regret that we cannot supply several of the back numbers of the Chronicle, which have been applied for. Nos. 40 to 46 are entirely exhausted. Perhaps some subscribers who have these deficient numbers, and do not care to preserve their file, will return them to the editor. Some have already done so.

Remittances by mail will be acknowledged on the cover, to be furnished with the last number of each month.

ARRIVALS AT WASHINGTON.

Bvt. Capt. A. Lowd, 2d Art. at. Fuller's.
Lt. J. B. Magrudor, 1st "

PASSENGERS ARRIVED.

CHARLESTON, S. C., Dec. 31.—Per steampacket William Gibbons, from New York, Lieut. C. J. Whiting of the 2d Artillery, and H. Prince, of the 4th Infantry, U. S. A.
Jan. 4.—per steamboat Champsion, from Alexandria, D.C., Col. W. Lindsay, Major J. D. Graham, and Lieut. J. F. Kennedy, of the army.

NEW ORLEANS, Dec. 31—per steamboat Marion, from Pittsburgh, Lieut. G. Morris, of the army.

THE PRESIDENT'S HOUSE—NEW YEAR'S DAY.

As usual, on the first day of the year, the President opened his drawing rooms, and held a levee from 13 until 2 o'clock. Among the first who arrived were the members of the Cabinet and their Ladies; next the Diplomatique Corps; then the Senators with their families, the Members of the House of Representatives with their Ladies, and the other officers of the Government, together with the Officers of the Army and Navy, and respectable citizens and strangers. The number of carriages and handsome equipages exceeded any former occasion; and although the rooms were thronged, still there reigned that order and regularity which gave to every one an opportunity of enjoying himself on the day, and of offering to the venerable Chief Magistrate those courtesies and salutations, which suit the season, and which are reciprocated so cordially by friends and acquaintances on the return of the new year.

The President stood in the centre of the Circular Drawing Room, and there received the visi tors. His appearance was much better, as to health, than usual. Perhaps, having thrown off, for the day, the cares of State, and yielded himself to the gratification of his numerous friends, he was enlivened by the joy which his presence spread around; for although President Jackson is thoughtful, while engaged in his important duties, he is
over alive to the regards of his fellow citizens, and charmed by the courteous attentions which they and all others so willingly yielded to him.

Having stated the position of the President, we will give some account of the stations taken by his interesting family, and the Members of the Cabinet.

A little removed from the position of the President, and near the fire place, were Mrs. Jackson, the President's daughter-in-law, and Mrs. Donelson his niece, both ladies remarkable for their beauty and amiable manners; they never appeared to more advantage than on this morning. Their dresses were so appropriate to the occasion, and becoming in their colors and arrangement, that one could not see these ladies without admiring them; and it was a difficult matter to say which of the two was the most engaging. They are both good spec-
cimens of American Ladies.

The Vice President stood near the President's family. He was dressed in a plain suit of black; his countenance and demeanor were conspicuous. He received no small share of the attentions of those who were present.

The next person in consequence and in consideration is the Speaker of the House of Representatives. He also took his post near the President's family, attended by his staff. Mr. Forsyth was a man of very bland manners, dignified in his carriage, without any of that hauteur, which sometimes accompanies men lately raised to high stations. He seemed to engage much attention, and reciprocated the courtesies proffered with kindness.

Mr. Secretary Forsyth, Mr. Sec. Woodbury, Mr. Sec. Cass, Mr. Sec. Dickerson, and the Post Master General, stood in the order here mentioned in a line, or rather segment of a circle, in the rear of the President.

Mr. Forsyth is a remarkably graceful man; his manner is that of a finished gentleman.

Mr. Sec. Cass has the air of a man of thought, strongly marked features, with strong evidence of talent.

Mr. Woodbury is a man of much firmness of character, exhibiting great perseverance; he is not more esteemed for his amiable qualities as a man than for his unerring industry as an officer.

Mr. Dickerson is the very personification of goodness, tempered with justice. His sound sense and amiability carry him smoothly along and have gained for him many friends.

We did not see the Attorney General, last though not least of the members of the Cabinet; he was probably absent from the seat of Government. Mr. Butler possesses the air of a man of thought, something so intelligent and intellectual in his countenance, he is so easy in his deportment, that every person is at once taken in by his unsophisticated manner and delighted with his acquaintance.

We did not observe any but Mrs. Polk, the Lady of the house, and Mr. Woodbury. Mrs. Polk possesses a next person and is of the ordinary height; her air is graceful and her countenance indicative of mildness, ex-
cellence and intelligence.

Mrs. Woodbury is perhaps a little taller than Mrs. Polk; has a remarkably youthful appearance, with all the grace which usually accompanies a good northern constitution. Her dress was becoming and her manner attractive.

The absence of Mrs. Cass was owing to the fatigues of a large party, given at her house the evening before, taking leave of the old year and welcoming the new. A party which for numbers and brilliancy has not been surpassed in this city, ladies and ladies were dressed in a style becoming such a party, and were highly gratified in part-
taking of the gayety of that evening. A more dignified and lovely person could not be mentioned than Mrs. Cass; a perfect example of that lady-like deportment so consistent piety, which so adorn the sex; nor is there any qualification which are so highly prized by the softer sex and admired by the other.

Mrs. Forsyth, whose health is delicate, was probably detained at home by that cause. With a fine command-
ing figure, easy and graceful carriage, Mrs. F. combines many excellencies of person and mind, and shines pre-
eminently for her piety. We, however, noticed the interesting daughters of these Ladies, especially the two Misses Cass, who took their proper places, and were sur-
rrounded by some elegant young officers of the army.

The Foreign Ministers were in full costume. Among them we were glad to see Baron Krueger, whose health had been delicate, but now, by the mild climate of Wash-
ington, seems to be quite restored.

The darkness of the rooms, and the immense assem-
blage, prevented us from particularizing many interesting and beautiful Ladies, who graced the drawing room on the 1st January.

The members of Congress with their ladies, being in some degree strangers, it was difficult to ascertain the names of all; but they certainly gave by their presence a dignity to the general assemblage and added much to its brilliancy.

Among the foreigners, we noticed the Earl of Selkirk, son of the late Lord Selkirk, who visited this country some sixteen years ago, and who had so much difficulty with the Canada Fur Company, which about that time invaded his territory on the Red river. The young Earl is an unassuming and intelligent gentleman, and we were happy to meet him at the President's.

The Officers of the Army and Navy, mostly appeared in their respective uniforms. The military dress is much improved and more becoming than that heretofore worn by the line. The Commander-in-Chief of the army, attended by his aids, Majors Cooper and Van Bur-
ren, was quite conspicuous; he seems in good health, and able to stand a good number of campaigns yet.

Major Gen. Scott was also looking in fine health; as well as Generals Gibson, Jones, Wool, Gratiot and Tow-
son, and many Colonels, Majors and Captains.

We were gratified to see Commodore Rodgers out; we had understood that his health was delicate. Com. Chauncey appeared in fine spirits, as did Com. Woolsey, and several other Navy Officers. The Officers of the Marine Corps have a very splendid dress; it is a green and buff; the shape and distinctions like those of the army officers.

On the whole, the Officers of the Army and Navy gave quite an effect to the general appearance of the Levee.

The French Legation was not present, which we may suppose is indicative of some feeling on its part.

In the great Hall was exhibited the large cheese, lately presented to the President. It was put up in a case, ornamented with paintings and some inscriptions, which it was difficult to read on account of the vast number of persons it attracted.

The Marine Band played during the continuance of the Levée; the ladies and gentlemen promenaded through the several apartments, which were opened on the occasion, and the whole seemed a gala very appropriate, and went off with eclat.

* Frigates bearing flags.

We enumerate the commands of the Navy and the officers necessary to fill them. Many of the ships, though in a situation to be launched, remain yet on the stocks,— others decaying and decayed at the dock yards, and but a small proportion of the whole afloat. Hence the impres-
sion that the present number of the two higher grades of the service are adequate to all its ends; and in the which we are not provided, as the Navy is to be con-
tinued in its present disposition, and there be nothing of consideration intended to the officer who has long and faithfully served his country. But were the vessels of war belonging to the United States completed, and being under construction, called for,—and such contingencies may not be admitted as being outside of our list? Worse than deficient, and the 38 Captains and 40 Commanders, without considering relief or disability from whatsoever cause,—and for the both we must estimate,—would be found wholly unequal to its equipment. There are 51 vessels of war, exclusive of the frigates; for the squadron required 29 post Captains and 38 Commanders; beside there are 21 stations attaching to the Navy, calling for 18 Captains and 20 Commanders—making an aggregate of 101 commands: to command which there are of the grades entitling commands 78; leaving a deficit of 6 Caps and 19 Commanders, and this allowing every officer equal to his duty; which we must not suppose possible, and it is not necessary that further reasons should be given than that the Navy with other associations is equally liable to casualties. A nation whose mercantile interests rank as do those of the United States, whose bearing, whose prosperity, which depends on the protection of its commerce, its defence, should boast a Navy somewhat beyond the nar-
row limit which distinguishes ours, and which for a lengthened period has embarrassed its efficiency and once high distinction. There are ‘in extenso’ admitted to the Navy, 40 Captains and 40 Commanders,—of which the grade of Captains there are 2 vacancies for its en-
tire appointment; and for the purposes of a country hold-
ing 2000 miles of sea coast, innumerable rivers, bays, and
inlets; 15 millions of population; a trade $240-
000,000, bearing its flag to the remotest regions; more
money in the treasury than we know how possibly to distribute, have no reason to be confined in any way.
With all the which we are told: you need not promotion in the Navy,—you need not higher grades. So do we not, if it be the purpose of the nation to trample under foot, the gallant spirits who have won distinction to their flag, consideration to their country, and further to render the miserable limit both as to grades and numbers the derision of the world. Of ourselves, if we are to repre-
sent our country, which we pray to do, well and truly, let it not be upon shadow—upon pretence. Lay us up al-
together or give position correspondent to the services, with which we are daily contacting; give us the first rank can be given you will; to the very highest grades of other services; we are not less deserving. This is essential: neglect it, and lament after-
ward, the consequences. We have generals in the Ar-
my, why not admirals in the Navy? If the term Admiral be obnoxious, give us too the title of General. General of Marine would not be inappropriate; it signifies what the Navy want—rank as a naval designation: distinction, which the inferior grade of Captain does not convey. It may be said that as the rank of Captain is the highest recognised to the Navy of the United States, so must it range with the first grade of any other navy. And so with us, and at home, it may; it will not do though abroad, and it must be seen more than by ourselves, more than our own, know this to be the case, and have felt many and oftentimes the mortification and annoyance of the inferior grade so long continued to the Navy. We take, as we have a right to do, the Senior Captain of our Navy,—we have no Commodores,—than whom no naval rank so far superior; he has acquired by 37 years service in that grade and still is a—Captain. Is the nation satisfied that this officer, with others in turn following him, and whose names are associated with the brightest incidents of its glorious history, should re-
main longer as Captains? We must not—we do not be-
lieve the present system of promotion. The Navy is a melancholy truth; it needs a something stir-
ing; its officers are worn out upon expectancies; their once high esprit du corps passed and gone. If we
would call back that which of right belongs to the Navy—
if we would fill its offices with the spirit and pride es-
cessary to the protection of our shores, and keep the Navy to grades and numbers. Send afloat the fine ships, which for years have remained to rot at our wharves. Our own
situation, the condition of the world forces upon us the
firmest conviction, that we shall have to do with as much
in this way, as under any circumstances we can hope to
defend our country. How then, considering the new and
earlier state of our lists? Worse than deficient, and the 38 Captains and 40 Commanders, without considering relief or disability from whatsoever cause,—and for the both we must estimate,—would be found wholly unequal to its equipment. There are 51 vessels of war, exclusive of the frigates; for the squadron required 29 post Captains and 38 Commanders; beside there are 21 stations attaching to the Navy, calling for 18 Captains and 20 Commanders—making an aggregate of 101 commands: to command which there are of the grades entitling commands 78; leaving a deficit of 6 Caps and 19 Commanders, and this allowing every officer equal to his duty; which we must not suppose possible, and it is not necessary that further reasons should be given than that the Navy with other associations is equally liable to casualties. A nation whose mercantile interests rank as do those of the United States, whose bearing, whose prosperity, which depends on the protection of its commerce, its defence, should boast a Navy somewhat beyond the nar-
row limit which distinguishes ours, and which for a lengthened period has embarrassed its efficiency and once high distinction. There are ‘in extenso’ admitted to the Navy, 40 Captains and 40 Commanders,—of which the grade of Captains there are 2 vacancies for its en-
tire appointment; and for the purposes of a country hold-
ing 2000 miles of sea coast, innumerable rivers, bays, and
inlets; 15 millions of population; a trade $240-
000,000, bearing its flag to the remotest regions; more
money in the treasury than we know how possibly to distribute, have no reason to be confined in any way.
With all the which we are told: you need not promotion in the Navy,—you need not higher grades. So do we not, if it be the purpose of the nation to trample under foot, the gallant spirits who have won distinction to their flag, consideration to their country, and further to render the miserable limit both as to grades and numbers the derision of the world. Of ourselves, if we are to repre-
sent our country, which we pray to do, well and truly, let it not be upon shadow—upon pretence. Lay us up al-
together or give position correspondent to the services, with which we are daily contacting; give us the first rank can be given you will; to the very highest grades of other services; we are not less deserving. This is essential: neglect it, and lament after-
ward, the consequences. We have generals in the Ar-
my, why not admirals in the Navy? If the term Admiral be obnoxious, give us too the title of General. General of Marine would not be inappropriate; it signifies what the Navy want—rank as a naval designation: distinction, which the inferior grade of Captain does not convey. It may be said that as the rank of Captain is the highest recognised to the Navy of the United States, so must it range with the first grade of any other navy. And so with us, and at home, it may; it will not do though abroad, and it must be seen more than by ourselves, more than our own, know this to be the case, and have felt many and oftentimes the mortification and annoyance of the inferior grade so long continued to the Navy. We take, as we have a right to do, the Senior Captain of our Navy,—we have no Commodores,—than whom no naval rank so far superior; he has acquired by 37 years service in that grade and still is a—Captain. Is the nation satisfied that this officer, with others in turn following him, and whose names are associated with the brightest incidents of its glorious history, should re-
main longer as Captains? We must not—we do not be-
lieve the present system of promotion. The Navy is a melancholy truth; it needs a something stir-
ing; its officers are worn out upon expectancies; their once high esprit du corps passed and gone. If we

new infantry tactics.

No. II.

In my last number, the history of American tactics was brought down to the present year, and the last resolution of the House of Representatives on the subject, which was that our system should be made to embrace "the recent improvements," in this branch of military science.

It was then made a point of inquiry, that a similar labor had, but a short time before, been executed in France with infinite care and admirable success, and this, too, on the precise basis already long familiar to our army. To preserve to us all the benefits of this old experience, the French book—even if it had not been known to be the original from which the preferable model. It has accordingly been selected, that was written in another language, with such alterations in the text as were indispensable to adapt it to the particular constitution of our infantry.

I shall now proceed to give the reasons for the revision in France, of 1831, as they are methodically developed in the Report addressed to Marshal Soult by the Commission (or Board) under the eye of which the work was, by its able author, digested and finished. The same reasons will be found equally to apply to nearly all the points of difference between our book of the present year, and that of 1825. The Report is rather long, but I hope to compress it, with some current remarks, into a convenient compass.

"The Commission, charged with the revision of the ordinance of August 1, 1791, concerning the exercises and maneuvers of infantry, being in accord with the whole army on the merits of the system, saw, from the beginning, that there was nothing to change in its plan and substitution, and could not supped to give a little more extension to some of the maneuvers generally regarded as incomplete; to suppress others, long acknowledged as impracticable in the field; and to replace the latter with such as our last wars had caused us to feel the want of.

"Such are the grounds on which the Commission established its labor. It had thought that it was not sufficient that troops should be able to move in all directions; but, moreover, that the movements should be made by means the most certain and prompt; provided that such means were neither forced nor complicated; and all the changes which have been made tend solely to this end.

"TITLE I. ARTICLE I.—Formation of Infantry, &c.

"The Commission, without adopting exclusively, the three-rank formation, has thought it necessary to preserve it as the habitual order of depth, because it is infinitely (infinitely) more solid than that of two ranks, and for this reason inspires the soldier with greater confidence: besides, it throws more lead from a given front, and the men of the third rank are always at hand to replace those of the second and first. Nevertheless, as the formation in two ranks gives the means of extending an arm, and consequently of attacking at the side of the enemy, the Commission has prescribed rules for passing from three to two ranks, and reciprocally, to the end that, in all cases, a commander may take that of the two formations which he may believe to be the most advantageous.

"Such the Report, which is supposed to be fully carried out by this short and single provision in the body of the French book: "Each company shall be habitually formed into three ranks;" and not another word is said of the other formation, except where the manner is prescribed of passing from three to two, and from two to three ranks, and also under the head of stacking arms.

Now if a company be at liberty, at all times, under the French text (I do not include the case of these men into two ranks, so may he take the same formation under a similar provision, No. (paragraph) 15, of our new tactics. In the latter, a bare preference is intimated for the one or other formation according to the strength of companies; but such preference is no barrier against special views and reasons, or the particular circumstances of the case which he may always justifiably plead under a rule so designedly framed. The matter, in all cases, is, therefore, by the American book, almost entirely left to the full discretion of the commander.

In peace, the French book of 1791 permitted the two-rank formation, in 1811, and said that exercises shall be frequent in the order of three deep," and prescribed the manner of forming a company in that order; but the first book had no details for two, and the second not one, beyond what is mentioned, for the three-rank formation. The French tactics of 1831 is, as we have noticed, equally barren in respect to two ranks, whereas our new book, by a skilful contrivance, and with infinite labor of precision, throughout supplies the omissions, and this too, without augmenting the number of pages beyond three or four. That labor, however, is nothing to the reader. He sees at once, in every place, and without confusion, whatever is peculiar to the one or other formation.

And where is the vice of an arrangement at once so simple and complete? Or why shall a commander, in presence of the enemy, not be allowed, under a sound discretion, to increase the solidity of his line by a slight
diminution of its front, seeing that victory depends on the measure. To deny him the option would be as mischievous absurd as to prescribe that attacks shall always be made in line, and never in column. Yet this discretionary depth of three-ranks has excited much prejudice against the front, of which the battalion in front are nearer the enemy, and is, as it seems, accursed with more or less of bigotry, and the military has certainly its portion, ever ready to direct itself against changes in general. I speak, of course, of the weaker brethren—of those who are "rather of the profession, than of the science of arms."

The question then is, whether the advantage of the long firing, and the greater depth of the line, is sufficient to overcome the disadvantages of the three-ranks. This is the subject of the controversy between l'ordre mince et l'ordre profond, which, commencing about the year 1740, agitated every army in Europe. Follard, Maizery, Mesnil-Durand, and a host of others of the same school, hotly contended for the habitual order of masses, after the manner of the Macedonians and Romans. Ho Lloyd urged four ranks. At length Guibert, by a decisive work—Defence du Systeme de Guerre Moderne—settled in 1779, the question in favour of three, as previously established in several armies, and which depth has maintained its ground, throughout the continent of Europe, down to the present day.

The objection, in the United States, to a discretionary third rank, can only be referred to a want of experience. The lamented General Pike, and others, in the late war, occasionally drew up their troops in the greater depth. Their example is forgotten; yet a little reflection, it would seem, might supply the want of actual experience.

There is no mystery—"art untaught and unteachable,"—in one formation more than in the other. Instruction in the greater depth includes instruction in the smaller. The former being well established, a single exercise in two ranks will generally be sufficient. Not a lesson, therefore, given to three ranks, would be thrown away, although the depth of the enemy was no greater than that of the third rank. In short, the main difficulty, in both formations, is with the front rank. The men in the other ranks have the easier task of conforming themselves to that. This is equally true whether it be a perpendicular or oblique march by the front; whether it be a march by the flank, a wheel or a turn. In all, the third rank has rather an easier part than even the second; because it is better to have two objects to regulate one's self upon than a single object.

The ranks in the rear, however, have one small difficulty entirely to themselves: each is expected, in the main, whether in line or column, to lock up with the rank immediately preceding; but this difficulty is precisely the same with the second, as with the third rank. And if an entire battalion be required and expected, as in all the books—French, English, American, &c.,—to march by the flank in the lock-step, why not also do the same thing to the rear, where the same kind of levies formed two deep, and to the same extent. The only remedy is, that suggested above—keep both regulars and militia out of battle till they shall at least be a little instructed. But it is time to return to the Report of the French Commission.

The formation of three ranks prescribed by the ordinance of 1791 is unfavorable to the fire of two ranks, [or by file, that principally used in battle.] The Commission, to avoid that inconvenience, has established, [the following]: the three tallest men form the first file, the three next in height the second file, and so on to the left, [of the company] which is closed with the three shortest men. This mode of forming companies, followed in the new American book, is objected to by Clairfait, because, when the battalion is drawn up in line of battle, the line of heads will resemble the teeth of a saw—the left flank of the right company, consisting of its shortest men, being in contact with the right flank of the next, consist-
of its tallest, and so on, at the junction of every two companies, towards the left. And who cares for this appearance, if important advantages are obtained by the formation? The principal of these will be found in the friction and the charge of the bayonet. Each file, consisting of the same height, may be used with greater ease and effect. And with a view to the same objects a slight change from the French book is made, so as to form the company (from one rank) by a movement to the left instead of the right. In this way, the little difference in height, in the same file, is, always in favor of the man on the extreme left rank over the front rank man, and the same between the rear and centre ranks, in the case of three. Another reason for having the men of the same file as nearly of the same height as practicable, is this: In the school of the Kinnicutt and evolutions of the line, all movements may be made with the first or third rank, leading, indifferently. Clairfait objects, also, to the formation of the company by a movement to the left; because it throws any broken file on the right. Refer to Nos. 425 and 487, of the book, for shifting corporals, (not to mention No. 424,) and the objection vanishes. In going on with the part of the subject, Clairfait cannot, for the soul of him, find out why the ranks are placed just thirteen inches—no more, no less, from each other! The fool in Leer profoundly remarks—"The reason why the seven stars are not more than seven, is a petty reason:" an enigma which, probably, but for the reply given, the writer critic never will be solved. Now they (the ranks, and not the stars) would, we doubt, have been brought into contact with each other, but for the absolute necessity of leaving sufficient space for the use of "those vile things, called guns," which some vile person invented and brought into use, not only to destroy, but, it seems, to puzzle "in every tall fellow," whose life and brains might otherwise have been preserved from harm.

A plainer statement of the whole matter, is this: The French, upon the experience of more than fifty years, had perfectly satisfied themselves that an interval was a sufficient interval to allow a rear rank the free use of their firelocks, and as (for other reasons) it was important not to increase that distance beyond the absolute necessity of the case, the translator, who perhaps has a contempt for the decimals of an inch, boldly rendered the two words into thirteen inches American.

Another point, to try the patience of the reader. The distances, between ranks, should be measured from heel to heel; but as it is a most awkward thing to compel men in the ranks to stoop down to find that part of their own feet, the American book has followed the French, and takes distances from breasts to knuckles.

HINDMAN.

PROCEEDINGS OF CONGRESS,
IN RELATION TO THE ARMY, NAVY &c.

IN SENATE.

MARCH 4, 1836.

The CHAIR communicated a report from the Navy Department, containing, in compliance with the provisions of the act of March 3d, 1809, an abstract of Expenditures, under the contingent head of said Department for the last year.

Mr. LEIGH presented the petition of the representatives of the late Commodore Thompson, praying for certain allowances in his accounts, which were disallowed him at the Navy Department, on the ground of his having made certain diplomatic services rendered by the deceased. 

Resolved, that the first prayer of the memorial to the Committee on Naval Affairs, and the second prayer to the Committee on Foreign Relations.

TUESDAY, JAN. 5.

Mr. RUTHERFORD submitted the following resolution, which was considered and adopted:

A proposition of War to be requested to the Senate, the survey and plan of West Torrens harbor, in Maine, together with the estimated expenses of contemplated improvements therein, made pursuant to a resolution of the last Congress.

WEDNESDAY, JANUARY 6.

Mr. BENTON presented a communication from Col. Rankhead, Captain Washington, and Lieut. Vinton, a committee of one of the States, on the subject of the uniform scarlet dragoon's coat, and the attention of Congress, in order to effect the uniform system of uniform for the Army and Navy of the United States.

On motion of Mr. BENTON, it was referred to the Committee on Military Affairs.

THURSDAY, Jan. 7.

The bill from the House, making appropriations for suppressing hostilities, commenced by the Seminole, was read twice and referred.

MONDAY, Jan. 11.

The Chair announced a communication from the War Department, covering a report from the Second Auditor on the contingent expenses of the military establishment for last year.

Mr. WSHERMAN, from the Committee on Finance, to which it had been referred the bill making appropriations to suppress hostilities commenced by the Seminole, reported the same with an amendment, which was read, and the bill was, by general consent, ordered to be engrossed for a third reading.

Mr. BENTON submitted the following resolution, which lies on the table one day.

Resolved, That the President be requested to cause the Senate to be informed—

1. The probable amount that would be necessary for fortifying the lake, the gulf, and gulf of the United States, and such points of the land frontier as may require permanent fortifications.

2. The probable amount that would be necessary to construct the adequate number of armories, arsenals in the United States, and to supply the States with field artillery, especially brass field pieces, for their militia, and with side arms and pistols for their cavalry.

3. The probable amount that would be necessary to supply the United States with the ordnance, arms, and munitions of war, which a proper regard to self-defense would require to be always on hand.

4. The probable amount that would be necessary to place the naval defense of the United States (including the increase of the navy yards, dock yards, and steam or floating batteries) upon the footing of strength and respectability which is due to the security and to the welfare of the Union.

Mr. SOUTHWORTH read the following resolutions, which lie on the table one day.

Resolved, That the Secretary of War be directed to communicate to the Senate the report of the Engineer on the subject of deepening the bar at Pensacola bay, with the opinion of the Department as to its utility and practicability.

Resolved, That the Committee on Naval Affairs be instructed to inquire into the expedience of the establishment of a station for deepening the bar at the entrance to Pensacola bay, so as to admit vessels of war of the largest class—and further to inquire into the expedience of constructing a dry dock or marine railway for the repair of vessels of war at the navy yard at Pensacola.

HOUSE OF REPRESENTATIVES.

TUESDAY, JANUARY 5, 1836.

Mr. CAMBRELLING, from the Committee on Ways and Means, reported the following bill, which was read twice, and committed:

A bill making appropriations for the current expenses of the Indian Department, and for Indian annuities and other similar objects for 1836.

Mr. PARKER, from the Committee on Naval Affairs, reported the following bills, which were read twice and committed:

A bill concerning pensions payable out of the Navy Pension Fund; and

A bill for the relief of Samuel W. Ruff, as a seaman, by the Select Committee raised on the subject, reported a bill to carry into effect a resolution of the Congress of 1776, to erect a marble column at Yorktown, in Virginia; which was read twice and committed.

The Speaker laid before the House the following communications:

A report from the Secretary of the Navy, in pursuance of the act of the 3d March, 1809, embracing an abstract of the expenditures under the departmental head of said Department, which was laid on the table and ordered to be printed;

A communication from the Secretary of War, in relation to the condition of ordnance and ordnance stores—laid on the table and ordered to be printed.
Mr. Thomson, of Ohio, from the Committee on Military Affairs, reported a bill to authorize a compromise and settlement of the controversy between the United States and the Seminole Indians, in the State of Delaware; which was read twice and committed.

Mr. R. M. Johnson, from the Committee on Military Affairs, reported a bill to authorize the Quartermaster General to employ additional clerks and a messenger in his office; which was read twice and committed.

The following bills from the Senate were read twice and committed:

A bill for the relief of Henry B. Tyler, executor of Col. Richard Smith;

A bill to extend two patents to James Barrett.

Mr. Sutherland, from the Committee on Commerce, reported a bill making an appropriation for the erection of a Marine Hospital in the city of Baltimore, which was read twice and committed.

Mr. Pearce, of Rhode Island, from the Committee on Commerce, reported a bill making an appropriation for a Marine Hospital at Portland, in the State of Maine, which was read twice and committed.

Mr. Young, from the Committee on Military Affairs, asked to be discharged from the further consideration of the petition of sundry citizens of the town of Coventry, in the State of Connecticut, praying for the appointment of Capt. Nathan Hale, of the revolutionary army. Mr. W. stated that the committee were of opinion that they possessed no jurisdiction of the matter referred.

Mr. Young moved that the petition of the citizens of Coventry be committed to a select committee, and in support of that motion proceeded to remark, that this petition came from nearly five hundred of his fellow-citizens, who were, therefore, interested in the character of the man referred to; and that he had heretofore referred to the Committee on Military Affairs; and that Committee had come to the result, that the subject of the memorial did not necessarily fall within their jurisdiction. The motion was now made to refer the matter to a select committee, upon the idea that there was no standing committee organized by the House, to whom the same could be appropriately referred.

It was indeed matter of surprise to a request so reasonable, should there be one objection heard: when the question should be understood, he was sure that all such objections would be withdrawn.

Capt. Nathan Hale, of the State of Connecticut, a brave officer, of marked abilities, was admitted by his ardent patriotism, entered the army, and was entrusted with a Captain's Commission, and during that glorious struggle, General Washington requested the service of some officers to ascertain the movements of invading armies; when the movements of that army were essential to the existence of the American Army. No officer could be found to perform this delicate and hazardous service, until Captain Hale had become a volunteer in the cause. He died a hero in the cause.

No notice had ever been taken of that event by the Government. It was due to the honor of the Nation, that it should now be done, and this was the object of the petitioner. The Congress had ordered a monument to be erected over the remains of the lamented General Brown, at the expense of the United States. Every American approved the course, and it might now be asked, was not this a case of equal moment?

Should the reference be made, it would be competent for the Committee to report on the special prayer, or they might refuse it on the ground of incorrelation to their care, the continuance of the quarrel of his Father's, the remains of Capt'n Hale—or to extend to his heirs at law, the benefits of the resolution of 1789.

The house should not be now detained further on the merits of the question, but when the Committee should have reported, it should then be his business, to show to this House, that these petitions must not be sent away unheeded.

The following resolution, hereof offered by Mr. Mason, of Ohio, was considered and agreed to:

Resolved, That the Secretary of War be instructed to communicate to the House of Representatives, the report of the joint examination made by the order of Congress, approved March 3d, 1835, by Captains Canfield, under the direction of the War Department, of the line of the National road between Springfield, in the State of Ohio, and Richmond, in the State of Indiana; and that he further report whether the President of the United States has approved or disapproved of the same.

The Cmrs laid before the House a letter from the Secretary of the Treasury, transmitting 278 copies of the Navy Register for the year 1836, laid on the table and ordered to be printed.

ORDERS OF THE DAY.

On motion of Mr. Camblin, the House resolved itself into a Committee of the Whole on the state of the Union, Mr. Conklin in the Chair.

On motion of Mr. Camblin, the Committee proceed to consider the following bill:

A bill making appropriation for suppressing hostilities commenced by the Seminole Indians.

Be it enacted, That the sum of $1,000 be and the same is hereby appropriated, out of any money in the Treasury not otherwise appropriated, for the expenses attending the repression of hostilities, commenced by the Seminole Indians in Florida.

A communication from the Secretary of War on the subject was read, when

Mr. Camblin briefly adverted to the deprivations committed by the Seminoles—their having laid waste and desolated the country for eighteen years.

Mr. Vinton inquired whether the gentlemen from New York was in possession of any information as to the cause of this war, or who commenced it?

Mr. Camblin said that the Seminole Indians had never received a package of documents containing the desired information. The disturbance had grown out of a treaty with the Seminoles, the execution of which had been postponed, from time to time, until the tribe had determined to remove, two of their own chiefs had been murdered by themselves, &c. The gentleman from Ohio could examine the correspondence in his possession, and more accurately to satisfy himself on that subject.

Mr. Vinton inquired when the treaty alluded to was made? He did not wish to delay the passage of the bill, but if it was the treaty of 1825, or 1834, it was his intention to move for information on the Union and States to carry that treaty into effect.

Mr. Camblin adverted to the necessity of speedy action upon this subject. The war was progressing. Florida had been invaded by several thousands in the late move, and only opposed by about two hundred troops. Unless speedily repressed, they would probably make inroads upon the State of Georgia. If the gentleman from Ohio desired to raise a question or a debate upon the treaty, he could select another opportunity, without embarrassing the present measure.

Mr. Adams moved to amend the bill by providing that the sum appropriated should be expended under the direction of the Secretary of War. The bill he considered rather indefinite in its terms. The appropriation in this bill was the same in principle with that of the $3,000,000 appropriation of the last session. He would ask the House if it had been yet expended? Was it for the purpose of raising an army?—Congress alone had that power. It was intended to confer upon the President a power which the constitution had reserved exclusively to Congress? If that was the intention of the present bill, he should be constrained reluctantly to vote against it. He adverted to the fortification bill of the last session, in which was contained an appropriation of $3,000,000. He had voted for the bill upon the principle which has always prevailed and about which there was not doubt, that however indefinite might be its terms, there was no authority to expend a single dollar of it unless Congress itself saw fit to command it. The Seminole war was an extraordinary and a temporary one, to an appropriation on the ground, as he understood, that it had placed at the discretion of the President $3,000,000 without prescribing by law the manner in which it should be expended. If that was the intention of the Committee of Commerce, he would support a compromise—a compromise was agreed upon—the appropriation was reduced and its terms were not so indefinite, thereby strengthening the belief that the object of the Senate was that which he had stated, if on the subject.

In conclusion, he trusted that the amendment which he had uttered should be adopted.

Mr. Camblin briefly replied to some of the remarks of the gentleman from Massachusetts. He had no objection to the amendment which had been proposed.
The amendment was then agreed to, and the bill passed.

The committee then rose and reported to the House the bill making partial appropriations for the support of Government for the year 1856, and the bill making appropriations for suppressing insurrections on the part of the Seminole Indians.

The amendment to the latter bill was concurred in, and the two bills were ordered to be engrossed and read a third time tomorrow.

THURSDAY, JANUARY 7.

On motion of Mr. White, of Florida, the House took up the bill making appropriations for roads and canals, and the bill making appropriations for the improvement of the Mississippi river, which was read the third time and passed.

On motion of Mr. Toucey, it was Resolved, That the report of the Secretary of War on the claims of citizens for services of militia and disbursments, made during the late war with Great Britain, made in obedience to the order of the House of Representatives of the 6th January, 1832, and the letter of the Secretary transmitting the same, be referred to the Committee on Military Affairs, with instructions to inquire whether any and what further legislation may be necessary for the adjustment and settlement of said claims.

The resolution was then submitted to the House and passed.

Challenger, That the resolutions of the House transmitting the same, be referred to the Committee on Military Affairs, with instructions to inquire whether any and what further legislation may be necessary for the adjustment and settlement of said claims. Mr. Challenger moved the following resolution, which was passed:

Resolved, That a select committee of nine be appointed to inquire into what amendments, if any, are expedient to be made to the bill for the improvement of the Mississippi river, at St. Louis, the State of New York, and also, in the expenditure of modifying the organization of said institution, and whether it would not comport with the public interest, to abolish the same, with power to report by bill or otherwise.

On motion of Mr. Jones, of Michigan, it was Resolved, That the Committee on Roads and Canals be instructed to inquire into the expediency of providing by law for the improvement of the navigation of the Mississippi river, from the mouth of the Des Moines river, in the Territory of Michigan, to Fort Crawford, Prairie du Chien, in said Territory. And that the same committee be instructed to inquire into the expediency of making appropriations in money and in land for the opening and constructing a macadamized or other road from the Mississippi river, through the United States Lead Mines, in the Territory of Michigan Territory, to Milwaukee Bay, on Lake Michigan.

On motion of Mr. Jones, of Michigan, it was Resolved, That the Committee on Commerce be instructed to inquire into the expediency of passing an act to exclude light vessels on navigable waters at the mouth of Detroit river, and the mouth of Saginaw river, at Lake Huron, at Chippewa, or Fox Point, or the Straits of Michilimackinac, and for landing at Kalamazoo and Milan rivers of Lake Michigan.

On motion of Mr. Jones, of Michigan, it was Resolved, That the Committee on Commerce be instructed to inquire into the expediency of constructing a dry dock at or near the Navy Yard at Mobile, Alabama, and the recommendation in the report of Captain Chase of the Engineer Department, so as to admit the passage of vessels of war of the largest class.

On motion of Mr. Jones, it was Resolved, That the Committee on Public Works be instructed to inquire into the expediency of making an appropriation for the construction of a military road from Fort Grant to the mouth of the St. Joseph river, and for the protection of the commerce on the lakes.

MONDAY, JAN. 11.

Mr. Gunter Lee said it was well known by a very large number of the House that the works on the fortifications had been stopped during the last year for want of appropriations to carry them on. It was also known that early appropriations were necessary to enable the War Department to proceed with the works. The bills of Ways and Means have laid on the table bills appropriating moneys for those purposes, which may be taken up at any time. He would, therefore, suggest to the Chairman of that Committee the propriety of taking up these bills at an early day.

Mr. Cammell said he rose at the same moment his colleague did, to announce to the House, under instructions from the Committee of Ways and Means, that he should with permission of the House, call up the bills making appropriations for the army and navy, to-morrow, at one o'clock. The committee would have called up these bills to day, but some further communications were expected from the Department.

As regarded the other bill about which his colleague had inquired, Mr. C. hoped the presentation of petitions would not take up the whole day; and if it did not, the bill, in its present shape, would not, he was quite sure, encounter any opposition, and there was time, he should call it up to day, and he trusted it would be passed.

Mr. Lee, of New York, said he was perfectly satisfied. He only wished to call the attention of the House to matters of more importance than any other before it.

Mr. Jarvis, from the Committee on Naval Affairs, asked the consent of the House to present a resolution.

Object being made, Mr. Jarvis moved to suspend the rule, which was agreed to.

Mr. Jarvis then submitted the following resolution:

Resolved, That the Committee on Naval Affairs be instructed to inquire into the expediency of increasing the naval force in early years.

The resolution was discussed by Messrs. Wise, Jarvis, Glasscock, Hammond, Hawes, McKeon, Reed, Miller, Greenwell, Everett, Lane, and Peirce of R. I., and adopted—Years 1856–58.

TUESDAY, JANUARY 12.

Mr. Johnson, from the Committee on Military Affairs, reported the following bills, which were committed to a Committee of the Whole on the state of the Union; and, together with the reports and documents accompanying the same, ordered to be printed:—

A bill making an appropriation for collecting materials preparatory to the commencement of certain fortifications; and,

A bill for the better organization of the corps of Topographical Engineers; and,

A bill authorizing the Chief Engineer to employ clerks and a messenger.

Mr. Johnson gave notice that he would call up the first named bill on Thursday next.

Mr. Parker, from the Committee on Naval Affairs, reported a bill to establish rations for the Navy, which was read twice and committed.

Mr. Ingersoll, from the Committee on Ways and Means, reported a bill making appropriations for the Military Academy of the United States for the year 1856.

On motion of Mr. Zane, of Ohio, it was Resolved, That the Committee on Naval Affairs be instructed to inquire into the expediency of establishing a Naval Depot in Charleston Harbor.

On motion of Mr. Jack, of Rhode Island, it was Resolved, That the Secretary of War be directed to communicate to this House the survey and estimate of Lieutenant T. S. Brown, of the Corps of Engineers, of the work proposed to be constructed at the eastern termination of Lake Erie, for the protection of the commerce on the lakes.

The Speaker laid before the House a letter from the Secretary of War, transmitting a report of the Second Auditor on the contingent expenses of the Military Academy for 1856, laid on the table and ordered to be printed.

THE ARMY.

Jan. 6.—1st. Lieut. J. R. Irwin relieved from duty in the Engineer Department, and ordered to join his company.

Jan. 8.—Lieut. S. Barber, 1st. Infy., assigned to duty at the Military Academy. 

Jan. 9.—Lt. Col. J. Bankhead, 2d Arty., ordered to proceed to Fort King and report to Brig. Gen. Cleish, for field duty with the troops serving in Florida. 

Jan. 11.—Bvt. Capt. A. Lord, 2d Arty., assigned to duty in the Ordnance Department. 

Bvt. Capt. C. Ward, 4th Arty., will be relieved on the 1st March from duty in the Ordnance Department, when he will join his company.

NAVY.

Passed Asst. Surgeon Geo. Blackman has been relieved from duty at the Naval Hospital near Norfolk, Va., and Asst. Surgeon J. C. Mercer ordered to supply his place.
ARMY AND NAVY CHRONICLE.

Purser T. Winn relieved from duty at the Navy Yard, Washington, at his own request, on account of ill health, and Purser G. C. Cooper ordered to supply his place.

REIGNATION.

MARRIAGE.

On the 8th ult., at Berea, Prizer William county Va., Lieut. JAMES S. DAVIS, of the 4th Arty. U. S. Army, to Miss FRANCES A. T. daughter of the late Dr. BERRY, of Frederick County, Va.

DEATHS.

In Washington, on the 7th inst., Captain JOSEPH L. KUHN, aged 43 years, formerly Paymaster of the Marine Corps.

On the 13th inst., Captain RICHARD BACHE, of the Ordnance Corps, Commandant of the U. S. Arsenal at Greencastle's Point.

Seldom have we to commit to the pages of obituary a name more earning than that of Lieut. AUGUSTINE F. SEATON, 7th Regiment U. S. Infantry, who departed this life at Fort Gibson on the evening of Friday Nover. 20th, in the twenty-sixth year of his age.

"When o'er the buds of youth the death-wind blows And blight the fairest, when our brightest tears Stream as the eyes of those who love us close, We think on what they were with many fears, Lost goodness die with them and leave the coming years."

Thus has perished amongst the young—"the beautiful"—the brave, ere his buds of hope had blossomed, and his flowers full time ripened to full maturity.

Liet. SEATON obtained the germs of the affection from which he died, during the last summer, whilst in the discharge of his duty in a most ardent service. About the middle of June he was sent to proportion the Dragoons, then 180 miles S. West from Fort Gibson; and at the same time to make a road to their camp. The weather during the greater part of the Expedition was rainy, and the streams in consequence so much up that the whole command might be said to have had scarcely a dry garment for nearly a month. It was detained eleven days on the left bank of Little River, on a ridge, not more than one hundred yards by fifty, completely surrounded by water. Here numbers fell sick, and among them the lamented object of our notice. On his return to Fort Gibson, our friend, yet scarcely convalescent from fever, was again detailed for the Prairies. After an effort to accompany the forces he found himself unfit and obtained leave to return. The bow had been sprung, and the barb of Death was now ranking in his vitals! If for a moment Health would let him, he would go to her respose, it would be transient—the weariness of the officers and the insuburability of Fort Gibson, precluded the possibility of his recovery. After suffering repeated attacks of disease he gradually fled away into the regions of eternal reposse.

Farewell beloved one! The muffled drum has told the last that remained of mortality in AUGUSTINE F. SEATON. Beloved whilst living, thou hast been respected in death. Thy companions in arms mingle their sorrows with those of thy bereaved relatives—thy memory remains in their recollections; though thou art passed over the valley and shadow of death never to return. Beloved one, farewell!

M.

In Newburyport, Mass. JOHN THURSTON, M. D., aged 47, late of the army.

At the Marine Barracks, near Portsmouth, N. H., on the 20th ult., MARY QUINCY WATSON, of typhus fever, aged 18 years and 11 months, 3d daughter of Col. S. E. WATSON, M. C.

At the Portsmouth Navy Yard, LEONARD, son of Lieut. J. R. JARVIS, of the navy.

At Morses Cottage, the residence of his father, near Fred. Pauling, Mass., the 20th ult., ROSEBY, the eldest son of Lieutenant R. D. THOMAS, of the U. S. Navy, in the fifth year of his age.

At Fort Trumpull, New London, Conn., on the 30th ult., MARY MORRIS, aged 15 months, daughter of L. W. MORRIS, U. S. A.

REVOLUTIONARY SOLDIERS AND PATRIOTS.

In Woburn, Mass. 8th ult., Mrs. DAVIS, aged 85. She dropped down and died instantly, while returning to bed; and on the 11th ult. NATHANIEL DAVIS, her husband, 76, a revolutionary pensioner. On the 19th April, 1776, he resided at Concord, Mass., with his parents, and though a boy and forbidden by them, he stole away, with an old gun, and went to carry his portion of the British at the North Bridge, and followed them towards Cambridge, and thereafter served several terms in the artillery in the revolutionary war.

In Gardner, Me., Mr. HUGH COX.

In Columbus, W. Va., Capt. SAMUEL ODORNE.

In Holliston, Mass., 14th Feb., MRS. L. L. LELAND.

In Lebanon, Me., MR. GEORGE FALL.

NOTICE.

PROPOSALS will be received at the Office of the Commissary General of Purchases of the U. S. Navy, Philadelphia, for making Army Clothing for the year 1856, as hereafter enumerated, viz.:

Costs of all kinds for the several Regiments.

Woolen Jackets, with sleeves, for Artillery, Infantry, &c.

Woolen Overalls, for Art. Inf. and Dragoons, for sergeants and privates.

Cotton Overalls, with sleeves, for sergeants and privates.

Cotton and Flannel Shirts, for sergeants and privates.

Drawers of Canton Flannel, &c.

Great Coat for Artillery, Infantry and Dragoons.

The Garments will be delivered at the Arsenal, near Philadelphia, cut out, with the necessary trimmings, and are to be returned there, when made up, for acceptance and payment.

Patterns of all the garments may be examined at the Commissary General's Office. On these pattern garments exhibited the contracts will be founded and inspected made, and no garment will be received and paid for that do not correspond in workmanship, and in every other respect, to the pattern on which a contract shall be founded. The garments are to be delivered in equal quantities monthly, and in equal proportions of sizes to be designated, and all contracts are to be signed in the Commissary General's Office, on or before the first day of July, 1856.

Those who propose may offer for a given number of each garment. No advances will be made. Security will be required for the faithful fulfillment of contracts both as to size and workmanship, including the risk of injury to garments delivered.

The proposals must be in writing, sealed, and endorsed "Proposals for Making Army Clothing," and must be received on or before the first day of February, 1856. Commissary General's Office, Philadelphia, Dec. 26, 1855.

E. OWEN, Commissary General of Purchases.

E. OWEN, Merchant Tailor, near the Seven Buildings, and also a door west of Fuller's Hall, WASHINGTON CITY.

Begn leave most respectfully to inform his NAVAL and MILITARY friends, and the PUBLIC in general, that he has just received a very large supply of fashionable WINTER GOODS, consisting of

WOOLLEN CLOTHS, CASSIMERS, VESTINGS, &c.

Which for quality and lowness of prices, he feels confident, will be found to be equal to any in the United States. E. O. would respectfully solicit the attention of gentlemen belonging to the ARMY AND NAVY, to his superior mode of fitting uniforms, which, for material and workmanship, cannot be surpassed by any house in the Union. He is constantly on the watch for the publication of articles, as used in the dresser of both services, and which he is determined to sell at a lower rate than the same articles can be procured for, in any of the Atlantic cities. He has also just received a quantity of GREEN FELT, particularly adapted to the dress of the Marine Corps, (as a very rare article,) to which he would invite the particular attention of such gentlemen, who belong to that corps, as it will be found to be a very superior material.

All orders received from distant parts of the country (containing a draft or suitable reference) will be as punctually attended to, as though the party ordering were present, and will be forwarded with the strictest confidence.

E. O. embraces the present opportunity of tendering his sincere acknowledgments to those gentlemen who have already favored him with their commands, and humbly solicits a continuation of those favors, for which he will ever feel grateful.

Jan. 7th.
SIEGE OF NEW ORLEANS.

[CONTINUED.]

It is, at all times, difficult graphically to describe the operations of a battle—to trace the combination of the movements, to present to the reader distinctly the prominent and subordinate parts of the action. But we cannot forbear expressing our sentiments and approval of the mode which the officers used in attacking Fort Jackson. With their usual sagacity, and above all to avoid the confusion so closely connected with an attempt to narrate, in succession, circumstances occurring simultaneously. And the task is still more discouraging, when the confusing officers mingled in the mêlée, instead of carrying on their operations agreeably to the principles of scientific warfare. We shall merely give the features of this irregular but spirited conflict, and pass on to the results of the campaign.

The armed brig was within musket shot of the bank, and her guns swept the whole plain. The British forces were gathered round their fires, reposing on ground, and as shortly as possible to advance from the fire. These forces were at length extinguished and order restored; but probably after the loss of one hundred men, killed and wounded by this extraordinary naval effort. Captain Cooke says, in his spirited account of the battle after half a mile was gained, driving the troops into the most dire confusion, which caused a tenfold panic during the darkness, and the confusion beggered all description. No man could be in a condition to form a line when sufficiently advanced, as it is well known that an alignment is preserved with much difficulty by new troops. By a misapprehension, however, of one of the principal officers, this was attempted to be formed on the river side, but that part of the troops beyond the immediate observation of General Jackson, attacked a forward movement with an extended front. At this place the river encroached upon the plain, and the consequence was that the army became curved, and in fact so far broken, that detachments were forced to come to the front, and slide between their friends, and enemies, and exposed to the fire of both. The effect of the most important operations; and the darkness of the night prevented the application of the proper remedy.

Still, however, both parties were soon warmly engaged, and the British fell back before their assailants. The scene was, no doubt, an extraordinary one. It was at this time between eight and nine o'clock in the evening, and the last rays of twilight had disappeared. A dump fog was advancing and enveloping the ground, but, and extending over the plain, through the objects, as it approached, in almost impenetrable darkness. The opposing forces had met, and were contending in a mortal struggle, guided in the attack by the sound of their adversaries' guns. General Keane says, in his official dispatch—"A more extraordinary conflagration, perhaps never occurred; absolutely hand to hand, both officers and men. The field was intersected by many marshes, fordable, to the front of the British army, but not to the rear of the American, the operations were continually affected by the interruptions which those occasioned. The combustible smoke the same language, and during this eventful night friends and foes were intermingled, without discernible character of each other till it was made known by actual contact, and announced by the death stroke. Under these circumstances, and with the occurrence of every variety of incident which a small collection of men has, which we have not time to describe, the British were driven from their positions, and gradually yielded a mile of ground.

While these operations were in progress, General Coffee and Captain Schaw, with the pickets under Captain Hallen and Captain Schaw, and that those officers and their respective pickets conducted themselves with firmness, and checked the enemy for a considerable time; but renewing their attack with a large
force, and pressing at these points, Colonel Thornton justly observed that "we move upon the whole corps," namely, the 95th and 85th regiments. That the outpost of Captain Hallen was not maintained by that officer, is also admitted by General Keane. He says that the enemy made a last effort, and for his army to retire in line, and we in all the advanced posts. He then proceeds to describe how, by the exactions of Colonel Thornton, the Americans were finally repulsed.

There is little, by this system of rhodomantade—by exciting ourselves and depressing our adversaries. If eighty men of the British army could cut General Jackson and his whole force, what censure is strong enough for a commander, and for his army to retire in line, and we in all the advanced posts. This panegyric upon a portion of the force, at the expense of the residue, is akin to the fortunate solution, by which our English conquerors accounted, during the late war, for the advance upon the river, and the retreat of Sir Henry Clinton's army from New York. That the British were victorious over those wooden bulwarks whose thunders had so long "quelled the floods below," they said, and no doubt believed, that the crews of the American ships were composed of Englishmen; thus complacently claiming the credit of the victory, which side sover brought it, without reflecting, that if a crew composed of Englishmen, in an American ship, could conquer a similar crew in an English ship, the result would have been different, efficient, and decisive, and experience of the officers; and as these were native Americans, their character and services must be a treasure of which we have a right to be proud.

Tellers of this kind allow us to know, and we do upon the best information, that the poquet in question was stationed at the intersection of the main road running along the bank of the Mississippi, and one of the numerous ditches, which exist, and used to save the water, would otherwise destroy the hopes of the planter upon this fertile plain. The principal part of the guard were in the ditch, and protected by them and by a slight post and rail fence. Some of them, however, were probably advanced in front in a manner to see the movements of the approaching enemy. When that part of the American army under the immediate personal direction of General Jackson, amounting to about three hundred men, instead of three thousand, who was in the rear, and on whose approach, the British observed an approach of the enemy, the poquet opened its fire upon the advancing soldiers, and immediately fell back to the next ditch, about one hundred and fifty yards in the rear of the former. The Americans then charged, and they did very Creditable service. The fire was almost harmless, and the order to charge was immediately given and obeyed. When, however, the advancing column gained the second ditch, where the poquet was not so efficient, it was met by five killed and wounded several men, and disabled two of the artillerist horses employed in drawing the guns. This circumstance occasioned a pause. The two guns were闺蜜ed, and another column upon the enemy, who again yielded their position, and sought safety in retreat. It was at this moment that Colonel Thornton reinforced the discomfited guard, as described by General Keane, with the 85th and 95th regiments, and assisted the British in the van of the British operations at this point. And here then succeeded one of the sharpest conflicts which marked this eventful night. Here it was that the combatants were intimidated, assailed, and defeated; and the principal disposition of the American forces was taken up by the American army, and the British did not take, but in the early periods of history, and many a deed of valor abjured by the darkness of the night and by the grave.

But we are concerned here about that moment, when the British gave way, and occupied the position we have before described, where they were protected, as in a redoubt, by a double bank or levee.

The tidings, when they had been sent on the first intelligence of the approach of the enemy to the Chef Mentour, to ascertain whether they probably contemplated any operations upon that line of communication, returned during the engagement, but it was so late that no demonstration was in contemplation. General Carroll was immediately ordered to move down his troops from the position he occupied, and General Jackson determined to renew the attack with vigour. In the morning, he opened a communication with General Coffee, that considerable reinforcements had been received by the enemy during the night, and that he had probably their whole army before him, of whose actual strength he was ignorant. He was informed by the British that the prospects of guarding the great artery of more than half the Union, could best be executed by assuming a defensive position, and putting nothing more to hazard than the progress of circuses might require. The enemy had received a salutary lesson, and his own troops had been taught, that they might successfully contend with those disciplined warriors, the prestige of whose glory was now destroyed. He gave an order to distribute, moral and physical, to him. To them it was fraught with the most disastrous consequences.

The next morning, therefore, at dawn, he fell back unmoled to a position about two miles higher up the Mississippi, near the place the army and the river approached nearest to each other and where it was thought the approach would be the shortest and most tenable. General Hinds, with about three hundred militia, dragoons and infantry, was left near the field of battle, and possession of a place where the Mississippi, about six hundred feet wide, where they remained unobstructed till the morning of the 25th, when they retired before General Packham, who moved out with his whole force. And yet Captain Cooke was not a victory, what would have been a defeat? We suppose nothing short of the annihilation of their whole army, would have effectuated the purposes of the British army.

Not by its necessary effects upon the series of military operations, but by its moral influence upon the invaders and invading. It is evident, in taking a retrospective view of the disposition of American forces with published accounts of the descent on Louisiana with a high, perhaps not too high, confidence in its own prowess; but with a thorough contempt for its adversaries. They forgot the cautious maxim, use the force of the enemy, as a deterrent to the opposite nation, and that we allow them to feel the weight of our forces.

The British army, so far as our occupation, remarked, that as the Americans had never yet dared to attack, there is no great probability of their doing so on the present occasion. And in the course of his narrative, this remark, of which he thinks the result of the campaign furnished a practical illustration, that this winter was near to be decided, and left to be captured at the will and pleasure of the dilatory. The American army shut themselves up in New Orleans, or taken a position below the city, and the British army, in the interval of their movements, events, skill, discipline, and experience must have done their work, and sealed the fate of the country. The great object, therefore, of the American General, was to teach the British army the value of象棋, while his own troops might gradually acquire confidence in themselves, and their leader. That the plan was successful, is evident from the fact, that during four precious hours, by the British, the army was kept within their lines, and were employed in the necessary communications with their fleet, whence heavy guns were brought, to destroy or drive off the little brig which continued to resist them with its iron messenger.

This action cost the Americans two hundred and thirteen in killed, wounded, and prisoners, and La Tour states that the British official report acknowledges a loss of three hundred and five. The return we have not seen.

The battle was engaged immediately behind the race or flame of a mill, which was supplied with water from the Mississippi. The river, at this time, though falling, was fortunately higher than the natural, and was swollen by the rains, so that the town was overflowed by which the swamp was inundated, and the front and left of the American position partially secured. In about a week, however, this advantage was lost by the subsidence of the water.

Every effort of the American General and his army was now directed to the construction of such defences as time and their position allowed. The troops were indefatigable in their labours, and the destruction of the bridge gave them confidence. A rampart of earth was thrown up on the northern bank of the mill race, and this was strengthened from day to day. The pressure of circumstances led to the execution of an extraordinary expedient. The plain was a dead level, saturated with water, and it was almost impossible to procure earth with sufficient facility. Bales of cotton were brought from New Orleans, and placed upon
Survey of the Coast.
SECOND REPORT OF MR. HASSLER.

Report upon the Works executed for the Survey of the Coast of the United States, upon the Laws of 1832, and their junction with the War of 1812, in 1817, by and under the direction of F. R. Hassler.

1. That great part of the work for the Survey of the Coast which has been executed since the renewed law of 1832, is grounded upon the work done in 1817, under the first original law of 1807. Therefore, in this first public report, of a more full and general character, which I have the occasion to render, it is necessary to go back to that earlier period, in order to give a proper view of the state of the work, its systematic connection, and its bearings in every respect, so much the more as the circumstances of the interruption, in 1818, precluded me from the presentation of the full report, which was just then in preparation.

2. I may be allowed to suppose the principles upon which the work is to be executed as sufficiently known; as well from the mathematical elements that must guide such a work in general, as by the plans that have been so repeatedly discussed and approved, upon all the occasions that circumstances have presented for their full consideration, and the test of the public approbation, that they have passed.

3. It is, therefore, rather my task here to show how these plans have hitherto been followed, to state the results that have been obtained, up to the present time, and to show their consequences.

4. The first distribution of a country into regular geometrical figures, that will approach its form the nearest, and under the most advantageous circumstances, to procure accuracy in the survey of it, requires the union of a detail knowledge of localities and theoretical principles, which is in general foreign to the habitual knowledge of the country, in respect to its civil connections; the surveyor or geographer, who are employed by no other but his personal inspection of the localities.

5. The general outline of the Coast of the United States presents, in the neighborhood of New York, a considerable angle between the main directions, easterly and southerly, and in some measure a basin, over which lines may be laid and determined, between the surrounding elevations fronting these two main directions, and thereby furnishing proper base-lines for the continuance of the works; though, therefore, I extended my first reconnoitring as far south as the Chesapeake Bay, I was ultimately, for the beginning of my work, arrested particularly by the decided advantages of that locality.

6. Guided by the idea, that behind the straight ridge of the Palisades, in New Jersey, bordering the Hudson river, above New York, a straight valley was likely to be found, that would present the necessary first element of any survey, namely, a nearly level base-line, of sufficient length to serve as ground to the triangulation, I directed my attention to the same view; in the valley called English Neighborhood, of which I made a detailed survey in the spring of 1817, in order to give it the best location that the ground would admit of, and actually measured the distance between Vreeland's and Cherry Hill, as more favorable than any locality that I had visited before the same time.

7. As habitual for such kind of works, under the expectation of taking the best advantage of the nearer investigation of the country, and not to make, at the very outset, expenses that might be more advantageously put upon a better line, this base was measured in a preliminary manner, with a chain of twenty links, of one metre each, constructed under my direction, by which it was
OUND TO BE 9448.15 METRES, CORRESPONDING TO ABOUT 30,999.6 FEET. I ALSO MEASURED

10. THOUGH IN EXTENSIVE SURVEYS IT IS HABITUAL TO MEASURE A VERIFICATION BASE ONLY AT A CONSIDERABLE DISTANCE FROM THE FIRST BASE, I CONSIDERED IT, ON THE CONTRARY, OF IMPORTANCE IN MY CASE TO HAVE A VERIFICATION AS EARLY AS POSSIBLE. THIS CONSIDERATION TOGETHER WITH THE EASINESS WITH WHICH THE BASE-LINES MEASURED IN ENGLISH NEIGHBOURHOOD, WHICH FORMED THEM, AND FORMS AS YET, THE FUNDAMENTAL UNIT OF THE WHOLE TRIANGULATION. THEREFORE, A SECOND OR VERIFICATION BASE WAS MEASURED IN DECEMBER, 1817, UPON THE SOUTH SHORE OF LONG ISLAND, BETWEEN A POINT NEAR THE NARRAGANS, AND ANOTHER NEAR GRAVESEND BEACH.

11. THE LENGTH OF THIS LINE WAS FOUND 7755 METRES, OR 25443½ FEET ENGLISH. THE RESULTS OF THREE DIFFERENT COMBINATIONS OF THE TRIANGLES, CARRIED OUT UPON IT, FALLING ALL WITHIN TWENTY FEET OF A TEN-METRE BASE (OR LESS THAN EIGHT INCHES) OF THE DISTANCE MEASURED.

12. BECAUSE OF THE FRESHNESS OF THE BASE-LINES, I HAD NOT AT THE BEGINNING OF THE WORK SUCH SATISFACTION, AS TO ALLOW MYSELF TO SUFFICIENTLY AUTHORIZED TO USE MY BASE-LINES OF ENGLISH NEIGHBOURHOOD AS A PRELIMINARY STANDARD FOR MY WORK.

AS THIS COINCIDENCE IS GREATER THAN USUAL IN COMMON GEOGRAPHICAL OPERATIONS, I CONSIDERED MYSELF ALSO ALLOWED TO PROCEED UPON THE WORK AS SOAR OBTAINED THE DETAIL SURVEY OF NEW YORK HARBOR FOR THE NEXT SUMMER, AS I PROPOSED IN MY LETTER TO THE DEPARTMENT OF THE 18TH DECEMBER, 1817. THE GREAT COINCIDENCE OF SUMS OF THE ANGLES OF THE TRIANGLES WITH THAT REQUIRED BY THEORY, CAME EQUALLY IN SUPPORT OF THIS SATISFACTORY RESULT.

13. THE WHOLE OF THE OBSERVATIONS COLLECTED DURING THE SUMMER OF 1817, I HAD, OF COURSE, TO SUBMIT TO THE NECESSARY REDUCTIONS, CALCULATIONS, AND CLEARING UP OF THE RESULTS, DURING THE ENDING WINTER.

14. WHILE I WAS ENGAGED IN THESE CALCULATIONS, THE LAW OF 1818 PUT AN END TO MY FURTHER AFFAIR IN THE WORK; ONLY IN MARCH, I WOULD HAVE SENT A REPORT UPON MY WORK, THAT WOULD CERTAINLY HAVE BEEN SATISFACTORY; AS I STATED IN MY LETTER TO THE DEPARTMENT OF 9TH APRIL, 1818, WRITTEN IN ANSWER TO THAT ANNOUNCING TO ME THE DISPOSITIONS THAT LED TO THE BREAKING UP OF THE WORK. IN CONSEQUENCE OF WHICH, I WOULD HAVE CONTINUED THE WORK IN ALL THE JOURNALS, BOOKS, INSTRUMENTS, AND OTHER APPURTenANCES OF THE SURVEY, TOGETHER WITH AN UNEXPENDED APPROPRIATION UPWARDS OF $80,000.

15. IT IS NECESSARY THAT THE STATIONS OF A WORK OF THE NATURE OF THE COAST SURVEY SHOULD BE USED THREE TIMES, AND IN MANY OTHERS TO WHICH THE DETERMINATIONS MADE BY IT WILL SERVE AS FUNDAMENTAL UNITS. THEREFORE I HAD CAUSED HOLLOW TRUNCATED CONES OF STONE TO BE MADE, WHICH WERE SUNK UNDERGROUND AT THE STATION-POINTS, DEEP ENOUGH TO BE SHELTERED FROM ANY INFLUENCE OF EXTERNAL ELEVATION OR DEPRESSION; THEY WERE WELL CENTERED TO THE STATIONS, SO THAT ONE HUNDRED YEARS FROM NOW, EACH POLE CAN BE PLACED IN THEM, TO SERVE AT ANY TIME EQUALLY AS AT FIRST, AS, BY THEIR NATURE, THEY WILL REMAIN UNDEFEATED FOR CENTURIES. WHERE THE STATION-POLE FELL UPON A SOLID ROCK, I CAUSED A HOLE, OF ABOUT TWO INCHES IN DIAMETER, SEVEN OR EIGHT INCHES DEEP, TO BE DRILLED AT THE STATION-POINT, AND THE POLE INSERTED WITH SUCH TIGHTNESS AS TO EQUALLY SERVE TO INDICATE THE EXACT POINT OF THE STATION. AN EXACT DESCRIPTION OF THE LOCALITY OF THE STATION MUST, OF COURSE, FORM A PORTION OF THE JOURNAL OF EACH STATION, TO GUIDE IN THE DISCOVERY OF THE POINT AT ANY FUTURE TIME.

17. THIS PECULIARITY OF THE LAW OF 1832 I HAVE ALWAYS CONSIDERED, AS StATED ALREADY IN ONE OF MY LETTERS TO THE DEPARTMENT, AS INTENDED TO PREVAIL A MORE DIRECT AND SEPARATE PROPOSITION FOR THE ESTABLISHMENT OF A PROPER NATIONAL SURVEY, THAN THE ONE DIRECTED TO THE COAST SURVEY, AND PROPERLY ADAPTED TO THE STANDING AS WELL AS TO THE PROPOSED NAVIGATION NATIONS THAT HAVE A NAVY, FOR WHICH SUCH AN ESTABLISHMENT IS AN ABSOLUTE REQUISITE.

18. IN TAKING UP THE WORK AGAIN IN 1832, IT WAS OF COURSE PROPER TO TAKE ADVANTAGE OF WHAT HAD BEEN DONE IN 1817, AS BASE OF THE OPERATIONS TO BE MADE UNDER THE NEW LAW, ITS FOUNDATION BEING GOOD, AND ITS PRINCIPAL POINTS ASCERTAINABLE, BY THE PRECAUTION TAKEN, AS STATED ABOVE; THE PROPER ACCRETION AND ECONOMY OF THE WORK, AND GOOD PRINCIPLES, EQUALLY INDICATED THAT COURSE, IN PREFERENCE TO ANY OTHER.

19. THE FIRST OPERATION WAS THEREFORE TO UNCOVER AGAIN THE STATION-POINTS OF THE WORK OF 1817, AND TO REPLACE SIGNALS UPON ALL THE ESSENTIAL POINTS; THESE WERE EASILY DISCOVERED, AND SIGNALS PLACED UNON THEM THE SAME KIND AS FORMERLY USED, NAMELY, TRUNCATED CONES OF SKEET-FIN, ELEVATED UPON POLES; ONLY TWO OF THEM, NEEDED ONLY AT SOME FUTURE PERIOD FOR THE SOUTHERN EXTENSION OF THE SURVEY, AND NOT NEEDED BY THE ASSOCIATES WHO VISITED THE PLACES, BUT WILL CERTAINLY BE FOUND WHEN MORE SPECIALLY NEEDED.

20. THE LINE BETWEEN WEST MOUNTAIN, NEAR PATTERSON, NEW JERSEY, TO THE BAY, AS FAR AS THE SITE OF BRONX HARBOR, UPON LONG ISLAND, HAD BEEN DETERMINED IN 1817 TO SERVE FOR THIS PURPOSE; THEREFORE I RECONNOITRED IN THE FALL OF 1832, AND EVEN IN THE WINTER, THROUGH A PART OF THE LONG ISLAND HILLS, AND OVER THE ELEVATIONS OF CONNECTICUT, THAT HAVE THOSE OF LONG ISLAND CONSTANTLY IN VIEW; AND THOUGH IN THE VARIOUS INTERVALS WHERE THEY PRESENT, ALL THE INFORMATION THAT I RECEIVED FROM THE INHABITANTS APPEARED CONTRARY TO SUCCESS, I WAS SO FORTUNATE AS TO FIND A SERIES OF FIVE TO SEVEN HILLS CONNECTED....
domestic intelligence.

the naval annual, for 1836.—this, we believe, is a new competitor for the public favor. there is only one qualified to challenge the highest admiration. it contains two nautical stories; the first, having the general title of "the pirate," is divided into seventeen chapters, each, in fact, constituting a distinct tale; the other is called "the three cutters," and is in like manner divided into distinct chapters; and all these are written by capt. marryatt, the editor of the day, whose pet simple, jacob faithful, and japhet in search of his father, have gone through more editions, probably, than any modern work of fiction, not excepting even the novels of bulwer. the illustrations, in number, are from designs by the famous stanfield, and worthy of his great name. they are all, of course, nautical subjects, unless we may except the frontispiece, which is a full length portrait of capt. marryatt himself; and a very decent looking gentleman he is, too. we beg leave to commend the naval annual to the lovers of excellent reading and superb engravings. in subject and production it surprised and delighted the publishers and original of all the annuals. it is published by the longmans in london, and by desilver, thomas & co. in philadelphia.—new york com. ade.

our interests in the pacific.—we find by referring to correct data, that there are at the present time, not far from two hundred ships, measuring about 800 tons, whose crews consist of 2,500 men, and the aggregate of whose cargoes to say nothing of cost of ships and outfits is, at least 200,000 barrels of sperm oil, worth nearly six millions of dollars. more than one half of this property is in the hands of new bedford merchant princes, in charge of our own immediate relatives and friends, either on the bosom of the pacific, or on its way home.

under these circumstances it is not surprising that the citizens of this town, of nantucket, new london, beg harbor, &c., feel a deep and trembling interest in relation to the result of the difficulties which now exist between this country and france. this immense property on the pacific ocean imperiously demands the careful protection of our navy, and while we entertain no doubt that a fair proportion of the naval force is assigned to this important post, we cannot but regret its insufficiency in case a serious rupture should take place. the increase of the navy of this country has long been a favorite measure in congress; but from some cause, to us not apparent, has been stumped over from time to time, for the purpose of reaching other matters which seemed to be of less importance to the country.—new bedford gazette.

the military fancy ball of tuesday night was a brilliant affair—indeed, it might with propriety be said, the most brilliant that has ever been witnessed in this city. the whole extent of the stage, as well as the large space comprised within the circle of the boxes, was converted into a grand dancing saloon, elegantly and appropriately decorated. it is supposed that the number of ladies and gentlemen present was from two to three thousand, the larger portion of whom were generally on the floor at one time, while the remainder occupied the tiers of box-
en. Rich and tasteful fancy dresses were worn by a considerable number, but among the gentlemen the gay and gorgeous uniforms of the military greatly predominated. The spectacle presented to the eye when ranging from the entrance of the ball room across its entire extent, and taking in a single view some fifteen hundred or two thousand persons in the most splendid attire of both sexes, was truly splendid. The Managers deserve no little praise for the happy manner in which all their arrangements were planned and carried out. Among the visitors were Major General Macomber, of the U.S. Army, Major Van Buren, Col. Boothe, of the Marine Corps, and Earl Belkire.—Baltimore American, Jan. 7.

AMERICAN HISTORICAL SOCIETY OF MILITARY AND NAVAL EVENTS.—We published yesterday, the list of officers of this praiseworthy association, recently elected. We alluded several weeks ago to its objects. They are excepted to intrain and associations of a similar character, where is as follows:—"The objects of this Society shall be, the collection, preservation and publication, from time to time (under the authority of the Society,) of documents, historical reminiscences, biographies, anecdotes, and other matters illustrating or calculated to illustrate the history of the United States, North America, and more especially of events connected with the war of the revolution and of the late war with Great Britain; with a view to hand down to posterity the memorable events of said wars, to award to its active friends and their coadjutors the honor and credit to which their devotion and services to their country entitle them; to preserve, in a form the history of the merits and achievements of distinguished American patriots, statesmen, officers, soldiers and seamen of the army and navy of the United States." All persons of full age and good character who shall subscribe to the constitution of the Society within six months after its adoption, contribute the sum of two dollars, and agree to pay the same amount annually, may be considered original members. The members are clas sified in "resident members," "corresponding members," to be admitted after they have contributed to the objects of the society by the communication of original papers and documents, and "honorary members," to consist only of those who have either distinguished themselves in the military or naval service of the country, or who from official station or public consideration, shall be deemed worthy of the honor. It is but justice to state, that this excellent association owes its existence to the exertions of the Hon. Thomas Hertell of this city. He was, we believe, the originator of the plan for its formation, and it is to be attributed to his exertions, more than to any other man, that the Society has been organized. It is formed on the most liberal principles. The spirit of exclusiveness—a spirit too often inadmissible in military circles—is excluded from its councils. Every man of reputable character and intelligence may become a member.—Seeking as it does, to collect information from every quarter where it may possibly be found, it acts on the just principle of admitting among its members all who can contribute to the information of the important subjects to which it is devoted. We trust that the proposing respectable men in its transactions will soon be published.—N. Y. Times.

WHOLE-HEARTEDNESS OF A SAILOR.—During the delivery of a sermon by Rev. Baron Stow, before the Fatherless and Widows' Society, in Boston, on Sabbath evening last, an incident occurred which illustrated the whole-heartedness that is so characteristic of the mariner. We were not a little amused, in witnessing the effect which this discourse had upon the minds of these men of a warm-hearted, but weather beaten son of old Neptune, who happened to be seated near us. When the box was approaching, he pulled out an old rusty purse, containing a two dollar bill and some odd change, and prepared to deposit his air; remarking rather roughly, that he was very poor; but the nonchalant pleased to have a sailor had as much feeling as the best of "m. "Besides," said he, "who knows but my Kate will one day need a lift!"—American Traveller.

The New Bedford Gazette learns from the master of a ship just from the Pacific, that three French Whalemen (one of them the John Jack) are cruising about in the South Seas in pursuit of whales, having on board a crew of sixty men, including eighteen guns on board, of which there is a surgeon, a chaplain, &c. &c. and that they are making boast of the islands, that as soon as they hear that war is declared, they will whip the oil out of our Yankee whale ships, and are in the fullest confidence of being so far at least, right. It is said that they have been openly told, and may be true. No one, however, believes that these French vessels were fitted out for the purpose of which they boast. Nothing is more common, says the Gazette, for the French and English vessels—whale ships—to carry a number of guns and their necessary tackle in the hold, to be drawn out for use at any moment.

FOREIGN MISCELLANY.

THE FRENCH NAVY.

Paris, November 18.

The Constitutionel sees with much pleasure the equipment of a fleet of 17 ships of the line and 18 frigates ordered by the Government, because, although a war is wanted, it may be for another object than the extension of the French navy, or the proposed invasion of the United States. It is right that France should know that she is not unprepared for whatever may happen. The people of the two countries will not plunge rashly into war, and the slow forms of constitutional governments are a sure prevention of the vanity of their leaders involving the countries in the perils of war. The Constitutionel believes that when a country is prepared in every sea, to demand reparation for any outrage that may be committed on her dignity, and the force above mentioned will be considered as a sufficient indication of her intention. At the same time, France must not forget that in the American navy she would find a formidable antagonist, and that she obtained many successes in the last war even against England.

From Galigalini's Messenger, 10th Nov.

The Courrier Francais says that the fleet fitting out at Brest is intended for the event of a war with America, and that the representations of French diplomacy will have much more force when backed by such preparations as these. It seems, as affairs now stand, that war is the only possible solution of the question. The French Ministers have been in the wrong for subscribing to a disad vantageous treaty, and for not preparing the incident addressed to the nation till it was felt by the Chambers. The American President, on the other side, has left nothing undone towards inflaming the pride of his country, speculating on the chances of a war for the continuance of a military party in America. The two people have no interest in another war, and are equally happy with it. The independence of the United States is the result, no doubt, of a great national resolution firmly maintained; but without the assistance of France, the rising freedom of the Union would never have been supported. It is ungrateful therefore, in the Americans, within fifty years from the glorious compact made between the two nations to attack France. When this country sided in the settlement of a new country, both for commerce and for liberty, on the other side of the Atlantic, it was a work, not only of generosity, but also of profound policy; it was the forming a reserve against all monopolies of power, either in peace or in war. To give the United States the means of increasing its power without the sanction of the French court would therefore be to oppose the principle of this policy: it would be to weaken France while under the fire of Russia and Prussia. On the one hand, the Minister cannot ask the payment of the money from the Chambers without having obtained the explanations required, and, on the other, France should not be too difficult as to the terms of the treaty, which have not yet been decided. But if, notwithstanding the conciliatory but firm disposition of France, hostilities should break out, the twenty-five millions in question will become the pledge upon which French commerce will have to depend for the losses it may sustain.

The Constitutionel says that looking at the existing relations of the various Powers, it is impossible to say exactly what is the destination of the armaments of France. The Russian Autocrat seems to be trying to prevent
western Europe, and applies the rod to it on the back of the Municipality of Warsaw. The language of the statesmen of England becomes every day more and more hostile towards the dangerous enemy who holds the keys of the Danzicellis.

The debates reverberates its attacks, and a squadron in the Baltic is talked of. These are terrible uncertainties in the air! The political tribune will open in the presence of facts of immense importance! Political indifference will be a want of patriotism! The same journal also reminds its readers that, in the case of a war with America, twenty-five millions will form a sufficient guaranty against the want of which commercial existence in this country.

The Messenger contains an article on Algiers, quoting a letter received from there, in which, however, no intelligence of importance is to be found. It merely contains claims of the military character of the colony, at which the indigenous inhabitants are displeased; and those who came from France with the intention and means of settling up useful establishments in the colony are disheartened. The projected expedition against Abd-el-Kader, though so much applauded by everybody, will be useful in its results to nobody except the arms contractors and the purveyors; and, although there is no doubt of the success of the expedition, if they are not a means of compelling an enemy to action, yet the easiest way of overcoming Abd-el-Kader would have been by using against him methods similar to those employed by him against France, and by leading to rival chiefs the execution of a vengeance that is below the dignity of this country.

The Constitution of 19th November in an able article introduces the following observations:—The American affair which has remained so long a time in a kind of diplomatic confusion, now assumes a more serious aspect. The respective representatives of the two States have withdrawn. The official relations have ceased. Attempts made by England to bring the armed and equipped, in six commissioned in ports; 7 frigates of 44 guns, of which two are armed and equipped and five commissioned in ports or under repair; 8 frigates of 35 guns, all armed and equipped; 10 sloops of from 15 to 24 guns, of which five are armed and equipped; and some armed and equipped, and 9 schooners, all armed and equipped. This makes a total of 35 ships; and we have reason to believe that this amount is incorrect, and that at this moment the United States have at least 65 armed vessels in the rest of the Mediterranean. But, as we shall immediately show, even this number is insufficient to contend with the naval force of France.

Neither can we admit that in a battle, frigate to frigate, of equal force, the advantage must necessarily be with the American. What rendered us inferior to the English at Aboukir and Trafalgar, in a great measure, was the brilliant tactics of Nelson, the Napoleon of the seas; and the comradeship of the Commanders of the British Fleet on these occasions. We have always been victorious in engagements ship to ship of equal force, and this will not be the case in future. This point established, let us compare our naval force with those of the United States.

We have at this moment in the Mediterranean, 1 first rate ship of 120 guns, 3 third rates of 80 or 90 guns, 5 fourth rates of 74 guns; total, 8 ships of the line.

We have also in the same seas, 6 frigates, namely, 1 of 60 guns, 4 of 44 guns, 1 of 28 guns, 8 sloops of 14 guns, 12 schooners of 6 guns, 1 cutter, 1 gun boat, 7 other ships, 8 transports, and 11 steam vessels; making a total of 151 guns; and 1 first rate, 1 second rate, 1 third rate, and 1 eighth rate in the core, 2 first rate ships of the line, 1 second rate, 2 second rates, and 1 third rate frigate, in all 7; 5 sloops, and 1 schooner as advice boat; 2 brigs of 20 guns, 4 of 18 guns, and 1 drak 6 guns; 1 timber bark, 4 schooner in port, and 12 steam vessels. These make the total of 50 ships in the core, and carrying the general total to 119.

The Electeur of Toulon of November 25th contains the following article:

If we are well informed, a telegraphic express has brought orders to the electeur to attack Algiers immediately on war establishment, the ships of the line Algeria, 84 guns, Scipion, 82, and the frigate Arteumet, 52.

The express further states that these ships are destined to form part of the squadron of observation. According to all appearances, this squadron is going to be sent on the ocean, and to hold itself ready to act against the Americans.

We approve with all our hearts, this measure, to which our wishes have long pointed, and which we have recommended at least eight months ago. It will arouse all our maritime population, and give them to understand, that, from this day forth, every man must hold himself prepared to go to war. Let us then survey the consequences this war will cost her. Our claims to redress are as clear as day—our demands are perfectly just and reasonable; and if the war be conducted with all the vigor that may be expected from such a leader as Admiral Duperré, success is certain. At all events, we cannot prepare ourselves too seriously, or too soon. It is on this account that we approve the measure which has just been determined on, and that we hope to see it extended to the whole fleet.

From the London Courier of Nov. 11.

We have quoted from Galigambi an account of the naval preparations at Toulon, which are there ascribed wholly to the necessity for being prepared for the utmost resistance at Algiers; but some of the Paris papers connect these preparations with the state of the American question, and indicate that the French fleet is preparing to meet the Americans. The Messenger even hints that a project is entertained of occupying the Balearic Islands, in order to deprive the squadrons of the United States of all refuge in the Mediterranean. This is one of the moonshine projects ascribed to the French Ministry by its opponents, in the hope of exciting the jealousy and ill will of the United States. The Balearic Islands belong to Spain, and France would no more think of occupying them than of occupying Cudiz.

Extract of a letter of Nov. 4th from Toulon. "Our maritime arsenal is in a high state. Several ships are being repaired with activity, and the Galatea, which has already received a part of her guns, will shortly put to sea. No more is said of dismantling the Nestor and Triton, which remain in the harbor. The fifth, sixth, and seventh companies of the first regiment of Engineers are still in town. We have just received a half battery of artillery, and two companies of African Chasseurs are expected. All that we hear to-day is that the Government is aiming to have in readiness vessels and troops to reinforce, in case of need, the expeditionary army of Africa, for we must not dissemble the fact that although Marshal Clausel has spies among the tribes of Algiers, yet it is impossible for him to have any certain data relative to the number of the enemy, a fact the Emperor of Austria is well aware of, and to which his minister has not divided his partisans into different corps, in order to compel us to disband our forces.

Post's script.—I learn this instant that the Triton and some other ships have received orders to prepare for their departure, and will, it is said, sail to-morrow morning. Their destination is not known; but it is observed that the Government is going to employ the company to come to America, since the Emir of Morocco has not divided his partisans into different corps, in order to compel us to disband our forces.

Post's script.—I learn this instant that the Triton and some other ships have received orders to prepare for their departure, and will, it is said, sail to-morrow morning. Their destination is not known; but it is observed that the Government is going to employ the company to come to America, since the Emir of Morocco has not divided his partisans into different corps, in order to compel us to disband our forces.

PARTS, NOV. 19.

Vice Admiral de Mackau is appointed to the command of a squadron now being fitted out at Brest for the protection of French commerce in the Antilles and the American Seas.

The Paris Moniteur of December 1st, contains under its official head:

Two ordinances of November 29th. One of which nominates Mons. the Vice-Admiral Mackau Governor of Martinique.

Article 1st. Mons. the Vice-Admiral Baron Mackau, Governor of Martinique, will take the command of the squadron of observation, which is under orders to rendezvous at the West Indies.
From Gallipoli's Messenger.

The Journal du Havre, of Saturday, has the following:

"An extensive promotion was to have taken place in the North Sea on the 1st of January next, Governor King has manifested the desire not to sign the promotion unless a war with the United States should arise to give a greater degree of interest to the measure."

The French Army.—Under the Empire the General Officers of the French army wore coats of two kinds; one a full dress richly embroidered, and the other only slightly so. After the Revolution of July, the full dress uniform was discontinued at the request of the general officers, and military taste became more simple. At the present time, being desirous of surrounding the service with more pomp, it has been ordered that the general officer shall have four different uniforms, viz.:—a full dress coat for court, varying for boots, pantaloons, or silk stockings. Their undress uniform is reserved for review, a costume formerly worn on day parades, and an Austrian great coat for the morning and the field. The waist belt and feathered cocked hat are strictly worn with all the four uniforms.

The London Chronicle earnestly proposes that the naval force of Great Britain should be augmented, if the probability of a war between France and the United States should increase.

Whale Fishery Statistics.—Our hardy countrymen, who braved the Arctic regions, and the war against the monsters of the deep on the very confines of Chaos and Old Night, have again, we regret to say, been unsuccessful in their exertions. Up to the date of the most recent advices, few vessels had captured more than one fish; others were entirely clean, and worse than all, two of the seventy ships on the station, the Lee and Isabella, were lost early in the season, while endeavoring to push through some lane in the ice to the east or west, in which was always a chance of some vessel having made a voyage to the far North since the time she was commanded by captain (now Sir John) Ross; and the public will recollect, not without interest, that it was her late commander, that young navigator, with his nephew and party, while escaping their weary way in open boats, after escaping from the horrors of Boothia Felix. As whales are generally from 260 to 400 tons burden, the loss of property, is, of course, considerable; but the crews of both vessels escaped, as generally happens in regions where it is much easier to find refuge on continents of ice than to range the solid land.

While about to commit these remarks to paper, an intelligent friend called, who has a deep stake in the Whaling company, and from whom we learned the following particulars: the whole of the whaling ships generally reach the barrier ice about the middle of May; at which time it is firm in many directions as the rocks themselves; but there are also so many masses floating about, that all the masters can do is to keep cruising in clear water awaiting some specially favorable occasion. Their footing is materially rugged and slippery; but their shoes are adapted to furbies so herculean, and they do not much complain of the service provided they find continuous water way. But herein consists the great danger; for if the wind blow strongly from the sea, fields embracing miles on miles of ice are put in motion, which, as they approach and touch the narrow gap, seize the helpless vessel with all the force of a thousand vies, and crush her oaken ribs with as much ease as the human hand crushes an egg shell. That the Lee and Isabella perished in this manner, we have no doubt whatever; and, amidst a whole host of other dangers, this, we believe, is the most terrible. Why, in the words of the Boer of Greenland, and in still higher latitudes. But occasionally careful observation enables experienced seamen to meet the coming crisis, by cutting a temporary dock out of solid ice, which protects them from the wind and the rash, and renders them secure until some contrary change in the elements throws their prison door open; and as this operation must be repeated wherever circumstances demand the exertion, the reader may form some idea of the labors of those who annually Glasses towards the great Northern deep; and looking to the great rigours of the climate, the occasional fury of the whales, the upsetting of boats, and other mishaps, well may they exclaim,

"Ye gentlemen of England, who live at home in ease, little, little do ye know the dangers of the seas."

With some exceptions in favor of individuals, and even companies, very little money has been made by whaling during the last six or seven years; nor is the trade prosecuted in any thing like the former extent. During the war, 500 vessels visited the North, by far the greater part of which were not under commission, but the whaling fleet this year has been reduced to 70 sail, and is likely to dwindle still further unless the profits of the trade increase.

—Dunroyle Courier.

Traces of Ancient Civilization among the South Sea Islands.—Amongst the Caroline Islands, only six weeks sail from Sydney, is Ascencio (about 11 deg. north latitude) discovered very lately by his Majesty's sloop of war Venus. Mr. Ong, now a resident of this colony, some years back remained there for several months, and we have our information from a friend, who conversed frequently with Mr. Ong on the subject.

On the above named island of Ascencio, the language of the inhabitants is more harmonious than in the other islands of the South Seas, a great many words ending with vowels. There are at the north-east end of the island, at a place called Tamen, ruins of a town, now only accessible by boats, the walls reaching to the steps of the houses. The walls are overgrown with bread, cocoa-nut and other ancient trees, and the ruins occupy a space of two miles and a half. The stones of these edifices are laid bed and quoin, exhibiting irrefutable traces of art far beyond the means of the present inhabitants. Some of the walls are twenty feet in length, by three to five each way, and no remains of cement appear. The walls have door and window places. The ruins are built of stone, which is different from that occurring in the immediate neighborhood. There is a mountain in the island, the rocks of which supplies with figures, and there are far greater mines of eight miles in the interior. The habits of these islands exhibit traces of a different social system; the women do not work exclusively, as is the custom in the other islands. After the meals, water is carried about by servants for washing hands, &c. Asked about the origin of these buildings, the inhabitants say, that they were built by a man who ascended from Heaven. —Hobart-town Courier.

Exploring Expedition—New South Wales.—Major Mitchell's exploring party, splendidly equipped, has left Bathurst, on the banks of the Murray, with the supplies, and, after resting three days, proceeded on their journey to a central spot, in the Boree country, from whence they will pursue a south-westward course to the Darling, Murrumbidgee, and other streams. This, and the depot, will form the first division of the work, when it is understood that the whole body will move off in a north-westward direction, where view of transversely intersecting the mountain barrier, is the residue of the great waters which are supposed to have their source amongst the interior mountains. The party are prepared for a year's absence, and for all the vicissitudes of weather and climate incidental to that protracted period. The men started in high spirits; most of them have been tried servants in the field service of the survey department, and

THE DARDANELLES.—A LATE LONDON PAPER GIVES THE FOLLOWING DESCRIPTION OF THE CELEBRATED FORTRESS WHICH GUARD THE ENTRANCE TO THE BLACK SEA:

LOSS OF A RUSSIAN 74.—ADVICE FROM PALAN, SHOWING THAT ON OCT. 25, THE RUSSIAN 74-GUN SHIP "CERNY" WAS CAST ON SHORE NEAR BORE, AND THAT THERE WERE NO HOPE OF GETTING HER OFF AGAIN. THE CREW AND THE SOLDIERS, WHO WERE TAKEN ON BOARD AT DUNKSTEAD, SUCCEEDED IN GETTING SAFE TO LAND.

WASHINGTON CITY;

THURSDAY, JANUARY 21, 1886.

THE LATE CAPTAIN J. SCHMUCH, U. S. A.—AT THE LAST SESSION OF THE LEGISLATURE OF MARYLAND, A RESOLUTION WAS PASSED, AUTHORIZING THE GOVERNOR TO PROCURE A SWORD, WITH SUITABLE DEVICES, TO BE PRESENTED TO CAPTAIN J. SCHMUCH, OF THE ARMY, A NATIVE OF THAT STATE, FOR HIS GALANTRY AND SERVICES DURING THE LAST WAR.

SOON AFTER THE PASSAGE OF THAT RESOLUTION, AND BEFORE INTELLIGENCE OF IT COULD HAVE REACHED HIM, CAPTAIN SCHMUCH DIED AT ST. AUGUSTINE, FL., AFTER A LINGERING ILLNESS, HAVING SUFFERED MUCH FROM WOUNDS RECEIVED IN DEFENCE OF HIS COUNTRY.

AT THE PRESENT SESSION OF THE LEGISLATURE, MR. ELY, CHAIRMAN OF THE SELECT COMMITTEE, DELIVERED A REPORT IN THE HOUSE OF DELEGATES, STATING THAT IN CONSEQUENCE OF THE DEATH OF CAPTAIN SCHMUCH, IT WAS NOT THOUGHT NECESSARY TO PROCURE THE SWORD; AND UNDERSTANDING THAT HE HAD LEFT A WIDOW AND ONLY DAUGHTER, THEY SUGGEST AN APPROPRIATION BETTER SUITTED TO THE PRESENT CONDITION AND SITUATION OF THE FAMILY OF THE DECEASED.

THE REPORT CONCLUDES WITH A RESOLUTION WHICH WAS ADOPTED AND SENT TO THE SENATE FOR CONCURRENCE THAT THE GOVERNOR BE REQUESTED TO ASCERTAIN THE VALUE OF THE SWORD, WHICH WAS DIRECTED TO BE PRESENTED TO CAPTAIN S., AND TO DRAW UPON THE TREASURER OF THE WESTERN SHORE FOR THE AMOUNT THEREOF, AND PRESENT THE SAME TO ELLEN SCHMUCH, THE WIDOW, FOR THE USE AND EDUCATION OF CATHERINE SCHMUCH, HIS DAUGHTER AND ONLY CHILD.

FORT GIBSON.—A REFERENCE TO OUR OBITUARY HEAD WILL SHOW THAT ANOTHER OFFICER HAS SUFFERED A VICTIM TO THE INSULARITY OF THE CLIMATE AT FORT GIBSON; AND THE FACTS STATED BY OUR CORRESPONDENT, "THRU MUST SATISFY ALL REFLECTING MEN, THAT SUCH A SACRIFICE OF LIFE AS HAS BEEN MADE SINCE THAT POST WAS ESTABLISHED, CANNOT BE DEMANDED, UNLESS THE PARAMOUNT INTEREST OF THE WHOLE COUNTRY WOULD BE JEOPARDIZED BY A REMOVAL.

THERE IS NOTHING IN THE CONDITION OF OUR AFFAIRS ON THAT FRONTIER, WHICH CALLS FOR THE CONTINUANCE OF FORT GIBSON AT ITS PRESENT SITE, LONGER THAN ANOTHER, MORE SUITABLE, CAN BE SELECTED AND THE NECESSARY BUILDINGS PUT UP FOR THE ACCOMMODATION OF THE OFFICERS AND SOLDIERS.

EVEN WERE IT ADMITTED THAT THE LOCATION IS THE BEST THAT COULD BE FOUND, THE HEALTH AND LIVES OF THE ARMY SHOULD HAVE WEIGHT IN THE CONSIDERATION OF THE QUESTION OF REMOVAL OR CONTINUANCE; BUT MILITARY MEN CONSIDER THAT THE LOCATION OF FORT GIBSON WAS NEVER THE MOST APPROPRIATE.

OUR INDIAN RELATIONS HAVE UNDERGONE A MATERIAL CHANGE DURING THE LAST TEN YEARS, AND THE REMOVAL OF NEARLY ALL THE RED MEN BEYOND THE LIMITS OF THE WHITE SETTLEMENTS WILL LESSEN THE NECESSITY FOR MILITARY POSTS WITHIN THE FORMER INDIAN RESERVOIRS.

THREE REVENUE CUTTERS, HERETOFORE UNDER THE ORDER OF THE SECRETARY OF THE TREASURY, HAVE BEEN PLACED BY THE PRESIDENT UNDER THE DIRECTION OF THE SECRETARY OF THE NAVY, FOR A FEW WEEKS, TO COOPERATE WITH VESSELS OF WAR, NEAR THE SCENE OF INDIAN HOSTILITIES IN FLORIDA.

FIRST LIEUTENANT R. P. PARROTT, OF THE 3D ARTILLERY, HAS BEEN NOMINATED TO THE SENATE AS CAPTAIN OF ORDNANCE, TO SUPPLY THE VACANCY OCCASIONED BY THE DEATH OF CAPTAIN B. BACHE.
ICE BREAKER.—Captain Seward Porter, of Boston, has invented the plan of a steam-boat for breaking the ice and keeping open a harbor.

Col. Loammi Baldwin, one of the most able and scientific engineers in the country, thinks the plan an excellent one, and deserving the encouragement of all merchants and ship owners. Col. Baldwin adds, in a letter to Captain Porter:

"It is made a great objection to the Navy-Yard at Charlestown, that the ice prevents ships coming in when the harbor is closed five or six weeks. As there is a permanent commercial interest in Boston to keep the port open for merchant vessels, the experiment will show whether the ice shall serve to block up our Navy-Yard for five or six weeks every winter. Strong objections, I know, exist against this harbor, for ships of war, on account of the ice, and the experiment is worth a trial. I believe your scheme a good and cheap one, and I hope the trial will be made."

ARMY AND NAVY REGISTERS.

In order to form some idea whether we shall be justified in continuing the annual publication of the Army and Navy Registers, early orders are respectfully solicited from those who desire copies.

The Registers printed last year were by no means as complete as it was intended they should be, owing to the short time allowed for their preparation.

The Army Register for the present year will contain, in addition to what the last contained, the Brevet rank of all officers—the Academic staff of the Military Academy at West Point, and a list of the Cadets—the names of the military posts and the officers at each.

The Navy Register will contain (additional) a list of the vessels of war, and their condition—the vessels of the different squadrons, and the officers on board—and the names of all officers at the several Navy Yards.

The price will be—for single copies, 25 cents each; five copies for one dollar; or two dollars per dozen.

Payments may be made to any Paymaster of the Army, or Pursuant of the Navy.

The Registers will be corrected to the 1st July, and be ready for delivery (if possible) by the 1st August.

We find it wholly impossible, to keep pace with the debates in Congress, on matters touching the interests of the Army and Navy. We shall give a faithful abstract, and as extensively as our limits will allow.

We have on file for early insertion a large mass of foreign miscellany, from our files of London papers, which we are compelled to throw aside to make room for matter, more immediately interesting.

The frigate Columbia, it is believed, will be launched from the Navy Yard in this city in the course of a few days.

We presume that due notice will be given of the appointed time, that all who desire to witness so imposing a spectacle, may not be disappointed.

We are informed that Major General Scott, accompanied by several subaltern Officers of the Army, will leave Washington this morning, or to-morrow, for the south, to join the U.S. troops in Florida.

The Norfolk Beacon of the 16th inst. says that Col. Bankhead will proceed to Florida in a few days to assume the command of the artillery in that quarter.

Extract of a letter from a Passed Midshipman in the Navy to his friend in Washington.

"Permit me to make the enquiry—what are the prospects of promotion this session? May I entertain a hope of being one of the number? It seems to me a long time—nearly five years—since I passed for promotion. This delay is very disheartening—life wasted—HOPES BLASTED!"

We have no doubt that the feeling expressed in the above quotation, is entertained by the whole of the meritorious and valuable class of officers to which the writer belongs. The letter was not intended for publication, and the writer may not be pleased with the free use we have made of his enquiry; but it is time something should be done to raise the "blasted hopes" and encourage the patience of the officers of the Navy.

THE SEMINOLE INDIANS—WAR IN FLORIDA.

The accounts from Florida are of a distressing nature. The Indians have laid waste many of the houses and plantations, and the former inhabitants fled to St. Augustine for protection. No official information had been received at the Adjutant General's office on Tuesday, probably owing to the regular communication with the interior being cut off.

We gather the following particulars from the Charleston, S. C. papers:

A great battle was fought on the 31st ult., in which many on both sides were slain and wounded. The battle ground was on the Withlacoochee River, about 35 miles from Camp Lang Syne, and within a few miles of the Indian Warrior Powell's town, where it is supposed, the Indian women and children are assembled.

The officers and men engaged on the 31st, we are happy to learn, behaved with great bravery. In fact, such was the disposition of the Indian forces, their boldness and desperate fighting, that nothing but the determined spirit with which the men fought and charged into the swamp, put the Indians to flight and silenced their firing.

The engagement lasted one hour and five minutes. At the first onset, the Indians on one flank leaped from their hiding places, and in front of the thickest formed boldly into the line with Powell at their head. At this moment, the fire of the whites did execution; the Indians broke, taking to their covert again. It is thought Powell is wounded in the hand.

Return of killed and wounded in the battle of Withlacoochee, Dec. 31st, 1835.

Regular troops—2 artificers and 2 privates, killed—1 captain, 1 1st lieutenant, 1 2d lieutenant, 2 sergents, 2 privates, 4 privates wounded—1 killed, 25 wounded.

Leon troops, 2 privates wounded slightly.

Militia, total 7 wounded.

Aggregate, 4 killed, 59 wounded, out of 227 men in battle.

Many were shot through their clothes, and some horses killed and wounded, Col. Warren is wounded. General Clinch, had one ball through his cap and one through his jacket sleeve. The firing was heavy, and the bushes literally cut up around us, how it was that more were not shot I cannot tell.

Capt. W. M. Graham of the Army, was badly wounded in the shoulder and leg. Lieut. C. Graham was very severely wounded in the chin and leg. Lieutenant Ridgely received a wound in the arm. Lieut. C. Graham had command of his company, and after he fell, the c-

COMUNICATIONS.

THE SECOND ARTILLERY.

Mr. Editor:—I have observed in your paper, several articles in relation to the change of the 2d regt. of Artillery from their present stations. I believe it is generally understood throughout the Army, that the justice of such a change was fully admitted by the proper authorities; it is therefore, no longer a debatable question.—

I have since heard that it is reported that the Secretary of War was reported to have received the sanction of the Secretary of War, and assurances given that it should be done? What good or sufficient reason has prevented it? None, I imagine, that will bear exhibition. I strongly suspect that the true reason why this measure was not carried into effect, (at least in part) was owing to the opposition made to it by some of the Bureau at Washington. That they could not give an opinion on such a question with propriety, without being required to do so is evident; yet there are various ways of exhibiting hostility to any measure without an open declaration of it. One department stated the great expense this movement would produce; the QM at the Quarters General stated he had ample funds for this item of expenditure; and if the principle was correct, should the claims of right and justice be sacrificed for a few dollars? Has not the nation ample means to do justice to all who are in their service? or perhaps it was forgotten that this money was appropriated for the expedition to Florida (and although a proper economy should be observed in all expenditures) yet they had no desire to see large balances remain on hand to the credit of any Department.

Besides, the estimates made were entirely too high, as it was well ascertained from the best authority, that four companies of this regiment might have been exchanged last November for less than five thousand dollars. (That is, if any judgment and economy was used) and the remainder could have been sent north next spring without any additional expense to the Government, as it is most probable some of the companies must be removed from Florida at that period, and it would be immaterial as regards expense, whether it was those of the 2d or the 3d regiment.

As to the opposition of some other Departments, I shall forbear at present to make any comments on them; but to the discerning they can be easily seen through,—Unfortunately the Secretary of War listened to them, and gave up a measure, which it is believed he had fully intended to carry into execution, and at once crushing all hopes that this regiment could have any expectations of redress from the War Department.

It now appears certain that no exchange of regiments will take place, unless the officers of the 2d regiment come forward and make a full and just statement of the pledge given them when they were sent south to have the 4th regiment, and that too with a spirit becoming soldiers and citizens of this free country. It is fully believed that if the subject is placed properly before the President of the United States, that his high sense of justice and military propriety, will induce him to order the exchange to be carried into execution, for this source alone, have the regiment any thing to hope; for they may rely upon it, if they sink down into supineness and apathy, their just claims will be unheeded and forgotten, and they may calculate to vegetate the remainder of their days among the sand bars of Florida, and the marshes! Louisiana, no comfort or protection what is worse, the finger of scorn may be pointed at them for their want of independence and spirit to claim what is due to them. Such, however, is not the character of the officers of the 2d Artillery; they will come forward, and respectfully claim from those in authority, all which is justly due to them, without wishing to infringe upon the rights of others. All they will ask, will be for...
justice, and to be placed on an equality as regards stations, with the other regiments of Artillery, and that one regiment shall not be compelled to perform more than their equal share of the drudgery in service.

AN OLD SOLDIER.

MEDICAL STAFF.

Mr. Editor:—It will be perceived by the Surgeon General's report in the Secretary of War's documents, page 99, that out of 121 physicians who had been recommended for examination and appointment in the army, 50 had declined that honor.

Being one of this number, perhaps my reasons for backing out will not be out of order in your interesting and useful Chronicle, whose columns will, I hope, be the means of correcting all injustice to the different corps whose interests it advocates.

I had supposed that medical education and skill were valued as highly in the army as in civil life, and that they received appropriate rank and pay; but on carefully ascertaining the facts, I was dissatisfied with both.

Although I had, at my own expense, obtained through a course of eight years study and attendance on medical lectures, the degrees of A. M. and M. D., and added five or six years' experience in private practice, I found, that after expending some $400 in prerequisites, and joining the army, I would receive only $30 per month pay, and $24 for subsistence. For the allowances for forage and servant, turn upon a condition that at once deprives the officer of any benefit therefrom, and even subjects him to much loss if he keeps his horse and servant at any Atlantic or southern station.

Respectable board, lodging and washing cannot be obtained at any southern station, which are the only ones with which I am acquainted, for less than $25 or $30 per month; leaving $24 for clothing, incidental expenses, and the laying up for a wet day.

I confess, too, I did not like to see my class-mate, whose of whom I had graduated at college, and my young friend the Methodist exhorter, who despising the roundabout way of the colleges to arrive at distinction, had taken the short cut of "the laying on of hands," enjoying, through the appointments of Professor and Chaplain, the rank and pay of Majors. And the teachers and storekeepers getting the pay of Captains, while I, having the extra degree of Doctor of Medicine, must be thrust down with the school master of the third grade, (see Art. 2d. Army Regulations) to the rank and pay of a Subaltern, who had been educated and qualified at the public expense.

If the medical gentlemen already caught, are tame enough to endure all this, for myself, I have concluded not to share the honor.

B. A. L.

FORT GIBSON.

Mr. Editor:—As a good deal of interest has recently been expressed and felt for the 7th Regiment of Infantry, and as some individuals have endeavored to produce an impression abroad that Fort Gibson is not quite the channel house of the Army,—I have procured from the public records of the post, an accurate statement of the number of deaths which have occurred among the Troops since the establishment of this post to the present time; which I think will put to rest the opinion of the most skeptical on this subject.

I have not the means of ascertaining the whole number of deaths throughout the Army for any particular period, but I will venture to assert that more soldiers have died of the fevers at Fort Gibson in the same length of time, than all the Army besides! Is it to be wondered, then, that the 7th Regiment of Infantry which has been stationed on the western frontier more than thirteen years, should feel and express so much anxiety to be removed from this enemy?

For the information of our friends at a distance, I send you the annexed accurate statement for publication in your chronicle:

From 1824 to the 8th December, 1835, (11 years and a half) 361 men, and nine officers, died.

For the last two years, from this date, 283 men, and 6 officers, died.

During the 3d quarter of the present year, the Surgeon reported 601 distinct cases of disease among the Infantry, exclusively.

Dec. 8, 1835.

TRUTH.

PROCEEDINGS OF CONGRESS, IN RELATION TO THE ARMY, NAVY, &c.

IN SENATE.

Tuesday, Jan. 12, 1836.

The Chair announced a communication from the War Department, transmitting a report from the Topographical Bureau, made in compliance with the resolution of the Senate of the 6th inst., in regard to the improvement of the harbor of East Thomaston, Maine; and

On motion of Mr. Ruggles, it was referred to the Committee on Commerce.

Mr. Wall presented the petition of William P. Rathbone, of New Jersey, late a paymaster in the army, which was referred to the Committee on Military Affairs.

Mr. Benton, from the Committee on Military Affairs, reported a bill referred to him by the order of the late General William Eaton, reported a bill for their relief; which was read, and ordered to a second reading.

Mr. Clayton submitted the following resolution, which was read on the same day:

Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of providing for the erection of a fortification for the defence of the Delaware and Schuylkill.

The resolutions submitted yesterday by Messrs. Webster and Southard, were considered and adopted.

The resolutions submitted yesterday by Mr. Benton, were taken up for consideration and discussed by Messrs. Webster and Preston, and Clayton.

On motion of Mr. Ewing, and without taking the question on the resolution, The Senate adjourned.

Wednesday, January 13.

On motion of Mr. Webster, The bill making appropriations to suppress hostilities commenced by the Seminoles, was taken up, read the third time, and ordered to pass.

Mr. Tallmadge presented the petition of William A. Weaver, praying Congress to authorize the construction of certain steam-fire ships; which was referred to the Committee on Military Affairs.

Mr. Southard from the Committee on Naval Affairs, to which it had been referred the petition of the heirs of Henry Eckford, deceased, reported a bill for their relief, which was referred to a second reading.

Mr. Wall, from the Committee on Military Affairs, to which it had been referred the bill for the better organization of the corps of Topographical Engineers, reported the same without amendment.

Mr. Southard submitted the following resolution, which lies on the table one day:

Resolved, That the Committee on Naval Affairs be instructed to inquire into the expediency of providing such defences for Cape Sable West as shall render it a safe rendezvous and depot for the navy.

Mr. Robinsons submitted the following resolutions, which lie on the table one day:

Resolved, That the Committee on Naval Affairs be instructed to inquire into the expediency of establishing a naval depot and port of expedition and rendezvous within the waters of Narragansett Bay.

Resolved, That so much of the report of the Board of Navy Commissioners, made October 19th, 1839, and of the report of the Secretary of the Navy, made December 6th, 1840, as relates to the establishment of a depot within the said bay, communicated to the Senate, December 19th, 1842, with the several charts relating to the same, be referred to the said Committee.

HOUSE OF REPRESENTATIVES.

Wednesday, January 13, 1836.

Mr. Johnson, of Ky. from the Committee on Military Affairs, reported a bill allowing rations to Brigadier General John E. Wool, Inspector General of the United States Army, which was read twice and committed.
The amendment of the Senate to the bill from the House making an appropriation to repress Indian hostilities, was taken up and the bill and amendment committed.

Mr. C. AMBLERSON moved that the House resolve itself into a Committee of the Whole on the state of the Union, for the purpose of taking up certain appropriation bills.

The motion was agreed to, and the House accordingly resolved itself into a Committee of the Whole on the state of the Union, Mr. CONGER in the Chair.

SEMINOLE WAR.

The Committee took up the bill returned to the House from the Senate with amendment, for the purpose of taking up certain appropriation bills to repress the hostilities of the Seminole Indians in Florida.

Mr. C. AMBLERSON moved that the Committee concur in the amendments of the Senate. Agreed to.

Mr. C. AMBLERSON took up the bill, making appropriations for the naval service for the year 1836.

Mr. C. AMBLERSON moved to insert an item of $15,000 to defray the extra services for surveying the coasts and harbors of the United States from 1830, &c. Agreed to.

Mr. C. AMBLERSON also moved to strike out the proposed appropriation of $200,000 for the purchase of sites, and erection of marine barracks, at a place in Massachusetts, New York, Norfolk, and Pensacola.

Mr. C. briefly advocated the propriety of striking out the item, on the ground of its being, in itself, an innovation, and dangerous in its tendency to break the navy down to the rank of a mere guard service, and armed officers, that the corps itself was an unnecessary appendage to the navy, and only requisite to keep up subordination, where the system of impressment prevailed.

The money was also required for the repair of fortifications.

Mr. WARD and Mr. SUTHERLAND briefly defended the character and utility of the Marine Corps.

Mr. VANDERPOEL said, if a vote in favor of striking out were taken, he would vote against the proposition of an opinion on his part, that the Marine Corps was unnecessary and ought to be dispensed with, he would vote against the motion to strike out the item in the bill, for the building of Marine barracks, because he had much greater lights than he now possessed, to give a vote, from which it might be inferred, that he considered the Marine Corps useless. His honorable colleague had represented these barracks as a sort of amplification of that substitute described as the horse jockey, of the same class, a gentleman, or a Jew selling a piece of calico and that the discussions of the French Chamber and proceedings of the French Ministry; in all of which the contrast he drew was highly and in every respect to the advantage of the conduct of France, quoting the minority report and speeches of the French Chamber. Mr. T. now sincerely and solemnly believed that war was inevitable. He feared not a more signal blow to the Federal system and the whole nation, and that the whole nation, he said, understood the question very well; the American people, who were a more reading people than any other, understood this question as well as the members of that House. Mr. T. would not add one of the most important matters, which was our ancient ally, but he would also be one of the last to suffer our national honor to be insulted. He should be false to his country, if he failed to give his vote to put the country in a proper state of defence, under the present state of our foreign relations. Mr. S. fully advocated the amendment, he wished to see the country prepared to meet any attack that may be made upon her.

Mr. THOMAS explained that instead of the term "aggressors," he desired to substitute that of "indirectest teareth."
steps to defend the country, when she was threatened; to carry out the maxim of the Father of his Country, "in peace to be prepared for war." He spoke not as a party man. He maintained, that instead of being the aggressors, we had acted with every species of forbearance. Mr. B. then referred to the report of Mr. Rives, who defended his motives, which had been so bitterly assailed and misrepresented by the gentleman from South Carolina; and Mr. B. paid a high compliment to Mr. R. for his integrity, honesty, and patriotism. The Committee on Military Affairs then reported the bill, which had been said by the gentleman from Kentucky, (Mr. Hawks,) that, in consequence of the number of the committee of the last session, it was almost impossible to get them to perform their duty. This was by no means a flattering to shift off responsibility. It had been evident for a long time past, and the course pursued by the Senate last year of the $7,919,311 dollars application, proved it. It had been attempted, he said, to argue, that this report was adopted because it was with the House of Representatives. Mr. B. pronounced it wholly untrue, let it be said where it might. After some farther remarks, Mr. B. gave way, without concluding, to be moved that the committee rise, which was agreed to.

The committee then rose, and reported the Seminole appropriation bill to the House, and its progress on the Senate, on the presentation bill, and asked leave to sit again on the latter bill.

The amendment of the Senate to the Seminole bill was then concurred in by the House, and the bill as amended was passed.

The House then, at 4 o'clock, P. M. adjourned.

THURSDAY, Jan. 14.

WEST POINT ACADEMY.

The following resolution, submitted by Mr. Hales, of Kentucky, on the 7th instant, was taken up:

RESOLVED, That a select committee of nine be appointed to investigate the various charges of lawless exactions, of individuals, made by the laws relating to the Military Academy at West Point, in the state of New York, and also, into the expediency of modifying the organization of said institution, and, also, whether it would not comport with the public interest to abolish the same; with power to report by bill or otherwise.

Mr. Hales said it would be recollected, that at the last session of Congress, a committee, consisting of one member from each of the States, had been appointed, and that committee went into an investigation of the affairs of that institution. That committee performed the duty assigned them, but their report was made at so late a period of the session, that it was impossible for the House to act upon it. The resolution which he now submitted, varied in but one particular, from the one adopted, raising the committee of last year; and that was in reducing the number of the committee of last year, impossible to get them collected for business. The number was entirely too great. As this was a mere resolution of inquiry, he would say nothing of the abuses which existed in that department of the government, because they might be adopted without debate, so that the committee might proceed to the duty assigned them.

Mr. Wardwell said he thought that this subject ought to be referred to the Committee on Military Affairs. He believed that the committee of twenty-four which was appointed last session, had investigated the subject fully. Their report was brought into the House, and it set forth all the facts which we ascertained to know. He would therefore refer my resolution to the Committee on Military Affairs.

Mr. Smith wished the gentleman from New York (Mr. Wardwell) would give some substantial reasons why the subject ought to be referred to the Committee on Military Affairs. It seemed to him that a special committee ought to be raised, but if the friends of the institution thought that a special committee would not do them the same justice which the House of Representatives did, and would offer that as a reason, he would withdraw his objection. As there were doubts about the organization of this Academy, it was desirable that a committee should be raised, which could devote to a Committee on Military Affairs, not having time, although they might have the disposition to do the subject justice. He believed a special committee would do ample justice. He hoped the gentleman from New York would withdraw his motion, or it would not prevail. Mr. Baines thought the subject had already been referred to the Committee on Military Affairs, by the general resolutions referring the different items of the President's Message to committees, and therefore inquired whether the present resolution was in order?

The Speaker said that the present resolution was one of importance, and he considered the reference of the President's Message as not applying to the case.

Mr. Bates then said he would vote for the amendment of the gentleman from New York, because he thought the honor had been repented of in that matter. He thought the President had been so repented of in that matter. That committee had a meeting early in the session, and appointed a sub-committee to investigate the whole matter, and that committee went industriously to work. Mr. Bates then said, the facts must be thoroughly investigated, and that committee was thoroughly investigated, and that there was no necessity for further investigation. He would vote for the amendment of the gentleman from New York.

Mr. Reynolds, of Illinois, remarked that the people he had the honor to represent in the state of Illinois, took a deep interest in this subject, and were he to remain silent on the occasion, they would consider him derelict in his duty. They expected him, on all occasions, to advocate such measures as would tend to reform this institution, or to abolish it entirely.

This was the reason which induced him to rise on this occasion.

It was astonishing to him, Mr. R. that gentlemen, friends to this institution, were so strenuous and so much opposed to an investigation of this subject. If it be an institution founded on a proper basis, and conducted in sound principles, the great dread of an investigation would be if it be of this character, an investigation will not injure it, neither time nor talents can prevail against it. But the great dread of an investigation, was almost positive proof, that there was something wrong in this institution. Mr. R. said, his honorable friend Mr. Briggs (Mr. Briggs,) tried to stifle this investigation, by his attempt to satisfy the Speaker, that the subject was already referred to the Committee on Military Affairs. This was strong circumstantial proof, that there was in it something not right. The other gentleman (Mr. Wardwell of New York) wished to have the subject referred to the Committee on Military Affairs. Mr. R. said he had the highest respect for that gentleman, but he supposed he would not have the same wish to investigate it, if he had already expressed an opinion on the subject, in a report favorable to that institution; and from that consideration, were not so impartial a select committee, raised express for that purpose, it was not satisfied that it was wholly right.

Mr. R. remarked, that an official investigation, and that made known to the people, would cause the institution at West Point to wither and die. Under its present organization for ten years, the gentleman who represented the exclusive individuals that were educated in it; and what was still worse, it was made a kind of monopoly. The Cadets educated there were the exclusive officers in our army, right or wrong; they were the officers who were to be the future soldiers, and in that character of antiquity did, who slew Goliath, he still could not rise one foot in the army.

He would appeal to the House, if every individual did not expect to be rewarded for their meritorious conduct. His friend (Mr. Briggs) from Massachusetts, no doubt would be rewarded for his services, but would it be in the regular course of conduct in Congress, and his assiduity to business. The same would apply to the gentleman from New York (Mr. Wardwell.) The principle was correct to reward meritorious conduct as an institution, but the one principle that exposed this principle, was in itself wrong. Any person that would look at the report made at the last Congress on this subject, would be satisfied that there was something not right in the institution. If the President of the Academy would let that report be printed, and officially presented to the people, that would be satisfactory.

Mr. R. said, he hoped under all the circumstances, the
notion of the gentleman from New York, (Mr. Wardwell) would not prevail; but that the subject would be submitted to Congress, under the resolution of the gentlemen from Kentucky.

Mr. Wardwell did not wish to take up the time of the House in discussing a preliminary question, but his friend from New Jersey (Mr. Reynolds) had made a speech on Military Affairs had expressed an opinion on the matter. It was not the committee of the last session which expressed that opinion, but the one preceding that, which was a different committee entirely. The committee of the present session had expressed no opinion on the subject. It was very probable that some of those who would be on the select committee, had expressed opinions adverse to the institute. The last Congress had refused to print the report. It was voted against having so many select committees on this subject which ought to go to standing committees. He was willing to have the institution examined—yes, proved the case—but let it be done by the proper committee. He would say a few words in reply to the gentleman from Illinois. Why was it that all this objection came from the western States? It was, he thought, because all persons in those States, who had any topographical knowledge, might expect some offices for the young gentlemen of the western counties of the western country. No wonder that certain gentlemen's constituents were in favor of abolishing that institution.

Mr. Bennet had a few remarks to make on the subject. He was a member of the select committee of the last session, and would say that it was not in the power of the Committee on Military Affairs to give the subject the attention it required. The committee of the last session made their report to the House, and the gentleman from New York (Mr. Wardwell) tells us that the House refused to print that report. Why did the House refuse? Because it required two thirds to make the motion to print, and three fourths of the House were opposed. He hoped and trusted that the resolution of the gentleman from Kentucky would be adopted, and that a thorough investigation might be had. Mr. Mann said he could not see what possible objection there was to the Bill. It was not the Bill of Mrs. Clipstead from Kentucky. On the one hand it was contended that it was one of the most aristocratic, and on the other that it was one of the best institutions that ever was established. Why, there was a method of conducting men to an office, so that we may be compelled to make an impartial judgment on the subject? A large portion of the people of the country brieve that the institution ought to be abolished; then let an investigation of the subject be made, and Mr. H. Reynolds say a word to the gentleman from New York, (Mr. Wardwell). He is mistaken; the people of the West are governed by so many means as those returned to them by that gentleman. That gentleman, having a large amount of men are sent out to fill up all the important offices, men who are the friends and relatives of those who are in high stations, and who have political influence. The men of high office are educated at that institution, and these men are sent out to fill all the high offices in the Western States. He thinks the people of the Mississippi Valley educate their sons at their own expense, why should they be appointed to those offices? If they are capable, let them have the offices. He objected, and his constituency objected to the existence of the institution in its present form. He therefore hoped there would be no objection to an investigation.

Mr. Mann, of New York, desired to make a few remarks upon the subject both in the House, but as the morning hour had expired, he called for the orders of the day. The motion was agreed to.

ARMY.

BY ORDER OF MAJOR GEN. MACOM. ROGER JONES, Adjutant General.

Jan. 15.—1st Lt. S. P. Heintzelman, 2d Inf., assigned to temporary duty in the Qr. Mr. Gen.'s Department.

Jan. 16.—2d Lt. S. T. Tibbatts, 2d Luy, transferred at his own request, to the 4th Infantry, and will take place below Bvt. 2d Lt. H. Prince.

Lieu. S. B. Dunseb, 4th Arty., ordered from Fort Severn to Charleston, S. C., to report to Gen. Eustis for duty in the Qr. Mr. Gen.'s department, in connection with the movement of troops in Florida.

Lieu. C. Dimmock, 1st Arty., ordered from Fort Monroe to Savannah, Geo., for duty in the Qr. Mr. Gen.'s department.

NAVY.

The U. S. Frigate Potomac, Capt. J. J. Nicholson, arrived at Lisbon on the 26th Nov. from Naples, Port Mahon and Gibraltar. We learn that the Mediterranean Squadron (with the exception of the Delaware, 74, bound home) would cruize during the Winter, in the neighborhood of Cadiz, Teneriff, and Madeira.

The U. S. ship Delaware 74, Commodore Patterson, was at Gibraltar on the 13th Dec.

The Vandalia, Captain Webb, arrived at Pensacola on the 27th ult. all well. The Y. arrived at St. Barts one or two days after the Constellation, Com. Dallas, left that port.

List of Officers attached to the vessels of the Mediterranean Squadron, 1 Nov. 1835.

FRIGATE POMAC—Flag Ship.

J. D. Elliott, Esq., Commander of the Squadron.

T. J. Boyd, Surgeon of the Fleet.

Commodore's Secretary, J. E. Dow.

Aid to the Commodore, W. W. Wolcott, W. L. Godden.

FRIGATE POTOMAC.

J. J. Nicholson, Captain.

George Minor, Acting Master.

Passed Midshipmen.—J. F. Green, B. M. Dore, A. M. Pennoke.

SHIPS JOHN ADAMS.

S. H. STINGLEY, Commander.

DEATHS.

In Philadelphia, on the 13th instant, Mrs. MARTHA W. BROOK, consort of Lieutenant B. E. BROOK, of the U. S. Marine corps, and youngest daughter of the late Mr. JOSEPH CAMPBELL, Esq. of that city.

At Fort Gibson, Dec. 3, 1833, 1st Lieutenant SAMUEL KINNEY, of the 7th Regt. U. S. Infantry, aged 30 years—a son of the late Lieut. Governor of the Schuylkill.

At Monterey, in the province of California, Capt. JOSIAH HOBAN, of the late Hawaiian Line, was drowned in his present command. Lieut. KINNEY contracted his fatal illness, in the performance of the duties incident to it. While yet unrecovered from a disease contracted on a former command, he did not shrink from exposing himself to the fatigue and exposure of a prairie expedition, and returned to this post from it, but to languish and die.

His character contained some of the finest elements of the human mind: thoughtful and considerate in forming his opinions—he was firm and unyielding in maintaining them, and in carrying them when necessary, into practice: mild and courteous in his demeanor, he neither neglected to perform his duties, nor extort from his subordinate the slightest hint of his authority; in the temporary tribulations of his fate—he had all the lofty pride and chivalry which should belong to the military character. It may be emphatically said of him, that he was one who

"In honor's field advancing his firm foot Plants it upon the line which justice draws, And will prevail, or perish in the cause."

Fort Gibson, Dec. 8, 1833.

At Sumner, Pa., on the 29th Nov. last, Mrs. HANNAH GRAH, widow of the late Lieut. ROBERT GRAY, of the U. S. A., and sister of Brig. Gen. HUGH BRADY.

REVOLUTIONARY SOLDIERS AND PATRIOTS.

At Woburn, Mass., 13th ult. Mr. ELIJAH LEATH, aged 89. He fell dead in his house. He was in the battles at Bunker Hill and Bemis' Heights, and at the capture of New York.

Of the soldiers of the Revolution who were among the first who carried shoes, in saddle bags, to market in Boston, there being then no shoe stores. He peddled them out from a bench, north side Faneuil Hall, where gentlemen and ladies, of all classes, resorted to buy.

In East Medway, Mr. STEPHEN HARDING, aged 85.

In Cohasset, Mass., Capt. PETER NICHOLS, aged 81-2. He was a Captain in the revolutionary war.

In Woburn, Vers. 29th Nov. Mr. PHINEHAS BOND, in his 80th year of age.

At his residence, in Rockland county, N. Y., on the 16th ult., Maj. PETER TAULMAN, in the 79th year of his age, was shot by a miscreant of New York, a sergeant, and closed the service in 1783, at the general discharge of the troops, a captain on the continental establishment. He was at the battles of Monmouth and Springfield, was wounded at the first of these, and was at the siege and surrender of York, Va., in 1781.

In Loudoun county, Va., on the 17th ult., JOHN WEST, in his 54th year.

In Newton, Mass., Dec. 8th, at his residence on Annunciation square, Col. B. SHAUMBURGH, aged 76 years, a revolutionary patriot. He was interred with military honors by the United States troops stationed in that city, and the services were conducted as an escort, followed by a large concourse of citizens.

In Alfred, Me., 28th Nov. Mr. LEVI HUTCHINGS, aged 87; and on the 30th, his wife, aged 83. Both were buried in one grave.

In Scarborough, Me., 6th Dec. Capt. ZEHULON LIBBY, 76.

In Portland, Va., on the 29th ult., Major SPIVEY WYATT, aged 76 years, and for twenty years one of the most respectable inhabitants of that place. He was one of the few remaining worthies who lived and toiled in "the times that tried men's souls."

At the age of seventeen, inspired with the love of country, he tore himself from his paternal roof to enter into the revolutionary army.

PROPOSALS will be received at the Office of the Commissary General of Purchases, in Philadelphia, for making up Clothing for the year 1836, as hereinafter enumerated, viz.:—

Coats of all kinds for the several Regiments.

Woolen Jackets, with sleeves, for Artillery, Infantry, &c.

Woolen Overalls, for Art. Inf. and Draagons, for sergeants and privates.

Cotton Jackets, with sleeves, for sergeants and privates.

Cotton and Flannel Shirts, for sergeants and privates.

Drawers of Canton Flannel, &c.

Great Coats, for Artillery, Infantry and Draagons.

The garments will be distributed at the United States Arsenal, near Philadelphia, cut out, with the necessary trimmings, and are to be returned there, when made up, for inspection.

Patterns of all the garments may be examined at the Commissary General's Office. On these pattern garments exhibited the contracts will be formed and inspections made, and no garment will be received and paid for that does not correspond in workmanship, and in every other respect, to the pattern on which a contract has been founded. The garments are to be delivered in equal quantities monthly, at so much per equal proportions of sizes to be designated, and all contracts are to be fulfilled on or before the first day of July, 1836. Those who desire a contract may apply to the Secretary of State.

No advances will be made. Security will be required for the faithful fulfillment of contracts both as to time and workmanship, including the risk of injury to persons and property.

The proposals must be in writing, sealed, and endorsed "Proposals for Making Army Clothing," and must be received at the Office of the Commissary General, on or before the 1st of February, 1836.

C. IRVINE,

Commissary General of Purchases.

Jan. 14—St.

E. OWEN,

MERCHANT TAILOR, near the Seven Buildings, and also a few doors west of Stoller's Hotel, WASHINGTON CITY.

Begs leave most respectfully to inform his NAVAL and MILITARY friends, and the PUBLIC in general, that he has just received a very large supply of fashionable WOOLEN GOODS, consisting of

WOOLEN CLOTHS, CASSIMERS, VESTINGS, &c.

Which for quality and lowness of prices, he feels confident, will be found to be equal to any in the United States. E. O. would respectfully solicit the attention of gentlemen belonging to the ARMY AND NAVY, to his superior mode of fitting uniforms, which, for material and workmanship, cannot be surpassed by any house in the Union. He has constantly on hand a large assortment of articles, as used in the dress of both services, and which he is determined to sell at a lower rate than the same articles can be procured for, in any of the Atlantic cities. He has also just received a new and elegant CLOTH, peculiarly adapted to the dress of the Marine Corps, and which is a very rare article, to which he would invite the particular attention of such gentlemen, who belong to that corps, as it will be found to be a very superior article.

All of which is delivered from different parts of the country (containing a draft—suitable reference) will be as punctually attended to, as though the party ordering were present, and will be forwarded with the strictest care.

On the 30th ultimo, he received the universal acknowledgments of those gentlemen who have already favored him with their commands, and he humbly solicits a continuation of those favors, for which he will ever feel grateful.

Jan. 7—St.
ARMY AND NAVY CHRONICLE.

Edited and published by H. Homans, at $5 a year, payable in advance.

Vol. II.-No. 4.] WASHINGTON, THURSDAY, JANUARY 28, 1864. [Whole No. 56.

SIEGE OF NEW ORLEANS.

[Continued.]

If the British general expected to terrify his enemy by the discharge of rockets and bombs, and thus to throw him into confusion, and then mount the works, he was assuredly deceived without his host. These missiles proved almost harmless, and the American backwoodsmen, who, if they had ever heard of a bomb or a rocket, were probably pictured to themselves some terrific instrument of destruction, soon learned, that like another army, they were more formidable in appearance than in reality.

Captain Cooke says that this affair, "to soften it off, was called a reconnoissance." "Words," Mirabeau told the French Convention, "are things." Still it is difficult to reconcile to common sense the idea, that a sight of General Jackson's works, standing directly in front of the British troops upon a naked plain, was properly purchased by a loss of one hundred and twenty killed and wounded, and by the far more serious loss of moral strength, produced by a display made of so few hours, and by the sheltered position and inactive state of the British troops. Captain Cooke says, "Indeed, the Americans, seeing the backs of the red coats, were elated accordingly, and were almost inclined to make a sortie. Not almost, but altogether; for Colonel Henderson was actually ordered to attack a party of the light troops, which had advanced near the American lines, and marched out for that purpose; but missing the nature of his orders, placed himself in a false position, and lost his own life with five of his men."

The British general seemed to consider heavy batteries artillery essential to his success, and the army was therefore zealously engaged in transporting from the rear the proper ordnance. Their supplies, too, and not a fact all their beef, were on board the vessels, some sixty miles from them, and separated by a swift stream of the river, navigable only for boats of light draft. It may well be supposed, that the necessary intelligence was transmitted. Their batteries were soon joined by the fire of the British, and gradually gaining the ascendency, they rapidly mounted the guns, killed and disabled the artillery men, and almost demolished the works which had been thrown up. About three o'clock the fire of the British was silenced, and their army retired to their camp. During this severe engagement, the whole of the enemy's force was drawn out and stationed in the ditches in the rear of their batteries, ready to advance to the storm of the American entrenchments, as soon as a serious impression should be made upon them. Independently of the loss occasioned to the British by the direct fire from the lines, many casualties were caused by the enemy's ships and batteries, which enfiladed and seriously annoyed them. Certainly the immediate theatre of this struggle must have presented a singular spectacle to these troops, many of whom had followed the standard of Wellington in his victorious career from Lisbon to Toulouse. Thence, the strongest fortresses, constructed with all the skill of modern military art, were assaulted and rudely opened by these weak troops, or had seen them scale the ramparts in the face of the most terrible opposition, and attended with circumstances of horrible atrocity, the details of which no historian can record. But here was a body of undisciplined men, collected suddenly from all the time of civil skill or experience, and whose officers were chosen from themselves, and with no higher qualifications than native courage, smart intellect and genuine patriotism can confer. And these farmers and artisans and merchants and lawyers, amounting to less than one half of the British force, were now posted behind a line of cotton bags partially covered with earth, while the confident invaders...
ers were "asinine," as General Lambert expresses it, or "lying down," as the Journal of Operations says, in the planters' ditches, waiting for a propitious moment to rally forth, and disperse what Captain Cooke calls General Jackson's "posse comitatus." "Was not this," inquires our author significantly, "enough to sicken the best troops in the world?"

However, there was an excitement in the enemy's lines, a note of preparation for the coming onset, whose issue, had it taken place, is beyond our ken. Two caissons were blown up by a rocket, and the accident itself, and the momentary confusion attending it, probably led the British to suppose that some serious disaster was at hand. Their preparations were suspended for a brief space, and a movement in their ranks was visible. They also manifested their emotion by three cheers. These were instantly sent back in startling shouts from the American lines, and were accompanied by a general salvo from the artillery. The besiegers resumed their former position, apparently satisfied that no favorable effect had yet been produced by their fire.

During the progress of these efforts, an attempt was made to turn the left flank of the Americans. A detachment was ordered to penetrate the swamp, and passing the extreme left of the position, to attain, if practicable, the rear. Had this plan succeeded, it is possible, in the absence of a reserve, the British columns might have surrounded the entrenchments, and destroyed the American army. But such a maneuver was too obvious not to engage the attention of General Jackson. He was well aware of the exposed condition of his left flank, and he had therefore adopted every practicable expedient to place it in safety. The breach in the levee had raised the water in the swamp, and had thus diminished the extent of the line of operations. Its defense was committed to General Coffee, and if unharnessed honor, chivalrous courage, and the most devoted patriotism give any claims to confidence, this lamented soldier well merited the toreador. He enjoyed it, and proved himself worthy of it.

This station required the most vigilant and severe attention. It was to be guarded day and night. From the depth of the water, it became necessary to erect a sort of scaffolding of logs and brush, upon which the troops could rest. This was pushed as far into the swamp as practicable, and the underwood cut down for some distance in front, that the riflemen might have timely notice of any advancing foe. The labor and exposure of this particular service were excessive, but they were cheerfully borne by men inured to hardships, and identified with the cause in which they engaged. The British columns undertook to penetrate into this morass, and endeavor to discover some way, by which the position might be turned. While wading through the water, they suddenly came upon the station of three of the practised marksmen, who were scattered through the marsh. They were seated behind a log, and each taking deliberate aim at one of the officers, these were instantly killed.

For a few days subsequent to this period, both parties were busily engaged in their respective preparations for attack and defense, as it was obvious that some decisive event would soon bring the campaign to a close. Reinforcements were received by both the combatants. Without entering into numerical details, little satisfactory to the general reader, we content ourselves with stating, as the best estimate we have been able to make from the data within our reach, that the British army was finally swollen to about nine thousand men on the left bank of the Potomac, and that the number of copies who served in the American army, was, as before stated, four thousand two hundred and sixty-four. The official returns which are annexed to this article, furnish all necessary information on the subject of the defensive force. But the actual strength of the British army has never been publicly made known. The English writers who have recorded events of the expedition, and whose works we have met with, deal in vague generalities, and present no credible estimate of the final strength of their army. The different corps which composed it are named below, as given in La Tour's memoir, together with his estimate of the numbers of each, and of the general aggregate. In Bissett's history of the reign of George III., the American force, collected for the defense of New Orleans, is stated at thirty thousand!!! The author of the Narrative of the Campaigns of the British army at Washington, Baltimore and New Orleans, himself a participator in the scene, as he describes it, after mentioning conflicting estimates of the American force, varying, as he says, from twenty-three thousand to thirty thousand, chooses "a middle course," and supposes "their whole force to be about twenty-five thousand."

In Baines' History of the Wars of the French Revolution, these estimates are reduced nearer to the standard of truth. This writer says, that the force on each side, at the battle of the 6th, was about ten thousand men.

From the official returns it will be perceived, that the lowest of these estimates more than doubles the actual number of armed men, who defended the American lines at the final repulse of the British.

Objects, which were thus exaggerated, must have been seen through a magnifying medium. Indeed, no clearer evidence is necessary, that the issue was equally mortifying and unexpected, than these attempts thus to increase the force of the Americans, and proportionately to diminish that of the enemy.

The British force, however, was perfectly armed and supplied, with much labor, it is true, but still well supplied, with all the necessary material which they required. Their magazines, with the fleet, were filled with whatever was wanted, and these were freely opened to the demands of the army. The expedition had been abundantly prepared from the English arsenals.

On the 3d of January, General Jackson informed the Secretary of War, that no arms had then arrived. They were yet upon the river, having left Liverpool the preceding autumn. He adds, "hardly one-third of the Kentucky troops, so long expected, are armed, and the arms they have are not fit for use."

It was lamentable that at this juncture some defect of inferior administration should have left unarmed a large portion of the force assembled at this point from so great a distance, and required by such imperious circumstances. But so it was, and the anxiously expected arms did not arrive till the British were driven disinclined from the attack.

List of the several corps of the British army employed in the operations near New Orleans, as given in the Appendix to La Tour's History of the Campaigns in America:

1st do. West India, Lieut. Col. C. W. Whitty, 700.
A detachment from the 92nd regiment.
Rockets, Grenadiers, Artillery, dragoons, engineers, sappers and miners.
Royal Marines, 800.
Sailors from the Fleet, 14,400.
We shall not stop to dwell upon the other defective arrangements for supplies, particularly of proper clothing, of which the distant militia were almost destitute. Harassing, indeed, were these circumstances to the troops, and perplexing to their leader; but they did not, for this was an army, vitally affect the operations. Without arms the troops could not fight; but suffering and privation they could endure and overcome. And they did so. This duty came down to them like an inheritance from their revolutionary fathers, and well was it performed.

We are zealous, however, of not being misunderstood. Far from us to cast the slightest imputation upon the venerable and patriotic man who then presided over the councils of our country, or upon his associates in this momentous struggle. Nobly, indeed, did they sustain the honor of the country, and rich should be their reward in the public gratitude. But their surveillance could not be confined to every portion of every region of this vast confederacy, and arrangements in the execution of the best concerted plans are every where the necessary consequence of extensive operations.

As we have already stated, the American lines were constructed on the upper bank of an old mill race, with a deep and broad glen, and was left untouched. The forces in the neighborhood were taken and planted upon the bank, to support the earth, and prevent it from falling into the race. Thus rudely constructed was the parapet. As different portions of the line were committed to different corps, and as the weather was remarkably inclement, there was little symmetry in the work. It was very unequal both in height and thickness, penetrable in some places by the enemy's balls on the 1st of January, and in others twenty feet broad.

With a commendable precaution, two other lines of defense were constructed, one about two miles in rear of the principal line, and the third still more remote, to the city. The work upon these was vigorously prosecuted, and they soon assumed a respectable appearance. It was the intention of General Jackson, if compelled to retreat, to fall back in succession to these positions, and then renew the contest. It was a noble resolution, but it determined on transferring their standard from parade to parade, yielding, if compelled to yield, to superior numbers and discipline, but still resisting while resistance should be within their power. If executed, it would have been a beautiful illustration of the command of Tydies to the Grecian troops, when compelled to fall back before the Trojan army.

"A ως ηος Τξας μας στοιχειονεται ακοινωνων ξενων Ερυθρων Εγρατων." Their banner would have then continued a signal of confidence to the troops of the city, which now, within plain view, was stimulating one party to exertion by its "rich merchandise," and the other, by all those sympathies and feelings which its precarious condition was so well calculated to awaken.

Should the enemy succeed in gaining his works by assault, it was the impression of the American General that he would deliver the whole force into the rear of the city, so as to be enabled to retire in safety, and place his troops in the rear of the second entrenched line in time for a vigorous defence.

Behind the second line were stationed all the troops, and they unfortunately amounted to between twelve and fifteen thousand. Thus arranged, they gave the position an appearance of strength, and every such appearance, which could impose upon the enemy, was now, more than ever, necessary to a successful resistance.

There was, indeed, but little opportunity for strategic combinations during the progress of the campaign. The theatre of operations was, from physical causes, necessarily bounded by the visible horizon. The dark nights and dense fogs, it is true, allowed the work of the space and the axe to go on with less danger and interruption; but from dawn till twilight, the parties stood before, each other, watching every movement, and equally exposed to observation.

We would not, if we could, cast the slightest unmerited reproach upon the memory of the brave but unfortunate soldier, who conducted this invading expedition. He had many enemies, it is true, at home and abroad, from the face of the country, and from the distance between his line of operations and his naval depots. It is obvious that he had not read, or did not heed, the maxim of the great master of modern military science: "Il ne faut," says Napoleon, "point faire une guerre facile." Our circle is a narrative, not a criticism. And it must necessarily be so. The professional reader would not come here for technical details, nor would the general one find any interest in their perusal. We have besides not the time, and we may add, in all sincerity, that we do not feel ourselves able to enter into an analytical investigation of this ill-starred irruption. But it is open to the slightest glance, that while the British General was unimpeachably brave, his movements were slow, cautious, and "timides." The vigour of his adversary had produced an impression, that his means of resistance were far greater than in fact they were.

But on the other hand, Sir Edward Pakenham had great advantages in his situation. He was independent of his command, and from the quality of his troops. He led none but regular forces, in a high state of discipline. His means, both of subsistence and annoyance, required nothing more than laborious transportation, and his cares and exertions were limited to his military duties. He had only one to thwart, to impede, to arrange it.

For different was the situation of the American commander. He had the same military labors and responsibilities as his rival. But he had others, not less perplexing, and which that rival knew not of. The civil history of this campaign is perhaps not less interesting, certainly not less instructive than the military. At some points we may endeavour to present it to our readers. To attempt it now, would be to tax our patience beyond any reasonable limits of forbearance. But it is essential to a just appreciation of the true state of affairs, to record at the outset the composition of the American army as not favorable to strict subordination—that they were not disciplined, partially unofficiated, collected from very different races, hastily brought together, and almost all voluntary militia. The population of Louisiana was principally of French descent, and though they behaved nobly during the whole contest, still, in looking back upon circumstances as they were, it is easy to see that the elements of discord were present, and that this fairness and precision were necessary in combining such materials into one mass.

There were other difficulties, peculiar to that time, and some of them to that place. DISAVERSION was there, not among many, but still among enough to make the public mind envious. The imminence of the danger rendered the measures necessary. The theatre of operations and the vicinity of the army converted a large and populous city into a beleaguered camp. Anxiety and alarm were everywhere prevalent, and each day produced its ten thousand rumours, ever varying, but still upholding the feverish excitement. The operations of our army were familiar to all, and in their nature and operations suited to a state of peace, and not to all the exigencies of a defensive warfare.

We do not recognise the principle, that the laws are ever silent among arms, nor in the darkest day of the republic, should its darkest day approach, could we, by any means, leave to the future care that decree: "submit perpetenti capiat respublica," which was heard in Rome when the Capitol was in danger; nor authorise any magistrate to perform the functions of a dictator. Once, in the most portentous period of the revolution, and while the Articles of Confederation loosely prescribed the powers and duties of the general government, an authority approaching that decree did obtain; but it never exercised any power except for his country's benefit. What might have been unsafe in any other hands, was, from habit, from principle, from temperament, safe in the hands of Washington.
SURVEY OF THE COAST.
SECOND REPORT OF MR. HASSLER.
[Continued.]

27. The operations before described having lasted until December, at which time we were upon the West Hills station, and the winter setting fully in, with the consequent intransparency of the atmosphere of the seashore, I was forced to abandon my plan, to visit the stations of Wesel and Harrow myselves. To offset this, I endeavoured to have a number of the stations occupied, either by one of the assistants, or by an officer, or a volunteer. I directed these two stations to be occupied preliminarily by some of my assistants, though with inferior instruments: that will, therefore, not dispense my observing there in proper time myself. So, Mr. Blunt observed the angles upon Harrow, and Mr. Ferguson those upon Wesel; and upon their returns, when the weather permitted me to reach the Hills, the present preliminary determinations are grounded, as far as they are dependent on this part.

28. When I had executed the station of Mount Carmel, the extreme eastern one to which I had intended to extend my observations that year, I considered myself authorized to form two parties, to carry on secondary triangulations within the limits of country that my main triangulation embraced, as the triangles could all be sufficiently determined to allow the verifications required in future: keeping, therefore, only two of my assistants, Captain Swift and Lieutenant Bell, with me, Mr. Ferguson was to take the station of Troughton, to fill up with secondary triangles all the parts included between the main northern triangle-points and Long Island Sound; and Mr. Blunt, with another second, would direct in a similar manner for all that related to both shores of Long Island; both equally proceeding from the eastern extremity of our work towards New York.

29. The secondary points thus determined must be sufficiently numerous, and placed in such a manner, as to enable from them to fill up all the details by plane-table operations on land, and by observations for the soundings upon the water. Considerable advance was made in those plane-table parts already in the latter part of last fall; and the works have been taken up again this spring early, though the weather of that neighborhood has again proved very unfavorable.

30. Upon Buttermilk and Toshua regular series of azimuth observations with the sun were made, with the two-foot theodolite, by myself; and the latitudes of the most essential stations were observed by my assistants, partly with the eighteen-inch repeating circle, partly with the ten-inch repeating reflecting-circles; by the calculations of this winter these latitudes were all reduced to one collective result by means of the azimuths, and the coincidence has been more satisfactory even than I expected.

31. These reductions, carried through the works of 1817 to the City Hall of New York, the latitude and longitude of which had been determined by entirely different means, gave the point from which the longitudes have been counted, as reduced to Greenwich, there being no other point within the limits of the Survey astronomically determined, nor any fixed point in the United States from which the longitude could be counted.

32. As well in my operations of 1817 as in those of last year, the angles of elevation or depression of the main station-points from one another, have always been observed, except at my two stations upon Long Island, because these will be revisited at a future time. These observations will furnish in time an interesting collection of data upon the elevation of all these points over the level of the sea; but, neither the winter of 1817 to 1818 nor the present has been long enough to make of time, to calculate any results; in fact, it is rather more proper to postpone these calculations, until the exact distances are fully determined upon which these results depend; they will, therefore, with more propriety form a part of the calculations of next winter.

33. In 1818, all calculations of the elements of the projection that will be the most advantageous for the construction of the maps as most concordant with the results of both the triangulations and the detail surveys, the knowledge of the dimensions and figure of the earth has much improved, and been much more accurately defined. I have no hesitation in saying that all the theoretical calculations thereto referring, upon the most approved elements, of which the leading data are the ellipsity of the earth, and the mean degree of the whole meridian, that is, its three hundred and sixtieth part. It would, however, be out of place, in the present stage of the survey, to give any result of that nature. We shall, however, adhere to the same plan of theory, which will become of great interest hereafter, as the ultimate results of the Coast Survey must furnish one or more of the data for the perfecting of these results themselves; if it shall take its appropriate standing among the works of this nature, it is to be hoped that it will be properly discussed at the end of the work, or more accurately, the investigation of the problem of the circumference of the earth in the New World.

34. It may be here the place to state my reasons for adopting the metre for the unit measure of the whole Survey. 1st. I had a fully authentic metre, made by the Committee of Weights and Measures in Paris; while of any other measure whatsoever, I could only have a copy, more or less corrupted. 2d. Notwithstanding older ideas to the contrary, I found positively, in my comparisons made for the weights and measures, that, in a general way, the metres are obtained of greater accuracy and coincidence than the English scales. (See my Report upon Weight and Measure Comparisons.) 3d. By my system the difference of longitude of Philadelphia and New York would be determined, in a way that is more accurate and certain than by any of the other means employed in this country. 4th. I adopted this system of the metre with the scale of Troughton of 82 inches, adopted as English Standard in this country, together with a number of other measures, its ratio to either one of them is sufficiently determined, to enable at any time to present any distance in either one of the measures thus introduced. In this case, for example, instead of submarine distances, which, for instance, to obtain the value in English inches, would need only the addition of the constant logarithm = 1.50352859 to the logarithm of the distance recorded in metres. In the ultimate general account, it will be proper to give the distances both in metres and in yards, or feet, to case the utility for the various future applications. 5th. The determination of the station-points of the triangulation by their differences of latitude and longitude, was calculated upon the same theoretical principles stated above; they have coincided with the results of the latitude observations, that are by their nature entirely independent of the geodetical operations, to such a degree as to render, in my judgment, my plan as it is, not consider myself authorized to expect; and the reduction to the City Hall of New York showed an equal coincidence with observations made some years ago by Captain Sabine, on the occasion of his pendulum observations.

36. This afforded also an additional proof that the result of the determination of the Neighbourhood, measured in 1817, could be sufficiently relied upon, for the preliminary calculations, as it stood the test of being extended to distances about 160 miles from the same. It confirmed equally the near approximation of the azimuths observed last year.

37. It is, however, evident that my dependence for the ultimate azimuths and latitudes of deciding accuracy, must as yet be referred to future observations, with the superior means of instruments, &c., that I have in part ordered, and have in part still to contrive; in respect to the longitude, it is too evident how desirable an observation with a meridian bar should be, as I doubt it will be provided in proper time, by special means, independent of the Coast Survey.

38. My attention at the present stage of the work must be directed principally to the measurement of a base-line, with all the means of accuracy that I may be able to dispose of, by means of the apparatus of which I have given the description in my printed papers. The Coast Survey adopted the base-line at full good order already during last summer, the wood work is in construction in New York, under the direction of Captain Swift, and I have just now put the double metre bars, which shall determine the absolute length, to their proper standard, by means of the apparatus provided for it, and with the help of my assistant in the weight and measure business.
In the actual measurement of the base-line, I shall unite all my present assistants, principally because they will all take a great interest in the operation, which is in its kind of a peculiar nature, and not often occurring, wherein every operator will always follow his peculiar work according to his situation, and the means at his disposal.

As soon as the result of the base-line is ascertained, which will require some time and considerable calculation, the result will be applied to the calculation of all the triangles, and the reductions to the geographical positions will be repeated with improved accuracy. Then a projection of the points, upon the scale of the fifty thousandth part, will be made upon papers, distributed over the extent of the work, in such parts as will be best appropriated to the filling up of the detail surveys, by the plane-table, and the insertion of the soundings, in which works the most of my assistants will then become engaged, while I shall proceed again in the main triangulation.

During the execution of these works I hope that the instruments, ordered of Mr. Troughton, in London, will arrive in this country, at least if he can execute the promises given to that effect; I hope, therefore, to be still more of the number of assistants, and to the continuation of my work in the main triangles, the determination of azimuths and latitudes, and all the more delicate observations, upon properly selected, favorable stations. The two-foot theodolite, that I have used last summer, I shall then propose to send to Mr. Troughton, so that we may again put in a proper serviceable state, for that accuracy of which it is susceptible, when in good order.

At the same time with the distribution of the detail surveys upon hand, I should like to put in activity two parties of naval gentlemen, for ascertaining the sounding in the neighborhood of the same points that the detail surveys would embrace, as they would probably sometimes work in conjunction with one another; they would embrace a great part of Long Island Sound, and part of the south shore of Long Island. This, however, will require to take some arrangements previously, in relation to the vessels, which it will be necessary to employ in it. Lieutenant Bell of the Navy, who has been one of my assistants last summer, will take the direction of at least one of these expeditions, as his acquaintanceship with the locality will of course assist him much in the proper execution of this task.

I join to this report skeleton-maps of the triangulated triangles, which was hitherto unknown, containing all the main triangles that I executed, and so much of the secondary triangles, of the two separate parties, as have been communicated to me until now. The distances in numbers would be of no interest in this report, and belong only to a final report upon the scientific part of the work; it is at no rate proper to mention any, before the calculations have been grounded upon a final base, measured as above stated. These maps present four sheets, upon the scale of the one hundred thousandth part, which is upon which it will about be proper to execute the detail maps, for publication; the whole system of the triangulation, will, of course, be more evident by them. It appeared to me to ease the general insight into the bearing of the work, to add a fifth sheet, upon the half-scale of the others, that will present the general view of the whole work; the easier reference to the locality of the triangulation will be assisted by the tracing, only in pencil, of the approximate outline of the coast, for the survey of which the maps contain the elements. The projections are made upon the principles above stated, and will present no deviation for the filling up to the minutest details, when executed upon the scale of one five thousandth, in which it is proper to execute the main original copy of the Corps.

It is proper that all the maps should be drawn upon a proportional decimal fraction of the real dimensions; there is a great advantage in being able to ascertain by the single measurement, in any length measure whatsoever, the real distances desired; this can only be obtained by such a system of scales, which therefore also is the only one adopted in the present time. The scales of so much in inches, or any other small measure, per mile, giving altogether an irregular proportion, are very bad, and therefore have been entirely abandoned in the new maps.

It is proper to add here some general remarks, upon the character which it is necessary to give to the work of the Coast Survey; its general bearing for the benefit of the country at large; and the influence which its proper execution shall have upon the improvement of all the practical mathematical sciences, that are so necessary in our country; and the standing of the Officers of the Army and Navy, to whose departments works of this nature, or requiring similar knowledge, are so often referred; though I have already touched this subject upon other occasions.

The Survey of the Coast must evidently, merely such as to extend landwards, to any place, until to the ridges of hills or mountains that border the valleys emptying their waters into the sea, or the large bays and rivers; it must present the localities of all the passages and gorges that lead to these valleys, etc. etc., because it must contain all that is needed for the proper bearing and case of the course of the different parts of the coast, just as much, as the outlines of the coast and the soundings; because, as these furnish the guide to the navigation, so the others are the elements upon which the directions for a proper defence of the country, in case of need, must be grounded; and all these elements must be so carefully and accurately delineated, as to give a just graphical picture of the country, that, with the map before the eye, the military operations may be properly judged and guided in the Cabinet. It is therefore also habitual to join for each district a statistical statement of its natural means and resources; it is as desirable to have these accounts of the land part as those upon the currents in the naval part of the work.

This work must besides furnish the elements of any other survey that may be desired for any public aim whatsoever, either within or in the neighborhood of its extent; its accuracy, if properly executed, and its wide range, render it peculiarly fit to become a standard to which all other surveys may and even shall be attached. Thereby will be gradually obtained the necessary accurate data for any public undertaking of general utility to the country. This feature of the work was felt already in 1817, when the Governor of New Jersey proposed to unite with it the Survey of a map of that state; but this request was declined by the Survey Department, where I had proposed to accede to the request. It appears equally felt now, by the proposition of the State of Maryland, for a similar junction of the map of that state, which has been very properly acceded to; and no doubt similar occasions will increase in the same proportion, as the general improvement of the country advances, and the proper character of the work of the Survey of the Coast becomes established; this is another proof of the propriety of the measure that I took at all times properly to secure the station-points for future use.

The character of a work of the nature of the Coast Survey, was to be so prominent in the public mind, that its character be impressed upon it to the evidence of the public capable to judge of it, neither credit nor confidence will be given to it; it is in fact more than useless, because it increases the doubts of the cautious and intelligent sea- man, and its defects mislead the ignorant who trusts to it;—plans going merely upon what is so wrongly called sufficient accuracy according to habit, which would prove highly expensive. The economy in the work consists in the certainly of producing the most accurate results.

In the execution of the laws in any country, and in a new country in particular, it appears me the duty to take a proper and the utmost care; the public interest is as much as possible the general benefit of the nation, and especially its scientific improvement, wherever there may be an occasion presented for it, and that upon a liberal scale; because its benefits are always far more extensive than what shows itself at the first outset. I am
AUTHORIZED TO THIS ASSERTION, IN THE PRESENT CASE, BY THE APPROBATION WHICH MY MODE OF TREATING THE COAST SURVEY WITH THESE VIEWS HAS CAUSED ME TO FIND IN THE MOST ENLIGHTENED MEN OF THE COUNTRY, AND EVEN ABROAD, AS TESTIFIED AMONG OTHERS BY LATE PRESIDENT JEFFERSON HIMSELF, WHO WAS THE AUTHOR OF THE ORIGINAL LAW, AND BY THE MANY OTHERS THAT HAVE ADDED THEIR TESTIMONY, AS THE WELL KNOWN EXAMPLES OF ALMOST ALL EUROPEAN COUNTRIES, WHO HAVE DERIVED VALUABLE BENEFITS OF VARIOUS KINDS FROM THE PROPER EXECUTION OF SIMILAR WORKS IN A SCIENTIFIC FORM.

60. WITH THESE VIEWS I ALSO FOUND IT PROPER TO COLLECT AND COMPILE A LIST OF THE BEST WORKS IN THOSE PARTS OF MATHEMATICS AND NATURAL PHILOSOPHY THAT ARE EITHER DIRECTLY BEARING UPON THE WORK ITSELF, OR MORE LOT OR LESS CONNECTED WITH ITS ACCESORIES OR INFLUENCING BRANCHES; BY WHICH MY ASSISTANTS MAY PROPERLY IMPROVE THEIR SCIENTIFIC STANDING, AND BECOME THE MORE USEFUL TO THE COUNTRY IN FUTURE. IT WAS ALL ALREADY PROPER TO THE WORK, AS EBERS TO ACQUIRE A PROPER TRAVERSE, SUCH SCIENTIFIC EXPERIENCES OR OBSERVATIONS AS RELATE TO THE PENDULUM, THE MAGNETIC ATTRACTION, THE TIDES, REFRACTION, AND OTHER SIMILAR SUBJECTS, WHICH ARE ALWAYS CONNECTED WITH SUCH WORKS, WHEN PROPERLY SCIENTIFICALLY TREATED. I COULD AS YET NOT DO MORE IN THIS THAN TO CAUSE THE MAGNETIC BEARING TO BE OBSERVED UPON THE MAIN STATIONS, NECESSARY TO DETERMINE THE DECLINATION OF THE NEEDLE AT THE PLACES AND TIMES; BUT FOR ANY OTHER OBSERVATIONS NOT AS YET PROPERLY PROVIDED, NOR IN FACT WAS THERE TIME AT DISPOSITION FOR IT.

61. BY THE NATURE OF THE SERVICES THAT THE NAVY AND THE ARMY ARE ENGAGED TO RENDER TO THE COUNTRY—THERE ARE TWO CAUSES OF A MONTHLY NATURE THAT WILL INFLUENCE IN ANY COUNTRY, DESERVE SPECIALLY, THOUGH NOT TO THE EXCLUSION OF OTHER CITIZENS, TO BE QUOTED HERE IN CONNECTION WITH THIS WORK. SUCH OFFICERS IN EITHER OF THESE SERVICES DO NOT APPLY TO THE STUDY OF THE HIGHER BRANCHES OF THEIR PROFESSION, OF WHICH MATHEMATICS FORM THE BRANCHES THAT ARE MOST NEEDED IN THE COAST SURVEY, AS AN OCCASION OF IMPROVEMENT, AS WELL AS OF GRATIFICATION FOR THEIR GOOD DISPOSITIONS; THEREFORE PREFERENCE IS NATURALLY TO BE GIVEN TO THOSE WHO, WITH A GOOD FOUNDATION IN THEORY, HAVE BEEN SUCCESSFUL IN THE CAREER OF PRACTICAL APPLICATIONS, IN TOPOGRAPHICAL SURVEYING, DRAWING, AND PARTICULARLY OBSERVING AND GENERALLY IN MAKING ASTRONOMICAL AND GEODETICAL OBSERVATIONS FOR ACTUAL USE. ONLY SUCH OFFICERS CAN REAP SOME BENEFIT FOR THEIR INDIVIDUAL IMPROVEMENT, OR BE OF ANY SERVICE IN THE WORK, BECAUSE THIS UTILITY MUST BE RECIPROCAL IF SUCCESS SHALL ATTACH TO EITHER SIDE; THE OFFICERS IN INDIVIDUALS WHOSE OFFICE IT IS TO OBSERVE WITHOUT THE NATURE OF PRACTICAL ABILITY, CANNOT TO ANY DEGREE START FROM FOLLOWING IT, AND OF COURSE THEY ARE ALSO COMPLETELY USELESS FOR THE WORK, AND THE COAST SURVEY WOULD BE IMPROPERLY LACKED WITH THEM.

62. THE SUCCESS OF THESE OFFICERS, THAT HAVE THE WORK BOTH GIVEN AND MATERIAL FOR THEM, WILL NOT ONLY BE IN THE OFFICERS INDISPENSABLY REQUIRED TO BECOME SERVICABLE, AND THEREBY ENTER THE WORK; BUT THE WORK ITSELF CANNOT BE THE SCHOOL FOR HIM WHO IS TOO FAR BEHIND TO BE OF SOME ACTUAL SERVICE IN IT; THE DISTANCE TO BE GONE THROUGH IS TOO GREAT FOR HIM, AND THE FUNCTIONS OF THOSE ACTUALLY ENGAGED IN SOME PART OF THE WORK, AND THEIR SPECULATIONS AND JOURNALS, EVEN WHEN THEY MIGHT BE TAUGHT, AND SCHERELD, SEPARATELY WHO BRINGS KNOWLEDGE ENOUGH TO THE WORK TO SEE HIMSELF WHAT HE CAN DO, AS WELL IN APPLICATION OF HIS ACTUAL REQUIREMENTS, AS IN ADVANCE OF THEM. ALL THIS APPLIES, OF COURSE, EQUALLY TO THE ASSISTANTS FROM ANY RANK WHATSOEVER.

63. TO ALL THIS IT IS NECESSARY TO ADD, THAT HABITS OF ASSIDUITY, AND DEVOTION TO A SCIENTIFIC OBJECT, WITH FRIENDLY AND OPEN DISPOSITIONS, WITHOUT ANY PRETENSION, ARE EQUALLY INDISPENSABLE MORAL QUALIFICATIONS, TO WHICH IT IS NECESSARY TO ATTEND, IN THE SELECTION OF THE ASSISTANTS IN THIS WORK, AS MUCH AS TO THEIR INTELLECTUAL QUALIFICATIONS AND ACQUISITIONS. FOR SERVICE, BY NATURE, RELATES NOT ONLY TO ANY OBSERVATION ENTERTAINED BY THE ASSISTANT, OR OVER THE ASSISTANCE RENDERED IN AN OBSERVATION, EXCEPT THE MORAL STRENGTH OF CONFIDENCE; ORDERS FROM SUPERIORS, FEAR OF CONSEQUENCES, AND ALL CONSIDERATIONS OF THAT KIND, CANNOT HAVE THE SLIGHTEST POWER; THE MORALITY AND ABILITY OF THE OBSERVER AT THE VERY MOMENT DECIDES WHAT NO POWER WHATSOEVER CAN DECIDE. AND THIS IS EQUALLY APPLICABLE TO ANY CHIEF, OR ASSISTANT WHOEVER, AND OF WHAT RANK EVER HE MAY BE IN THE WORK.

64. IN SUCH EXPOSING THE PRINCIPLES THAT MUST GUIDE IN THE SELECTION OF THE ASSISTANTS FOR THIS WORK, AND WHICH MUST BE THE GUIDE TO ME IN THE PROPOSITION OF ANY ASSISTANT, OF ANY RANK WHATSOEVER, WHOSE CONDUCT I WILL BE GUIDED BY THE PLEDGE, THAT I SHALL ALWAYS BE GUIDED BY PERFECT IMPARTIALITY AS TO THE PERSONAL, THOUGH I MAY PROPOSE PERSONS OF DIFFERENT QUALIFICATIONS, WITH THE VIEW OF THEIR DIFFERENT EMPLOYMENTS; THE MORAL PRINCIPLE WHICH MUST GUIDE IN ALL SUCH CASES, IS SIMPLE; THAT EVERY ONE MUST SEE BEFORE HIM AN AIM FOR HIS INCLUSION OR ABANDONMENT, TO WHICH HE WILL APPLY HIS EXERTIONS HONESTLY, THE RESULT OF WHICH WILL BE USEFUL TO THE WORK. WITH THESE PRINCIPLES, I HOPE TO BE AS SUCCESSFUL IN MY CHOICE AS THE GENERAL CHANCES OF HUMAN AFFAIRS WILL ADMIT, AND TO BE APPROVED IN MY SELECTIONS; THEREFORE TO OBTAIN FROM THE CIVIL, MILITARY, OR SCIENTIFIC CIRCLES TO WHICH SUCH AN ASSISTANT IS ATTACHED, PLEASURE AND SATISFACTION, AND THEREFORE DO HONOR TO THE WORK AND TO THEMSELVES, THENCE REFLECT CREDIT UPON OUR COUNTRY AND NATION; CONVINCED, AS THEY MUST BE, THAT THEY ACT BEFORE THE WHOLE CIVILIZED WORLD—BECAUSE THE HISTORY OF SUCH WORKS IS ALWAYS MINUTELY KNOWN TO EVERY ONE, AND THEIR USEFULNESS AND IMPORTANCE UPON THE CONSIDERATION OF USEFULNESS AS WELL AS UPON THAT OF ITS HIGH CREDIT.

F. R. HASSELLER.

WASHINGTON, CITY, MAY 17TH, 1834.

PAK'SWITZCH, THE CONQUEROR OF WARSAW.—WE read in the Gazette de l'Assegne of the 18th of October, that a General who enjoys a high military reputation is subject, when travelling in a carriage, to such excesses of fear that when it is necessary to cross a wooden bridge situated near the castle of Warsaw where he is staying, he always caused it to be carefully examined beforehand, to be sure of its solidity. It is also said, having one day perceived, at a great distance, a sportsman who was levelling his frying piece at some game, he caused him in the most imperative manner to desist from firing. Letter from a Spanish informer tells us that this cautious General is the famous Paskewitzch. The measures which he took for his preservation while at Warsaw were not less remarkable. He always caused a guard of soldiers to be placed at the corner of every street; he never stirred without being preceded and surrounded by an escort of hussars; and invariably passed through the city at full gallop.

Whenever fire happens, however violent it may be, he has prohibited the towns from being rung or the generale from being beaten, until he has given permission, and never grants it even then until he has retired into the fastness of Prague; and places the wish of the Viscount between himself and danger. From this cause serious evils arise, assistance comes so late, that whole masses of buildings become a prey to the flames. It is doubtless a consolation, though a slight one, to an oppressed people, to see the power of conscience over its oppressors, to witness this inless fear of punishment which they have too justly deserved, and the natural inheritance of the oppressors of Poland, and we should doubt in Providence were their days not delivered over to fear and their nights to remorse.—Bon Sen.

GEN. WILLIAM NORTH, a veteran of the revolution, died in the city of New York, on the 10th inst., at the advanced age of 83. Gen. N. has filled many important public offices, both honorably and advantageously to his country. He was for many years a member of the Assembly of that State, Speaker of the House, and Senator in Congress. He is believed to have been the only survivor of the revolution of the same rank.
WASHINGTON CITY; THURSDAY, JANUARY 28, 1836.

Much credit is due to the Subsistence Department of the Army, for the foresight and promptitude recently exhibited. Anticipating, from the information derived from various sources, the hostile disposition of the Seminole Indians, which has since been so unfortunately realized, orders were given to have a large supply of provisions, consisting of pork, bacon, flour and hard bread, forwarded to Florida. These provisions were shipped from New York in December, and must ere this have arrived at their destination, and have proved an acceptable relief, not to our troops only, but to the inhabitants who are in danger of suffering from want.

Trophies in Chelsea Hospital.—A London paper of November 7, contains a list of trophies recently presented to this institution by "His Most Gracious Majesty." They are principally flags, taken from the French, Dutch, Spaniards, Prussians, and Americans. Among those which formerly belonged to us, we find mentioned:

"An American flag—when taken uncertain, but probably in the first war."
"An American national flag of the 4th regiment, taken on the frontiers of Canada."
"An American national color of the 2d regiment of the line, taken by Gen. Brock on the frontier."
"An American flag"—of the same kind as the first mentioned above.
"The regimental color of the 4th American regiment."
"An American flag, taken by the 8th on the left bank of the Mississippi."
"An American flag, taken in the first war, probably at Boston."
"American regimental flag of the 2d regiment."

We can furnish a much longer list of trophies that are scrupulously preserved in the public offices at Washington, and as soon as we can procure a list of them we will publish it.

We understand that Captain Gallagher, Commandant of the Navy Yard, has reported that the Frigate Columba will be ready for launching on Tuesday next, the 2d February.

Captain W. C. Bolton arrived at Pensacola, on the 20th inst., to assume the command of the Navy Yard at that place, and entered on his duties the next day.

Revenue cutter Jefferson, Capt. Jackson, sailed on the 20th inst. from Charleston, S. C., for St. Augustine. The Revenue Cutter Dallas was to have left New Orleans on the 11th inst. for St. Marks and Tampa Bay, to assist in the protection of the citizens.

To Correspondents.—"Subaltern" is received and shall appear next week. The interrogatory of "Junius" shall be answered; the other portion of his communication is inadmissible. "The Lost Sailor" is a repetition of the same story, that has often been told, with more or less variation. We are, however, indebted to the writer for the good intention exhibited in furnishing the sketch.

The British Brig of war Pantaloan, Captain Corry, arrived at Norfolk, on Saturday last, in 29 days from Falmouth; with despatches for the British Chargé d'Affaires at Washington.

After coming to anchor, the Pantaloan fired a salute, which was returned from the flag ship Java.

It is conjectured that the despatches relate to an offer of mediation on the part of England, to adjust our present difficulties with France.

SEMINOLE WAR.

Since our last paper, we have received painful news from the seat of war in Florida. A whole detachment, consisting of 100 men and 8 officers, has been cut off, on the march from Tampa Bay to Fort King, on the 20th December, and of the whole number but three escaped, and those wounded.

From the official report of Major F. S. Belton, of the 2d Artillery, the commanding officer at Tampa Bay, to the Adjutant General, and dated on the 1st January, we gather the following particulars of the sad catastrophe:

"On the 29th, in the afternoon, a man of my company, John Thomas, and temporarily transferred to C Company, 2d Artillery, came in, and yesterday Pr. Ransom Clark, of same company, with four wounds, very severe, and stated that an action took place on the 29th, commencing about ten o'clock; in which every officer, and nearly every man. The command entrenched every night, and about four miles from the halt were attacked, and received at least fifteen rounds before an Indian was seen. Major Dade and his horse were both killed on the front, and the interpreter "Louis." Lt. Mudge, 3d Artillery, received his mortal wound in the first fire, and afterwards received several other wounds. Lt. Basinger, 3d Artillery, was not wounded till after the second attack; and at the latter part of that, he was wounded several times before he was tomahawked. "Captain Gardiner, 2d Artillery, was not wounded until the second attack, and the last part of it. Mr. Basinger, after Captain Gardiner was killed, remarked, "I am the only officer left, and boys we will do the best we can." Lt. Keais, 3d Artillery, had both arms broken the first shot, was unable to act; and was tomahawked, the latter part of the second attack, by a negro. Lt. Henderson had his left arm broken the first fire, and after that his musket fired at least thirty or forty shot. Dr. Galpin was 107 killed until after the second attack, nor was he wounded; he placed himself behind the breast-work, and with double-barreled guns, said, "he had four barrels for them." Captain Fraser fell early in the action with the advanced guard; as a man of his company, (B. 2d Artillery,) who came in this morning wounded, reports.

"On the attack they were in column of route; and after receiving a heavy fire, from the unseen enemy, they then rose up in such a swarm, that the ground, covered, as was thought by the Light Infantry extension, showed the Indians between the files. Muskets were clubbed, knives and bayonets used, and parties clinched. In the second attack, our own men's muskets, from the dead and wounded, were used against them; a cross fire cut down a succession of artillerists at the fence, from which forty-nine rounds were fired—the gun carriages were burnt, and the guns sunk in a pond. A war cry was held on the ground—many negroes were in the field, but no scalps were taken by the Indians, but the negroes, with hellish cruelty, pierced the throats of all, whose loud cries and groans showed the power of life to be yet strong. The survivors were preserved by imitating death, excepting Thomas, who was partly stifled, and bought his life for six dollars, and in his enemy..."

*There are two officers, named Henderson, belonging to the 2d artillery; one killed is Lieutenant R. H. — Ed.*
In the midst of war, an Indian whom he had killed a few days before his death. About one hundred Indians were present, and among them was a chief who came in with a note from Captain Fraser, addressed to Major Mountfort, which was fastened in a cleft stick and stuck in a creek, dated, as is supposed, on the 27th, stating that they were best set every night and pushing on.

Lieut. B. Alvord, of Major Dade's company, which was left behind at Fort Brooke, writes to Lieut. R. C. Buchanan, the adjutant of the 4th Infantry, at New Orleans:

"Maj. Dade took command of this detachment under circumstances which reflect upon him the highest honor. Capt. F. S. Belton, of the 2nd Artillery, commands here. General Clinch had ordered the commanding officer at this post to detach there two companies on their arrival. They were not in sufficient numbers, but the companies ordered not having arrived, the accounts received at this time, of the hostile intentions of the Indians, were such as to induce Capt. B. to postpone the march. On the arrival of our company from Key West, the two companies were strengthened from the whole command to 100 men. The last man, Mrs. Gardiner, was exceedingly ill and it was supposed that if her husband left, she would not live. Nevertheless Capt. Gardiner (who was to command the detachment) prepared to go and at reveille on the morning of the 28th he mounted his horse in front of the detachment which was about to start. Maj. Dade made a proposition to the commanding officer to take Capt. G.'s place on account of the situation of Mrs. G. The proposition was accepted and the command commenced its march. Before they proceeded many miles Capt. G. ascertained that the U. S. Schooner Motto was about to sail for Key West, for the purpose of bringing two twelve-pounders from Fort King;—the children with their grandmother were already there and he concluded to send Mrs. G. to Key West in the Motto, and thus gratify his earnest desire to go with his company; and on joining his company the relation in which he stood to Maj. Dade of course induced him not to demur to his continuing in command and proceeding to Fort King—they took along six pounder from the belief that it would produce a panic among the savages. But they seemed to have assembled in such numbers as to render the stout defence of the unfortunate troops quite unavailing. One hundred of the Indians are said to have been mounted. This accounts for the suddenness and system of the attack. Whilst I am writing I have just learnt of the arrival of another soldier very badly wounded on war has made his way from this bloody field. He confirms every portion of the above account. His name is Clark, a private of [B.] comp. 2d arty. and the same man that escaped from the boat when Lieut. Chander was drowned in Mobile bay.

A very strong little defence of pickets and admirably flanked by two Block Houses was completed here some days since. There are five companies here. Maj. Zantzing's (H) Capt. Belton's (B) Maj. Montfort's (G) and Capt. Lowd's (commanding). Lieut. Grayson (A) of 2nd Artillery and Maj. Dade's company now commanded by myself and of the 4th Infantry. If the Indians in their triumph should attack us we are well prepared.

Lieut. J. B. Grayson, of the 2d Arty. in command of Captain Lowd's company, writes to Col. Twiggs, at New Orleans:

"A wounded soldier escaped by biring an Indian, and arrived here at four o'clock to-day. Maj. Dade, Capt. Fraser, Lieut. Basinger and Mudge were killed; Lt. Kea had both arms shattered to pieces; Lieut. Henderson had his arm broken; Doctor Gallin is supposed dead, as he was not seen after the first onset, and Capt. Gardiner not shot or wounded when the man left the ground, owing, doubtless, to his having previously been a soldier. The woods were lined with mounted warriors, they commenced the attack at eight o'clock yesterday morning, fought one hour, then retired to replenish their ammunition, renewed the attack; and during the period Capt. Gardiner cut down trees and made a path for fresh men. The two companies left the Indians picked them off, just as fast as the posts were supplied with fresh men. When the soldier left the ground, he says that there were not more than ten men, and some at that time wounded. Major Mountfort and myself were to have left to-morrow morning for Fort King, and we should doubtless have shared the same fate, but as we were plain soldiers, Capt. Belton, has decided to strengthen his position by keeping us. We are very strong behind a picket, but our ammunition is virtually speaking, nothing; and some of the hostile warriors are known to have fifty kegs of rifle powder. That we shall be attacked is considered almost certain.

"Poor Mrs. Basinger is with Mr. Haskill, and is nearly beside herself, the death of her husband has not yet been communicated to her.

We have strengthened our work very much in the last two days, as we have made a lunette, which gives us a flank fire. A short time before Fraser left, the work was called Fraser's redoubt.

"Major Mountfort was under orders to leave the day I arrived here; but Major Dade had got so far ahead, that Major M. could not have overaken. I was to follow Major M., and the consequence would have been that Mountfort's company and my own would have shared the sad fate of those poor fellows who went before us.

On hearing this news. Col. Twiggs, of the 4th Infantry, U. S. army, chartered the steamboat Merchant, and started with four companies of troops from New Orleans to Tampa bay.

In connection with this subject, we present the following extract of a letter, with which we have been favored:

Extract of letter from Florida, dated Jan. 6th, 1838.

"We are now in the height of actual war with the Seminole Indians. You are, no doubt, already apprized of the events which have occurred in this quarter,—of the massacre of Mr. Thompson, our Indian Agent, and poor Lieut. Constantine Smith: and I suppose the account of General CLINCH'S battle on the 30th has all reached you. CLINCH is a gallant and experienced officer. He met the enemy in a manner to fight but that he might conduct the campaign with ability and proper discretion. He wants, and needs, more force. We are miserably deficient in platoon officers. Would you believe, that several of our companies have each, but one commissioned officer serving with it? The company led by the gallant Lieut. CAMBELL GRAHAM, of the artillery, was left without an officer in the recent action, after his second and severe wound; the command of it, then devolved on the Sergeant. Other companies were in the like destitute situation. Capt. GRAHAM, (a brother,) of the Infantry, who was also severely wounded, was the only officer serving with it at a time more precious than that. I trust that you, CASS, and General MCARMS, will now look to the proper interest of the service, and that they will no longer permit so many officers to remain from their Regiments—some of whom are employed, in a way, which has about as much affinity to our army duties, as the construction of a turnpike, or the vocation of the Gallant LIEUT. CAMBELL GRAHAM in the General Land Office; or, the Draftsman, who sits in the Land Office.

"We, who are performing our proper, though arduous duties with the troops, feel the hardships of this partial and ruinous system, in reference to the true interests of the military service, the more severely, because double, national duties, thereby devolved upon us, "Col. CRAN" arrived some ten days since—he is an excellent and capable officer, and now the only field officer of artillery in Florida. The gallant
ARMY AND NAVY CHRONICLE.

The British Consul at New York, J. Buchanan, Esq., has returned his most grateful thanks in the papers of that city, to Captain Oliver, of the ship Tiber, for bringing into port four British seamen, the only survivors of seventeen souls, on board the brig Edgar, bound from Quebec to Liverpool.

ARRIVALS AT WASHINGTON.

Jan. 22—Major J. Fy unpleasant, 5th Inf., at Gadsby's.

Capt. T. Childs, 3d Arty.

Capt. A. Moore, Ordnance, Gadsby's.

Dr. J. J. Wright, Alexandria.

PAASSENGERS ARRIVED.

Jan. 12—Per schr. S. B. Mills, from St. Augustine, Major J. S. Lytle, Commissary of stores, of the army.

20—Jan. 21—Per steamboat W. Gibbons, from Charleston, Col. A. C. W. Fanning, of the army.

COMMUNICATIONS.

THE ARMY—OFFICERS' MESSES.

No. II.

An association of officers in a mess is almost as necessary to the public interest as it is indispensable to personal convenience; for in proportion as their military duties require uniformity and punctuality, must their private engagements be marked by system and dispatch.

Were this not the case, each officer his own hour to dine, were he his own commissary and his own steward, each office making drafts on his time and attention, his very necessities would be continually urged as excuse for daily professional delinquencies. A well regulated mess establishment, on the contrary, assures him facilities in the discharge of his duties promoting his bodily comfort and relieving him from mental anxiety—wholesome fare appropriately cooked contributing to his health, and the foresight of the caterer divesting him of all concern for the "morrow." The sound of "roast beef" takes him to dinner, as "the assembly" takes him to the parade, and meal hours thus enter as essentially into the regimental economy or internal police as the hour for guard mounting or that for tattoo. On the score of expense too, the public interest is consulted by mess establishments. The Government by its present General Regulations seems to admit the necessity of, and obligation to make the allowances for culinary purposes—such as fuel, kitchens, and means of transportation for cooking utensils, &c. Now, the same means and facilities, which would be ample for twenty officers in a mess, would no more than suffice for one, should each live separately; consequently those allowances which in the former case are proportionate to军事 necessities would work out a burthensome tax. For public considerations like these, viz: the facilities they afford for the prompt discharge of military duties, and the containment of expense they promote, it is evident that messes of officers in every service but our own are under the fostering care and control of Government. In our service they are only recognized. They may or may not exist at the option of the officers. This is not sufficient. The interests of the army require that they should exist, and Government should both assist and, to a certain degree, control them. Without such aid private contributions are not sufficient, and without such control the public bounty might be abused. The allowance of fuel and quarters is not alone adequate to the maintenance of a mess—the Government should grant pecuniary assistance, for the procurement of furniture, cooking utensils, and whatever else may further the character. The peculiar distribution of our troops, and the constant change of stations of the officers consequent to such distribution, render it utterly impossible that an officer should contribute to the purchase of mess furniture, &c. at every post at which he may be stationed.

Indeed, the inability to do so, causes the officers of the Army, at the United States generally, to be a meaner style than probably those of any nation in the world. In how many instances in our service are officers supplied with their meals by landresses or camp women; or, if they have the semblance of a mess, how frequently do tin cups constitute their only plate, and clothless pine tables almost their only furniture? Officers of artillery can especially well answer these questions. But, when we add to these frequent assessments for the purchase of furniture, &c., the expense growing out of the necessary entertainment of the many visitors whose curiosity or duties take them to military posts, it will be evident that that facility of a military mess is subject to no inconsiderable tax, and that too without being able to live in many instances even decently. We alluded to this latter source of expense in our preceding number on the subject of double rations, wherein we contended that said expense is borne usually by messes of single officers, and not by commanders of separate troops. It is necessary, therefore, that the recipients of publicKate, who bear the expenses of such expenses. This declaration we repeat, and on its truth base one of the claims of officers' messes to Governmental patronage. In our former number we stated some of the circumstances which shield commanding officers from the expense of entertaining visitors, and how we were of opinion that there is hospitality peculiar to military messes which renders them constantly exposed to such taxation. Not only the acquaintances of officers, but strangers, find a seat and a welcome at a mess table who would find them no where else. Indeed, it is in the very nature of things that strangers should prefer trespassing on the hospitality of single men, to intruding on the economy and privacy of a family, or even of a single individual if he be living alone. But few commanding officers, however, are single men, and they, generally speaking, are members of the mess—their guests are the guests of the mess, and not both. A double ration by frequent visits by visitors, you will hear of a married Commandant who being nominally a member of a mess, but living separately with his family, was in the habit of taking his visitors to the mess table for entertainment; and in connection with another we have heard this anecdote, going to show that the nice taste good opinion of other than its members may also tend to swell the expenses of a member. The Pay Master on an official visit to a military post was invited by a member to dine with the mess; the former politely declined, remarking that he felt it his duty to prefer the civilities of the Commandant who doubtless would extend them to him. The officer in a whisper rejoined, "the Major has an eagle eye, and he needs help in feeding his two meals a day, and that which they call dinner, you and your spinster ladies would term tea; they are remarkable, however, for the excellence of their pumpkin pie—but adieu!" Taking the Pay Master's hand, "we have nothing to day, I believe, but a saddle of venison and a wild turkey "thank you," said the Major, "always, I shall dine with you, my friend first, and pay my respects to the Major afterwards." Again, if an Indian.

* The writer of this article in the course of about four months belonged to three different messes, two of which cost him $30 each for furniture. In one of these he remained about a fortnight only. He has not been able to return to those messes, and such contributions in both cases were a pecuniary loss to him.
The Quarter Master's department should be required to supply as often as might be necessary each permanent Post and Arsenal with prescribed articles of mess furniture &c., say, tables, chairs, sideboards, closets and certain standard articles necessary for the use of the men, at a cost for each Post in any one year did not exceed the value of all the items per year of a Lieutenant, or $292; these articles of furniture &c., to be accounted for as is other public property, and to be removed from one military station to another only on the order of the Quarter Master General purveyor. The purchase and decoration of the General in Chief. This supply, it will be observed, is required annually, that it would be incumbent that the whole sum allowed for its procurement should be appropriated in any one year—the articles would be procured only when necessary, and no necessity would authorize an expenditure of more than $292 for each post. The last Army Register exhibits the number of post and arsenals, the outfit for which according to the foregoing suggestion, supposing $292 expended on each, would cost $18,396. No further appropriation would probably be required on this account for five years at least, at the end of which period the result to the Treasury would be as follows:

Saved by the abandonment of the existing double ration system the yearly sum of $20,513.
In five years $102,565
Expended for mess furniture &c. $18,396

Balance in favor of the Treasury $84,196, which sum, it will be presently shown, far exceeds the amount required to accomplish the third object of our project, viz:

to grant an allowance to messes, through the Colonels of the respective regiments, on account of expenses in entertaining visitors to military posts. In endeavoring to determine what should be the extent of this allowance we feel sensibly the obstacles presented by the wide dispersion of our army. While on the one hand it is desirable to grant no more than an adequate sum to a regiment not at all, or but little, dispersed, it is essential, that the allowance to a regiment differently situated should be sufficiently large to give, after an equitable distribution, a mess an adequate share of the public bounty. An official document lying before us exhibits the regiments of Artillery in the occupation of twenty three, and those of Infantry in the occupation of twenty one, Posts; giving to each of the former an average of nearly six, and to the latter of three, Posts. The Dragon's of there three stations. While this may be as much dispersed, and the Infantry and Dragons as much concentrated, as they probably ever will be, the chances are in favor of a more equal distribution of the several arms of service. In taking therefore the present arrangement of the several regiments for our own basis in determining what shall be the extent of this allowance, it will be sufficient to examine a few of the most representative regiments and to see which will be shown as the greatest inequality that will probably ever exist. What has already been stated, it seems the Infantry and Dragons are about half as much dispersed as the Artillery; it will not be unfair then to take the division of the officers of the former into three parts, as the point of division between the maximum and minimum amount to be allowed to regiments by Government. With this prefiguration of our views on this point we propose, that there be allowed yearly to the Colonel or commanding officer of a regiment, the permanent stations of which are not the three parts of the messes, the value of every three rations of a Lieutenant Colonel, or $365; and to the Colonel or commanding officer of a regiment, the permanent stations of which exceed three, for a like distribution, a sum not exceeding the value of the yearly rations of a First Captain, or $436. This allowance should be paid in due proportions as the officers of the messes, should be immediately distributed by the Colonels to a caterer of messes, who should be made responsible by regulations that it be legitimately applied. The distribution by the Colonel should be an equitable one, having reference to the special circumstances of each mess and post of his regiment. The following statement will show
By this exhibit it seems that $4,818 would be the yearly sum required for messes of Dragoon, Artillery and Infantry officers; but, if to this were added for the Corps of Engineers and Ordnance $438 each, the yearly expenditure by Government on account of the third branch of our service would be $8,694. 

The following recapitulation of items will show, how at the end of five years, the Treasury will be affected by the execution of our entire design.

Saved by the abandonment of the double ration system—

<table>

Expended for mess furniture, &c. $13,296 

Beauty to messes, $5,984 yearly $28,470 46,866

Balance in the Treasury $85,699

In the foregoing estimate we have placed the Engineer Corps and that of Ordnance on a footing with regiments; this may not be entirely just, as the officers of those corps are more dispersed than any others, and would seem to require therefore a larger contribution; and yet, on the other hand, it may be urged that any dispersion will rarely enable them to mess together; and that, as the public aid is only designed for bona fide messes, those officers should fare like many others who, detached from their regiments, or belonging to the General Staff, must necessarily bear a certain degree of mess. This being the case, let the Treasury by the adoption of our proposition would allow the Government to be liberal, and we should like to see those corps provided for: so also would it be desirable that from the ample resources a greater amount than we have asked as the maximum sum to be yearly allowed, should be granted to those regiments which garrison more than three posts.

In the commencement of this article we stated that the existence of messes ought not to be entirely at the discretion of officers, seeing they were conducive to the public interests, but that they should exist, and that the Government ought to a certain degree of control them. We will now state a few points, occurring to us at this moment, to which that control should extend. The general regulations of the army should require,

1st. Every Colonel or commanding officer of a regiment or corps to encourage and promote the formation of messes, and in his regiment to appoint an Aid of the General in Chief, for the information of the General, what means he has adopted to advance such a measure—what difficulties, if any, attended it, &c.

2d. That the senior officer of any detachment of a regiment or corps should, under the supervision of his Colonel, in like manner encourage a mess within his command, making his reports on the points above stated to his Colonel. No more than one mess of a regiment at any one post.

3d. That commanding officers as aforesaid be responsible that money, furniture, or supplies, furnished by Government for messes, be duly applied, and that no officers not actually mess together, and purposing bona fide to continue in a mess, shall receive the benefits of the aforesaid allowances, and that on no account said allowances ever be divided for the personal use of officers.

Colonels to account for monies paid them for their regimental messes: accounts to be sent through an Aid of the General in Chief to the Treasury department. Caterers or senior officers of messes in like manner to account to Colonel.

6th. The Caterer at the end of every month to account to the Quarter Master General for furniture, cooking utensils, and fuel. The Quarter Master to make every quarter a separate return of such furniture, &c., to the Quarter Master General, stating what supplies are insufficient and what too large, if any.

6th. Furniture, &c., furnished by Government to be marked "U. S. Officers' Mess;" all articles, such as spoons, casters, forks, and forks, and tumbler, officer in a regiment ought to have one) to be marked "—regiment mess," and these should as far as possible, although procured for different messes, provided they are of the same regiment, be of uniform pattern, so that on the concentration of the regiment there might be a variety of furniture. When required, the Quarter Master's department should furnish appropriate masses.

7th. Mess regulations to be made by the officers and approved by the Colonel should as far as possible be uniform throughout the regiment; convenience a main object, but that degree of uniformity which, for the respectability, even in appearance of the association. Officers should dine in undress coats, except on occasions when they agree to wear the full dress. Persons, even those professing to be gentlemen, differ sometimes on points of decorum; they should be settled by rules of the mess.

8th. On Government being informed of the officers of any regiment opposing the formation of messes in the spirit and with the views of the general regulations, but of seeking to establish such temporary and irresponsible associations as comport with their own notions of convenience, regardless of the public interests, then all mess allowances by law or regulations to be withheld from such officers.

9th. Inspectors General to enquire into, and report on the condition, &c., of messes.

We will now submit our project to the Army with this concluding remark, that we by no means think it without defects, although it strikes us as the most feasible of several plans which we have had under consideration, and that we shall be satisfied with its fate, should a discussion of its merits lead to the adoption of a proposition, more practicable in its character and more beneficial in its results. We would invite officers to give their attention to this branch of the subject. Let them consider and call to the notice of the officers of the army the manner in which our projections are made known to the War Department through the General in Chief. Activity and concert in the matter, respectfully manifested, may effect much good.

JANUARY, 1836.

PIKE.

* It has not been our intention, in the course of our remarks, to ascribe a more hospitable disposition to single than to married officers, but to show peculiar reasons for that of the former being more frequently could it be excused than that of the latter. Married officers, who do not receive double rations, have strong motives to practise economy, and would consult it by encouraging messes; the tables of which would afford them facilities for entertaining many of their visitors in a style at once creditable, and economical.

[The foregoing communication came taxed with a postage of 75 cents. We mention this, as it appears to have been the intention of the writer to have paid it, and we have no other method to apprise him of the omission. In several other instances, also, postage has not been paid, although manifestly intended by the word "paid" being written on the envelope. We would ask writers to be particular, when they design to pay postage, to see that it is marked at the Post Office.—Ed.]
NEW INFANTRY TACTICS.

No. III.

I shall now proceed with the Report of the French Commission, turning aside, if possible, from the Clairfaits and Young Forgams—those croakers, produced under the "green mantle" of a calm world, and a long period of uninterrupted activity, have moved away from the spring and summer of the Army and Navy Chronicle.

"TITLE II, PART 2, LEG. 2.—Manual of Arms.

"The rules prescribed in the Ordinance of 1791 for teaching this lesson, are excellent, having the advantage of preparing the recruit to enter the battalion in the shortest possible time. It was well, however, to be desirous that this instruction should begin with the term [pauses; motions] of the manual which are the easiest. The Commission has made this change, and among the times which the soldier ought to be taught, before loading, there are several which have the advantage of preparing him for that more difficult part of the exercise.

"According to the Ordinance the men in all cases who fire standing, have, in order to come to the aim, to lower the piece suddenly, and to slip the left hand upon it to the tail-band. This movement has the tendency to drop the muzzle too low, and consequently to cause the fire to be delivered too low. We have, therefore, changed it. After cocking, and after loading, and before taking aim, let his piece slip through the left hand to the tail-band; in this way, the hand, already grasping the piece at the place where it is to remain (when the butt is brought to the shoulder in taking aim) the muzzle is less liable to be dropped too low.

"We have added to the manual a new time—that of shifting arms to the right shoulder. This position is to be taken in the march by the front instead of the support arms. Two advantages result from the change: each man occupies, in his rank, about the same space as at the carry, and he is more relieved, because the arm that habitually bears the piece, is left, for the period, perfectly free.

"The Ordinance is silent as to the cadence to be observed in the manual of arms, which it is necessary to fix; for in many regiments it has become so slow that the men can scarcely fire twice in a minute. This cadence we have established at the nineteenth part of the minute, as it had previously been by the minister's circular of May 17, 1822.

"This circular, it may be observed, was the only official alteration made in Guibert's Book in forty years, and it was never, till 1831, incorporated with his text.

"The word file, is used above, in a sense not familiar to the student of the British military system. It is the word-exercise or the tale de exercice. It has been adopted in the new Tactics, and, from a like necessity, in the British Manual and Platoon Exercise.

"Lesson 3. Loading in quick time.

"This denomination expressing neither the object of the lesson, nor the manner of executing it, the head has been changed to load in four times.

"The American Book of 1825, has in this lesson, the subordinate head of loading in the quickest time. In the new Tactics, with a view to harmony, carga a volonté is translated to load at will.

"PART III, LEG. 2.—The march by the front.

"The Ordinance does not permit the oblique march in quick time. This movement, however, being of great utility in the battalion manoeuvres, which, according to this revision, ought to be made in the quick step, and the oblique march being susceptible of execution with so much regularity in quick time as is common, we have prescribed that troops shall be exercised in marching obliquely in quick time.

"LEG. 4.—Wheels in marching.

"The Commission has made a slight change in the principles of this movement. The pivot man is to take steps of a fourth of the full step, because, the three ranks, with knapsacks on, having a depth of little more than six feet [American] and the rules for all the manoeuvres are established on this position—the wheeled point cannot be cleared, in time, without that extension.

"This notice, however, is indispensable to three ranks, and of no sort of injury to a formation in two.

"Under this fourth lesson, in the new American Tactics, No. 392, the words "if in a single rank" are inserted, in order to place the principle there laid down in harmony with Nos. 614 and 685. In this way a discrepancy is removed which exists, at least in terms, in the French Books of 1791 and 1831, and in ours of 1815 and 1825.

"To stack arms.

"We have placed at the end of the School of the Soldier an instruction for stacking and resuming arms. It is proper that each should be executed in the same manner by all the regiments.

"There is nothing in the French Book of 1791 on this subject. The commission was supplied in our Books of 1815 and 1825; but the manner adopted from the French Book of 1831, is preferable for two ranks, and also applies to three.

"In the French Books of 1791 and 1831, as in ours of 1815 and 1835, not a word is said of the balance step, the step short, or the step short. Neither of these steps belongs to the system. They have been incorporated in our Book of 1825, and on reflection, will be acknowledged by all to be wholly useless as specific heads of instruction.

"TITLE III.—SCHOOL OF THE COMPANY.

"LEG. 2. Art. 4.—The fire of two ranks (or by file).

"The progression established by the Ordinance for the commencement of this fire is much too slow. Experiments made, with the greatest care at the camp of Saint-Omer demonstrated that the front right-hand-man of a company, consisting of twenty files, had fired five rounds at the moment the man on the opposite flank fired the first time. This progression we have changed; the front rank-man of every file takes aim the instant that the right-hand-neighbour draws back his piece to reload; in this the number one fires the second time when number fourteen fires the first, and thus the greatest vacuity is promptly given to the fire of the whole front.

"The Ordinance prescribes that the captain shall give himself, pending this fire, opposite to his interval, one pace behind the rear rank. We have changed his position to places behind the centre of the company, in order that he may the better superintend the firing of his men.

"In the American Book of 1825, although it is said in the School of the Soldier, No. 312, that the second "file will aim at the instant when the first has fired," yet, in the School of the Company, same book, No. 490, where the rule is laid down more formally, we have "the file will aim at the instant the first, which has just fired, primus." This is liable to all the censure contained in the Report.

"This particular mode of firing (the most used in battle) is called the new Tactics, in the alternative, the fire of two ranks or by file, according as the formation may be in three or two ranks. If in three, the first command is fire by two ranks, as a double advertisement that the front rank is not to kneel, and that the rear is not to fire. The formation being in two ranks, the caution is simply fire by file, as in the Book of 1825. Can any but grognards pretend to say that this is a distinction without a difference?"

"ART. 5. To fire by the rear rank.

"We have substituted this denomination for the old one—to fire to the rear. The change is made in order to put the school of the company in harmony with that of the Battalion, in which we have given rules for manoeuvring by the rear rank.

"LEG. 3. ART. 4. (No. 360.) Remarks on quick time.

"The swiftness of this step remains fixed at 100 per minute, but we have thought that, under particular circumstances, it may be carried to 180 instead of 120, the number of steps fixed by the Ordinance."
In the American Book of 1825, those numbers were fixed at 120 and 150, respectively; but experience having shown those rates to be too high, they are, by the new Tactics, reduced to 110 and 140, and the latter number of steps made the double quick time of Skirmishers, which by the run, may again be much accelerated.

"Lesson VI."

The commission has changed the order in which the articles of this lesson are placed in the Ordinance. The third, which comprehends the movement of breaking and forming company by platoon, in march, is made the first, because, this movement being applicable to the column in route, it ought to precede the article that treats of this column."

In the American Book of 1825, a farther diminution of the second section, was introduced, but there was much movement in the French Ordinance of 1791, nor is our Book of 1815. In the new French Book, and in our new Tactics, this movement will be found under the head—column in route, and in this place only is it wanted.

"Art. 2. Diminishing and increasing front by file, &c."

This movement being only applicable to the column in route, we have prescribed that files should be broken of soley from the side of the guide, in order that the commander may, at any time, cause the company to pass from the march by the front, to the march by the flank.

Precisely for the reason here stated, the same change was introduced into the American Book of 1825, and by the same hand recently employed upon our new Tactics.

"Art. 2. To march the column in route, &c."

"As this article may be considered the element of the column in route of the school of the Battalion, the Commission has thought it necessary to give it more extension that it had in the Ordinance, and hence it has been entirely re-constructed upon the following principles:

"1st. The column marches habitually by company; the march becoming insufficient, the company breaks by platoon;

"2d. The column, marching by platoon, when the way again becomes too narrow, platoons break into sections, if the companies are of twenty files or more; if of less than twenty files, the platoons are reduced to a front of seven by breaking of files;

"3d. The way becoming still narrower, the column resumes the cadenced pace, when files are broken off till the front is diminished to five;

"4th. Finally, the file becoming too narrow for five abreast, exclusive of the chief of subdivision, the man by the flank is assumed."

These principles are carried out both in the school of the company and that of the battalion, of the new French Book, and also in our new Tactics. In the latter, the details for the two rank—formation are, under this head, as in all other places, given. The minute changes, all of which, it is believed, are for the better, are numerous. Of these, two only need to be here noticed:—1. Arms are borne at will, at the commands route step—march, without any further command; and 2. The ranks open out to twenty-eight inches, (American) only, which the Report states, upon experiment, to be found sufficient to enable the men to march at will and without constraint."

"Art. 4. Countermarch."

We have made a slight change under this head; the two guides face about; the captain conducts the leading file, and when he aligns the company, he takes care to include it between the two guides.

"This movement has, over that of the Ordinance, the advantage of giving the means of replacing the company on the same alignment."

"Art. 5."

"The Ordinance prescribes the establishment of the line of battle at four paces, at least, from the flank of the column which we have extended to ten, because, the subdivisions have [in three ranks] with the file closers, a depth of about ten feet six inches [American], and as they are to be halted at three paces from the line of battle, there would only be two paces between the file closers and the files of the subdivisions in march."

In our new Tactics that distance is either ten, or nine paces, according as the formation may be in three, or two ranks.

"General Remarks on the School of the Company."

"The commission has prescribed that the third lesson shall only be executed with arms carried, because the position being the only one that can lead recruits to march correctly in line, it is necessary they should be early habituated to it. In the march in column, we may, to avoid fatigue, cause arms to be shifted to the right shoulder, and in the march by the flank cause them to be supported. The latter is rejected, in the march by the front, because, each man, occupying less space [by about two inches] than with his piece carried, and still maintaining the touch of the elbow, the line becomes much closed, at halting, or on returning to the carry. This inconvenience, slight in a subdivision of but two files, becomes in a battalion in line, immense, sufficient indeed to destroy the regularity of the march."—See, on this subject, in our new Tactics, No. 767, and page 196, volume second.

"From three ranks to form two, and reciprocally."

"We have placed at the end of the School of the Company, [at the beginning in the new American Book] this movement, the utility of which has been demonstrated in our remarks on Title I.

"Being in three or two ranks, to form one."

"This movement is of but little use except for inspections in detail. It is proper that it should be executed in the same manner in all the regiments.

"Instruction for target-firing."

"In this, which the Commission has substituted for that of the Ordinance, nothing is said in detail, of the theory of firing, because this principle has been developed in the instruction drawn up by the Artillery Board, to which it has been thought best to refer. A similar instruction should be prepared by our Board of Ordinance for the use of the American Infantry.

"Instruction for the drum-major."

"The beats have come down to our time only by tradition, and some of them have been so altered that they cannot be recognised. In order to fix them in an invariable manner, the Commission has caused them to be written by means of conventional signs at once simple and intelligible."

A similar course has been pursued in the new American Book.

The number of beats has been fixed at twenty, of which, fifteen are for the exercises and interior service, and five new ones for the movements of skirmishers.

The number of bugle or cornet sounds, has been reduced to twenty-six—fifteen of which correspond with the beats for exercises and interior service, and the others are for the movements of skirmishers.

In the new American Book, the whole number of beats, given, is nineteen, and the sounds twenty-two, and eleven of each are applied to the movements of skirmishers.

HINDMAN.

SOUTH SEA EXPLORING EXPEDITION.

A friend has forwarded to us from Washington the following memorandums, which, he observes, was early in the session presented by the Chair to the United States Senate, and also, by a distinguished member, to the House of Representatives, and referred to the appropriate committee which, for the information of our fellow citizens, we insert with pleasure; and it is sincerely to be hoped that Congress will this session authorize this very laudable national expedition, to the support of this valuable whale and seal fishery, as also, in aid, and to the advancement of navigation, con
LAW OF THE UNITED STATES.

AN ACT making an appropriation for repressing hostilities commenced by the Seminole Indians.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the sum of one hundred and twenty thousand dollars be and the same hereby is appropriated, out of any money in the Treasury not otherwise appropriated, to defray the expenses attending the suppression of hostilities with the Seminole Indians in Florida, to be expended under the direction of the Secretary of War, conformably to the provisions of the Act of April fifth, eighteen hundred and thirty-two, making appropriations for the support of the Army.

JAMES K. POLK,
Speaker of the House of Representatives.

M. VAN BUREN,
Vice President of the United States.

President of the Senate.

APPROVED 14th of January, 1836.

ANDREW JACKSON.

IN SENATE.
Thursday, Jan. 14, 1836.

NATIONAL DEFENCE.

The Senate took up Mr. Benton’s resolution to appropriate the surplus revenue for purposes of National Defence; which was discussed by Senators Ewing, Goldsborough, Benton, Webster, and Cuthbert.

Monday, Jan. 18.

The following resolution was offered by Mr. Lincolm:
Resolved, That the Committee on Naval Affairs be instructed to inquire into the expediency of providing, by law, for the improvement of the navigation of the Mississippi river, from the mouth of the Des Moines river, in the territory of Michigan, to Fort Crawford, Prairie du Chien, in said Territory.

Mr. Southard, from the Committee on Naval Affairs, reported a bill making an appropriation, for deepening the harbor of Pensacola and for constructing a dry dock at that place, which was read and ordered to a second reading.

Wednesday, Jan. 20.

The resolution submitted by Mr. Benton for appropriating the surplus revenue to permanent objects of national defence, was taken up as the order of the day; and after some remarks at length from Messrs. Cuthbert and Hubbard, the resolution was laid upon the table.

Thursday, Jan. 21.

Mr. Tallmadge presented the petition of Commodore Woolsey, which was referred to the Committee on Naval Affairs.

Mr. Tyler presented the petition of Charles D. Brinton, praying for the removal of vessels injured by worms, which has been used for several years past in the public service. Referred to the Committee on Naval Affairs.

Mr. McKean, from the Committee on Naval Affairs, reported a bill regulating the pay of officers of the Marine Corps, which was read and ordered to a second reading.

Mr. Benton, from the Committee on Military Affairs, to which had been referred the resolution of the Senate, directing the Committee to inquire into the expediency of constructing floating steam batteries for the public service, reported a bill appropriating 650,000 dollars for that object, to be expended under the direction of the Secretary of War, which was read and ordered to a second reading.

Mr. Benton, from the same Committee, reported a bill making an appropriation for opening a military road from Fort Leavenworth to the River des Moines, which was read and ordered to a second reading.

Mr. Benton, from the same Committee, reported without amendment the bill providing for the increase of the Corps of United States Engineers.

Mr. Benton offered the following expedient resolution:

Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of an appropriation to pay a company of Volunteers, commanded by Captain Michael Siglor, of the State of Indiana, for services rendered the United States, against the hostile Indians in the year 1832.

On motion of Mr. Hubbard.

The Senate then proceeded to the consideration of the resolution introduced by Mr. Benton for appropriating the surplus revenue to purposes of national defence.

December 6th, 1835.

EDMUND FANNING.
FOREIGN MISCELLANY.

FROM PAPERS RECEIVED AT THIS OFFICE.

BELGIAN ARMY.—It is stated to be in contemplation to grant letters of naturalization to several military and civil officers in the service of Belgium, born in foreign countries. The question of dismissal of the French officers in the Belgian army continues to be agitated, many more lithographic letters having been addressed to the native officers, in which arguments are adduced to show the necessity of the measure. A decree of the Minister of War has decided that the furloughs of the men belonging to the regiments of infantry absent on leave till the 1st of November, shall be prolonged till the 1st of March, next year.

FRENCH NAVY.—Notwithstanding the numerous promotions lately made in the French navy, there are still, in consequence of its many recent losses, the following vacancies:—21 Lieutenants of ships of the line; 18 Captains of sloops; 7 Captains of frigates; 5 Captains of ships of the line; 3 Rear-Admirals; and 1 Vice-Admiral.

CULTIVATION OF LITERATURE BY THE ARMY.—It is a fact highly honorable to the military profession, but not generally known, that in 1860 the English army in Ireland subscribed 1,900l. towards the purchase of a library for Trinity College, Dublin. Nor is this the only instance of such generosity, for after the death of Archbishop Usher, in 1666, the army in Ireland purchased his valuable collection of books and MSS., in order to present it to the college, and though several obstacles intervened, the munificent donation was finally confirmed by Charles II.

RUSSIAN AND PRUSSIAN SOLDIERS.—The Leipsic Gazette of the 19th inst. has the following from Berlin of the 16th:—"The guards are returned from Kalisch, and the object of fraternising the Prussian and Russian troops has entirely failed. The principle of honor which exists in the young Prussian army, and the abolition of all corporal and degrading punishments, have raised in the breast of the Prussian soldier a painful sentiment of indignation at the sight of the semi-barbarian laws which rule the Russian army. The Russians are, on the other hand, not anxious to fraternise with their new comrades. Moreover, the Russian soldiers were forbidden to go into the Prussian camp."
ARMY AND NAVY CHRONICLE.

HEADQUARTERS OF THE ARMY.

ORDER. No. 7.

Washington, Jan. 31, 1836.

The Commanding Officers of the companies at Forts Johnston and Macon, in North Carolina, and at Savannah and Augusta Arsenal, in Georgia, will proceed forthwith to Picola, Florida, with the effective force of their respective commands, leaving only the Ordnance Surgeons and invalids. The Medical officers of the army, at the above posts, will accompany their respective garrisons.

The detachment of Dragoons recruits at New York, and the movement of recruits for the Artillery and Infantry at the same place, will proceed to Picola, Florida; the former under the command of Captain Wharton of Dragoons; the latter under the command of Lieutenant Herring, of the 3d Artillery. Lieutenant Simonton and Dr. White of Dragoons, and Lieutenant Beall of the 1st Infantry, are assigned to the command of Captain Wharton; and Lieutenant Poole of the 3d, and Lieutenant Humpreys of the 2d Artillery, are assigned to the command of Lieutenant Herring.

The following officers are relieved from the duty to which they are now assigned, and will forthwith repair to Picola, Florida, on their way to join their respective commands:

2d Lt. Morris, of the 1st Artillery, Company C.
1st Lt. Chambers, 2d G.
1st Lt. Dancy, 2d D.
2d Lt. Burnett, 2d F.
2d Lt. Stockton, 2d A.
2d Lt. Fuller, 2d G.
2d Lt. Ward, 2d G.
2d Lt. Linnard, 2d H.
1st Lt. Burk, 2d H.

Assistant Surgeon Myers, Suter, and Cuylor will report without delay to Florida and report to the officer in command.

Assistant Surgeon Worrell will repair to New York with out delay, and there await the orders of the Surgeon General.

Major General Scott will repair to Florida, and take command of the troops operating against the Indians in that quarter. Besides his personal staff, he will be joined by Captain Caffield, of the Topographical Engineers, Lieutenant Van Buren, Alcée de Camp, and Lieutenant John- son, of the 4th Artillery.

The Commanding officer of Fort Monroe will send two officers from his command, one to Fort Macon, the other to Fort Johnston in North Carolina, to take charge of those portions of their regiment, and assume the duties of Superintendence in the Western Department. Lieut. Barry, of the 1st regiment Artillery, is assigned to duty at New Port, Kentucky.

BY ORDER OF ALEXANDER MACOMES,

MAJOR GENERAL COMMANDING IN CHIEF:

ROGER JONES,

Adjutant General.

- Jan. 28.—Colonel Cutler, Supt. Eastern Recruiting depot, ordered to detach 80 recruits to supply the troops in Florida.

Jan. 29.—2d Lieut. R. T. P. Allen, 1st Art., and 2d Lieut. J. E. Henderson, 2d Art., removed from Topographical duty, and ordered to join their companies in Florida.

Bvt. Major B. K. Pierce, 4th Art., with his company, will repair to Fort Millin, on the Delaware, and assume the command of that post.

NAVY.

List of Officers ordered to the ship Concord, fitting for sea at Portsmouth, N. H.

M. P. Mix, Commander.

Lieutenants—H. A. Adams, W. L. Howard, T. J. Leib.

Acting Master, 1st P. McKinstry.

Carlyle, J. Dibble. Sailmaker, J. Beggs.

The Frigate Constellation, Commodore Dallas, and ship St. Louis, Capt. Rossassin, arrived at Havana on the 5th inst. from St. Jago, and Trinidad de Cuba; all well.

Schr. Shark, Lieut. Commanding Ridgway, touched at Milo Point, Nov. 17, and sailed for Smyrna.

RESIGNATION.

Passed Midshipman J. C. Graham, 21st Jan. 1836.

DEATHS.

On the 21st November last, near Louisville, Ky., in the 39th year of his age, JOHN L. WATSON, late a Lieutenant of the U.S. Dragons.

In his residence near Morristown, N. J., Captain WIL- LIAM TUTTLE, aged 77, having entered the service at the early age of 18, and continued one of its brave defenders until peace was proclaimed.
SIEGE OF NEW ORLEANS.

[CONTINUED.]

Certain it is, however, that there are times when a military officer, to whom a great trust is confided, may be called on to violate the laws, that the Constitution may be preserved. Such cases cannot be foreseen and described. They must be met when they come. He who exercises a feared responsibility, and he who should therefore be so extreme, as to leave no doubt of the duties he imposes. No one, not lost in metaphysical abstraction, would insist on the preservation of formal regulations, or even of ordinary enactments, in those cases of extreme peril, where an invading enemy is laying waste the country, and where the energy of military organization can alone stay his progress, and preserve that liberty, for which laws are not the substitute but the defender.

But should a General mistake the crisis, he is lost; it must look to his countrymen, to public opinion, and to the proper legislation, for protection against those very laws which he violated, and whose spirit and authority restored them to immediate operation, when the pressure of danger is removed. It is, after all, a perilous resort, and most devoutly we hope, that it may never be again witnessed in our country. But if it be, our next wish is, that the authority thus assumed may be quietly relinquished, and that its parting scene may be as memorable as was the appearance of the American General before the Louisiana Court; where he was thanked for his military services and fined for his civil offences, and bowing to the decree, ransomed himself by complying with the judgment. The incident is not unworthy of the historical painter. We do not enter into the discussions, which then divided the executive and legislative authorities of the state. Suffice it to say, that there were criminalizations and reprimandations, and that in the mean time the public interest suffered.

These difficulties did not disappear, till the functions of the civil magistrate were limited or suspended, and till the energy of military authority pervaded the whole circle of operations, and brought all to the great object of defence.

This, however, was not effected without much trouble and anxiety to the American commander, which were ascribed to the proper duties of his station.

There was occasional firing on both sides, during all this period, by whist a few casualties were produced, and perhaps some slight interruption given to the regular working parties. But the great object of the campaign was not advanced on one side, nor retarded on the other. The British were busily engaged in transferring their supplies, in preparing and strengthening their batteries, and in making the arrangements for the assault, while at the same time they were willing to delay the final effort, till the arrival of a reinforcement daily expected under General Lambert.

It was also ascertained, that they were employed in excavating Villère's canal, so as to open a navigable communication between the bayou they had ascended and the Mississippi. There could be but one object in this project, so to throw a port, or the whole of their force, suddenly across the river, and thus place it in their power to move from New Orleans by one bank or by both. The possibility of such a diversion had already been anticipated, and preparations had been made for the danger, by the isolation of batteries and the posting of pickets for the assault, while at the same time they were willing to delay the final effort, till the arrival of a reinforcement daily expected under General Lambert. It was also ascertained, that they were employed in excavating Villère's canal, so as to open a navigable communication between the bayou they had ascended and the Mississippi. There could be but one object in this project, so to throw a port, or the whole of their force, suddenly across the river, and thus place it in their power to move from New Orleans by one bank or by both. The possibility of such a diversion had already been anticipated, and preparations had been made for the danger, by the isolation of batteries and the posting of pickets for the assault, while at the same time they were willing to delay the final effort, till the arrival of a reinforcement daily expected under General Lambert.

As the probability of a vigorous attack in that quarter became greater, precaution required a proportionate increase of the means of defence. The force was considerably augmented, and amounted, at the moment of attack, to about eight hundred men.

These works, however, were incomplete. A redoubt, thrown up near the river, and an entrenchment was constructed along the bank of a canal, for the distance of about two hundred yards. From this point to the swamp there was no defence but the canal.

The Americans had thus two lines of defence separated by the Mississippi, while the British commander had in his power to concentrate his forces upon either, or to attack both simultaneously. There were not wanting those in his camp, who recommended that their principal effort should be made across the water, and had it been so, they might have pushed on to New Orleans, and compelled General Jackson to form, to by some means a new system of defensive operations, or perhaps to risk the fate of the city upon an engagement in the field.

On the night of the 7th of January the American lines were shamed by the troops, who were aware, from the incidents around them, that their enemy was preparing for the attack. The British had collected about forty boats, some of them armed with cannon, which were yet lying in the canal, ready to receive on board the detachment destined for the operations on the right bank of the river.

Many a sleepless eye watched the slow progress of the night—many, indeed, which never watched again. No man can contemplate, without emotion, the approach of such a struggle as was then evidently impending. When the blood is up, and all the excitement of battle around us, the mind is withdrawn from the reflection of danger, or rather is elevated above it. Duty, hope, pride, habit, the spirit of the line, all conspire to stimulate to exertion. But the "pain of death is most in apprehension." It is in the stillness of the night and of solitude that those thoughts come over us, which are told in such burning words by the great dramatic poet of our fatherland. When

"...the dread of something after death,..."

"...the undiscovered country, from whose bosom..."

"No traveller returns—puzzles the wise...

"If this be life and all must die, what is it worth?..."

Captain Cooke has portrayed with much feeling his impressions upon this eventful night; and whether his thoughts took their hue from the circumstances around him, or the latter from the former, certain it is, from his description, that a sinister augury was as natural in itself, as it proved in the end to be but too true. He states, that he wandered through the camp, contemplating the "city all around, so broad and so large, the houses and quarters, and the noise and revelry and fires at the lines with the silence and order which appeared to prevail in the American army on both sides of the river.

The whole scene, with its associations, must have been singularly impressive to an Englishman—to a native of the world who has wandered over works of nature spread out in that magnificence which marks her operations upon this continent. Before him is that mighty river, of which he had heard from his infancy, rolling its endless floods to the ocean, and seeking its supply from the fountains of the north; traversing regions of boundless forests and perpetual solitude, and overtopping the rich but narrow plains, which man had gained from its dominion. High up, on its tributary and tributaries, those nomads wander, whose origin is a mystery; whose condition, habits, institutions and history, have arrested the attention of Christendom, since the veil, which insulated them and their world, has been withdrawn; whose fierce war-like spirit, in their angry and deserted fields, is gratified in the blood of friend and foe; who have been stationary, not in position but in improvement, while everything around them has been changing; and whose destiny we have no pleasure in anticipating. Around him is the primeval forest, biding defiance to the slow progress of human activity.
find toils, is with... his sphere of vision, though shrouded from his view by the obscurity of the night, and guarded against his approach by an enemy he came to conquer without an effort, but whom, if he now fears, no effort can conquer. The river is sending up its dense canopy of fog, which, mingling with the smoke and mist of the battle above, and interlacing, and circumscribes the loely spectator within his own narrow world. His companions had fought in many a foreign clime; at Corunna, says Captain Cooke, at Busaco, at Ciudad Rodrigo, at Badajoz, at Salamanca, at Vittoria, at Toulouse, at Martinique, and at other famous battles which he enumerates, and where they, and some of them, have been exalted by the influence and its most fortunate yield to their impenetrable valour. Now they were being fanned by a band of husbandmen, a "pose comitius," "dressed in coloured clothes," "wearing broad hats," "armed with long duck-puns," "by jumps and crowds of American militia," and "by round hatted Americans," but who, with their weapons, with stout hearts, sharp eyes and steady hands, had planted themselves in the path between them and their prey.

Here was, indeed, food for reflection and recollection; and the reader of the two military authors, who participated in these events, will be struck with the sombre topic with which they open, and prospects on the eve of the battle. There was an evident want of confidence in the British army—a vague presentiment of some approaching disaster—a scepticism as to the abilities of their leaders, and the military policy of their arrangements.

"Coming events cast their shadows before." These apprehensions are easily accounted for from the course of events, and from the promptness, decision, and confidence on one side, and the want of these military virtues on the other.

But the work of preparation went on in the British camp. The troops were embarked in the boat; the fascines and scaling ladders were prepared; the columns marched to the proper positions; the batteries were ready to open their fire, and the necessary orders communicated, according to military usage, through such channels as would ensure their reception and proper execution. Thus passed the night.

Such was the relative situation of the hostile forces, when the dawn of day, on the morning of the 8th of January, a signal rocket, thrown up from the left of the British lines, and immediately succeeded by another from the right, announced to the assailants that the moment of attack had arrived, and to the defenders that it was coming. The cannon was fired, and lowering, and the exhalations from the river and swamps still rested upon the whole face of nature, and masked the movements of the advancing troops. They had formed in two columns, the principal one on the right near the woods, and the other on the left near the river. As soon as their advanced animals, by the outlying pickets, these instantly retreated within the American lines, and gave notice of the coming storm. There could, however, be no surprise. All night the lines had been manned; one half of the troops doing duty at their posts, while the other slept, or more properly, observed duty. The well-known partial curve in the woods, enabled the main column to attain within two hundred yards of the American work, before it was distinctly visible. The enemy had constructed two heavy batteries, and these opened their fire simultaneously with the movement of their troops, and were returned with great rapidity. The thunder of the discharges added to the sublimity of the scene, but in all other respects they were innocuous. Not a gun in the American battery was disabled, and as to the killed and wounded, they did not equal, in the whole engagement, the number of cannon which the British had in battery.

The American artillery now took its part in the contest. Some of the batteries were directed against the enemy's cannon, while others swept the advancing columns. Commodore Patterson, from his position across the river, co-operated by a vigorous flanking fire, with the general means of annoyance.

Sir Edward Pakenham, the principal officer of operations lay within a narrow compass. He designed to push his columns, by a rapid forward movement, upon the American entrenchment: to fill the ditch, as he reached it, with the fascines which had been prepared, and were to be carried by the heads of his columns, and then to apply to the breach, with an overwhelming force. The principal object of the movement on the right bank of the river was to seize the batteries constructed there, and to turn their fire upon the American right wing, and envelope the lines. To render this co-operation effective, it was essential that the collateral movement should precede the principal one, so as to place the batteries in the possession of the British before the lines were taken. It was therefore a part of the plan, that Colonel Thornton, to whom the operations on the right bank were committed, should commence his movement at an early hour in the morning, so as to reach his point of attack about day-light. This, however, he did not do. Owing to his being unable to bring his men up in time, and to the depth of the canal, the boats grounded, and were got off with difficulty and after much delay. The best devised schemes may be marred by such unforeseen accidents. But he proved himself to be the great commander, who repairs the misfortune by prompt and vigorous measures. In its final form, the British General postponed his attack till the result of Colonel Thornton's expedition was disclosed. That movement seemed to be the key of his own. But he apparently thought it essential to success, that the assault should take place about the dawn of day, so that his columns might approach as near as possible without observation, and then precipitate themselves by an overwhelming rush upon the Americans. To a night attack he had insuperable objections, it is said, on account of the difficulty of distinguishing friend from foe, where both spoke the same language. However this may be, he gave the orders for the signal. The rockets ascended, and his plan was committed to its fate.

The British columns were instantly impelled onwards. A rush, an escalade, and the bayonet, only could save them. But they moved slowly. Some of them carried fascines of sugar cane, and all had their knapsacks upon their backs. A French pas de charge was executed in brief space, if indeed it was in the power of any troops, to such a degree, of the murderous fusilage which was vomited forth from the American works. But slowness was death. And so the assailants found it. The damp canopy which had shrouded the plain, was now rising, and bringing into view the desolating scene. The columns had debouched from their shelter, and the dense masses of human beings were now propelled to the very muzzles of a frowning line of guns, held by the best marksmen in the world. The eye upon the barrel, and the finger upon the trigger, and wo to the living target at whom the bullet is spent. The fire opened with volleys of flame, and before any return, was sustained with so much most awful sight and sound that ever broke upon the eye or ear. Captain Cooke's description of the reverberation of the intonations from the forest is appalling. Well it may have been so, to men who stood before these terrific discharges, and were mowed down without resistance. No doubt, as he says, none but a spectator could form an adequate conception of this catastrophe. It was not our fortune to be there, and we cannot therefore spread before our readers a vivid picture of a scene without a parallel in ancient or modern warfare. Nor indeed would it be possible for any one to describe with minuteness and precision, the varied incidents of such a field, founded in peculiar circumstances. Suffice it to say, that some of the British troops, with matchless courage, gained the brink of the ditch, but could go no farther. The column itself, broken, dispersed, disheartened, retreated in the
SURVEY OF THE COAST.

THIRD REPORT OF MR. HASSLER.

Report of F. R. Hassler, as Superintendent of the Survey of the coast, additional to that dated May 17th, 1834, containing an Account of the Progress of that Work during the Summer and until November of 1834.

1. I stated in my report, of which this is a continuation, as well as in many previous communications, that the accurate measurement of a base-line, by the means especially provided for that purpose, the description of which is published long ago, was, after the measurement of the angles of the main part of the triangulation, presented in that report, the first and, as well known, most important part of the work; to that I had therefore principally to devote my attention and personal exertions this summer.

2. I also stated in that report, that from the observations upon the stations of Rulands and Westhills, upon Long Island, there appeared to present itself the prospect of a base-line far more advantageous, in every point of view, than that measured preliminary in English Neighborhood, to the new point called Head and Horns, and perhaps farther. Its position lies eminently favorable for the determination of the distance from Westhills to Rulands, which presents its extremely favorable as a base for the large triangles, crossing Long Island Sound over to Connecticut, &c., as evident by the maps of the triangulation joining to that base.

3. Viewed from the two named stations, this beacon presented a narrow strip of land, that appeared straight between the lighthouse, at the inlet of the bay, and the new point called Head and Horns, and perhaps farther. Its position lies eminently favorable for the determination of the distance from Westhills to Rulands, which presents its extremely favorable as a base for the large triangles, crossing Long Island Sound over to Connecticut, &c., as evident by the maps of the triangulation joining to that base.

4. These advantages were too great not to decide in favor of this location of the base-line, for the execution of which Captain Swift was preparing all the mechanical means in New York, during the time that I wrote my last report and before, but it would have been very desirable that the actual work could have begun with the earlier part of the season; this, however, was impossible, on account of a considerable part of my time being taken up in Washington, in the latter part of the winter, to give to the Navy Department all the information, that was requested, on account of the correspondence, that Survey being transferred to that Department from the Treasury Department, where all the detail arrangements of the work and the tenor of the agreements made with me were known from their very beginning.

5. When I could join my assistants in New York, in the earlier part of June, the means being all on hand, I directed the final adjustment of the whole base-measuring apparatus and what is connected with it; there were also engaged an adequate number of men for the manual assistance required, in the selection of whom we were very fortunate to obtain all efficient regular men, of such different qualifications as are absolutely required for the actual measurement of a base-line, and the extra works that it requires. In a place entirely isolated, and thence distant from all other means to provide for them.

6. I directed them all the assistants, not otherwise especially engaged, the men, and the apparatus, and equipment, to a survey report of that base measurement. The bordeel of which the west end of the base-line was to fall; and directed the assistants, joining there, to make a detail survey of the beach, from its western end, till to Head and Horns, or even Watch Hill; such a previous survey being always necessary, to enable to select the most favorable ground for the actual measurements of this locality hereinafter joins proves this evidently. Two lines between Head and Horns, and some points near the Light-house, proposed, and scrutinized first by my assistants, presented such difficulties, by intervening
sand-hills and bushes, as not only would have required a great length of time in overcoming, but also would have occasioned chances of inaccuracy, besides a great deal of labour for the carrying and necessary reductions to the too much interrupted horizontal line.

7. When I could join my assistants upon the beach, in the beginning of July, though by no means in a good state of health, and after having visited the projected lines, the difficulties they presented decided me to try to lay off a straight line upon the outlying sandy shoals of the sea-side, and the sand-hills, which appeared to present a nearly straight line, little different from parallel to the shore. This succeeded so well, that a line was laid out, starting from a sand-hill of moderate elevation, somewhat south-east of the Light-house, and extending over eight miles upon the sandy beach, only in a few instances, edging the sand-knolls, and in some others going between the high and low water mark on the sea-side; the lowering of the first, as much as needed, was easy to accomplish, and the second apparent difficulty, was equally easily overcome, by so regulating the work, as to meet these places during low tide.

8. This line was then laid out accurately straight, by means of a transit instrument; and measured preliminary by the same chain of twenty metres, which had been used in 1817, for the preliminary measurement of the base-line in English Neighborhood, and which serves now for the detail plane-table survey of the south side of Long Island. At every four hundred metres a peg was driven in the ground, from the principal point of the distance; these precautions are always required, as a great means of security against mistakes, by the omission that might happen of inscribing a measuring bar box in the registers, as thereby constant verifications are presented.

9. During the months of August, September, and October, this line was then measured in forty-five days, of which twenty-seven in August, fifteen in September, and three in October, the other part of that time being taken up either by interruption from unfavorable weather, or such days as were necessarily employed for the moving of our encampment along the line, for which it was always necessary to employ all the help otherwise engaged on the main part of the base measurement; there being never any doublets of men engaged in our work, and I must add, near the end of it also, by my own increased state of sickness.

10. The rods, as determined by the accurate measurement, and at every one thousand metres, strong pegs were driven in the ground, marked by their distance from the west end, and every two thousand metres, was besides furnished with one of the stone-ware comes, that are always used at the station points, as one of the fixed points, from which the detail points, of the soundings in the sea, that they border, are to be determined.

11. Both ends of the base-line, thus resting upon two sand-knolls, that will by their position, in all appearance, always be secure from the sea, have been marked by two monuments, each consisting of a Newark red sand stone, five feet high, between fourteen and fifteen inches from the top, with an even top of one square, and a round hole in the centre; under the square part, a frame was fixed in, consisting of four pieces of hard wood scantling, embracing it closely by grooves, made expressly in the stone; the lower part being left rough. These stones were sunk entirely even with the sand, together with their frames, which by their extending about twenty inches on each side farther in the ground, will make them stand more solid, and maintain their perpendicular position.

12. The distance between the monuments will exceed fourteen thousand and fifty metres, or eight miles, and the accurate number will result from the calculations that I shall make next winter, upon the reductions needed for:

1. The varied state of the temperature.
2. The elevations and depressions, that the localities of the ground obliged to make in many places.
3. The reduction of the line actually measured upon the shore sand, to that between the monuments; for which all the data have been determined upon the place.

13. The apparatus used for this measurement, is that which I have described in my printed papers upon the Coast Survey, which, though grounded upon entirely new ideas of my own, has obtained the approbation of all the men of science acquainted with such kind of works. It has also proved a very expeditious, therefore even an economical arrangement, as the line was measured in forty-five days, as the base-line of Mr. De Lambe of eleven thousand eight hundred and forty metres, which mine evidently exceeds considerably. In fact, this base is one of the longest lines ever measured with an accuracy in any way comparable.

14. The details of the operations in principle, and even the manipulations, are already described, in my "papers upon the Coast Survey," and as the statement of the final numerical results, must naturally be postponed until the adequate calculations will have been made. I have here only yet to state the great satisfaction which it gave me, that my assistants, engaged with me in this arduous task, naturally entirely new to them, acquired the manipulations of the apparatus so well, that when otherwise favored by the weather, and the locality, we proceeded with a rapidity far above all expectations; and their cheerful exertions during the whole time, and even the laboring men, deserve due praise, and an honest recommendation to that interest so fervently claimed by me last winter, and mightily towards the end, when my ill health had rendered my personal exertions very difficult and fatiguing.

15. The detailed account of this operation, which is of rather a scientific nature, I flatter myself, will be of interest, and therefore enhance the value of the methods that I have devised for the works of the Coast Survey, as well as increase the interest for the work, with the Government, and the well informed public in general; in fact, this account of the work belongs rather to the ultimate scientific account of the main triangulation for the whole work.

16. I had expected, at the close of last campaign, that after the measurement of the base-line, I should be able yet during this campaign, to measure the angles of the triangles, that will determine directly from it the distance from West hills to Rulands, and also those angles on Harrowhill and Wesel, which connect my work with that of the present; but I have obtained a large instrument ordered of Troughton and Peto, and have in the meantime been in time for that purpose. But unfortunately, not only this instrument has not yet arrived, but even many unexpected impediments have arisen, that have made the execution of my projects impossible, and deprive me even now of the use of the means, by which I intend to supply this deficiency. Besides that the latter part of the season, at which the campaign could be opened, postponed naturally every thing for equally as much as my stay in Washington had been protracted, as above stated; an accessory result of which was, that the season for living and working at the sea-shore, falling partly in the month of July, was much extended, for about a month; but unfortunately suspended, but it reduced me ultimately to the sick bed, and the lingering state consequent to it, which last even now, increased and maintained by the difficulties laid in the way of my progress. I had therefore also to avail myself of the assistance of Mr. Blunt, whose operations were near the base-line, for the determination of the necessary angles, and by presenting those to the points of the base-line, and by measuring the mean of the different places of the base-line, for which besides neither I, nor any of the other assistants engaged at the actual measurement, could leave our functions.

17. Though the two assistants engaged in the second-mentioned operations, Mr. Brinton, and Mr. Means, for about one part of the time with me at the base-line, particularly Mr. Blunt, they have continued equally their tasks, as I stated in my last report that they were engaged in, namely, Mr. Ferguson in Connecticut, Mr. Blunt upon Long Island, continuing the secondary triangulations, of which a part is already included in my report of last May; the comparison of the sketch of Mr. Ferguson's
triangulations here joined with the map of my last report, shall show his part of progress; the necessity of calling of Mr. Blunt for the triangulation around South Bay, and the importance also in more to present with this report a corresponding sketch of his work, besides that herewith from the said South Bay.

18. It is my intention to have the topography of the south part of Long Island near the base-line fully executed this fall, as well upon land as for the soundings of the great South Bay, the intention of which lies in making a map to show the island. With that view I marked off a part, from the west end of the base-estery of such length as would serve as base for the triangles, adapted in size to the dimensions of that bay. Such a triangulation was then grounded upon it, by Mr. Blunt, as envelopes the whole bay from its entrance to its southern extremity, as the base-line. These documents, and the needed principally only my revision and signature, but it has become necessary to make use of so many of them that the collection is now very incomplete, and actually my time is otherwise too much engaged to attend to this part at present.

20. In the same manner Lieutenant Gedney of the Navy, who has been appointed, upon my proposition, for the first expedition of soundings, namely, that of the bay so enclosed in the triangles, and the seacoast adjacent to the beach, has been furnished with a projection of these triangles upon a scale sufficiently large to make his preliminary constructions for placing the soundings, in which service he is now engaged upon the bay.

21. It was my intention to procure from Paris the materials and implements, (which hitherto I have furnished out of my private stock,) necessary to have a fully finished map executed of the part of the coast in the vicinity of the base-line, where the topographical details are now executing and the soundings are now taking, by which I would have been able to present this winter yet, a real sample of the execution of the maps, early enough yet to lay it before Congress during the course of the coming season; also examples of drawings in all the different scales that it will become necessary to use to be procured, as I have only (in my private possession,) a single example upon one scale, that was presented to me long ago by Mr. Beaumont Beaupré, of the Depot de Marine in Paris; for it must be here observed that these objects are not obtainable from any other place than Paris, or where they were brought to from there. The base-line will be established in a language of signs, and manner of distinguishing the objects, which appears not yet much known in this country, and which it is necessary to adopt, in order to be properly intelligible for every body, and to present the results also from side to side, as it is proper in the present state of science. But the difficulties attending an introduction of perseverance as laid in my way for the best forwarding of the work, by procuring the necessary means in due time, has frustrated me of the pleasure of giving that satisfaction this year; this can only be remedied the following year, (if in the mean time the difficulties are levied.)

22. The secondary triangulation made by Mr. Ferguson is now brought till to the Pallisades on the west, from New Haven, where its eastern part begins, and that of Mr. Blunt upon Long Island parallel to it, both upon the plan as already stated, though I had to interrupt Mr. Blunt several times for works at the base-line, as above stated.

23. Thence also of all these parts of the country the work is brought to its ultimate application to the minute details of the topography, which I therefore intend to put in full activity as soon as the necessary arrangements can be made, which in the present state of things is important.

24. I am sorry to be obliged to state here yet, what is otherwise evident to every man, who occasionally is a witness to the work of the Coast Survey, that from the most important to the minutest part of the work every thing is arranged in the strictest economical manner, and at the same time so as to produce the greatest possible effect, in perfectly accurate results in the shortest space of time; for in this principle lies the true economy of the work; any arrangement whatsoever not fitting to this aim, is a direct loss, as well in work, as in expense, having made similar works formerly at my private expense. I find a sure guide in this respect, and I dare to assert with full confidence that never so much actually valuable work was obtained in the same space of time, and for the same proportional amount of money, in any survey whatsoever.

25. By the change of the Department in which this work is committed, it became necessary for me to spend much time in giving the informations necessary to introduce many gentlemen, completely new in the business, into the proper genius of the work, and its most advantageous organization, which lies in documents reaching from 1807 to the present date, during which time, on one hand the arrangements were constantly perfected, while on another even the older documents, in the hands of the Government, have been destroyed by the confiscation of the Treasury Office, so that now I am alone in the possession of them in their original form. I had already some time ago copied these documents, and they needed principally only my revision and signature, but it has become necessary to make use of so many of them that the collection is now very incomplete, and actually my time is otherwise too much engaged to attend to this part at present.

26. As this report is to be made in haste, to reach in due time for the aim of the President, to present it with the Message to Congress, in addition to that of last May, minute details have been excluded. I expect however to have presented the principal features and state of the work to sufficient satisfaction for the present purpose, and to have made evident that I have continued the work according to the principles laid out for me from its first beginning in 1816, that is in a manner honorable and permanently useful to the country, which was already the judgment that late President Jefferson, with whom the first law of 1807 had originated, gave upon my work of 1817, and if nothing is altered in my plans and organization of the whole arrangements, I can promise equally good success for the further continuance, and even assure that by no other means, or arrangements, it is possible to obtain such a result; for this the judgment of all the practical and experienced men of science in this line all over Europe is already recorded in the scientific prints.

F. R. HASSLER.

West Hills, Huntington township Long Island, 11th November, 1834.

Addition.

The neighborhood of this base-line is peculiarly remarkable for the Coast Survey, from the circumstances that it is just the place of the coast of Long Island, where the most vessels shipwreck, because the sea-charts generally represent this coast straight, while in reality it makes a considerable angle out in the sea, so that for vessels arriving from the east, the captains, thinking themselves safe in sailing straight on, after seeing the shore in the evening, are stranded next night at their projecting point; this is proved by the number of wrecks, the remains of which are strewn all along the base-line, and in one of which actually one of our intermediate marks stands; notwithstanding that the habit of the inhabitants of the beach is, to buy the wrecks, and clear them away as soon, and as much as possible. The next year, when we were there, the remains of about eight such vessels: one that had stranded while we were there, was cleared off entirely during the time, and we made use of pieces of it to shelter the base apparatus from the waves, when we were passing between high and low water marks; and one stranded there since.

F. R. HASSLER.

The French frigate Dido has arrived at Martinique from Brest. She is the only vessel of war that had left France at our latest dates, for the West India station.
DOMESTIC INTELLIGENCE.

An Invention.—The New York Times says:—We understand that Mr. Clinton Roosevelt, of that city, has invented an invulnerable Steam Battery, calculated to do great service. It is rendered invulnerable, as we are told, by making the bows and stern of the vessel alike sharp, and plating them with polished iron armour, with high bulwarks and a sharp roof, also plated in like manner, with the design of glancing the balls, which can be done if the ship is not in a very intense action. The means of offence are a torpedo, which is made to lower on nearing the enemy, and be driven by a mortar into the enemy's side under water, where by a fusee it will explode. There is also a very large cannon at each end of the battery, to use in case circumstances should render an attack by the torpedo impracticable. There are also mortars to throw all kinds of combustibles upon the sails and decks of opponents. This mode of approach is always to keep one of the ends of the battery opposed to the enemy. There are means to prevent balls from reaching any part of the machinery.

The Report of Col. Long upon his exploration of the country to ascertain the best route of a Rail Road from the coast of Maine to Quebec, has been received by the Governor, and communicated to both branches of the Legislature, and they have ordered 30,000 copies to be published. It is a valuable document, and contains the fact that Belfast is the best place for it to terminate on the Atlantic waters.—Belfast Journal.

A letter from Mobile, dated the 14th Jan. says:—The Boat which was expected yesterday from New Orleans with Col. Twiggs and the U. S. Troops, arrived last night, but without troops or any further information than that Col. T. did not consider the danger sufficiently great to induce him to move without orders.

LITTLE ROCK, ARK. Jan. 5.

MORE TROOPS.—The steamboat Arkansas, from New Orleans, brought up 128 fine looking recruits for the United States dragon corps at Fort Gibson, which were enlisted in Pennsylvania and New York within a few months past.

The officers in charge of these recruits are, Major Belknap, 3d United States infantry; Lieutenant Izard, United States dragoons; and Lieutenant Nute, 6th United States infantry.

LITTLE ROCK, ARK. Jan. 12.

Information reached Van Buren, a few day ago, of the death of Capt. George Vashon, agent for the Cherokee, and formerly an officer of the U. S. army. He is said to have died on the 31st ult., of an inflamatory sore throat.

ENGLISH CREEKS.—The Steamboat Alpha, with two large Keelboats in tow, arrived at this place on Friday evening last; and, after anchoring in the Stream about an hour, without permitting any of the Indians to land, proceeded up the river, having on board 511 emigrating Creek Indians, on their way to the country west of the Arkansas. The party is under the direction of Mr. Beatie, agent for the contractor, and Lient. Deas and Dr. Randall, U. S. army.

We acknowledge, with pleasure, the receipt of the following letter and its enclosure, by the mail this morning:

To the Editors of the N. Y. Commercial Advertiser.

ALEGHENY ARSENAL,

The enclosed check on the Girard Bank, is the amount of a subscription from the small enlisted force, and others employed by the public at this Arsenal; and is intended to be applied by the Committee, of which you are a member, in alleviating the distresses produced by the late disastrous war, so prevalent in your city.

It is a small donation from men, whose munificent dispositions are less limited, than their means of gratifying them. I am, sir, very respectfully, your ob't serv't.

R. L. BAKER, Maj. U. S. A.

FOREIGN MISCELLANY.

FROM PAPERS RECEIVED AT THIS OFFICE.

From the United Service Gazette.

WIND, WEATHER, &C. ON THE COAST OF CHILL.—The following remarks on the currents, and on the wind and weather on the coast of Chili, were made by Captain Robert Fitzroy, of his Majesty's ship Beagle, enclosed in a letter to Captain Seymour, which was produced by Commander Inglis, of the British Navy, before the Assemblies of the Fique.

The communication is dated the 12th of July, 1855:—

Near the Island of Mocha, and in the offing off Cape Rumena, the current usually runs to the north-west from half a mile to one mile and a half each hour. Distant, in the offing, from Cape Mocha and off Cape Rumena, from this set of current is so much diminished, that it is hardly sensible; but near Mocha, and especially near the very dangerous outlying rocks on the south and south-west extremity of that island, it is increased to two, and at times, even to three miles an hour. From the great river Bio Bio, and from other rivers in the vicinity, vast floods escaping to seaward, cause strong and irregular currents, which set to the southward, passing the island of Santa Maria, sweeping round Point Lavapre, and Cape Rumena, and Tucapel Point, into the bay, where H. M. S. Challenger was wrecked. These southerly currents are usually found to set strongly along shore, but have an easterly tendency, in support of the cold current from the northward, near the island of Santa Maria, in one night during a dead calm.

But after the great earthquake of the twentieth of February, which affected all the coast about Concepcion, and especially the island of Santa Maria, which was upheaved ten feet vertically; the currents set to the south-west so strongly, that a boat, belonging to the mentioned Antonio Vogelborgh, which he was steering, running near the island of Mocha, under sail, with a fresh southerly breeze, could hardly make head against the strong stream that was passing along shore from the north-westward. This happened on the 21st of February;—a few days afterwards, there was very little current in any part of the coast. Since then it has not been at rest near Concepcion during any considerable interval. Repeated shocks have continued to alarm the suffering inhabitants, as may be known by referring to Mr. Caldecott's paper, published in the Transactions of the Royal Society. It is therefore to be apprehended that the mare northeasterly, and directly from the neighboring ocean are, as yet, unsettled, and extremely uncertain.

On the southern coast of Chili, winds from the southward, or from the northerly prevail more than those from the west, and very much more than those which come from the east. From south-south-east to south-west, and from north-west to north (magnetic,) are the points whence the wind usually blows with less or more strength, according to the time of the year. During the summer months, or from September to March, southerly winds are prevalent almost always. They are frequently strong in the afternoon, and sometimes during a part of the night. Towards morning and during the latter part of the day, moderate winds, light breezes or calms, are to be expected. Near the land it is generally calm at night, excepting about once or twice a month, when the wind blows strongly from the southward until about midnight. Occasionally northerly winds are experienced, but they are usually moderate during that season, that they pass almost unheeded.

About the end of March, the "northerns," as they are called, begin to remind one that fogs—heavy and frequent—thick gloomy weather—and strong winds often trouble the southern coast of Chili. During a part of
March, and throughout April, May, and June, foggy weather is frequent; and although it is not often that a thick fog lasts longer than a day or two, we frequently have two or three days of continued thick fog is not unknown. With northerly and north-west winds, the sky is overcast, the weather unsettled, damp, and disagreeable. These winds are always accompanied by cloudy, and usually by thick rainy weather. From the north-west, the wind in general shifts to the south-west, and thence to the south. Sometimes it flies round in a violent squall, accompanied by rain, thunder, and lightning; at other times it draws gradually round. Directly the wind is southward of the west, the clouds begin to disperse, and a steady southerly wind approaches, the sky becomes clear, and the weather becomes pleasantly fair.

A moderate breeze from the south-east, with a sea rolling in from the east, was eventually followed by a moderate breeze from the south-east, with very fine weather, light variable breezes follow, clouds gradually spread the sky, and another round turn is generally begun by light or moderate north-easterly breezes, with cloudy weather, and often rain. This is the general order of change. When the wind shifts against this order or back round, bad weather with strong wind may be expected.

Lightning is always a sign of bad weather. It accompanies or precedes a change for the worse, which, however, is usually a prelude to clearing up. Squalls are rare, excepting at the shift from north-west to south-east. Occasionally, a moderate breeze from the north-west to north-east may be experienced, and a dull, thick overcast, with fine weather.

From the Plymouth (England) Journal.

Barbary Dockyards.—Pembroke dockyard is situated about 10 miles from the entrance of Milford Haven, and is well calculated for building ships, but will never form a place for a dockyard, being very narrow for large ships. A bank lies off the dockyard, between which and the yard itself, a line-of-battle ship could not lie and swing round without touching the ground. The artificers employed there have principally been sent from other yards; they receive from Plymouth all the stores for building their ships, and the ships are, when built, sent away—that is to say, artificers, with materials, having been sent into Wales to build ships, and when the ships are built they are sent to England—an admirable system of economy.

Plymouth is easy of approach. Pharo gleams on the top of the Eddystone rock, and points out the way to a safe haven behind that great national work, the Plymouth Breakwater. Here our navy may ride in safety, and find either an entrance or an exit by an eastern or western channel; Calwater receives the disabled ship from the east, and Plymstock's best bulwarks float and swing round at their masts in its deep but tranquil waters. Here the largest ships approach the arsenal and receive on board the whole of their equipments, provisions, water, and artillery, while the channel between Hamoaze and the Sound is so extremely deep to admit the largest ships at any time of tide.

Pass we now to Portsmouth; a muddy g lour, traversed by several creeks, in which a number of ships of war lie, moored head and stern for want of space to swing round, and for want of depth to clear the bottom; a few only may be seen near the entrance, no doubt the bow, which makes the best ground in a hole, scraped out at an immense cost by a steam power. All this is nearly enclosed by marsh-lands, ditch water, and shining beach, and behold the commodious and splendid port of Portsmouth, where the solon of the Naval and Military Gazette would place the Royal Navy of Great Britain; large ships can neither fill their water, take in their provisions, nor grant their discharge; the entrance is very narrow, and has no more than 14 feet water in the narrows at low spring tides. There is a basin, it is true, but large ships can only be taken in at spring tides. Its natural advantages are all of the negative kind, and were it not for the fine anchorage at Spithead, and the port within the Hamoaze, Portmouth would be really the worst of our naval stations. Portsmouth is a complete and convenient dockyard: it has deep waters, deep docks, and a good basin, but our naval rulers in every age, have been more famed for finding natural difficulties to surmount, than in taking advantage of natural facilities in forming our public works. Sheerness is for the main a dismal desolate place, enclosed by a wall built upon a quick sand; it stands upon the lowest and most easterly point of the Medway, the sands about the entrance of the Thames—serving equally to impede the entrance of an enemy or the exit of a friend.

Chatham is a dockyard of shallow and fresh water kind, and is now of little use as a fitting port; there is little more than 16 feet of water at low tides, consequently a large ship cannot be equipped here.

Woolwich is the pride of cockney town, its dockyard is built on the western banks of the Thames, whose turbid waters once washed the foundation, till either the existence or ignorance of its officers allowed cretations to be made on the bank of the river; when the stream was turned, and mud deposited to a depth of 12 or 15 feet along the front of the dockyard. Basins have been built to obviate some of these evils—mud has been raised by steam and deposited on the adjacent shore, and men have been employed to push the mud into the stream, and "John Bull" has paid pretty handsomely for the ignorance of his officers. Woolwich is now a receiving and building yard; here steamers are fitted out or repaired, sailing vessels seldom being equipped at this arsenal.

Dedford dockyard, once the pride of the British fleet, is now become a desolate place: it has been shut up, and is now only used for taking old and crazy ships in pieces. When it was determined to reduce this yard, and send away the stores to the magazines at Woolwich, Chatham, and Sheerness, all the river craft were employed for a great length of time on the service. Huge rafts were made of the lumber and spars; and although the yard was ordered to be cleared, we very much doubt this service has yet been accomplished.

CAPTAIN BACK.—At a recent meeting of the Royal Geographical Society of London, a paper was read from the pen of the gallant Captain. Among other novelties he said—that the extent of his journey had been 1,200 miles up the Ueave Lake and Mackenzie River, and that he had discovered upwards of 30 falls during his course; the banks in some places being of a native red granite, and others of a slate-colored grey stone, of 50 and 60 feet perpendicular height. The paper minutely described the appearance of the land on the sides of the river, and the abundance of tributary streams falling into it. He also described the fish, some 150 to 200 feet wide, at the mouth of the Ueave Lake, in which were many small pointed islands forming groups. About four hundred miles from this, four islands were visible, and the lake was joined by another larger stream. The shores of the lake, either from the crumbling of the ice, or the rolling of the holders, produced a coast of pudding-stone to a considerable extent. In a contracted part of the channel, the water was said by the Equi nauax never to freeze, which for two years he had an opportunity of proving, although the rapidity of the stream could not be considered the cause. The expedition wintered in lat. 62° 46' N. and 109° 39' W. len. The valley at the mouth of the lake was found to be a small, having been informed that fish and game were plentiful. They found, however, unfortunately, that the former only came to this spot to spawn, and that the latter forsook it at the approach of winter. The valley was covered with grass in most places, and in others, with large masses of moss.
covered rock, which appeared to have been deposited by some convulsion. At fifteen miles distance they were informed by the Esquimaux that there was an eminence, from which arose an immense smoke, which these simple natives ascribed to its being the residence of the Evil Spirit, and refused to lead the way to the spot. It having been observed two of his men, he sent on a scout, he and his party to examine it, and found the eminence 2,000 feet high, from whence was precipitated a magnificent cascade, the uprising foam causing that appearance, and the waters having frozen, formed beautiful pendants of green, blue, and violet color, from the refraction of the light. He then continued his passage to the 62d degree west, the point where the Fluico river cuts its way between mountains of a very considerable height, forming a numerous succession of cascades, one of which was a mile and a half wide, and 65 feet high. He concluded by giving his opinion that there was a north-west passage, the driftwood not sufficiently saturated with water to be incinestible, in the neighborhood of Boothia, which he had no doubt was an island, proving the existence of a current from Behring’s Straits, the passage from Boothia to the main land being from 35 to 40 miles wide. He expressed his opinion, that should a proper vessel be built with impetus, and means to construct boats on board, and the navigators trust themselves to the currents instead of edging along the shores, while their course would be more secure, the chances of success would be more certain. The strongest indications of the passing being occasionally opened, were proved to him not only by the drift-wood which was frequently met with; but by the vertebrae of a whale which was found on the shore—these animals never resorting to shallow water.”

Bravery of a French Sailor.—The Courier de Breval, of the lst of November, contains the following act of courage:—On the 22d of October, about noon, the cutter, command by Captain Francais, Captain Lefrancois, run in the reach of Roland, near Quiberon, where Quiberon is carried by the sea and a heavy gale of wind to a chain of rocks stretching out from Tivie, where she must inevitably have been dashed to pieces; in that state of danger an enormous sea laid her upon her quarter with-in a quarter of a league from the coast. The tempest was then raging with the utmost force, and, to avoid certain death, the captain came to a resolution to get out his boat. He had then on board, as passengers, a lady and her daughter, an infant six years of age. The poor woman shut up in the cabin with her little daughter, expected every instant that death would terminate her existence, and rewarded the same boat at the same time. The cutter, with the utmost exertion got her head up the hatchway to look for the captain, who said to her coolly, “Madam, recommend your soul to God—you and your children are lost beyond all human assistance.” He then left her, and joined the seamen, who with another passenger, aged thirteen or fourteen, were ready to leave the vessel. They abandoned the unfortunate mother, who was deprived of her last hope. She had always expected they would have saved either herself or the child. When they got ashore they were received by a crowd of persons whom the event had drawn together. The saving of the crew was inquired if all were removed from the wreck? The men then said there was a woman and a child on board. Honest indignation was immediately felt against the wretches who had thus abandoned the sufferers. At that moment one of the spectators, named Kerho, a sailor belonging to Keroste, in Quiberon, launched his boat, and obeying the impulse of true courage, without knowing the nature of the dangers, he reached the wreck. “Give me your daughter,” said the brave and generous sailor to the lady, “and be assured if I succeed in saving the child, I will return to you very soon.” His efforts were crowned with happy success. The infant was carried safe to shore, and the wait was rewarded by his promise, Kerho, a sailor, on the foaming waves. He got to the vessel, and happily landed the mother. He was received with all the applause his generous and perilous devotion justly deserved.

The Omega Shoal.—Omega Shoal, although not far distant from Batavia, has escaped the notice of navigators until its discovery, March 1, 1833, by Captain Russell, of the American ship Omega, from Canton, bound to New York, of which he has transmitted the following information. The Omega, having discovered the Omega Shoal and remained on it 22 hours, beat off her rudder, and received damage in her bottom; got off by throwing overboard cargo of the value of about 15,000 dollars to lighten her, and she was obliged to lie down at ourst, near Batavia, for repairs. This is a coral shoal, steep to its edge, being about 40 fathoms deep, to the ridge. N. S. W. 190 to 200 yards, having on it from 10 to 18 feet water, and it bears about E. by S. from the south end of the North Watcher, distant one mile and a quarter. There is a channel of 12 fathoms water between the island and the shoal. As this danger has not been known hitherto, it may now be noticed publicly under the name of Omega Shoal.

Harbour of Lyskial.—The following is a letter received from the agent to Lloyd’s at Greenwich, dated 20th ult.—“I begleave to apprise you that by order of the proper authority, a beacon has been erected on a rock near the entrance to the harbour of Lyskial, and the northern passage to the Uddevalla, called ‘Gofoen,’ being constructed of spars and boards painted red and white, visible in clear weather about 8 or 9 English miles, to appearance like the draught at Ovat (meaning the representation of the beacon.) I further have to inform you that the vessel White Elephant, under the command of the Kosten Island is now furnished with excellent decked pilot-boats, and exerions are making for rendering the coast to the northward well supplied with lights and beacons. I understand the Marstrand Lighthouse is repaired, and will be furnished with a superior light apparatus and machinery, from London, and where the Sale beacon now stands, there is to be erected a double light.”

Anecdote of H. M. S. Guardian.—His Majesty’s ship Guardian, Lieutenant Rieu, commander, on her passage to New South Wales in the year 1789, struck on an iceberg on the 24th Dec. in latitude 44 south, and longitude 41 east. Her stern was split to the water-line; she lost her rudder, and received so much damage that she could not be kept clear of water by pumping. A gale of wind blew her sails to pieces, and on Christmas-day the water was above the orlop-deck. The launch, cutter, and jolly-boat left the ship. The jolly-boat foundered, the launch was lost, and the cutter from her end of the ship having for the Cape of Good Hope. Lieut. Rieu and the remainder of her brave crew kept the Guardian from sinking, by securing the lower deck, and placing under it empty casks and other buoyant materials, and throwing overboard all solids that could be spared, and that were specifically heavier than water. This dexterous and natural skill, actually carried the ship to Table Bay, Cape of Good Hope, and ran her on shore two months after she struck on the ice.

Owen Shoal.—Owen’s Shoal, in lat. 8° 8’ S., long. 110° 8’ E., by two chronometers agreeing, in a run of ten days from Macquarie, on 11th, 1885, by Captain Owen, commander of the ship David Scott, on the passage from Canton river towards England, had not been previously known. He got upon the shoal a little past noon, steering S. S. E. and S. E. by S., had soundings of 6 to 45 and once 34 fathoms, and his rudder became involved, his rudder was broken off. The ship appears to be about two miles in extent, composed of black and white speckled coral, in a state of rapid accretion, perceived by the vitality and energy of the madreporites, observed in recent formations of large pieces of coral brought up by the lead. Whilst on the shoal, patches of variegated coral were observed to break through the water, and the patches were visible, as the sea was then very smooth, yet when the sea is high, it probably breaks over some of the shoal patches, when a large ship would be liable to strike on them.
Our correspondent, "Subaltern," has chosen to take himself remarks which were general and not personal in their application; and intended to be prospective and not retrospective in their effects. "Subaltern" is not the only one, although he is the last, who has written on the subject of Army and Navy pay. The attentive reader of the Chronicle will remember that there were at least two writers who appeared in its columns during the past year—one under the signature of "Aristotle."—and the other under that of "Falconer;" and although we offered no comments at the time, we did not the least regret the reciprocal allusion to the rank and pay of the two services.

We have generally given our correspondents all the latitude they asked; and while protesting against being held responsible for the sentiments of any, have always left to others the task of setting right or correcting any errors or unintentional misstatements which may have been made.

"Subaltern" accuses us of gratuitously charging him with being a disturber of the harmony and cordiality between the Army and Navy. A denial of our allusion to him, or to any individual, is likewise a denial of the correctness of the accusation. But let us suppose for argument's sake, that we had alluded to him, have we so proof to sustain us? Hear what he says in his first article, published in the Chronicle of Nov. 5:

"And should, perchance, the facts herein stated meet the eye of those of the navy who, having obtained their increase of pay, are now laboring to defeat the efforts the army may make to a similar end, we ask of them an atti- mate reading; and if after this they still contend for the equity of the present rates of pay between the services, we shall, though reluctantly, impute it to illiberal motives."

What ground, or shadow of foundation, had "Subalter-"n for this direct charge against the whole Navy, of laboring to defeat the efforts of the army? and if he had some, how could he, with any semblance of justice, impute to the Navy illiberal motives? Was there nothing in this quotation calculated to "disturb the harmony and cordiality between the Army and Navy?"

"Subaltern" refers to allusions to and comparison with the pay of the army, made during the pendency of the bill in Congress to increase the pay of the navy, and asks where were our sensibilities then that we could see nothing to elicit a remark or two of disapprobation? These allusions and comparisons were not made in the Military and Naval Magazine, nor in the Army and Navy Chronicle; and if made elsewhere, we did not feel ourselves called upon to take up the gauntlet. The officers of the Army and Navy are fully competent to defend themselves as well as their country, when occasion needs.

"Subaltern" speaks of statements "mathematically correct," made by him and published in the Chronicle, "of the comparative pay and promotion of the two services." We do not dispute the mathematical accuracy of his calculations; but we know and do assert that as regards promotion, they are practically wrong. His premises being incorrect, his inferences and his calculations must necessarily be so too. His "mathematically correct" statements are based upon the supposition that every brevet second lieutenant and every midshipman remains in service until the arrival of his turn for promotion. Every one, upon the slightest reflection, must be aware that not one half continue in service long enough to attain even the middle grades. Deaths, resignations, and other casualties, thin the ranks weekly if not daily. We have not the means conveniently at hand to determine the whole number of vacancies in the army or navy for a series of years; but from a record carefully kept by an officer of the Navy, the result of which was published in the Chronicle of Jan. 3, 1835, page 4, it appears that of 159 midshipmen who were in the navy in 1801, there were in 1834 (after a lapse of 33 years) but fifteen, (or less than one tenth,) and all these were of course Captains; while the mathematical calculations of "Subaltern," would lead us to believe that a midshipman who enters the Navy at the age of 16, must remain in it one hundred years ere he attain the rank of Captain; and a brevet second lieutenant, who enters the army at 20, will be one hundred and sixty years old when he becomes a colonel!! The Spanish proverb, "May you live a thousand years," must no longer be con- sidered hyperbole.

The following is the statement made by "Subaltern," of the promotions that have occurred in the Navy, in the ten years between 1825 and 1835:

23 Master Commandants promoted to Captains,
80 Lieutenants promoted to M. Commandants,
197 Passed Mid. promoted to lieutenants,
199 Midshipmen (in 5 years) pro. to passed Mid.

Now what are the actual facts? There have been promoted during the above period, 28 Master Commandants to be Captains, 51 Lieutenants to be Master Commandants, 234 Passed Midshipmen to be Lieutenants, 225 Midshipmen examined and found qualified for pro-

Here is a slight difference of only 90, or nearly 20 per cent. in the basis of his calculations. What then becomes of the calculations, "mathematically correct," of the chances of promotion in the Navy? The state-
ments made with regard to promotion in the army, we apprehend, will be found to approach not much nearer the truth, if tested in the same manner.

We have been censured, in good round set terms, for admitting communications (and particularly those of "Subaltern," having reference to the pay of the Army and Navy, not only on account of the inaccuracies which some of them contained, but of their tendency to produce an estrangement between the members of the two services. We defended ourselves by saying that the statements were those of officers in one or the other branch; that we sincerely regretted, at any and all times, any allusion by the one to the pay and circumstances of the other; but that acting on our uniform principle to give all a hearing who claimed it, we felt that we could not consistently refuse insertion to such articles; and, finally, that if any person thought the subject of sufficient importance to be noticed, the columns of the paper, he knew, were open to him.
In reference to the effort now making by the Army to obtain an increase of pay, we were assured that while the matter was pending in Congress, the officers of the Navy would take no notice of what might appear on this subject in the Chronicle; but that they nevertheless deprecated the allusions that had been made to their own rank and pay. Not only in conversation, but in correspondence, was this language held; the following extract from a letter to us from an officer of the Navy, may suffice for a sample:

"Permit me to express to you a hope that you will not suffer any communication to appear in the columns of the new paper, that will have a tendency to produce ill feelings between the Army and Navy. All should be done to produce harmony; hence any thing reflecting on one service from the other must engender unpleasant feelings somewhere, and should be avoided."

We needed not, however, any such admonitions, that these allusions were injudicious, to say the least; but as we have before observed, "we frequently admit communications which our own judgment does not approve."

We seek an impartial and consideration of the remarks offered by us in the leading editorial article, first number new series, and also of the concluding paragraph of the notice "to correspondents," in the same paper. Yet it seems we cannot express even "a hope and desire," in reference to correspondents in general, but it excites the ire of some one, who takes to himself individually what was not designed for him more than for any other.

If the allusion in the last paragraph of "Subaltern's" communication, be to the editor of the Chronicle, we cannot perceive its applicability.

We have devoted more space to this present subject, than we wish to afford to matters touching ourselves or our course; not because of any importance we attach to the obtrusions of "Subaltern," but because the relation of an editor to his subscribers and correspondents should be better defined, if not better understood, than it appears to be. We have never attempted—we have never expected, to please all. We know that such a wish, or such an effort would be futile; but we have anxiously striven, and in that spirit shall persevere, to do equal and exact justice to all.

We repeat (not in the spirit of ostentation, as is alleged) that "we have ever been strenuous advocates for harmony and cordiality between the members of the two services." We have no fear that that harmony and cordiality, which has happily subsisted heretofore, will be endangered by the efforts of a few to represent the circumstances and condition of one service to be more fortunate than those of the other.

N. B. Since the foregoing remarks were prepared, we have received the communication of O. P. Q. We shall pay our respects to him next week.

ERRATUM.—In a part of the impression of our last paper, on page 56, the name of Lieut. Keats was inserted, at the close of Lieut. Alvord's letter, as one of the officers at Fort Brooke. In the paper from which the extracts were taken, the names of nearly all the officers were spelt wrong, and we had written them all correctly on a strip of paper, which was attached to the printed copy, as a guide to the compositor. Hence the error, which escaped detection in reading the proof.

**MOVEMENTS OF TROOPS TOWARDS FLORIDA.**

Captain G. Porter's company (A) of the 1st arty. arrived at St. Augustine on the 19th Jan. in the Steamboat John Stoney from Charleston. The J. S. had been chartered to proceed to Smithville and Beaufort, N. C. to convey the U. S. troops from those places to Florida.

Companies (F) from the Arsenal, Washington, D. C. and (D) from Fort Washington, were conveyed by the rail road to Baltimore, on Thursday 28th ult. whence they will take passage in transports to Savannah; from the latter place they will be taken to Picolata on the St. John's river.

Company (B) 1st arty. at Fort Severn was to have left Annapolis on Saturday last for the same destination.

Maj. Gen. Winfield Scott of the U. A. and suite, passed through Petersburg, on Sunday for Florida. After proceeding in the rail road cars about 8 miles from town, the engine and whole accompanying train, ran off the rails and landed the gallant General and his fellow-passengers, very unceremoniously in the woods. Not the slightest injury was sustained by any of the party from this accident. Another engine and cars having been procured, they proceeded on their journey.

**MORE INDIAN MURDERS.**—News arrived in town yesterday, (says the Macon Telegraph, of the 21st Jan.) of two men being killed in Baker co. by a party of 40 or 50 Creek Indians, and several others wounded. We have no time to state particulars.

It thus appears as though the Creeks and Seminoles were acting in concert in their savage warfare.

**BLOCKADE OF PARA.**—The Brazilian Chargé d'Affairs at Washington has notified the Secretary of State that the coasts of the Province of Para have been declared in a state of blockade by the Regent of Brazil.

General E. P. Gaines, of the U. S. Army, arrived at New Orleans on the 14th ult. and at Mobile on the 17th, on his way to Pensacola.

**MONUMENT TO PERRY.**—A public meeting was held at Buffalo, on Saturday, 23d ult., for the purpose of making suitable arrangements, and appointing committees to solicit contributions for the erection, in that city, of a monument in honor of the gallant and lamented Perry.

Commodore I. Hull, of the Navy, and his family, arrived at Gibraltar on the 20th Nov., in the Brig Mason Barney from New York.

**PAASSENGERS ARRIVED.**

Col. J. Bankhead, of the army, arrived at Charleston, S. C., on the 28th ult. on his way to Florida.
SEMINOLE WAR.

We have no later intelligence than was contained in our last, from Fort King or Tampa Bay. A storm is gathering, which will burst ere long upon the heads of the fated Seminoles and sweep them from the land they have scoured.

Besides the United States Troops which have lately been ordered from the seaboard, corps of volunteers are raised and their services tendered to the military authorities, in several of the southern cities.

In Charleston, S. C., four companies were assembled as the 25th, were received and inspected by Gen. Eustis, and started the next day. The following order was issued by Gen. Eustis:

**Head Quarters, Charleston, 25th Jan. 1836.**

**ORDER.**

The Patriotic Volunteers who have so gallantly offered themselves for the protection of their fellow citizens in St. Augustine, will embark to-morrow morning on board the steam boat Dolphin and Santee.

Captains Finley and Ravinal, with the Washington Volunteers, and a Washington Light Infantry, will go in the Dolfiin, C. S. A. Captains Cross and Connolly, with the German Fusiliers and Hamburg Riflemen, in the Santee.

On their arrival, they will report their several commands to Capt. Porter, or Officer commanding the U. S. Troops, in that station.

Assistant Surgeon Turner, U. S. A. will accompany the detachment on board the Dolphin.

ABRM. EUSTIS,
Brigadier General U. S. Army.

In Augusta, Geo., the fine volunteer company of Richmond Blues, 100 strong, commanded by Captain F. M. Robertson, started on the 23d Jan, in the steam boat George Washington. They were escorted by the Military, and the greatest enthusiasm is said to have prevailed. They were addressed, after inspection, by Col. Lipsey, of the U. S. Army.

The ladies of Augusta devoted two days to making gaudily such articles of dress as were required.

Forty to fifty volunteers have been raised in Baton Rouge, (Louis.) and a messenger has arrived at New Orleans, from them, offering their services to the Governor, its force is to be raised to go in defence of our fellow citizens of Florida.

A letter from Fort George Island, in the neighborhood of St. Augustine, dated on the 19th Jan, mentions, as evidence of the daring of the Indians, that four of their number were laid and fired upon the whole body of Florida militia, nearly 600 strong, as they were passing through the Alachua country; they were, however, pursued, and all four of them killed. The same letter adds, that a great number of inhabitants from the main had taken refuge at Fort George Island.

It appears by the Tallahasset Floridian, of the 16th Inst., that Governor Eaton has ordered a draft of 600 of the militia of that Territory, to serve for six months, it necessary: although the hope is expressed that their services may not be required for more than sixty days.

---

**Correspondence of the Charleston Courier.**

KEY-WEST, JAN. 20.

"Our citizens, a few days ago, dispatched a messenger to Havana, to request an American vessel of war to come here. We have found the U. S. Frigate Constellation, Com. DALLAS, and Capt. ROSEFIELD. The Commodore, immediately on being informed of the situation of Florida, got under way and arrived here on the 19th. He has since despatched the M. Louis to Pensacola, to order the remainder of his fleet here, and for one of them to touch at Tampa Bay, with provisions, to be landed there if found necessary. He has sent the brig Sea Flower to Tampa, with all of his 370 Marines, (70 in number,) to give aid, if necessary, to the Garrison at Tampa, as the Indians are reported to be in his neighborhood. Our citizens have chartered a schooner, Balama, and Capt. DALLAS has ordered 50 of his men to embark on board—they will leave to-morrow, to visit the different Keys, and then proceed for Cape Florida, and up the Miami river. His frigate will remain here, until affairs take a different aspect in this quarter. He appears a prudent and vigilant officer, which gives the citizens full confidence in him; and I feel safe in saying, in the moment of trial, we shall not be disappointed.

"Persons have been sent to the Light House at Cape Florida; so I presume the light will be resumed in a few days."

The steam boat Champion arrived here from your port, St. Augustine, Indian Key, &c., on the 21st, and left this for St. Marks and Mobile this morning."

---

The Revenue Cutter Jefferson, Capt. JACKSON, from Charleston, was at St. Augustine on the 21st Jan., but was not able to cross the bar on account of the rough state of the weather—on the following morning she was away for St John's. At 5 o'clock on 22nd Jan. the John Stoney saw a herm. brig full of men, and a schooner; two vessels were passed, the schooner to the brig, which it was afterwards ascertained were live oak cutters, who were leaving Mosquito.

Great fears were entertained for Captain DRAKE's command, who had left Picolata some time previous, with about 60 men, as an escort to a quantity of provisions, &c. for Camp King. Nothing had been heard from Gen. CLINCH, at the latter place.

---

From the Jacksonville Courier, Jan. 21.

On Friday of last week, Lieut. Ruggles started for the Head Quarters of Gen. Clinch in charge of 50 recruits, brought on in the schooner Davenport, from New York.

The Davenport was to have proceeded up the Ocklawaha, but the inexpediency of landing there in the present state of affairs, stores and unarmed men, induced the master to make this port the terminus of his voyage. These raw recruits are destined to fill vacancies in the companies under Gen. Clinch.

Lieut. Ruggles was detained in the neighborhood of the city near a week, procuring provisions, &c., and putting the recruits in order for marching, hence to Camp King, via Black Creek and Micanopy. During that week he was not idle. Procuring arms for his men, from the supplies sent hither from Charleston, he kept them almost constantly on drill, in order that they might be, on reaching their destination, fit for immediate service.

He has some experience in Indian character and warfare, having for two years, since his graduation at the Military Academy, been stationed among the Indians of the "far off" west. He is now, we are told, on furlough, and as he was travelling south for his health, he, by request, took the charge of delivering at their destination the aforesaid recruits. We are confident from what we know of this gentlemanly young officer, that he will, especially if he meets with Indians on his march, acquit himself in such a manner, as to merit the approbation of the Commanding General.

---

Arrived at St. Marks on the 15th Jan. the Steam Boat Eclipse, under the command of Lieut. L. M. Goldsborough, of the U. S. Navy, having on board, 30 officers, seamen and marines, belonging to the West India squadron, and intended to act as a co-operative force to suppress the hostility existing among the Seminole Indians. The Eclipse was to have left St. Marks, on the 20th for Tampa Bay, under instructions from the Governor of Florida, to communicate to the public, as soon as the contemplated campaign against the Seminoles. The ship is fully equipped, with arms, ammunition, provisions, &c.

LAWS OF THE UNITED STATES.

AN ACT making an additional appropriation for repressing hostilities commenced by the Seminole Indians. It was enacted by the Senate and House of Representatives of the United States of America in Congress assembled.

That the sum of five hundred thousand dollars be, and the same hereby is, appropriated, out of any money in the Treasury not otherwise appropriated, to be paid out of the same fund, in order to furnish the President with power to make an additional appropriation, to defray the expenses attending the suppression of hostilities with the Seminole Indians in Florida; to be expended in the manner provided for in the Act approved January Fourteenth, eighteen hundred and thirty-six, entitled “An Act making an appropriation for repressing hostilities commenced by the Seminole Indians.”

Approved 29th Jan., 1836.

RESOLUTION authorising the President to furnish rations to certain inhabitants of Florida. It was enacted by the Senate and House of Representatives of the United States of America in Congress assembled.

That the President of the United States be authorised to cause rations to be delivered from the public stores to the unfortunate sufferers who are unable to provide for themselves, and who have been driven from their homes by Indian depredations in Florida, until they can re-establish themselves in their possessions, or so long as the President may consider it necessary.

Approved February 1st, 1836.

COMMUNICATIONS.

NEW INFANTRY TACTICS.

No. IV.

Learning that the second volume of this work is now, after some delay, in a course of general distribution, I resume the translation of the Report which submitted the French original for the approbation of Marshal Soult.

TITLE IV.—SCHOOL OF THE BATTALION.

PART SECOND.

ART. 3. To play the battalion in close column.

In the Ordinance of 1791 the first example given is a central play, from which rules are deduced for playing the battalion in rear and in front of the right or left subdivision.

It is easy to perceive that no advantage is gained by this presentation of the manoeuvre, because it was afterwards necessary to explain separately, the movement of the subdivisions which play in rear of the directing one, and also of the subdivisions which place themselves in its front. The Commission has thought that, in presenting each of the two formations separately, the principles could be better comprehended, and that hence rules might be naturally deduced for a central play. Besides, it is in this order, that all the other manoeuvres are given, and the commission did not deem it proper to depart in this place from the general plan of the work.

The distance between subdivisions is fixed at three paces; but, as the three ranks have a depth of about three paces, with knapsacks (and all the manoeuvres are calculated on this supposition) it results that the distance of one guide from another is about six instead of five paces, as indicated by the ordinance.

In the new American book, when the formation is in two ranks only, the distance from guide to guide is fixed at five paces.

The Commission has thought that as, in columns at full or half distance, the space between subdivisions is estimated from guide to guide, so ought it to be in columns closed in mass—always calculating that distance so as to leave at least three paces from the front rank of one subdivision, to the rear rank of that next preceding.

PART THIRD.

ART. 1. To march in column at half distance.

We have given an extension to this article as it appeared necessary to develop more fully some of the principles of the march in column, and particularly that which prescribes that each guide shall exactly follow in the trace of the one who immediately precedes without occupying his attention with the general direction; because this principle, the importance of which has been but little felt in a column of two platoons (in the School of the Company) on account of its want of depth, finds its application in the Evolutions of the Line in changes of direction of columns closed in mass.

For this purpose an improvement in Nos. 834—5 of the new American book, and plates XVII. (fig. 2.) and XL. (fig. 1.) For another improvement—to march a column faced to the rear—omitted in the Report, see same book, No. 836.

ART. 2. Column in route.

The Commission has not failed to remember how important it is that columns in march should occupy only the space necessary to form themselves into line of battle, preserving at the same time, so far as possible, because this step can alone allow the necessary ease to the men, and, consequently, be long maintained. The Commission has sought to attain that object by means less complicated than those of the Ordinance, and it has entirely remodelled the column in route, according to the principles indicated in the part of this report which relates to the same column in the School of the Company.

The Commission, aware that subdivisions cannot march by the front for any great length of time, and still less by the flank, without constraint and fatigue, and without an elongation of the column—particularly in marching by the right—has nevertheless no difficulty in maintaining these dispositions which were already established by the Ordinance, because they are only to be taken for the passage of defiles of no great length, and in this case, distances are naturally recovered as soon as the column is able to resume the route step.

ART. 4. [Of the old books.]

The prompt manoeuvre.

The Commission has suppressed this manoeuvre because it is absolutely of no value. If a column which has commenced a change of direction, has to halt, in order to form itself into line of battle, the formation may readily be executed by the union of two movements [as in part IV., Article 8, of all the books.]

If, on the contrary, the column has to continue the march, all the subdivisions must necessarily enter their new direction without any resort to extraordinary means.

The Specateur Militaire had previously demonstrated this manoeuvre to be both useless and impracticable.

ART. 5. To close the column at half distance in mass.

The Ordinance admits of no other manner of closing column than on the leading subdivision. Experience has shown that it was no less necessary to be able to close it in the rear, than the front, on the rules which have given rules for this movement. The subdivisions which have to close to the rear, face about, march with the rear rank leading, and their chiefs throw themselves on the flank in order to judge exactly the distance at which each subdivision ought to be halted.

ART. 6. To change direction in column closed in mass.

The Ordinance gives no means for the change of
direction of a column in mass, when it is in march. The Commission has filled up the chasm. The movement adopted is taken from the Regulations of 1788, with some slight changes to render it easy for its execution.

The execution is as follows:

"The column takes the guide on the side opposite to the change of direction, if that were not before the side of the guides; and when the leading subdivision arrives at the wheeling point, all the subdivisions execute the movement simultaneously at the command of the colonel."

The leading sub-divisions are the wheels as if it were part of a column at half-distance, and the others immediately conform themselves to its movement; to this end, the guide of each, advancing slightly the outer shoulder, and lengthening a little his step, inclines, by obligiting, to the side of direction—taking care, at the same time, to gain ground enough to maintain the distance of the three spaces between this sub-division and the one immediately preceding; and as soon as he covers the guide of the latter, he ceases to oblique, and marches exactly in the same trace. In every sub-division the men follow the movement of their guide; they advance, like him, slightly, the shoulder next to the direction the moment they commence obliquing; each file gains so much less ground to the front as it is nearer to the pivot, and the pivot only so much as is necessary to maintain the same distance as at the marching flank. When the leading sub-division has finished its wheel, it marches straight forward; the others immediately conform themselves to its movement, and if the guide should not find himself exactly covering in file, he brings himself on the direction by slightly advancing the opposite shoulder.

"The mechanism of this movement appears at first view, a little complicated; hence, no doubt, its rejection in 1791; but, in practice, it is sufficiently easy of execution, and the precaution which we have taken to execute it at the pivot, as at the marching flank, the distance of three spaces between the sub-divisions, is a security against all confusion. It may be added that the Commission did not decide to adopt the movement until after reiterated experiments, and hence, no doubt, conviction that troops, after such exercises, may be brought to execute with as much facility and order as a change of direction at half-distance."

This movement was adopted in the American book of 1825, from Munnier; but the principles and details of the New French Tactics are preferable.

"Art. 9. To take distances.

"The Ordinance prescribes but one manner of taking distances by the head of the column. Experience, however, has demonstrated that it is not less necessary to be able to take distances on the head and on the rear of the column, in order to place it, by a single movement, on the ground it ought to occupy in line of battle. The Commission has filled up this chasm in a new article.

"To take distances, the sub-divisions which execute their movement to the rear, face about, with the rear rank leading, and each again faces about, when it is at its prescribed distance.

"As often as distances are taken otherwise than by the head of the column, each chief of sub-division shows himself on the flank, on the side of direction, in order to judge the precise moment for halting his sub-division.

"Art. 10. To countermarch a column closed in mass.

The Commission which we have substituted in the place of that of the Ordinance is taken from the Regulations of 1788, it has the advantage of requiring much less time, and of being executed on the ground itself occupied by the column.

"At the time the Ordinance of 1791 was drawn up; but it has been practised for a long while by all the regiments of the army without being accompanied by any real inconvenience.

"Part Fourth.

Art. 5. Deployment of column closed in mass.

The deployments are presented in the same order of the ploys. We have made, in the details, certain changes which have for objects to render the execution more easy and more certain, and also to remedy the inconvenience of the almost inevitable elongation of the successive movements of the flank.

"At the end of the deployments we have given the forms of bringing a column by company, closed in mass, on the right (or on the left) into line of battle. This movement, which cannot be extended to a column by division, may be useful under particular circumstances.

"Remarks on inversions.

The Ordinance does not admit the use of inversion except in the formation to the left (or right) into line of battle. The Commission has thought it necessary to extend the principle to the successive formations, except to that of faced to the rear into line of battle. This extension has required certain explanations to prevent doubts in cases where the general rules cannot be rigorously applied to a line formed by inversion.

In all formations of companies by division (or companies) whether by breaking or ploying; and in all formations of line from such columns, whether by wheels or deployments, rules are given in the new American book, for the presence of an odd company. The new French book supplies such details only in a few places, and the American book of 1827, in no number of battalions in the field, as many will be found with an odd company, as without.

"Part Fifth.

"Art. 7. Change of direction in marching in retreat.

The Ordinance is silent as to this movement in the School of the Battalion, although it prescribes it in the Evolutions of the Line. The Commission has filled up this chasm.

"Art. 8. Passage of obstacles.

The Commission has thought it necessary to extend this article a little in order to leave no doubt as to the manner of executing the passage of obstacles in the different cases which may present themselves.

"The Ordinance prescribes that the companies, which execute the movement, shall march in the flank when the obstacle covers two contiguous companies; if it cover a greater number, the companies ploy themselves at full distance behind the last of those remaining in line. The Commission has thought that, whatever the number of companies, this last manner ought alone to be preserved, because the march by the flank has not the inconvenience as the march by the flank, and also, because, companies thus marching, may return into line as easily, and nearly as promptly, as if they marched by the flank.

"Art. 9. To pass a defile in retreat.

"In the Ordinance, this article is given next to Changes of front. The passage of a defile to the rear, belonging necessarily to movements in retreat, we have thought that it ought to follow the latter closely; besides, it is in this order that it is placed in the Evolutions of the Line.

"The battalion passing a defile by the flank, as the Ordinance prescribes, cannot fail to be much lengthened out. A considerable delay results in the execution of the movement, and the companies, forming themselves into line, when out of the defile, have not their distances. To avoid this difficulty, which in proportion to an increase of numbers, the Commission has prescribed the formation of platoons into line, by company, as soon as the next company finds itself entire, behind the portion of the battalion yet in line of battle.

"Art. 10. [Of the Ordinance of 1791, and of the old American books.]

"Passage of Lines.

"The inconveniences of the passage of lines, of the Ordinance, are generally acknowledged, and a long time has been granted to the measure; but it has not been practised. That which we have substituted, and which has long been practised in the army, is taken from the Regulations of 1776. This manoeuvre being the union of two movements with
which the battalions necessarily became familiar, we have only inserted it in the Evolutions of the Line.

"We have suppressed the central change of front [in a single battalion] because it is of no utility.

"According to the principle generally adopted, the Commission has thought it necessary to lay down in this school, in an explicit manner, the principles of oblique change of front, which have more mention in the Ordinance, except in the Evolutions of the Line.

"Art. 18. Column doubled on the centre.

"This denomination, which expresses with exactness the formation in question, is substituted for the column of attack of the Ordinance, which has no relation to the uses to which it is applied by the Commission in the Evolutions of the Line.

"In the Ordinance, the column of attack is formed at platoon distance—but, with what view is not perceived. No rules are given for its march, and it is only deployed face to the front.

"The promptitude with which the double column is formed and deployed, and the facility it affords of commencing the fire in the act of deploying, have caused the Commission to believe it susceptible of advantageous employment in the Evolutions of the Line, by giving it the capacity of moving in all directions, possessed by a simple column. Consequently, we have prescribed for it the following rules:

"The double column is formed either at company distance or close in mass; because, in the first case it is to cover square, and in the second it may be deployed more promptly than any other column.

"Every two companies, placed flank to flank, in the column, form a division; the senior captain in each takes command of it, and places himself before its centre; all the other officers and sergeants find themselves in their habitual places, and the divisions are numbered from front to rear.

"The double column, according to the objects proposed, takes the guide to the right or left; it can move, in any direction, like a simple column. It may also take the guide in the centre when it is wished to march it perpendicularly to the front or rear.

"The double column, at company-distance or close in mass, forms line of battle, faced to the front, by deployment. If in mass, it forms line faced to the right or left by changing direction, and then deploying. At company-distance, the companies of one wing form line to the right or left, and those of the other wing, on the right or left.

"Most of the dispositions here noticed by the Report were given to the column of attack in the American books of 1815 and 1825, from Meunier; but it was reserved for the recent French Commission to apply the same column, as a column of manoeuvre, to many new and improved purposes in the Evolutions of the Line.

The French Ordinance of 1791, and the American book of 1815, give an article, with this title, in the Evolutions of the Line, though both are silent on the subject in the preparatory School of the Battalion. This chasm was tolerably filled up in the American book of 1825, and it is yet better done in the new French tactics. The Report (on the School of the Battalion) after giving the principle and reasons of many proposed squares at the Camp of Saint-Omer, in 1826-7, lays down the new principles for their formation as follows:

"When a battalion in march apprehends a charge from cavalry, it forms itself into column, by division, at company-distance; it continues to march in this order, without being prepared to receive a charge, and forms square, and in the second it returns to the preparatory column by a movement as simple as it is prompt."}

"Art. 15. The rally.

"The Ordinance only gives the means of rallying a battalion into line. The Commission has thought that the proof in the said rally to resist cavalry, it was necessary to give them a disposition to form promptly the square. It is for this reason that we have prescribed that the battalion shall also be exercised in rallying into column, by company and at platoon distance.

"Art. 16. Rules for manoeuvring by the rear rank.

"Manoeuvres by the rear rank [rear rank leading] are of great utility in the Evolutions of the Line; and they are, besides, a natural consequence of the firings to the rear. The Commission has accordingly thought it necessary to prescribe rules for their execution; and it has given a new article, with this title, at the end of the School of the Battalion.

"When a battalion, either deployed or in column, has to face to the rear rank, or the reverse, the colonel, because the command about-face, gives the caution face by the rear (or front) rank, to advance so that they are to pass to the rank which is about to load, upon the file closers, that they are to place themselves behind the opposite rank. These commands are substitutes for those—face to the rear, and face to the front.—used in the Ordinance for the files to the rear, and which we have reserved for the cases in which the file-closers are to remain before the rear rank.

"Manoeuvres, by the rear rank, are made according to the same principles with those by the front rank; but in such manner that, on returning to the proper front, the battalion always finds itself in the direct order.

"School of the Battalion arranged for Lessons.

"We have entirely re-cast this part of the Ordinance, to correspond with the additions and suppressions made in this School.

"The School is arranged into six, instead of five lessons; but according to the principles of the Ordinance.

"The new lesson, which is the fourth, comprehends the movements relative to the square, and some of those which may be executed by a column consisting of divisions.

"We have retrenched the second and sixth lessons of certain movements which were there, and which, though belonging to the march of the column and line of battle, it is not necessary frequently to repeat.

"The School of the Battalion being considered the element of the Evolutions of the Line, we have established it as a principle that it shall always be executed in quick time; and that the common shall only be used in the execution of the instruction, and then only for the march in line of battle, the march in column, and the march by the flank.'

The American Book of 1815, like the Ordinance of 1791, left it discretionary with commanders to order quick or common time. The American Book of 1825 made an article to this effect: by prescribing (No. 803) that in "all interior movements of the battalion, after it is well established in marching in common time, the word march shall be preceded by the word quick, although the latter be not found in the text or commands."

"The new American Tactics being made to conform on this point (as on almost every other) to the new French tactics, it became necessary, on this account, among other reasons, to reduce our quick march from one hundred and twenty steps in a minute to one hundred and ten.

HINDMAN.

To the Editor of the Army and Navy Chronicle.

Sir,—Your remarks, under the head of "Army Pay," in the last number (58) of your paper, have given me a passing notice, charged, as I virtually am therein, of being a disturber of that harmony and cordiality between the army and navy, which you so ostentatiously claim to have ever been a strenuous advocate of preserving. It is not from a desire to enter into a newspaper discussion, that I repeat this allusion, but to simply make it plain that the imputation you have cast upon me, and to place myself in a more enviable light before the navy, then it seems you are willing to allow me. And to do this, I
ARMY AND NAVY CHRONICLE

go back to the last winter's naval bill, the origin of which was the conviction in the minds of the Navy, that the Army was better paid than the Navy. This belief suggested the effort, and the result was the present rate of pay; and no man should know better than yourself, that a reference to the Army allowances was the main ground upon which the bill was sustained by its advocates, both in the House and Senate, not only was "allusion to, and comparison made with" the pay and allowances of the army, but these were assumed to be two-fold what they actually were, and this assumption made the guide in fixing the details of that bill. There was no opposition to this course from the Army,—not even a correction of the minor errors and mistakes which it contained, regarding pay and allowances, and for reasons which I hope were understood and appreciated by the Navy, though you may not have done so. And may I ask, Mr. Editor, where were your extreme sensibilities at the time here referred to? If I remember well, you were conducting a periodical, "devoted to the interests and wants of both services." Could you see nothing to elicit a remark or two of disapprobation? You are impartial, doubtless; then, perhaps, you will gratify more than my humble self in the army, by explaining this seeming inconsistency. The bill passed, and I think I shall be seduced by the Navy, when I say the Army participated in it, not that disapprovingly, but to the degree to which I could. One year thereafter, the Army memorialize Congress, and pray to be put upon a footing with the navy, grade for grade, as determined by the bill referred to; which bill was itself debated and fixed the year before by rejected "allusions to, and comparisons with" the Pay of the Army.

It is true there were other and more powerful grounds upon which the petitioners rested their prayer for an increase of pay; but as they were solicitous to ask for nothing but what was reasonable and what they therefore had a right to expect, they referred to the Navy Pay bill, and a number of considerations ground upon the friends of the army, and to act upon something determinate, statements mathematically correct, of the compensation, pay, and promotion of the two services were made by me, and published in the columns of your paper—the better to reach distant military posts—and for this you have gratuitously charged me, in the remarks referred to, of being actuated by unkind and ungenerous feelings towards the Navy, although I desired to be understood, that it was not that either of these arms of national defence receive too much of Uncle Sam's honest greetings, but, that as the last winter's naval bill was based, and again and again urged, upon what was assumed as our pay and emoluments, our present pecuniary advantages should be nearly, if not quite equal, and "disclaiming any invidious feeling towards our gallant Navy, whose merits entitle it to its whole allowance of dollars and cents, and to that which is far less peremptory—to the gratitude of the country." And again, when stating some of the grounds for an increase of pay from any reference to the navy allowances, which are but reasonable and well deserved by our more fortunate brethren.

One word at parting. The Army has had cause to distrust the watchfulness of its sentinels before this; he is not always the most faithful and vigilant, who oft repeats "all's well." SUBALTERN.

THE SEMINOLE WAR.

It seems to be the fate of this nation to meet with signal disasters at the commencement of every war; there are causes which inevitably flow from our pernicious policy. It is quite clear that the destruction of property effected by an enemy at the outset, together with the suspension of all ordinary business, if converted into dollars and cents, would maintain many regiments of disciplined troops who would be glad of the chance of flying to the rescue of our defenceless citizens.

Let us look at the condition of Florida: a few hundred regulars were ordered there, by piece-meal, to drive off a powerful band of warlike Indians, acquainted with every inch of ground and ready to fight with desperation. Already the blood of many of our gallant fellow soldiers has covered the ground, and their scalps are the trophies of savages. They have been fighting at fearful odds, one to seven or eight. Dade, Fraser, Basinger, Gardiner, are massacred. Clineh has fought nobly, but is now on the defensive, his stomach injuries are cut off, and apprehensions are felt for his security. Even now his devoted band may have shared the fate of their butch- ered comrades. Let it be understood that five thousand men will be necessary to hunt down these nimble warriors before the sickly season commences; they are supposed to number near 2,000, and must be surrounded. They have inexhaustible quantities of arrow root, and the rivers and lakes abound with fish; these will furnish, it is thought, an ample subsistence for them, though such diet would be meagre for the whites. It is no longer prudent to despise this band, but give us, in the words of Demosthenes, action, action, action.

[To prevent misapprehension, it is proper to observe that the writer of the foregoing is not the writer of the article bearing the same signature in another part of this paper.—Editor.]

"Fort" Brooke, Tampa Bay, Jan. 9th, 1836.

Ms. Editor.—The attention of the public may in some degree be referred to this point, and I therefore give the following information:

This place was never fortified; two block houses were indeed built on the bank of a stream of four or five bar- racks, and quarters on each side. The Secretary ordered "Cantonnements" to be called "Forts," and to that extent the rule was confirmed.

The existing defences are called the "Fraser redoubt" in compliment to the late gallant officer of that name. It is a triangular stockade, with two block houses and a battery of two 12 pounders looking upon a plain; and some 100 yards from the barracks and a large grove of venerable live oaks, the gorge, or third side, was open to the bay shore, and has since the battle of Withlacoo- chee, been enclosed with a 6 pound battery flanking it and making a cross fire upon the salients of the gorge.

All that is fort about the position, has proceeded from the thews and muscles of its garrison from about the 1st Dec. to the date of this missive. Of all miserable con- tinuences in the paper way, paper forts are the most tor- menting; impending evils check stronger epithets. It is the lot of man to do, to bear and to suffer; and here to do, or die.

A SEA COAST ARTILLERIST,

Now on his fourth Indian tour. (Subaudice campaign.)

ARMY.

Correction.—Order No. 7, published in the last number of the Chronicle, should have had the signature of S. Cooper, A. t. Adj. Gen., instead of R. Jones, Adjutant General.

Captain H. Smith, 6th Infy. and 1st Lt. A. D. Mackay, 1st Art'y, relieved from the operation of Gen. Order No. 9, 1st Lt. F. D. Newcomb, 4th Infy. A. Q. M. assigned to duty at Fort Brooke, Tampa Bay.

NAVY.

Master Commandant J. P. Zantzinger has been ordered to the Navy Yard, Norfolk, Va., vice Master Commd. B. Kennon, relieved at his own request.

Master Commandant John Gallagher has been promoted to the rank of Captain, by and with the advice and con- sent of the Senate, to take rank Dec. 22, 1835.

The Delaware, 74, sailed from Gibraltar for the United States about the 10th Dec.; her arrival may be hourly looked for.

Sbrh. Shark, Lt. Com. Ridgeway, was at Smyrna, Nov. 14th.
NAVAL MEDICAL BOARD OF EXAMINATION.

This Board, which commenced its sittings in Washington, on Monday, Jan. 15th, adjourned on Monday, Feb. 1st, having examined all the candidates who presented themselves.

The following Assistant Surgeons were passed for promotion:

1. John C. Spencer, Passed Asst. Sur. Lewis B. Hunter, J. C. Spencer,
2. George Clymer, W. A. W. Spottwood,
3. Amos G. Gambrill, Daniel Eberhardt,
4. W. A. W. Spottwood, A. C. Gambrill,

The following gentlemen were found qualified for appointment as Assistant Surgeons in the Navy:

1. Jonathan Dickenson Miller, of N. J.
2. Augustus J. Rowic, of Md.
5. John T. Cox, of Conn.
7. J. J. Abernathy, of Conn.

NOTE OF PREPARATION.—The Bunker-Hill Aurora states that orders have been received at the Charlestown navy yard to prepare the three ships now on the stocks, to be launched immediately. These ships are the "Monticello" and "Virginia," of the line, and the "Cambridge," of 44 guns.

We learn, upon enquiry, that no orders have been issued from the office of the Navy Commissioners of the tenor above-mentioned.—Ed. A & N. C.

REVENUE CUTTER SERVICE.

The following order has been forwarded to the officers of the different revenue cutters. The button bearing the impression of the treasury arm, surmounted by an anchor, is still the same:

Revenue Cutter Service.

GENERAL ORDER.

Treasury Department, 13th January, 1836.

Ordered, That blue cloth be substituted for the uniform dress of the officers of the revenue cutter service, instead of the grey, as prescribed by the order of the Department, dated July 21, 1834.

LEVI WOODBURY, Secretary Treasury.

Captain Day has been appointed to the command of the U. S. Revenue Cutter McLane, at New-Bedford, and has reported himself to the collector for duty.

MARriage.

In Baltimore, on Tuesday evening, by the most Rev'd. Samuel Eccleston, Archdeacon of Baltimore, GEORGE R. CARROLL, U. S. Navy, to MARIA, daughter of the late GEORGE CLARK.

DEATHS.

In Baltimore, RUFUS COCHRAN, aged 83.

In New York, on the 14th ult., ISAAC HADLEY, in the 83rd year of his age.

In Ossage County, N. Y., Colonel LOOMIS. He was a volunteer at the battle of Banker Hill, and was at the battle of Monmouth, New Jersey.

In New York, on the 17th ult., of apoplexy, THOMAS THORN, Esq., in the 84th year of his age.

In Mecklenburg county, 6th ult. Mr. CHARLES ELMS, Sen., a soldier of the Revolution during the whole struggle for Independence, and participated in many of the important engagements, as several honorable scars will testify—in the 79th year of his age.

In Oxford, Maine, 12th ult. Mr. JOSPEH PERKINS, aged 81 years.

In Cornish, Me. 7th Jan, Mr. EDMUND HAMMONDS, aged 94.

In his residence in Fairhaven, Mass, 27th Jan. Mr. SAMUEL TUPPER, 78.

In Somerset, Mass. on the 11th January, Mr. DAVID REED, 76.

In Lebanon, Lebanon county, Pa. on the 23d Jan. after a protracted illness, the Hon. JOHN GLONINGER, in the 78th year of his age. In early life, in the memorable year of 1776, he entered the service of his country, in defiance of his liberality, and bore a part in the battle of Sustian Island, as also in that of Trenton, at the taking of the Hessian troops at that place. He also made the campaign against the Indians, in the north-western part of Pennsylvania. Having served throughout the greater part of the revolutionary war, he bore various commissions, and suffered many and severe hardships, incidental to a state of warfare.

At Little River Village, Me., Jan. 9th, Mr. ELIJAH LIT TLEDIEK, 76.

At Jamaica Plains, Massachusetts, Mr. JOHN BEAN, aged 91.

CHAIN CABlE IRON.

NAVY COMMISIONERS' OFFICE, 31st January, 1836.

PROPOSALS, sealed and endorsed "Proposals for Chain Cable Iron," will be received at this office until three o'clock, P. M. of the 15th instant, the specification furnishing and delivering at the Navy Yard, Washington, D. C., the following quantities and descriptions of CHAIN CABLE IRON, viz.:

15,360 links of 2 1/8 inches diameter, 26 inches each, in length.
32,340 links of 1 15 16 inches diameter, 23 inches each, in length.
354 end links, 2 1/4 inches diameter, 37 inches each, in length.
324 end links, 2 11 16 inches diameter, 25 inches each, in length.
8 Anchor Shackles—126 Connecting Shackles—36 Swivel Pieces—16 Box Pieces for the two and an eighth inches Chain Cable.
18 Anchor Shackles—126 Connecting Shackles—36 Swivel Pieces—16 Box Pieces for the one and fifteen-sixteenths inches Chain Cables.
27 feet of 4 1/4 by 3 3/4 inches oval, Pin Iron, in lengths 1 foot 6 inches.
90 do. 3 1/4 by 2 3/4 do. do. do. do. 5 feet.
24 do. 3 4/5 by 2 1/4 do. do. do. 1 ft. 4 in.
90 do. 2 1/2 by 1 3/4 do. do. do. 5 feet.

Models and drawings, showing the shapes and dimensions of the iron required for Shackles, Swivels, Boxes, and Pin Iron, will be furnished, upon application to the commanding officer of the Navy Yard at Washington, to determine whether it is all of proper quality, and corresponds in all other respects to the terms, stipulations, and conditions of the contract to be made.

The whole of the said iron must be free from flaws, raw and fagged ends, and all other defects; and must be delivered in straight lengths. On delivery, it will be inspected, tested, and proved, under the instructions of the commanding officer of the Navy Yard at Washington, to determine whether it is all of proper quality, and corresponds in all other respects to the terms, stipulations, and conditions of the contract to be made.

One-third of each size and description of the said chain cable iron must be delivered on or before the 1st day of April next, one-third on or before the first day of June next, and the remainder on or before the fifteenth day of July next.

Ten per centum will be withheld from the amount of all payments, until fulfillment of the terms of the contract to be made, as collateral security, in addition to a bond, in the amount of one-third of the contract, to be given to secure its performance: and will not, in any event, be paid, unless the contract shall be complied with in all respects.

Jan. 26—31
SIEGE OF NEW ORLEANS.

[CONCLUDED.]

While these events were in progress on the left bank of the river, fortune was not equally propitious to the Americans on the right. Colonel Thornton had, indeed, been delayed in his movement; but having surmounted the difficulties in his way, he passed over the Mississippi, and disembarked with at least five hundred men, about three miles below the lines occupied by General Morgan. A detachment had been pushed in advance on this position, to prevent the landing of the enemy; but owing to some of the one thousand and one causes which so often discovey different arrangements, and particularly when these depend for their execution upon unexperienced militia, this force offered no resistance to Col. Thornton, and were, indeed, ignorant of his having made good his landing, till he was almost upon them. They fell back as the British advanced. The action on the left bank had now begun, as Thornton was aware from the din of battle which was wafted to him; and yet he had three miles over a heavy road to march, and a fortified position to carry. But his battery, whose possession and co-operation were all important to the plans of his commander. He however advanced up the bank, accompanied by three gun-boats.

As soon as General Jackson became satisfied that a demonstration would be made by the enemy on the trans-Mississippi bank, he directed a reinforcement to cross the river, and to join General Morgan, who commanded there. This detachment was ordered to consist of five hundred men, but from the scarcity of arms they could not all be supplied, and it appeared probable that its actual strength, at its junction with Morgan, was about two hundred and fifty, who were badly armed, and fatigued with the want of food, and by arapid harassing march along the heavy Mississippi bottom. As soon as they reached Morgan, they were pushed forward to support the picquet, which had been ordered to watch and oppose the enemy's movement. After proceeding about a mile they met the picquet in full retreat, and ascertained that the enemy was strongly reinforced. General Morgan was taken by the whole detachment in the rear of a mill race, and the approach of the enemy immediately followed. The disparity in the number and composition of the troops left no rational hope of a successful resistance. For Davis, who commanded the American detachment, had about three hundred and fifty men, while Thornton had regular troops, and two gun-boats to ensnare his adversaries' line. The defence was certainly not discreditable to the troops under the circumstances. But after a few volleys, fired with spirit and some effect, they abandoned their lines and retreated to Morgan's position. The military fault was not in the degree of resistance, but in the attempt to make a stand where nothing could be gained, and where defeat was inevitable. The object was wholly incomprehensible. After the British had landed, the advanced detachments should have retired slowly before them, annoying them where practicable, and joining Morgan in good order, instead of the confusion and depression of a panic which they could not recover.

We have entered into more detail upon this part of the operation than is consistent with our general plan, not from its intrinsic importance, but from its effect upon the arrangements and defence of Morgan. It will be recollected by those who were familiar with the events of that day that the battery was held by the Kentucky militia, who, under Divia, advanced and fell back, as we have described, both for their conduct be-

fore the enemy, and for their subsequent behaviour when incorporated with Morgan's force, and aing in the defence of his position. The official report of the Americans to this effect, that immediately after the engagement, coincided with the report of the British press. But General Jackson reported the facts as they were communicated to him. Subsequent investigation corrected the opinion then formed: and it is evident, in looking back upon the transaction, that the disorderly retreat, the confusion, and the second flight, were not the fault of the men, but the result of the physical circumstances, which gave to the British an ascendency. Most assuredly, the event, however untoward, furnished no just cause for state excitement or state reproach.

The British were now before Morgan's lines. These consisted of a breastwork, flanked on the river by a battery under the direction of Commodore Patterson, and extending about two hundred yards into the plain. From this point to the woods, being nearly two thousand yards, there was no entrenchment, and the only protection was the mill race, which might be any where crossed. Morgan's right flank was therefore liable to be turned, almost at any moment.

The whole extent of the breastwork was occupied by Morgan's troops, and as the detachment under Davis arrived, it was formed upon the open plain. From the extent of space intervening between the breastwork and the woods, the troops were formed in very open order, and within intervals of not less than two hundred yards, each left unoccupied in the lines. The whole disposition betrayed the haste and confusion in which it was made.

The first attack of the British was directed against the American left and centre, but a vigorous discharge from the artillery compelled the column in the road to incline towards its left. The other column advanced, and taking advantage of the false position, passed through the interval so unaccountably left, and having attained the rear of the entrenchment, pushed on towards the river. The confusion was almost instantaneous and irreparable. General Morgan was forced to retreat to his left, but was supported by a few horsemen to restore order, but in vain. The flight became general, and Commodore Patterson having, with his characteristic judgment and coolness, spiked his cannon and destroyed the ammunition, almost in contact with the enemy, retired on board the Louisiana. Morgan was unable to rally his troops till they had fled about two miles, when they halted and took up a position behind a canal. His loss was one killed and five wounded. That of the enemy is stated by La Tour to have been one hundred and twenty killed and wounded.

As soon as these disasters were made known to General Jackson, he prepared to throw reinforcements over the river in order to dislodge Thornton. This was rendered unnecessary by the retreat of that officer. The defence on the left bank of the river cost the Americans thirteen in killed and wounded, and the British, in killed, wounded and prisoners, two thousand and seventy, by the official report of General Lambart, made immediately after the action, which was not to be expected; two thousand six hundred by the statement of the American Inspector General, founded on the numbers captured, on the casualties actually counted, and on other information; but in all probability at least three thousand, as subsequent accounts have led to the belief.

Whence this disparity? The British troops were highly disciplined, well provided, content in themselves, and led by experienced and accomplished officers. The Americans, as we have seen, were principally militia and altogether inexperienced. Their defences, in a professional view, were unworthy of the name. A rude line, thrown up across the plain, constituted their ramp
part and parapet and bastions, and whatever else military science has found most effectual in repelling those treacherous attacks which stand in the way of their terrible relief upon the canvas of modern warfare.

Whence, then, this disparity? How happened it, that the same cold forward movement, which surmounted the iron crowned ramparts of the great fortifications of Europe, could not cross this like, thus rudely and hastily constructed? In the answer will be found the secret. At Sandusky and Fort Erie, and the great slaughter at Bunker's Hill, and the success which has usually attended our defence of positions that have been strengthened by entrenchments, or even masked by substitutes for them—and that is, the murderous precision of American marksmen.

The inhabitants of this country, accustomed to the fire arms of their infancy. Rarely, indeed, is a person found who does not, at times, seek the amusement of hunting. In the West, it is the business of many, and the passion of almost all—more particularly upon the still extending frontier, where the large animals furnish to the new settler the means of subsistence, and where the vicinity and the habits of the Indians teach him to rely for security upon his own courage and preparation. His rifle is his friend, the object of his pride, as well as the instrument for the support and defence of his family. Few indeed are the log cabins, those first evidences of improvement, which dot the prairie and the forest in the western region, and which are easily detected, in which the traveller will not see the cherished rifle hanging upon its appropriate wooden hooks, driven into a rude beam in front of the large open fire place, itself made of wood, but lined with a few stones rudely thrown against the back and sides. Here it is safe from harm, and yet within instant reach. In front of this fire, and in the evening, after the labours of the day, whether in the field or the chase, are over, the family is assembled to hear and recount all that has happened. And then the rifle is prepared for another excursion. The bullets are cast and moulded, and the patches cut and deposited in their proper receptacle in the breach of the piece.

Men of this character, without discipline and subordination, cannot be expected to oppose, on equal terms, in the open field, troops whose business is war, and whose habits of obedience and action have been acquired in severe and practical schools. The higher duties of the military profession are a science, the lower an art. It may be said that the man of the human intellect, while much of the latter is mechanical. A brave man, unaccustomed to tactical combinations, and ignorant of their effects, may lose all confidence in passing arrangements; while a timid one, taught a lesson of obedience, and learning by experience that he is a portion of a machine, does not hesitate to operate, by others, and which provides for the safety of all by the exertions of all, feels that his own personal safety is best promoted by the execution of his duty. But undisciplined men, with even slight defects, acquire confidence, and their duty is discharged with courage and alacrity.

Indeed there is no more severe trial for any troops than the open field, in which standing and motionless, the approach of an enemy. To see the glances of their arms and armour, and then the heavy columns marching up and deploying into line. To watch the long array moving in all the pride of military equipment. And then to hear the booming of the cannon sending their balls across the plain or valley. If first ineffectually—then ploughing the ground nearer and nearer, till a shrick is heard, and a heralded companion is called to his account. Soon the advancing battle presses on with all its horrors, and while this is doing, the line is still, anxious, inarticulate. Soldiers who can maintain this position have nothing further to learn. We have no further to add to what we have given to our readers the underplot of Captain Hallen's adventures. We have not the same space for Lieutenant Lavack, who also figures in the pages of Captain Cooke as another sol-dier hero, and who told in an evil hour, or possibly in an indiscreet one of bosom, this tale of marvel. And most marvellous it is—too much so, to be passed by with entire neglect. No one can doubt but that in the hurried events of such a story the same scenes may have been viewed in a very different light, and may bring different impressions upon the actors and spectators. This is natural, and of every day's occurrence, and should be remembered when conflicting accounts of the same events are perused. But there are limits even to a just spirit of forbearance. These limits are passed, when a military man claims results that are not his due. The man whose darings and doings, relates facts inconsistent with the general course of operations. Such is the narrative told by Lieutenant Lavack, and embodied by Captain Cooke in his work.

The story goes, that Captain Wilkinson, seeing the slain American soldier, fired at an American fire, swung forward, and being mortally wounded, fell into the ditch. Here he exclaimed, in the agonies of death, 'now why do the troops come on? the day is our own.' Lieutenant Lavack, the only officer who had accompanied him, 'then scrambled up the earth entrenchment, and seeing the enemy flying in a disorderly mob, demanded the swords of two American officers,' which two officers, kind souls, being surrounded—agreeably to the well known Hibernian manner by which a gallant Irishman in our service captured five of his enemies during the revolutionary war—were about to obey this beth (as, but recovering from their consternation and finding the time not to surrender, and the Lieutenant, being convinced of the prudence of the measure, yielded himself a prisoner. Captain Cooke adds, Lieutenant Lavack afterwards declared before seven of us, that the whole of the Americans on the left of their lines had run away, with the exception of the few fore mentioned officers. This was the exact expression used by him. This short note is not a little amusing. It is as much as to say, that settles the whole matter, and forever establishes the pusillanimity of these dastardly trans-Atlantic citizens. All this is romance, sheer romance. But few men reached the edge of the ditch, and none, we speak absolutely, could have effectually carried out the plan, if any one entered it except the wounded, who staggered in, and those who, in the extremity of danger, sought refuge there till the storm should pass away. These were spared and were received within the lines. And in this way, and in no other, did this Lieutenant Lavack gain the rear of the American entrenchments. As to his signature and all that, he had time, while in the ditch, to recover his usual coolness, and to repress his emotion. The story of the abandonment of the lines by the American troops is a phantom of the imagination, only to be accounted for, with a due regard to professional honour, by the conjecture that the adventurous lieutenant judged it his duty in time of peace to assume the position of the Americans, and saw them in his mind's eye upon the wrong side of the parapet.

But the strangest manoeuvre practised on that day by the shrewd Yankees, is described by the author of the "Narrative of the Campaign of the British army at Washington, Baltimore, and Fort McHenry." He says: "It was on their least of the obstarte courage was displayed. They fell by the hands of men whom they absolutely did not see; for the Americans, without so much as lifting their faces above the rampart, swung their firelocks by one arm over the wall, and discharged them directly upon the heads of the enemy. The shot was so bad that they could be found in Dundas. It's have been original. We leave the story without comment. Nothing we can say would add to its graphic effect.

About noon of this day, General Lambert opened a communication with General Jackson, for the ostensible purpose of procuring permission to bury the dead, and to bring off and relieve the wounded. Several
pured, and the American General consented to a short
peace, upon condition that no reinforcements should be
sent over the river, and that either party should be at
liberty to continue operations there. The British com-
mander was prompt to withdraw his army, and General
Lambert withheld his answer to General Jackson's
notification of the proposal till the next morning, when
he transmitted information of his acquiescence, with
some idle explanation of the reason of the delay. In the
meantime Thornton was withdrawn, and General Jack-
son's troops, after some activity, issued from the
position to condemn the indecision of his opponent, whose
real motives were sufficiently obvious.

At the close of the action, there were two plans of opera-
tion presented by the circumstances of his own posi-
tion and that of his enemy to the American General.
One was to sally out from his entrenchments, and at-
tack the British army, endeavour to destroy them;
and the other was to maintain his attitude and continue
the defensive system he had found so efficacious. Most
wisely he determined upon the latter. If ever there
was a case, where, as has been said, a bridge should be
built for a flying enemy, this was the one. The British
had crossed the river; they were all fugitives from
New Orleans. This he had so far signally effected. His enemy was discomfited
and dispersed. His own troops confident and elated.
The same course of measures, if persisted in, must be
finally successful. Every day would add to his own
strength and diminish that of his adversary. The great
body of his force was not a hired one. They were all
fathers and husbands and sons and brothers, who, had
left the peaceful avocations of life, and hastened to the
field to repel the invaders, intending then to return to all
their civil and social duties. The commander of such
men has no right to sport with their lives—to sacrifice
them to the phantom of military glory. He ought to
have moral firmness enough even to restrain them—to
refuse himself to their generous but indiscreet ardour,
and lead them to combat only when his purposes cannot
be otherwise effected. The great Roman captain, in his
history of the civil war of his country, felt and acknowl-
edged these obligations. "...qui velit esse amítam
alios, alius armis..." Cur vulnerari poteretur op-
time meritos de se milités? Cur denique fortunam pe-
rédendam? Preservit quum non minus esset imperato-
rum, cosállio superare, quam gladio." These senti-
hents are honourable to Caesar, and deserve to be held
in remembrance by all who are intrusted with the com-
mand of armies. Independently of his ignorance of the
real state of things on the right bank, and which of it-
self imposed upon him the duty of caution, the Ameri-
can General could not forget that the foe which had re-
ceived from his ramparts, was yet almost double in num-
ber to his whole force, experienced and disciplined; and
that his own troops; so splendidly formed and armed,
and marched out into the field, that foe might speedily rally
and turn the fortune of the day. Some of the ardent
officers of the American camp were anxious thus to
duly forth, and placing the fate of the campaign upon
the points of their swords, to gain all or lose all. Prud-
deally, indeed, was this zeal restrained, and the Ameri-
can General’s determination that he had been won
by his own skill and the valour of his troops.

There is one incident connected with this battle,
which demands a candid notice, and shall receive it.
Immediately after its close, the impression prevailed in
the American camp, and gradually spread through the
government stores, that the magnificent stores of cotton
that occasion, was BEAUTY AND BOOZE. The fact
was stated as early as January 1815, in a letter from Mr.
Peindefontier, published in the Mississippi Republican,
and generally repeated in the papers of the Union. In
the life of General Jackson, by his friend and biogra-
phist, Eaton, the fullest conviction is expressed of the
truth of this statement, and the reasons of the belief
are given. The terms are too significant to leave any
doubt as to the consequence, either as to the motive that suggested them, or the object they were so well suited to produce. In the ab-
sence of positive testimony, many probably doubted the
fact, from the very atrocity of the sentiment. But the state-
ment was received, as we well remember, with general
indignation through the country; and from that day it has
recently it has passed uncontroverted, and has been
continually repeated in conversation, and sent abroad in publications both evanescent and permanent.

Mr. Stewart, in his Travels in the United States a
short time since, heard the story, and introduced it into
his work, entitled "Three Years in America. It ap-
pers to have had no effect on the Englishman in
England. As soon as the public attention was drawn
the subject, six of the surviving officers, of the high-
rest rank, who served with Sir Edward Packenham,
including among them Generals Lambert and Keane, in a
note to Mr. Stewart, which was published by that gen-
tleman, formally contradicted this statement, and denied
that the army was promised the plunder of New Orleans
by their commander, or that this savage watch-word
was issued.

That the British army expected to pillage that city
is certain. That they would have done so, per fas aut
per nefas, had their inroad been crowned with success;
that it is too probable to question that this was done by
them by their commander; that it was officially prom-
mulgated in general orders; and that it was impressed
upon their memory and feeling by the very pass-word,
which in the excitement of the battle was to distinguish
friend from foe; and above all, that it was associated
with that unbridled licentiousness which is the heart
and soul of lawless soldiery, and the last and worst misfor-
tune of a subjugated city, we do not believe. Such savage
atrocity formed no part of the character of the English
General, still less of his nation. It would have doomed
him to everlasting infamy. It would have sent down his name
till after times with the Attalos and the other human
monsters, who, living, were execrated, but, after death,
dead, are monuments of execration. There could not
have been wanting, honourable men enough in the
British army, who would have denounced such a leader
to his own government, to Christendom, and to pos-
ternity.

But while we give just weight to the moral consider-
atious which tend to shield the British General from
this imputation, and to the statement which his surviving
coadjutors, men no doubt of high personal and profes-
sional characters, have made, we still emphatically re-
peat, that the British army did expect to pillage the City of
New Orleans. Nor do we understand, that this fact is
at all denied in the authorized contradiction to which
we have adverted. It is there said, that a promise of
plunder was not made to the British army by their lead-
er. Be it so. Whence the expectation came, we do
not know, nor do we seek to know. We deal with the
fact as presented, as we find it, and trace the previous
conduct of a portion of the force composing his addi-
tion, at Havre de Grace, at Hampton, at Alexandria, and
at many other exposed points of our extensive coast,
we may well believe they were prepared, by one con-
tentious feeling, as we know they were by practice,
to seize by the strong hand, whatever the chances of war
might present.

Captain Cooke says, "notwithstanding all these natural
drawbacks, the City of New Orleans, with its valuable

duty of merchandize, was craved for by the British,
to grasp such a prize by an coup de main." In another
place he remarks, "the warehouses of the city were
overflowed with store cotton to a vast amount, and also
sugar, molasses, tobacco, and other products of this
prolific soil," etc.

British army at Washington, Baltimore, and New Or-
DOMESTIC INTELLIGENCE.

From the Buffalo Whig and Journal.

PERRY MONUMENT.

At a public meeting of the citizens of Buffalo, to take into consideration the expediency of erecting a Monument to the memory of the late Commodore Oliver Hazard Perry, held at the Farmer's Hotel, January 23, 1836—Lieutenants HENRY R. STAOG and LIEUT. J. T. HOMANS, U. S. Navy, appointed secretaries.

On motion, Resolved, That a Committee of five be appointed by the chair to draw resolutions expressive of the sentiments of this city.

The following gentlemen were appointed as a committee: R. W. Haskins, Horatio Gates, Chas. B. Lord, David M. Day and Theodorus Burwell.

The committee reported the following preamble and resolutions, which were unanimously adopted:

Whereas, it is one of the first and most positive duties enjoined by patriotism, to cherish the memory of public and private services of those whose services have stayed their country in the hour of peril, not only in justice to departed worth, but as pointing other worthies to those examples by which they may be safely guided, in their conduct or profession.

Resolved, That the many daring and efficient skill owned by Commodore OLIVER HAZARD PERRY, in his memorable battle with the British fleet, upon Lake Erie, on the 10th day of September last, and whose services, not only in the blow, but also in the management of that eventful day in the history of the Nation, and transmit its glories to posterity, unharmed by the lapse of time.

Resolved, That it is incumbent upon us, as citizens of a rising City, whose shores have been laved by the blood of the youthful hero to victory, to erect here, a suitable MONUMENT, commemorative of that glorious event.

Resolved, That a committee of nine, to be named by the Chair, be raised, whose duty it shall be to solicit subscriptions to a fund, for the erection in this city, of a MONUMENT to the memory of OLIVER HAZARD PERRY, and commemorative of his great service to his country and whose further duty it shall be, when the same shall have been secured, to locate and superintend the erection and completion of said Monument, without unnecessary delay.

The following gentlemen were named by the Chairmen to constitute said committee: Benjamin Cary, Robert B. Heacock, Samuel Willets, Jacob A. Barker, Roswell W. Haskins, John W. Clark, Pierre A. Barker, Benjamin Rathburn, Alanson Palmer.

Resolved, That the Chairman and Secretaries of this meeting shall be the Custodians of such money.

Resolved, That the Committee have power to call a meeting of citizens, on any contingency.

Resolved, That the proceedings of this meeting be signed by the Chairman and Secretaries, and published in all the papers in this city.

STEPHEN CHAMPLIN, Chairman,
HENRY R. STAOG, Secretary,
J. T. HOMANS, Jr.

We have just been shown a specimen of several splendid Canes, which have been lately manufactured of oak from the hall of the Legislature, at Erie, Pa. The work in the interior consists of an ivory knob at the end of about six inches from the head, the stick is beautifully inlaid with plates of gold, from which we copy the following inscription:

ARMY AND NAVY CHRONICLE.
ARMY AND NAVY CHRONICLE.

1. "We have met the enemy and they are ours."
2. "Two schooners and a whaling squadron." "
4. "Taken from the flag ship Lawrence, Nov. 19th, 1835."

The new Bedford (Mass.) Mercury.

PREVENTIVE AGAINST DRY ROT.—We have been favored by an intelligent ship master with the following communication relating to recent successful experiments in England, in the means of preserving ship timber against premature decay, which cannot fail to be of practical interest and value to many of our readers.

Mr. Lindley.—If you think the following description of the method of preserving timber from rot, insects and worms, now universally adopted in England, is of importance to the public, you will confer a favor by giving it an insertion.

The name of this personally acquainted with the ingenious inventor—has been read in London on the subject, and is satisfied of the efficacy of his plan.

The material employed by the inventor is Corrosive Sublimate, known as a great preservative of animal substances from decay. The timber to be preserved must be placed in a room from 40 to 90 feet long, 4 to 5 feet deep, and about the same width. A solution of the Corrosive Sublimate is then thrown upon it until covered—i.e., the proportion according to the inventor is 1 lb. of Corrosive Sublimate to 5 gallons of water—but individuals who have tried it say 1 lb. to 10 gals. of water. Fire damage is not satisfied. An oak stick, 40 feet long and 1 foot square, requires three weeks—during which time it becomes effectually seasoned, and will not contract or shrink even on exposure to the highest temperatures of a tropical climate. The Corrosive Sublimate has so strong an affinity, for the albumen or vegetable substance generally called sap, combines instantaneously with it, and the resulting mass is cheap, insoluble and will not attract moisture. The efficacy of this invention has been tested in the most extraordinary manner. Pieces of the timber preserved, exposed to the sublimate, and unpreserved pieces, after being well seasoned, were placed in the "Botten Pit" at the Woolwich Yard, Woolwich, in 1825. In 1828 the writing of this article was withdrawn. The preserved timber was perfectly sound—the unpreserved, although the best English oak, was a mass of rot and decayed vegetable matter.

The preparations were made of the area in the ground in the first six months, and then again placed in the Botten Pit with other pieces of well seasoned timber. At the end of two years the preserved timber was found quite sound—the seasoned very rotten.

The preservation consists in letting the wood lie for some time in a solution of corrosive sublimate, which impregnates it, and it is said prevents the dry rot. We stated, some months ago, that an extensive course of experiments, at Woolwich, had completely established the fact that Kyan's process does not totally prevent dry rot. We have since been informed that the House of Commons on the subject, and as the matter is of the utmost importance to the shipping interest, as well as to house builders, we have made the following abstract.

The commissioners appointed by the Admiralty, to enquire into the process of Mr. Kyan's process are John Hayes, Dr. Birkbeck, Messrs. T. E. Daniel, A. Conland, Hutchinson and B. Rotech, jun. They report as to the general efficiency of the process, that timber, canvas, and cordeg, thus preserved, had been tested by comparative trials, lasting for years in a variety of ways, at Woolwich, Margate, London, Sheerness, and in no instance of the dry rot attacked the preserved timber, whereas, kce., had invariably decayed under the same experiments. That the process renders the ordinary length of time for seasoning timber unnecessary. That the solution diminishes in bulk by absorption but the remainder is of the same strength as at first. That the additional expense of building the Samuel Enderby, a ship of 1,900 tons, and study of the preservation, is such that the Admiralty are to pay £15 a load extra for such as may be used in the construction of the Liberet. That the process was not in the least wholesome, and that the crews of the two ships, wholly built of the preserved timber, were reported all well from the South Sea and Indian Oceans. That the bilge water in a ship built of the preserved timber, was pumped out perfectly sweet.

No doubt can now be reasonably entertained as to the

The writer has seen experiments tried upon canvas and rope, which was immersed in the solution, and placed four months in a dung hill—the unpreserved pieces were destroyed—while the texture of the prepared specimens was not weakened in the slightest degree. Any one can try this by using the above proportion.

Satisfactory accounts have been received by Messrs. B. Rotech and M. Enderby of London, from the captains of the ships constructed at their instance, of timber prepared as above—testifying that the crews were remarkably healthy, although they slept actually in contact with the ceiling plank thus prepared, through all climates and changes of temperature.

It is well known to practical men that Salt is not an effectual preservative—as many ships salted on the coast, have been ruined in the first voyage—one instance is the Enterprise of Nantuckett. The Golconda of New Bedford has had a new windlass three voyages in succession, and the lower masts of ships very quickly decay. These parts of a ship it is impossible to salt.

In the British navy the use of salt has been discontinued, as it is found to corrode the iron rapidly and it also keeps a ship in a very damp state.

PREVENTION OF DRY ROT.—The new steam ship launched on Wednesday, for the City of Dublin Company, is entirely built of wood prepared by Mr. Kyan's process, for which, among other reasons, the ships have been ordered the first voyages—one instance is the Enterprise of Nantuckett. The Golconda of New Bedford has had a new windlass three voyages in succession, and the lower masts of ships very quickly decay. These parts of a ship it is impossible to salt.

We have stated, some months ago, that an extensive course of experiments, at Woolwich, had completely established the fact that Kyan's process does not totally prevent dry rot. We have since been informed that the House of Commons on the subject, and as the matter is of the utmost importance to the shipping interest, as well as to house builders, we have made the following abstract.

The commissioners appointed by the Admiralty, to enquire into the process of Mr. Kyan's process are John Hayes, Dr. Birkbeck, Messrs. T. E. Daniel, A. Conland, Hutchinson and B. Rotech, jun. They report as to the general efficiency of the process, that timber, canvas, and cordeg, thus preserved, had been tested by comparative trials, lasting for years in a variety of ways, at Woolwich, Margate, London, Sheerness, and in no instance of the dry rot attacked the preserved timber, whereas, kce., had invariably decayed under the same experiments. That the process renders the ordinary length of time for seasoning timber unnecessary. That the solution diminishes in bulk by absorption but the remainder is of the same strength as at first. That the additional expense of building the Samuel Enderby, a ship of 1,900 tons, and study of the preservation, is such that the Admiralty are to pay £15 a load extra for such as may be used in the construction of the Liberet. That the process was not in the least wholesome, and that the crews of the two ships, wholly built of the preserved timber, were reported all well from the South Sea and Indian Oceans. That the bilge water in a ship built of the preserved timber, was pumped out perfectly sweet.

No doubt can now be reasonably entertained as to the
efficacy of the process. That it will be generally adopted we are confident, and the saving will be immense; and that the timber is used. Sir R. Snirke (well known as an eminent architect in London) has introduced it into most of his buildings, and was one of the witnesses in its favor before the committee. Certainly all public buildings should have the advantage of the process. The state of the timber at the Lunatic Asylum in Liverpool is abundant evidence of the injury done to wood by dry rot.

It is supposed that government will purchase the remaining time of the period from Mr. Ryan, and throw it open for gratutious adoption. Certainly there can be no public objection to this. Dr. Carmichael Smith got £200 compensation for the disfiguring process that the character of the character was growing for preventing dry rot in timber, is of far greater importance to the public at large. —Liverpool Journal.

SCHOOL SHIP.

From the National Gazette Sept. 16 1835.

Mr. Eddon —I beg leave to suggest, through the medium of your paper, and such others as may feel disposed to promote the object which I shall endeavor to bring to the notice of the public—that there is a subject of great national importance, for a long time has been neglected to an alarming degree, and therefore, if not speedily attended to, will place one of the great sources of our prosperity in other hands, or at least jeopardize its safety in ours.

This subject has for many years past attracted the attention of many of our Navy officers, as well as that of the most thoughtful citizens and enterprising ship masters, all of whom concur in the opinion, from the evidence which is daily brought to their observation, that the time has arrived which calls for the exertion of every friend of his country—and points to the adoption of such measures as will put a stop to this growing evil.

I mean the want of native born, and the great influx of foreign seamen. I would not, in the latter class, to prescribe those who have been long in our country—have made it their home—have families—and doubtless intend to settle the balance of their lives amongst us—but those who, in a few days after first setting their feet ashore, will throw the lives of such men amongst the employment of our national and mercantile marine, to the exclusion of the native born, who would in greater numbers engage in this service, were it not for the numbers of foreigners who crowd every port in our country, and are too often the masters to have made a monopoly of this kind of employment.

Some remedy must be found for this evil; its consequences cannot fail to be evident to every reflecting man, and in my opinion, he who first suggests that remedy, will deserve well of his country. Indeed, I am so fully persuaded of it, that I cannot refrain from making the attempt, or rather, from reiterating some ideas which have been presented to my notice, by an individual, and by a paragraph in the New York papers.

The Congress of the United States has never given to this subject that consideration which it merits; perhaps, the nature of our political institutions is not favorable to its interference. No objection of this character, however, exists with the state governments, and of them, but particularly those bordering on the sea coast, great rivers and lakes, have a stake in this matter worthy of their fostering care.

It is now a practice, (and a barbourous one it is, in these days) for example by the fair of our country, to their sex to seize on the juvenile offender for what might be considered a mere bohyh mischief, and cast him into prison, a house of correction, or some such place of degradation, as forever after to affix a stigma on this character, and thus cut him off from his family and friends; and if a boy of any sensibility of character, drive him from his home to seek his fortune amongst strangers, under the most discouraging circumstances, such as frequently have a tendency to drive to desperation, many, who, by the application of proper means, could be reclaimed and rendered valuable members of society.

I cannot but believe that this subject requires nothing more from me than merely to suggest to the good people of this city that such is the case, and that there is a remedy for it; after which, I am persuaded that we shall see some of those characters which have for ever foreseen in good works, moving in this all-important cause of national interest and national humanity.

The means which have been suggested, is the establishment of a School ship, equipped and officered with such care and attention as to character and qualifications, as may insue the moral improvement, and as the certainty of rendering these youths happy in themselves and valuable to their country as its maritime defenders; to sell all such buildings as have been erected for their punishment, applying the proceeds to the purchase and support of a school ship. With a proper organization of these means, the moral character of many such boys as are, by existing regulations rendered fit instruments in the hands of adult offenders, could not fail of improvement, and having their minds enlightened by proper education, their constitutions invigorated by healthful and honorable employment, we might reason whose course, as matters now stand, is almost certain to lead many of these boys to a life of crime, would be reclaimed to be of one of infancy and disgrace.

Let not the difficulties which may be presented at first sight, deter those who may be favorably disposed towards this plan. There can be no lack of suitable characters amongst the citizens and ship masters of this city and port, to arrange the details and carry the scheme into full and effectual execution.

One, two, or three years, thus spent, would qualify a boy of from twelve to sixteen years of age, for rendering such assistance to the crew of a ship, as would induce commanders to receive them gladly into their ship's company upon such terms as would be altogether repre sent to their interest, and to finish an education and honorable profession, thus worthily begun.

No one will be at a loss to conceive that boys put on board of a ship, such as has been suggested, and which is properly placed in our waters, may be so completely cut off from vicious companions and bad associations, so completely separated from vicious habits, as to give a different tone to their inclinations, and finally, to lead them gradually into the paths of virtue and peace.

A great variety of employments in the line of a seafaring life, may be practised by youths thus situated as this plan proposed to be carried into effect, we may reasonably hope that the seafaring clergy will be anxious to visit and exercise their powerful influence over the minds of those embraced by it—and that being the case, who can doubt the effect of a course so well calculated to have an influence over their future lives?

As a commencement, a half worn ship of large dimensions should be purchased and equipped, and with a very trilling expense in comparison to that which is now incurred for the safeguarding and support of the juvenile offender, a system might be matured which would furnish a fruitful source for native born seamen, and which, with a very small probability would go farther to correct the vice and elevate the moral standard of that class of people than any other plan or system heretofore proposed or acted upon.

GOOD INTENT.

From the Columbia (S. C.) Hive.

LONGBIVTY. Capt. Benjamin Wages was born on the Waterer creek in Fairfield Dist. S. C. on the 16th day of March 1736, served through the whole of the re-
1Vestimentary war, was in the battles of Bunker Hill, Cowpens, Stono, Horse Shoe, Cranes, Savannah, Eu-

taw, Orangeburg, Juniper Springs, Ninety-six, and Soc-

ote Mount, was wounded five times; captured for Gen-
mral Washington more than twelve months, often heard
the General pray in his tent, the subject matter of his
prayers were first the salvation of all men and he would
close his prayer by saying "Oh Lord, look in mercy
upon your poor suffering country and give success to
her arms.

Mr. Wages never was drunk in his life, but has used
tobacco from his youth; he never had tasted Calomel or an
other strong medicine—has lived for a number of years in
Kentucky, and now is (Nov. 26) in Fairfield District, on
his way to Columbia where he expects to be early next
week to sell a horse that he has had, and rode another
from Ferry Co. Kentucky, and has no other company
with him than his wife, who will be 89 years of age
next January; he can see to thread a fine needle and
has a good memory—on being asked if he recollected
any of the officers in the army, he replied yes—he
recollected the two Buchanans and Major Henry Moore,
and spoke of these three men in this way—"they were
fine soldiers." He is a member of the M. E. Church and professes
to enjoy the comforts of Religion.

Please publish the above in the Hive; and it may also
be worthy of remark that he receives 96 dollars of pen-
ses annually, and that a lawyer W**** charged him
one hundred dollars for writing out the papers necessary
to obtain his pension—this lawyer must have been a true
friend.

W. C.

From the Savannah Georgian, Feb. 9th.

LATEST FROM FLORIDA.

By the Steamboat Florida last night, we received the
following letter from the Editor. It contains the latest
intelligence of Gen. Clinch.

"Camp Charley O'Mathula,}
January 30th, 1838.

"Early this week Lieut. Dancy, of the U. S. Artillery,
arrived at the Ferry, opposite this Post, with a number of
wagons and an escort of one hundred volunteers, part
of a volunteer force from the Alachua, composing Geni-
Clinch's command at the time Mr. Dancy left Fort
Drake.

"Lient. Ridgelly of the U. S. Artillery also accom-
splained Lieut. D. and bears on his person the honourable
woods received at the same gallant affair. Dancy has two
wounds, but one great pain and suf-

fering. He will proceed the first opportunity to St. Au-
pusie, where he has two children.

"Lient. Dancy's escort consisted of three companies,
under the command of Captains Williams, Gibbon, and
Cowley.

"Lient. Dancy started hence yesterday morning with
wagons and escort for Fort Drake and Fort King. When
Lient. D. left Gen. Clinch the latter had from 100 to 150
volunteers under the command of Col. Parrish, his
companies of regulars which must about 250 to 300 men.

"Triggs had not arrived.

"Gen. Clinch's regulars are divided as follows: two
companies at Fort Drake, which Fort includes a portion
of Gen. C.'s buildings picketed in; two other companies
at Camp Lang Syne, a short distance from Fort Drake,
where some other buildings of the General are includ-
ed with pickets. A fifth company is stationed at Fort
Drake, under Col. Crane, and a sixth at Fort Gates, Col.
I. H. Melton in place of Col. Dancy. These regiments
either contain provisions necessary for the support of the
troops or are in themselves essential to their comfort.
When Gen. C. marches to attack the Indians, he doubt-
less will, as he did when he fought the battle of With-
lachoochee, Garrison these posts with volunteers and take
the rest of the troops in his rear.

"The imposing corps of Richmond Blues from Aus-
tura, under the command of Capt. F. M. Robertson,
rushed this Post this morning in the Steamer Florida.
Their appearance is creditable to the state and the city
whose tomes they have left for the wilds of Florida.

"On the arrival of the boat this morning Sergt. Reed
of the Savannah Volunteers very gallantly volunteered
to ride as an express to Lieut. Dancy, who it is presumed
has not this day proceeded many miles.

"An express arrived on the opposite bank about half
an hour previous from Gen. Clinch with despatches in
answer to despatches sent from St. Augustine. Of the
nature of these despatches we are not apprised, as they
were sealed, but learn verbally that Gen. Dancy was
up, and 500 mounted volunteers was with General
Clinch.

"I learn that the latter could, after securing the posts
garrisoned by his command, spare about 100 regulars
fit for duty, to unite with the volunteers in acting against
the Indians. The sooner a blow is struck the better—
I doubt not, if Gen. Dancy had the least opportunity, that he has turned the tide of war,
and taught the misguided sons of the forest, the folly
of their blood-thirsty course.

"Since writing the above, I have been with five others
across the St. Johns, to bring over our gallant ser-
gent Reed, for whom I felt individually some appre-
hensions. Sergeant Reed overtook Lieut. Dancy's party
between 4 and 6 o'clock yesterday afternoon, about 25
miles from the Ferry, on the road to Fort King. They
proceeded near two miles further, before they encamped
for the night."

"Sergt. Reed reports that Lieut. D's. party has scoured
the woods on their route, and have not discovered any
signs of Indians. Neither did Sergeant R. in going
and returning."

FOREIGN MISCELLANY.

FROM PAPERS RECEIVED AT THIS OFFICE.

SHIPS IN ORDINARY.—Ships laid up in ordinary are
stripped of all their rigging and guns—stores and other
contents are taken off board. The men and officers are
all paid off, except the boatswain, gunner, carpenter,
and cook, and six ordinary seamen. The ships are
moored by large chains of iron, sixty fathoms long,
consisting of one hundred and twenty links, and having at
each end a large anchor. The chains are stretched
across the harbour (the Hamoaze) and the anchors
sink into the mud. In the middle of each chain is a
large iron ring and swivel, to which are attached two
thick cables, called bridges, sufficiently long to be taken
on board the ship to be moored. The bridges, when not
in use, are constantly sunk, a small cable being fastened
around them, which is raised up to the top of the
bottom of the water, and there made fast; when wanted,
the ends are easily hauled up by means of a buoy-ropes,
and are then passed through each of the ship's hawse-holes,
and fastened on board. By the bridges being fastened
to the same swivel, the ships swing easily with the tide,
which runs amazingly strong, especially the ebb, with
the wind at north; at these times no boat can make head
against it. In Hamoaze are nearly one hundred of these
moorings, each capable of holding a line-of-battle ship.

—Stanhope's Coast Scenery.

NAVAL ARCHITECTURE.—When Peter the Great
determined to make St. Petersburgh a great naval station
he seemed to treat with equal contempt the obstacles in-
terposed by nature and man; and his successors adhere
to this day to his plans. Ships of the line are still built
at the Admiralty, which a vessel drawing nine feet of
water can neither approach nor leave! When the ship
is built, the quays having been raised to meet the
river, and the task is always difficult and expensive, al-
though performed with great ingenuity. A vessel is brought
to the building yard, called a camel, and which may be
described as a huge hollow box. It is then filled with wa-
ter and sunk so far that, on its sides being opened, its
humbous cargo is floated into it. The box, which contains
the entire bottom of the ship, is then submerged and
pumped up. As the water goes out, the machine
rises; till at length it floats so high as to be able to get
over the bar, and deliver its strange passenger in triumph
to the Gulf of Finland.
NEW CAVALRY CARBINE.—The 2d Dragoon Guards in this garrison have received five new carbines with percussion locks, by way of experiment. They are much superior to those hitherto in use in every respect, and from the practice already made, there seems to be little doubt as to their being a great improvement in active service. — Dublin U. S. Journal.

WASHINGTON CITY;

THURSDAY, FEBRUARY 11, 1858.

To Correspondents.—We would ask the patient indulgence of our correspondents, whose favors are duly appreciated; we have a number of articles on file, which we shall insert as fast as our limits will allow.

An Old Soldier’s “Plan for the defence of the Sea-coast of the U. S.” has been on hand for some time, and would have been acknowledged before, but for the expectation that we should have room for it in the succeeding number.

“Brown”—“Neptune”—“Aristides”—shall receive early attention.

If B—who writes under the caption of “Early Impressions,” will inform us how a note may reach him, we will give him our reasons for declining his article.

O. P. Q. is unavoidably deferred.

We have inserted in another column an article from the National Gazette of the 16th Sept. last, on the subject of School Ships for indigent boys, as a nursery for seamen. The editor of the Gazette accompanied its insertion in his paper with a remark that would lead to the belief that it was the writer’s intention to burden the naval and merchant service with the inmates of our prisons and houses of refuge. Having had an opportunity of conversing with the writer and learning his sentiments, we can say that he had no such design.—The allusion to prisons and houses of correction was only made to show the contrast in the condition of boys before and after conviction; and it is confidently believed that if this scheme were put into execution, there would be no necessity for such buildings.

In every city there are boys, who are left orphans at an early age without friends to counsel or direct their path in life; too many of these are led, for want of parental authority, to habits of idleness, and thence to the commission of petty crimes, which result in their conviction and sentence to a degrading punishment. A stigma is thus fixed upon them, which attaches itself through life. It is, therefore, the object of the writer to take boys of this class, before they shall have violated any of the laws of their country, snatch them from the temptations of the world, and place them where they may learn to be useful members of society, and a benefit to the community.

In this view, the subject deserves serious consideration. It is only necessary for the state or municipal authorities to provide the means to put the scheme in practice, and thus to test its utility. The expense of the criminal docket which would be thereby lessened, is one point gained; but the advantage derived by the public in making useful members of society from those who might otherwise become outcasts and a burthen, is of still greater value.

We are a people fond of experiments, and this is one which promises good; let it have a trial.

MOVEMENTS OF OFFICERS AND TROOPS TOWARDS FLORIDA.—Major Gen. Scott arrived at Augusta, Geo., on the 80th ult.; his Aid de Camp, Major Van Buren, arrived at Charleston, S. C., on the same day.

Gen. Scott has made a requisition on the Governor of South Carolina for a full regiment of 750 men, to consist
ARMY AND NAVY CHRONICLE.

of as many mounted men as could be furnished, to rendezvous at Pusserburg.

The steamer John Stoney arrived at Charleston, S. C., on the 4th inst., from Beaufort and Smithville, N. C., with two companies of U. S. Troops, (116 men) under the command of Major Kirby, destined for the Florida service, and proceeded on her voyage the same night. The following officers are attached to this command: Major R. M. Kirby, Lieutenants Nauman, J. R. Irwin, G. W. Turner, A. V. Brumby, and Asst. Surgeon Wharlow.

The steamer Santee, Captain Brooks, has been chartered by the U. S. Government, to be kept steadily employed in its service during the Seminole war.

The Revenue Cutter Jefferson, Capt. Jackson, arrived and anchored in the St. Johns, opposite Jacksonville, on the 28th ult. She is sent thither to be subject to the orders of General Clinch, and the services of Captain Jackson and his crew will be valuable in keeping the river clear of Indians and their boats, and communication between the points on the river open.

Major Gen. Gaines arrived at Pensacola about the 26th ult. While at New Orleans, he gave orders to Col. Twigg to assemble all the disposable troops from Baton Rouge and elsewhere, and proceed with them immediately to Tampa Bay.

The Huntsville steamer arrived at New Orleans, on the 26th ult., from Baton Rouge, brought down 87 of the U. S. troops, under the command of Col. Foster, destined for Florida.

The ice-boat Relief succeeded in towing the Brig Arctic from Baltimore through the ice, a distance of 60 miles down the Chesapeake Bay.

The following are the names of the officers of the U. S. Army who have sailed from Baltimore and from Annapolis, in the brig Arctic, destined for Florida:

Major Wm. Gates, 1st Artillery, Commanding.

Capt. J. Dimick, do
Capt. D. D. Tompkins, do
Lient. F. Taylor, do
Lient. J. B. Magruder, do
Lient. C. B. Chalmers, do
Lient. A. Hersey, do
Lient. Montgomery Blair, 2d do.
Assistant Surgeon, H. S. Hawkins.

Volunteers.—The Irish Volunteers, at Charleston, S. C., under Captain Henry, to the number of 60, have offered their services for three months.

The Richmond Hussars (armed for the occasion as infantry) 70 strong, under Captain Samuel Bones, left Augusta, Geo., on the 2d inst. in the steam boat George Washington, arrived at Savannah on the 4th, and took up their quarters at the U. S. barracks until a conveyance to Florida could be procured. Prior to embarking at Augusta, the Hussars were inspected in presence of Captain J. Green, Adjutant of the 2d regiment U. S. Artillery. Augusta has furnished 170 men for the Florida campaign.

At a public meeting held at New Orleans on the 24th ult. it was resolved to raise 500 volunteers; and a subscription of 4 to $1000 dollars was immediately obtained for the purpose of procuring clothing and equipments. In the course of the year, 200 volunteers enrolled their names, and it was expected that the entire quota would soon be filled up. They were expected to embark on the 3d inst. under command of Gen. Persifor F. Smith, Adjutant General of the State of Louisiana.

One hundred and seven volunteers, under the command of Capt. J. Duncan Allen, arrived at Charleston, S. C. on the 5th inst., by the Rail Road from Barnwell District, and were quartered at the Citadel.

Captain C. S. Merchant's company of the 2d artillery, left Savannah on the 22d ult. in the steamboat Etiwau, for St. Augustine.

The Mobile Chronicle says.—The U. S. Cutter Washington, Ezekiel Jones, commander, left Mobile Bay on the morning of the 14th inst. bound to Tampa Bay, for the purpose of co-operating with our troops in that vicinity against the Indians.

THE MARINE CORPS.

A difficulty has recently arisen at the Navy Yard in Washington, with respect to the authority of the Commandant of the yard over the Marine Guard stationed at the yard. What the precise origin of the difficulty was, we do not know, nor is it important; but as it was deemed of sufficient consequence to be submitted to the President of the United States for his decision, and as the principle may be considered as settled for the present, it appears to us deserving of a passing notice.

The President has decided that, until further orders, the Marines at the several navy yards shall be subject to the orders of the Commandant, agreeably to the 14th paragraph of the Rules and Regulations for the government of the U. S. Navy Yards, adopted in 1818, which is in the following words:

Par. 14.—"The guard of marines detached for the protection of the yard, shall, while doing duty in the yard, be subject to the orders of the Commandant, and receive from him their instructions as to the duties they are to perform therein; and all persons, enlisted into the service of the United States, and doing duty under the orders of the Commandant of the yard, shall, for every offence, be subject to the justice of the better government of the Navy of the United States, and punished in the same manner as if the offence had been committed at sea."

This decision has called forth a writer in the New York Courier and Enquirer of the 4th inst., whose communication will be found in another column.

It is very desirable that the relation of the Marine Corps to the Navy should receive the early attention of the proper authorities, and their relative rights and duties so clearly defined as to admit of no doubt hereafter.

It has been proposed in Congress to authorize the erection of barracks without the limits of the navy yards; this would secure the independence of the officers commanding the guards, of any control save that of their superiors in their own corps, and leave the authority of the Commandants of the yards, within their several jurisdictions unaltered.

STEAM PROW SHIP.

We would invite attention to the plan of a Steam Prow Ship, proposed by Commodore Barron, of the Navy, which will be found under our communication head. A model of this ship has been exhibited several weeks in the Rotunda of the Capitol, where it has attracted much attention.

A vessel of this description must prove a valuable
auxiliary in the defence of towns, bays and rivers, and
would be able in a short time to sink a whole fleet of
enemies’ ships. Indeed we should think a hostile force
would be cautious in approaching a coast, if it was
known that so powerful an engine of destruction was
ready to meet them.

Officers of the highest respectability in our Navy con-
cur in the opinion of the efficacy of the steam prow
ship.

Hugh W. Mercer, late of the U. S. army and now
a resident of Savannah, Geo. was elected on the 8th inst.
second lieutenant of the Chatham Artillery.

COMMUNICATIONS.
NEW NAVY TACTICS.
No. V.

The Report on the French Tactics of 1831, under the
head School of the Battalion thus proceeds:

"Instructions for skirmishers (light infantry or rifle.)

"The want of an [official] instruction for skirmishers
(traileurs) has been generally felt. For a long period
many colonies have followed systems supplied by them-
selves, and at this day there is not a regiment without
its own.

"The Commission, in drawing up this instruction, has
sought to render it as simple as possible; and hence
nothing has been introduced that may not be useful in
war.

"Knowing that skirmishers have to manoeuvre on all
sorts of ground, the impossibility was perceived of lay-
ing down particular rules for all cases. Hence but a
small number of precepts and examples are given to
serve as a general illustration for any case that may pre-
sent itself.

"It is on these bases that the instruction has been
drawn up. It has been divided into five articles, with a
short introduction, containing the necessary general
rules. The first four articles give the movements of a
company, and the fifth, those of a battalion.

"General Rules.

"The Commission has prescribed that every detach-
ment of men, thrown out to skirmish, shall have a re-
vise.

"The reserve of a company, skirmishing within reach
of its battalion, is fixed at a third of its strength. For
more numerous detachments, and which cannot be im-
mediately sustained by the corps to which it belongs, be-
side the company reserves, another, composed of extra
companies, and at least strong enough to relieve one half
of the skirmishers, is prescribed.

"Skirmishers being obliged, in the great majority of
cases, to traverse extensive woods and fields, it is impor-
tant so to manage their movements as to preserve them
in strength for the occasions in which success depends
mainly on celerity. Hence the Commission has pre-
scribed the quick as the habitual step in this instruction.

"When a greater swiftness becomes necessary, skirmishers
are to take the double quick step, which is fixed at one
hundred and forty to the minute—or they are, in decisive
moments, to gallop in a race.

"As commands cannot always be heard, we have pre-
scribed that they may be transmitted by sound of the
buge or beat of the drum; but only for movements which
demand a prompt execution."

To this provision the new American book adds (No.
1571) certain conventional signs to meet the case (too
frequent in our army) of a want of both drum and bugle.
The Report continues:

"All the companies, without distinction, are to be ex-
ercised as skirmishers, and this part of their instruction
is not less important than the manoeuvres in closed files;
that is, as infantry of the line. The left flank company
(light infantry or rifle) it is true, is more especially
charged with the service of skirmishing; but the com-
pact may be detached, and when it has skirmished for a
certain time, it becomes necessary to relieve it; besides,
the entire battalion may often be obliged to combat as
skirmishers.

"Art. 1.

"This comprehends deployments. A company is de-
ployed in two different ways—forehead and by the flank.
If it be in rear of the line on which the skirmishers are
to be established, it deploys forehead; and when on that
line, the deployment is by the flank. In both
cases, the front and centre ranks only are deployed:
the rear rank remains in reserve.

But if the company is in two ranks only, it is in both
the new books (French and American,) divided into
three equal platoons. In this case the first and third are
deployed, the centre platoon remaining in reserve.

"In the deployments forward, the file on which the
movement is made, conducted by the guide, marches on
an indicated point; the other files quicken step, and, ad-
vaning the shoulder next to the direction, successively
take their intervals; and as each has its interval, it
marches on the alignment of the directing file.

"The skirmishers having arrived on the line on which
they are halted, the men of the second rank place them-
selves each on the left of his file leader; and the offi-
cers, as well as sergeants, take their places in the par-
ticular line of battle. The company-reserve remains at
one hundred and forty paces behind the centre of that
line.

"To deploy by the flank, all the skirmishers, except
the directing file, put themselves in march. The guide
directs himself on the indicated point, and each file halts
as soon as it has its distance; at the instant of halting
the front rank man faces to the front, and his file coverer
places himself on his left.

"After the deployments, we have given rules for ex-
tending and closing intervals, also for relieving a company
deployed as skirmishers. These movements are ex-
ecuted according to the principles of deployments.

"Art. 2.

"This article contains all that relates to the march by
the front and the flank.

"Art. 3.

"This article treats of the fires. In the fire at a halt,
as in the fire in marching, the two men of the same file
so arrange it between them, that one or the other always
has his piece loaded.
"ART. 4."

"This treats of rallying and assembling."

"The company being forced to rally, forms itself into a circle. This disposition seems to be the best for so small a body. Against cavalry. The reserve begins the movement by the right, the skirmishers, as they successively arrive, place themselves, without regard to height, to the right and left of the reserve, facing outwards; the officers and sergeants direct the formation, and when ended, they enter the circle.

"ART. 5."

"This comprehends the manner of deploying a battalion as skirmishers, and of rallying it. According to the principle established, [No. 1665—of eight companies,] only five are deployed—the other three remaining in reserve. The company on which the deployment is made, executes its movement from the front, and the others march each by the flank, until its last file has passed the right or left of the company that next precedes it in the deployment. It then halts, and finishes the movement. The lieutenant-colonel directs the alignment to the right, and the adjutant aids to the left. The reserves of the companies of skirmishers are thrown into echelons, with four united into two, in order to diminish their number and to increase their strength.

"The colonel directs the execution of the movement, and then throws himself to a point in the rear, whence he may best see all the parts of the battalion and harmonise their further movement."

"When the battalion is obliged to rally, the colonel throws himself upon the battalion-reserve, and so disposed as to protect the movement. The skirmishers of each company rally on their reserve."

Here the report on the School of the Battalion terminates. In my next number I shall take the remaining part of the Executive of the Line: in the mean time, a word in defence of the Instruction for skirmishers.

It has been objected that, the Instruction is, within itself, incomplete, because it is made to depend on the previous Schools of the Soldier, the Company, and the Battalion. And why not? Does any person desire to have in our army companies, or battalions of infantry or riflemen, without the capacity of going through the exercises and manoeuvres of the line—that is, in closed files? Without such capacity, how even (when skirmishing) rally in column, square, or circle, to resist cavalry? It will then, perhaps, be admitted that all kinds of infantry ought first to be well grounded in the exercises and manoeuvres of closed files. This being fully provided for is the previous Schools, the question occurs—Why rest upon a subsequent head? or, why, in the manner of our book, of 1825, reproduce the same exercises and manoeuvres, and prescribe for their execution according to new principles and by new names?

Troops are drawn up either in closed or open files. If in the first order, let us have but one system for them—whether they be called light infantry, riflemen, or infantry of the line; and for the second order, add, under a separate head, what may be peculiar to this formation.

It is the course here intimated and followed in the new Tactics, that has excited the strange opposition I the occasion of mind sees nothing of beauty in mere order and simplicity. It delights to lose itself in the maze of involution, and finds a subject grand or sublime in proportion to its bulk and incomprehensibility. The instruction for Skirmishers was intended to be compendious, and it is expressly called, in the new American Book, a Supplement to the preceding Tities. Its first two paragraphs (not found in the French original) are the connecting links between this Supplement and the body of the work. They are as follows:

"By the general term skirmishers, will herein be understood any company or body of infantry, whether demoted grenadiers, light infantry, rifle, or battalion companies. They are thrown out and actually deployed into open files or loose order.

"The term will only be applied to the companies whilst so extended. The moment that either shall be re-assembled, or re-formed into closed files, it will take its habitual denomination of grenadiers, light-infantry, rifle, first company, &c., or, in the case of an isolated battalion-company, the simple denomination of company. From the same moment the company, or companies, will again be subjected to all the rules and principles prescribed for the government of one or more companies in the preceding Tities."

These simple provisions save the necessity of duplication, and to avoid all confusion, when it is desired to pass from closed to opened files, the first command always is deploy as skirmishers.

Yet a critic, in the seventeenth number of The Chronicle, who admits that, in the firings—"the files being in loose order, uniformity is not so desirable;"—who, after lauding our people for their love of enterprise and singular skill as marksmen;" and after adding that our light infantry and riflemen, are not only supposed to be intelligent, but they are actually so;" pours out a lament that a peculiar manual of arms is not given in the Supplement for Skirmishers, and quotes, as specially authorizing his indignation, a paragraph (under the head remarks on the firings) which is in these figures and words:

"1669. They [skirmishers] will also be exercised in loading and firing, kneeling and lying, leaving each man at liberty to execute those times [or pauses] in the manner he may find the easiest."

And the paragraph next preceding these words:

"Skirmishers will be habituated to load their pieces whilst marching; but they will be enjoined always to halt an instant when in the act of priming and charging cartridge"—an injunction which, considering the singular skill of our marksmen, might, perhaps, have been omitted; but, in respect to another part of the manual, under the head of general principles, a wider latitude is allowed:—"1669. In all the movements, skirmishers (that is, men in open files,) will carry their muskets or rifles in the manner that may be most convenient to each skirmisher, taking care to avoid accidents."

Let it be remembered that, in the supplement, although no peculiar manual is given, every thing else, relating to the firings, is minutely explained and fully enjoined.

Many of the commands in the Supplement, as in other parts of the new Tactics, have been objected to by the same critics. In this respect "omission is no quintessence."

In a future number this subject shall be taken generally under discussion. We find, used above, skirmisher, to skirmish, a term which, belonging to our popular speech, have not not before been employed as technique in any military work. They seem, however, to be well adapted to this purpose.

SKIRMISH, n. s. A slight fight; less than a general battle. Todd's Johnson.

To SKIRMISH, v. n. To fight loosely, to fight in parties, before or after the shock of the main battle. Ibid.

I will pass the little skirmishings on either side. Fairfax.

To SKIRMISH, s. a. & c. n. To scour, to rumble over in order to clear; to run in haste. Todd's Johnson.

Send out more horses, skirmish the country round. Hang those who talk of fear.—Macbeth, A. 4 Sc. 2.

We'll make them skirmish away as swift as stones, Enforced from the old Assyrian slain.—Hamlet, 4 Sc. 7.

SKIRMISHER, n. s. He who skirmishes.—Barrett.

HINDMAN.

* * * Lying is not in the French original.
† The words of No. 1669, which are in parenthesis, and also those in italics, are not in the French original.
ON THE APPLICATION OF STEAM POWER TO THE PURPOSES OF WAR.

I would propose that a vessel be constructed of solid logs of light timber, the gravity of which would not exceed one-tenth that of water, and be of such bulk that the upper part of the solid log-work of the centre vessel would float six or eight feet above its surface.

Let this vessel, or combination of vessels, be of large dimensions, say from 150 to 200 or 230 feet long, and 70 or 80 feet wide, and resembling in their form a steam boat, or the Crucero of the West India Steamers. The plain and broad, and for a few feet aft, a little sharp; but not so much, as to impair its strength. The point of it should not be reduced to a less thickness than three or four feet, and not exceeding in its whole length, beyond the bow of the centre vessel, 15 or 20 feet, and that prominence covered with iron plates, from 3 to 4 inches thick, 8 or 10 inches wide, and 6 or 8 feet long on each arm, formed into an acute angle, to fit the shape of the prow, and enlarged at their junction on the point of the prow, to about 8 or 10 inches in thickness and rounding outwards in sharp pointed knobs, cut in large diamond form. These plates should be from 4 to 5 inches thick, and let half their thickness into the wood, which will produce a saw shaped space upon the prow and prevent the glancing of the vessel from her object, either up or down or sideways.

The logs that form the prow should be at least two feet square, thirty or forty feet long, and of the hardest and strongest timber, be set on, and occupy a space of 10 or 12 feet up and down, and be supported on each side by the same kind of timber. The iron plates should be securely bolted through the whole mass; but particularly so, through these logs of hard timber. To protect the crew and machinery from shot, let the guard vessel without the center one, be built 12 or 15 feet wide, and of the solid white pine timber, and projected a sufficient distance from the sides of the centre vessel to embrace the paddle wheels. These barricado vessels, should be of sufficient elevation to cover the upper part of the paddle wheels. Each of the lower parts must form a bottom similar to the centre one, and be secured to it forward and aft, by the cross logs of which the centre vessel is constructed, projecting from her sides to such a distance as to allow space for the paddle wheels on each side, and from as many other points above the water between the paddle wheels as might be required for strength. The timber is added to these by giving the bows of these three vessels through a channel formed by a long inverted arch, the lowest point of which must descend below the level of the lower part of the wheels. The solid log work, forward and aft of the centre vessel should form a mass of at least 12 or 15 feet in thickness, and as the sides of the ship.

The top of these three vessels, lay a tier of logs about two feet square, which will serve as a protection to the crew and machinery from any assaults by boarding, &c. The middle vessel may be hollowed out, at a proper distance from her extremities, if more buoyancy is required than the timber itself gives, except amidship, and then the log work should be continuous from the prow all the way aft.

The object of this vessel is to destroy men-of-war, by running into them with such impetuosity, as to break down their sides sufficiently to admit water in such quantities as would defy all possible efforts to prevent immediate sinkage. About 10 or 12 feet of the prow of this vessel ought to be allowed to strike the ship that is assailed: the other parts, above and below, should recede or incline aft, and this 10 or 12 feet space should be so situated as to come in contact with the side of the enemy, 5 or 6 feet above the water, and about 6 feet below its face. The resistance to the stroke would be less impeded than it would be, were it given by a prow of greater extent, and of course it would be more certain to pierce or break down that part of the side of the enemy's ship which it might come in contact with.

Three steam engines of 150 horse power each, would propel such a vessel at the rate of 8 or 10 miles, or more, per hour, and should be preferred to larger ones, as they would be less liable to damage from the shock to which they might be exposed, when the vessel should come at her full speed, in contact with the enemy.

Let those who are curious and in doubt of the efficiency of this plan, calculate the effect which would be produced on a stationary body, by a concussion so violent as would be occasioned by a stroke of the prow of this massive vessel. To make it apparent that the strongest ships in the world are entirely inadequate to resist such a shock, it need only be very briefly stated how few can come in contact with each other with any violence, without sinking, or sustaining a most destructive degree of damage. Ancient as well as modern history furnishes us with many proofs of the decided effects of this mode of attack. The Romans and Carthaginians were in the practice of running into each other's vessels, at their greatest speed, impelled by their oars; and it is recorded of them that when they found their enemies entangled with their friends so as to render them stationary for the moment of their assault, that it seldom failed to produce that description of destruction contemplated by the adoption of this invention; but the power of steam, and the solid construction of this vessel, would give this mode of attack a decided advantage over all other attempts of a similar nature, ever heretofore resorted to, and beyond a doubt, insure success.

The proof of the effects of an attack made by a whale on the ship Essex, of New Bedford, in the year 1819, is conclusive that no construction of a man of war could resist the shock of such a vessel as the one I have described. A circumstance not very dissimilar occurred to Capt. Jones, in the U. S. ship Peacock, in the Pacific ocean.

The instances of destruction occasioned to vessels by one running into another, are too numerous to admit of a doubt, that if the plan recommended above, should be adopted on a proper scale, it could ever fail of effecting its object.

The rudder is attached to the centre vessel, and must be moved by a wheel, which may be placed on the upper surface of the centre vessel, under the roof or main covering, either forward or aft; but I should prefer its being aft, and it should be considerably forward and lower down than in ordinary cases. A breast-works should be raised aft, for the protection of officers and others; also for the chimneys and steam pipes, in their proper places, which should be circular.

The term in the above description is the White Pine—"Pinus Strobus," Poplar—"Liriodendron tulipiferas," and some species of the Gum, none of which exceeds four-thenths of the gravity of water.

The prow mentioned in the first part of this description, is not of such a form as I would either use myself, or recommend to those whom I would allow to use this invention: that form might become fixed in the body assailed, but the form represented by the drawing will surely clear itself.

In speaking of the different presentations of the prow, and its momentum, it is to be considered as in contact with a solid body.

JAMES BARRON.

MEMORANDUM

Of the first concession of the prow, presenting a surface of 48 feet, 900,000 on each square foot.

The second concession of the extension of the prow, presenting a surface of 64 feet, 846,000.

Third concession of the prow, presenting a surface of 98 feet, 756,000.

Fourth concession of the prow, presenting a surface of 88 feet, 696,000.

Fifth concession of the prow, presenting 104 feet, 88, 154, which is 15,758,00 more than the momentum of a cannon shot. It is therefore evident that the prow is superabundant for the object contemplated.

By a careful estimate of the cost of a vessel of this description, which was made in Philadelphia, the one contemplated on the above dimensions would not exceed $8,866; and it is evident from the above calculations that a larger one will scarcely be required.

The velocity of a 24 pound shot in one second is 1600 feet, which multiplied by its gravity, gives 88,400 as its momentum; a 24 pound shot will penetrate oak timber 4 feet six inches.

The cost of the steam prows, of larger dimensions; 80 feet beam, by 230 feet in length.

For building the hull of the ship—materials and workmanship, $91,000 00

Three high-pressure engines, of 120 horse power, each will cost each $12,000, 00

$127,000 00

From the N. Y. Courier and Enquirer, Feb. 4.

Sir,—I would respectfully invite the attention of the public to the following, which has been in my possession for some time, as exposing a grievance existing in the Marine corps, which is, in my opinion, unjust and indefensible. It is a subject which was designed to have said much which is not contained in the communication, but want of room compels us to defer it until a more convenient period.

Ed. Cour. & Enq.

THE NEW REGULATIONS OF THE MARINE CORPS.

To the Editor of the Courier and Enquirer.

Sir,—At a period when our country may probably be called to assert her just and acknowledged claims upon a foreign power in the attitude of war, it is deeply to be deplored that any cause of dissension or complaint should have been thrown among a body of her citizens whose duty and whose pride it is to form an important portion of her naval power. Yet a cause of deep dissatisfaction and complaint, which may lead to dissensions highly inimical to the harmony and efficiency of the service is felt by the marine corps, at all its stations throughout the United States, in certain new orders for its regulation that have recently been issued by the Navy Department.

Therefore the Guards of Marines, stationed for the protection of the navy yards of the country, have been subjected only to the orders of their own officers, and have been compelled to submit their communications to the examination of their local commander, or being exposed to the liability of having themselves detained by the very officer of whom they might remonstrate. And thus were their rights, as soldiers and as citizens, satisfactorily secured.

The new regulations deprive them of these privileges, and brand them with degradation as a corps. They destroy their identity as a body under military organization, and impeach their fidelity and trustworthiness as a guard, by imperatively requiring them to submit to the naval commandant of the yard, all orders, and all other communications whatever, from the Colonel Commandant and Staff of the corps to the officers on the station, and from the latter to the former, unsolicited—and they empower the naval commandant to detain, to anticipate by reply, or altogether suppress, either the whole or any part of the correspondence which may have been submitted to his absolute supervision and irresponsible disposal. Thus, if an officer of superior rank complains of an inferior, or directly the reverse—if he wish to recommend him to the favorable consideration of the Colonel Commandant, and thence to that of the Department, such communication (if any) must necessarily be written in the fats of uttore oblivion in the hands of a naval commandant who may not be more exempt from personal prejudices and partialities than other men. But this is not all. The commanding officers on any station cannot suspend from duty, nor impose confinement, or any other punishment, on any marine officer, not even that officer will be in any respect made accessory in their detachment, without furnishing a proof of the offence alleged and of the penalty intended, to the same all-concentrating authority; and they are moreover bound to present a daily report of the minutest transactions and occurrences among themselves.

Who then are the naval commandants to whom this high-minded, independent, and most distasteful corps is required to surrender its military character and definitely organized command? They may be veterans, or they may be boys. The commandant of a yard, when absent from his station on business or recreation, for a longer or a shorter period, is represented by the naval officer next in rank who may happen to be there; and it may happen that a Lieutenant, a Past Midshipman or a Midshipman of three days standing, as chance might determine. But, whoever he may be, he is invested by these new orders with all the power of surveillance and control that I have stated, over marine officers who may have grown gray in the service and done the best that was in them to vindication at his contumely or neglect, without the possibility of obtaining timely redress.

I speak not theoretically, sir, upon this subject when I say that the whole of this meritorious Corps feels itself brought under an odious disparagement by these new regulations. If called to sea in the service of their country, whether in peace or in war, the Officers of Marine would, as they ever have, cheerfully submit to that one source of authority which is there quite essential to an effectual command. In this they would not suffer degradation by the imposition of unnecessary authority; here they would not be deprived of any privileges or immunities of justice which were properly their due; and invidious would rest upon their station in the national service. But, sir, whether in war or in peace a part of the Corps will have duties to perform on the soil of their country, and here it is that they claim the undiminished privileges and honors of their rank as soldiers, and as the military guardians of their shores. If any occasion of necessity could be discovered for their being subjected on shore to those restrictions of naval discipline which are indispensable at sea, that feeling of patriotism which is the most spontaneous emotion of their bosoms, would lead them to acquiesce with promptitude. But, in the main body of the expression the manner they are bound to consider their passive transfer to a new and alien condition an annihilation upon their distinctive character, as an imputation upon their fidelity, and as an exercise of undue and inexpedient officiality in the Navy Department.

As an admiral and friend of the Marine Corps; as a person well acquainted with its universal feeling towards these inseparable officers, and as one who can deeply sympathize with the silent struggles of wounded honor, I have sought your columns as a favorable medium for presenting this statement to the eye of those who possess the power to afford the aggrieved redress. And I would ask if the aggrieved, as a body, may not hope for it as well as for the individual? If they are wronged, let them know it; if they are right, let them know it. What is the state of the Marine Corps in the national service? Does it not stand as the foremost guard of the nation both on sea and land? Who is the sentry that walks his lonely round upon the deck of our ship-of-war, and in every avenue of our naval arsenal? Who is
they that are the most perilously exposed in every naval
conflict, and I first and last to guard the halyards
of that great ship of War?

I need not answer; nor need I refer to the minor con-
siderations of their ever alacrous service in aid of the
civil power, for an example has been presented too re-
cently to be soon forgotten. For brilliant records of
their merit in our past history, I need only refer to
the pages of the annals of the service, which will
confidently refer to themselves. But let not the honors
of the United States Marine Corps be crushed, as
it now is, beneath official experiments at once degrad-
ing and unnecessary.

PHILO CLASSIARIUS MILES.

PROCEEDINGS OF CONGRESS,
IN RELATION TO THE ARMY, NAVY, &c.

SENATE.

MONDAY, Jan. 25.

The CHAIR communicated a report from the Navy De-
partment, made in pursuance of the provision in the 3d sec-
tion of the act of Congress of July, 1822, showing the names
of the invalid pensioners on the Navy pension roll, the
sums allowed to each, and the law under which such pensions
have been granted; and a similar statement respecting
pensions granted to widows of deceased officers and
seamen: referred to the Committee on Naval Affairs.

Mr. LINN submitted the following resolutions, which lie
on the table:

Resolved, That the Secretary of War inform the Senate
what number of Indians now occupy the frontier on the
Southwest, North, and Northeast of the United States, and
what number is probable, will from the States and Territories,
to the frontiers of the United States.

Resolved, That the Secretary of War also inform the Senate
whether, in his opinion, the present military force of the
United States is sufficient to garrison the fortifica-
tions on the seacoast, and at the same time give protection
to the inhabitants residing in the States and Territories
bordering on the Indian frontier; if not, what force will,
in his opinion, be necessary to such protection.

On motion of Mr. BENSON,

The Senate took up for consideration the bill providing
for the increase of the corps of the United States Engineers,
and the same having been read the second time, consid-
ered as in Committee of the Whole, was, after a brief
explanation from Mr. BENSON, ordered to be engrossed
for a third reading.

On motion of Mr. WALL,

The Senate took up for consideration the bill providing
for the better organization of the Topographical Engineers,
and the same having been read the second time, consid-
ered as in Committee of the Whole, was, after a brief
explanation from Mr. WALL, ordered to be engrossed
for a third reading.

On motion of Mr. WHITE,

The resolution introduced by Mr. BENSON for appropriat-
ing the surplus revenue, to objects of permanent national
defense, was taken up for consideration.

Mr. SOUTHARD addressed the Senate at length, in oppo-
sition to the resolution, and continued speaking until after
three o'clock, when without concluding, he gave way to
Mr. DAVIS, on whose motion, the Senate adjourned.

Mr. BENSON's resolution on the subject of the appropri-
ation of the surplus revenue was taken up as the unfinished
business; and

Mr. SOUTHWARD continued his remarks begun yesterday
in opposition to the resolution, and after he concluded, a
few remarks were made by Mr. LEIGH and Mr. HUBBARD,
when on motion of Mr. WHITE, the Senate went into the
committee of the whole on Executive business; after which the
Senate adjourned.

WEDNESDAY, Jan. 27.

A message arrived from the House of Representa-
tives, from Mr. FRANKLIN, their Clerk, stating that the House
had passed a bill making an additional appropriation to
repress hostilities commenced by the Seminoles, and asking
the concurrence of the Senate thereon.

On motion of Mr. WARD, the bill was read the first
time and referred to the Committee on Finance.

Mr. LINN presented the petition of sundry ship-owners
and masters of vessels navigating Lake Michigan, praying

that an appropriation may be made for the building of a
light house at the mouth of the Grand River of Lake Michigan, which was referred to
the Committee on Commerce.

Mr. LINN also presented the petition of Brevet Major
W. M. HOWE, which was referred to the Committee on
Military Affairs.

Mr. YELER presented the petition of Abraham Van Biber,
administrator of Isaac Garrettson, deceased, praying
that the funds may be passed for the settlement of the aca-
tounts of the deceased: referred to the Committee on Na-
val Affairs.

Mr. NAEDAN, from the Select Committee to which had
been referred the memorial of Dr. Boyd Reiley, reported a
bill to allow him ten thousand dollars for his improvement
for the application of steam to the human body, in the hospitals of the United States; which was read
and ordered to a second reading.

Mr. GOODWIN, from the Committee on Revolutionary
Claims, reported a bill providing for the payment of a
company of Vermont militia, who served at the battle of
Plattsburg; also a bill to increase the salary of the principal
clerk in the office of the General Land Office; which
were severally read and ordered to a second reading.

Mr. Linn submitted the following resolution:

Resolved, That the Committee on Indian Affairs be in-
structed to inquire into the expediency of extinguishing
the title to the lands lying north of the Wisconsin,
and the right to the Iowa river in Des Moines county, all
in Michigan Territory.

Mr. WEBSTER, from the Committee on Finance, which
had been referred the bill that came this morning from the
House of Representatives, for additional appropriations to
repress hostili-
ties commenced by the Seminoles, reported the same with-
out amendment, and expressed the hope that the bill would,
by general consent, be carried through its different stages,
and passed by the Senate.

After a few remarks by Messrs. CLAY, WEBSTER, WHITE
and BENSON, the bill was read the third time and passed.

The Senate then proceeded to the special order, which
was Mr. GURNEY's resolution for the appropriation of the
surplus revenue to objects of national defense.

Mr. WHITE, addressed the Senate for a short time.

On motion of Mr. GURNEY, the Senate adjourned.

THURSDAY, Jan. 28.

The CHAIR communicated a letter from the Chief En-
sign, enclosing a report of the Chief Engineer, on the sub-
ject of the removal of the obstructions in the Ohio river,
below Shippingsport, made in compliance with the resolu-
tion of the Senate of the 31st instant; also a report from
the same officer, on the subject of constructing a mole near
Cape Henlopen, for the protection of the Delaware break-
water, made in answer to a resolution of the Senate.

Mr. McKee presented the memorial of the citizens of
Philadelphia, yrating forth the propriety of erecting piers
in the river Delaware, at or near the mouth of the
Delaware and Chesapeake Canal, and praying Cong-
gress to make an appropriation to that object; which was
referred to the Select Committee on the Navy.
ARMY AND NAVY CHRONICLE.

PASSENGERS ARRIVED.

MILITIA AFFAIRS.

Governor Everett, of Massachusetts, has appointed the following gentlemen as his Aids de Camp:

Governor Veazey, of Maryland, has commissioned Thomas G. Pratt, Henry Page, William A. Dunlap, and Jos. H. Nicholson, Esquires, his aids, each with the rank of Colonel.

Jacob Falcon, of Warren County; Michael Hoke, of Lincoln; William G. Bryan, of Craven; and George Little, of Wake; have been appointed Aides-de-Camp to his Excellency Governor Spaight, of North Carolina, with the rank of Colonel.

Col. John Sloan was elected, on the 29th ult., a Brigadier General of Va. Militia, in the place of the late Gen. McCoy.

DEATHS.

In New York, on the 6th inst., Lieut. JOHN T. JENKINS, of the Navy, aged 59.

In Gosport, Va., on the 31st Jan. JOHN WOODS, Boatswain U. S. Navy.

In New Orleans, on the 19th ult., Mr. WM. HENRY HARFORD, late Lieut. in the U. S. Army.

RESOLUTION authorising the President to furnish rations to certain inhabitants of Florida.

Be it resolved by the Senate and House of Representatives of the United States of America, in Congress assembled, That the President of the United States be authorised to cause rations to be delivered from the public stores to the unfortunate sufferers who are unable to provide for themselves, and who have been driven from their homes by Indian depredations in Florida, until they can be re-established in their possessions, or so long as the President may consider it necessary.

JAMES K. POLK,
Speaker of the House of Representatives.
M. VAN BUREN,
Vice President of the United States and President of the Senate.

APPROVED Feb. 1st, 1836.

ANDREW JACKSOn.

REGULATIONS.

Prescribing the mode in which the Rations shall be issued under the above Resolution.

1st. Rations under the above Resolution may be issued at all places in Florida, where public provisions are collected, and where there is an issuing officer of the Subsistence Department. And the Commissary General of Subsistence will also take measures for such issues at a few other important points, if it can be found necessary, where stores are not already collected.

2d. The issues will be as follows:

To each white person of the age of fourteen years and upwards, a full army ration.

To each white person under the age of fourteen years, one half of an army ration.

To each colored person, slave or free, where the owner of such slave is unable to procure provisions for him, of the age of fourteen years and upwards, a full ration of bread, meat, and salt.

Provided, that such colored persons as are invalids, and to mothers with suckling infants, army rations of coffee and sugar may be issued.

3d. Persons claiming the benefit of these issues will present themselves to the commanding officer of the post, and establish to his satisfaction, that they are unfortunate sufferers, who are unable to provide for themselves, and who have been driven from their homes by the Indian depredations in Florida. The inability to provide subsistence will not depend altogether on the amount of the property of the applicant, or his ability to support himself by labor, though a regard must be had to these points: because, from the state of affairs in Florida, there may not be an adequate supply of provisions in private hands,—therefore the means of subsistence may not be within the reach of any of these persons thus driven from their homes, whatever may be their pecuniary condition. It is required, however, that the issues shall be made to all, who bring themselves within the resolution; but the commanding officer must be satisfied of the scarcity of provisions, and of the inability of the inhabitants to procure them. As he will also take care, that in all cases where provisions are issued to these sufferers, on account of there not being an adequate supply in the country, and not on account of a want of reasonable means to purchase them, the issue be stopped as soon as the market is supplied.

To others, with such means of purchasing, the issues will be continued, until they can be re-established in their possessions—provided, however, that such persons return to their possessions as soon as the state of affairs in the country will permit them.

The Commanding Officer will in all cases satisfy himself of the justice of the application. And he will cause all persons, claiming rations, to appear before himself, or before

ARMY.

Feb. 9—2d Lt. F. H. Smith, 1st. Arty, ordered to the Pikeville Arsenal, for temporary duty in the Ordnance Department.

1st Lt. J. Semigney, 6th Infy. assigned to temporary duty in the Subsistence Department, in Florida.

NAVAL.

The brigantine Potomac and ship John Adams were at Lichten on the 3d Jan.—all well.

The ship Vandalia, Captain Webb, sailed from Pensacola on the 1st, for Tampa Bay.

The St. Louis, Captain Rousseau, arrived at Pensacola, on the 21st, from Key West, and sailed again on the 2d to resume the Constellation.

MARINE CORPS.

CHARGES IN THE ROSTER SINCE 1ST JANUARY, 1836.

1st Lieut. Horatio N. Crab, waiting orders, (Philadelphia.)

3d Lieut. Benjamin E. Brooke, detached from Philadelphia post, and on leave of absence.

4th Lieut. Louis F. Whitney, Head Quarters, Washington, D. C.

MARRIAGES.

In Baltimore, on the 2d inst., Lieut. J. H. LITTLE, of the U. S. Navy, to Miss MARY ANN, daughter of Dr. Chapman.

In New Orleans, on the 28th Jan., Major R. B. MASON, of the U. S. Army, to Miss MARGARET HUNTER, of Georgia.
some person, to be appointed by him for that purpose, and have their names, ages, sex, color, and condition entered, and a list of the numbers in the family by family, with the designation of where their possessions are, and to what places they were driven. The issues may be made for a term not exceeding two weeks. But where the Commanding Officer has reason to think that, from improvidence or other causes, issues for that time would be longer than necessary, and that the provisions would be wasted, or improperly applied, he is authorised, in such cases, to reduce the term, as he may think necessary, or to discontinue to draw for a longer time, whose habits will ensure the proper consumption of the provisions. And whenever any provisions thus issued are disposed of in any other way than their consumption by the persons to whom they are issued, and if such waste will thereafter cease to draw rations from the public stores.

All changes must be noticed upon the roll, whether of persons leaving the place, or of persons arriving thereat. And such rolls will be prepared at the end of every month, so long as those issues continue. No issues will be made, except at the place where the applicant resides, in order to prevent persons from drawing double rations at the same time. And such persons will therefore cease to draw rations from the public stores.

All changes must be noticed upon the roll, whether of persons leaving the place, or of persons arriving thereat. And such rolls will be prepared at the end of every month, so long as those issues continue. No issues will be made, except at the place where the applicant resides, in order to prevent persons from drawing double rations at the same time. And such persons will therefore cease to draw rations from the public stores.

Provision returns will be drawn for each family, stating the number of the family, and the number of persons, agreeably to the several designations before mentioned, and stating also the number of days for which the provisions are to be issued, together with the commencement and close thereof; and the several quantities of each description to be issued.

Persons having no families will each receive a provision return. Those provision returns will be drawn in the usual manner, agreeable to the issuing Commissary, and the issues will be certified by the Commanding Officer, and agreeably to the army regulations; which abstracts, together with the rolls of the applicants, will be transmitted to the Commissary General's office, and upon these the accounts will be adjusted.

4th. At those places where there are no military posts, and where the Commissary General may find it necessary to make issues, the Commanding Officer will, in addition to the usual instructions to stations, take the proper steps to perform the duties herein prescribed to the commanding officer.

5th. These issues will only be continued while the sufferers are compelled to remain from their homes; and for such time as their return home, or their recovery from the effects of the disease, or for some other cause, procuring in time for their return home, but without the means of procuring provisions for the sustenance of themselves and families.

With respect to the issues, after the sufferers are re-established in their possessions, the following rules will govern:

1. Under no circumstances will provisions be issued to persons having property, sufficient to make purchases, or whose labor will enable them to procure provisions, after which they may go to procure provisions for the sustenance of themselves and families.

2. When the country shall possess the necessary supplies, the continuance of the issues must depend upon the inability of the suffers to procure the necessary supplies, and reference to the property and capacity to support themselves by their labor.

3. Persons not able as above described to procure provisions, will receive them from the public stores after their return home, while this inability continues; but under no circumstances will provisions be issued to such persons for a longer term than one month after their return home, nor to any person for more than one month after the termination of Indian hostilities.

4. Persons receiving the benefit of these issues after their return to their residence, must be enrolled for that purpose at the most convenient place where the issues are made. And they must receive the provisions, and transport them to their own expense, to the place where the issues are wanted; and, whenever required by the commanding officer, and he will require the same when he has first cause to believe that any such person is able to procure the necessary supplies for himself. The number must be presented to him for a comparison with the rolls; or they will procure a certificate from a Justice of the Peace, certifying the number, condition, &c. of their families, which will be received by the commanding officer instead of an enrollment.

5. The officers to whom these duties are entrusted, will take all proper precautions to check any abuse or fraud that may be committed; and if any such abuse shall be discovered, the parties will be reported, from time to time, to the Commissary General of Subsistence for the operation of the system, and whether in their opinion, any other checks are necessary.

7. A separate account will be kept in the Commissary General's Office, of the issues under the above Resolution, and of the expenses in relation thereto. And the Commissary General will make the necessary arrangements for giving effect to the above instructions, and also for providing such means as may be requisite.

8. The general supervisory authority over this subject is hereby entrust to Major General Scott; and should he find that the object of Congress is not accomplished by the operation of these regulations, or that abuses are practised, not herein provided for, he is empowered to suspend or modify the regulations, and to provide for such others as he may see fit, reporting his proceedings, to the President, whenever he shall think it expedient. Recommended to the consideration of the President.

LEWIS CASS,
Secretary of War.

ANDREW JACKSON.

WAR DEPARTMENT, Feb. 4, 1836.

CHAIN CABLE IRON.

PROPOSALS, sealed, and endorsed "Proposals for Chain Cable Iron," will be received at this office until three o'clock, P. M. of the fifteenth day of February next, for providing and delivering at the Navy Yard, Washington D. C., the following quantities and descriptions of CHAIN CABLE IRON, viz: 18,380 links of 2-1/8 inches diameter, 26 inches each, in length.

20,530 links 1-15-16 inches diameter, 23 inches each, in length.

394 end links, 2-1/4 inches diameter, 27 inches each, in length.

394 end links, 2-1-16 inches diameter, 25 inches each, in length.

8 Anchor Shackles—126 Connecting Shackle—36 Swivel Pieces—18 Box Pieces for the two and an eight inch Chain Cables.

18 Anchor Shackles—126 Connecting Shackles—36 Swivel Pieces—18 Box Pieces for the one and fifteen-sixteenth inches Chain Cables.

27 feet, of 4-1 by 3-3/4 inches oval, Pin Iron, in lengths of 90 do.

12 do. 3-1/4 by 1 do. no. do. do. do. do. do. do. do. do. do. do. 6 feet.

12 do. 3 by 1-1/2 do. do. do. do. do. do. do. do. do. do. do. do. do. do. 6 feet.

Mallets and tongs, showing the shapes and dimensions of the iron required for Shackles, Swivels, Boxes, and Pin Iron, will be furnished, upon application to the commanding officer of the Navy Yard, Washington. All the said iron must be of American manufacture, without any admixture of foreign steel, or be the best quality manufactured from hammered bar iron, to be cut, filed, and rolled to about two inches in diameter, then cut, filed, and rolled again to the required size; satisfactory proof of all which must be given by the contractor to the said commanding officer. The iron required for Shackles, Swivels, and Box Pieces, and the oval Pin Iron, must be hardened to the respective shapes and sizes or dimensions.

Stamps, and iron punch, including all raw and forged ends, and all other defects, and must be delivered in straight lengths. On delivery, it will be inspected, tested, and proved, under the instructions of the commanding officer of the Navy Yard, Washington, to determine whether it is of proper quality, and corresponds in all other respects to the terms, stipulations, and conditions of the contract to be made.

One-third of each quantity of the said chain cable iron must be delivered on or before the tenth day of April next, one-third on or before the first day of June next, and the remainder on or before the fifteenth day of July next.

The payment thereon will be withheld from the amount of all payments, on account of the contract to be made, as collateral security, in addition to a bond, in the amount of one-third of the contract, to be given to secure its performance; and will not, in any event, be paid, unless the contract shall be complied with in all respects.

Jan. 26-31
ARMY AND NAVY CHRONICLE.

Vol. II.—No. 7.] WASHINGTON, THURSDAY, FEBRUARY 18, 1836. [Whole No. 59.

SURVEY OF THE COAST.

THIRD REPORT OF MR. HASSLER.

Report of F. R. Hassler, as Superintendent of the Survey of the Coast, upon the progress of that work from November, 1834, until May, 1835.

It is proper that every spring and fall a regular report shall be made upon the works that have been executed since the last report, the state in which they are at the time, and the prospects or plans for the further prosecution or the measures to be taken; such as to make a full series of public documents upon the leading facts, to be laid before Congress, and for the information of the public in general. I therefore herewith present the same, as follows:

1. It has been stated in my report of November last, that, and in some measure now, the base-line, which shall serve as foundation for the whole work, has been measured. The actual work during the winter just past was, therefore, to make all the necessary and very extensive calculations, which this work required by its nature, to deduce the final results, as I have given the idea of it in my last report. All such calculations must necessarily be made at least double, and then be revised by comparison; Captain Swift, of the Topographical Engineers, and midshipman John A. Dahlgren, of the Navy, assisted in turn to make these second calculations, which have just now been finished.

2. The peculiarly favorable locality of the base-line, besides the use of any one of its parts for the soundings of the stations at which it lies, gave the opportunity to ground upon the measurement that has been made, three determined distances of different lengths, to serve, the two smaller ones for the secondary triangulation of the neighborhood, and the ultimate whole line for the large main triangulation. These three distances resulted, after all reductions, as follows:

<table>
<thead>
<tr>
<th>Distance</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>East</td>
<td>2,815.00</td>
</tr>
<tr>
<td>West</td>
<td>2,817.00</td>
</tr>
<tr>
<td>North</td>
<td>2,815.00</td>
</tr>
</tbody>
</table>

3. With the last distance all the main triangles are now completed over again, as it is proper to do and the results will be used for the introduction of all the triangle points upon the map projections which will be given to the topographical surveyors and the sounding expeditions, to fill up, in the same manner as has been shown by the works presented last winter, but upon a much larger scale.

4. These results would have been obtained much earlier, if the difficulties of mere form, which have been thrown in the way of the general progress of the work, had not obliged me to lay my work so frequently aside for the convenience, to which these difficulties necessitated me to direct my attention.

5. The detail maps of the coast, the topography and soundings of Great South Bay of Long Island, by Lieutenants Godfrey and Mr. Renard, which have been executed during the about five weeks that it was possible to work at them last fall, comprehending a distance of up to and beyond the fourth station, have been executed by the assistants who have produced them are now again in the field, in continuation of their work. These maps are however, such as must be kept for the general stock of the records of the Coast Survey, of which they form the first beginning; they can therefore not be added to the report, as not absolutely due on hand as of the last month.

6. To me it devolves for the further execution of the topographical and the naval part of the work, that of the execution of the maps, Mr. Renard was here with me this winter, and made the projections of the individual sheets that are to be distributed to the different parties to be filled up by their work, when the triangle points have been inserted into them from the calculations. A map of assemblage is joined herewith, which shows as well the principles upon which such works are to be distributed and ordered, as the great quantity of work for which the triangulations hitherto made have produced the elements.

7. The number of sheets of maps presented by this assemblage shows evidently how much could have been fully and finally executed; they are to the number of twenty seven, and more are preparing by the secondary triangulations going on at this moment, which could have been all executed this year, if the funds had been disposable to carry on the work, as the proper progress and the best economy in its prosecution would have made desirable.

8. But having, with these views and the knowledge that the next appropriation would likely be made only during a time in the spring, I proceeded last winter upon the last appropriation about $15,000, to employ them this year in the fulfillment of these proper plans, and expected from the last Congress an appropriation of $40,000, according to my estimate given in, I calculated all my plans upon the means of $55,000, thus apparently disposable; the appropriation, however, being only $29,000, the amount of the vessel for the sounding expedition being laid upon the Coast Survey appropriation, to the amount of near $10,000, while before it had always been intended that these expenses should come out of the general navy appropriation, these circumstances reduced the funds upon which I had calculated, for about $29,000, below the necessary means, so that the funds remaining available are reduced below $34,000, which is insufficient for the intended aim, and must be made use of to the best advantage within its reach.

9. During the time that I was thus engaged here, partly with my assistants, Mr. Ferguson recalculated the latitudes, azimuths, and other mixed astronomical observations, and Mr. Blunt recalculated the triangulation which he had made, upon the results communicated to him, of the base-line stated above, between base west and 5,200 metre mark. They are now both again occupied at the continuation of their respective triangulations; Mr. Ferguson is at New Jersey, and Mr. Blunt upon the west part of Long Island.

10. I cannot omit to record it here, that the remainder of the appropriation stated in § 5 must now be necessarily stretched out, so as to defer the outfit of two years, namely, that of this whole year, and that of next spring, and therefore the works year, if their extent, that notwithstanding my actually executed preparations for the final mapping are great, the result possible to be presented will necessarily remain far behind what I had prepared for, and there will need the utmost indulgence and regard to the circumstances under which I labor, and which no exertions of mine, even great, can possibly overcome. I can only lament the disappointment of the public in general, in the expectations which I have observed that it had of this work, and my own, by the frustration of my hopes to answer these expectations. A later execution of these detail parts will become a great deal more expensive than they would have been if immediately after the reconnaissance for the projecting of a proper triangulation of that part of the country, and its junction with my executed triangulation near New York and its neighborhood.

11. The junction of the survey of the coast of Maryland with the Coast Survey, which has been sanctioned last winter, must necessarily now be added to this spring. The Legislature of Maryland has made this winter permanent arrangements for its execution; and Mr. Alexander, who is charged with that task, expects to be able to receive from me in Baltimore, and have him in Washington, his reconnaissance for the projecting of a proper triangulation of that part of the country, and its junction with my executed triangulation near New York and its neighborhood.

12. This work of the map of Maryland being set in
activity, and the state government paying the secondary triangulation and the topographical work, the Coast Survey will be made to proceed in two places, and thereby, it may be hoped, progress with so much more rapidly; but it is of course my task to attend to this junction and to all that I shall have here in the special work, but considerable length of time and money, by the frequent journeys for the replacement of the signals to which it necessitates; that certainty in our operations is very difficult to obtain under such uncertainty of the steadiness of our signals is evident by itself, and a remedy to it very desirable.

Washington City, May 8th, 1856.

Map joined to this Report.

Map of assemblage for the topographical and sounding parts within the triangulation executed before 1856.

From the Portland (Me.) Jeffersonian
MILITARY ACADEMY.

We have seen, with some degree of surprise, that the subject of a Military Academy at West Point has again been brought before the attention of Congress in a spirit of querulity and disfavor. We say surprise,—first,—because every investigation hitherto made, of its merits, its uses, and its administration, though often repeated, has been as often crowned with a triumphant verdict in its favor. And secondly, because every investigation of its cost or expense has been attended with the same sort of mistakes or faults in the conduct of its affairs, resort is still had, to the general aspersions that the Academy is but the nursery of aristocratical principles and prejudices and is conducted under influences of favoritism and partiality.

Let us examine this. What can, or may be alleged to the contrary, it has been fairly and we had hoped definitely proved, that cadets' warrants are distributed amongst the applicants with an anxious and scrupulous eye to impartiality;—or, if the weight of circumstances were ever allowed to turn the scale, that it was in favor of the claims of the poor in preference to those of the rich. To substantiate this fact, it will only be necessary to consult the records of appointments made,—or even to survey the actual circumstances of those who, as graduates of the Military Academy, now hold commissions in the Army. We ask no qualification of this general assertion, as to its applying to any one of those who at present hold the rank of major or in the War Department, but such as may be due to the general imperfection of human nature. The Secretary of War can hardly be supposed to possess the attributes of ubiquity or omniscience,—and without these, he would have no power to discern the true merits of every application that might be made to him,—to judge of the qualifications of every candidate,—or so to discriminate between the claims of rival aspirants,—both equally unknown to him,—as always to decide in favor of justice and of superior desert. Respect must consequently be had to the testimony of other persons, who, being acquainted with the candidates, are also, themselves known to the government, which are Members of the House. Their recommendations are mostly received as impartial testimony to the point,—and perhaps better witnesses or a more appropriate influence, the nature of the case would not allow. If there is room still left here for the undue exercise of political bias or aristocratical associations, be it so:—But as the perishability of human institutions is still an unsolved problem, it rests with the complainers to suggest the remedy,—to point out that other possible plan which shall guide the War Department to a safer rule of judgment in the distribution of appointments.

But even admitting the existence of abuses in the mode of appointing Cadets, in what way are we to be exempt from equal abuses in the appointment of Lieutenants or other grades, if made directly from the ranks of civil life?—besides,—with what measure of justice or propriety is the administration of the West Point Academy made answerable for the obliquities of the administration of a Department at Washington.
The Constitution of the Military Academy is peculiarly designed to foster and secure that very spirit of republican equality which its assailants presume to be endangered by it. In all the rules and usages of the institution, whether embraced in the scope of academic discipline or bearing upon the social relations of the Cadets, the same spirit is practically exemplified.—With this while, it is characteristic of the Academy, he takes his equal stand with others of his class, and no question is asked of his family or his fortune. He treads the academic plain on terms of equal dignity with his young peers from every quarter of the Union,—forms acquainances or friendships among them as chance or taste may dictate,—and not until after a sufficient exhibition of their talents or attainments, when the academic Roll shall exhibit the scale of intellectual gradation, is there the least index to signify the superiority of one over another. The Professors being paid from other sources than the pockets of their pupils, they are so far forth left free from all temptations to compromise the integrity of their trust,—either by a ruinous indulgence on the one hand, or a vexatious opposition on the other. It is difficult to conceive of an institution for the education of youth, framed upon a purer model of equity, both in the distribution of its academic influences and in the social condition of its members. It is in short, the realized Beaux-Arts, from whose specific level, and to develop itself to the greatest advantage.

The history of the Academy will show how small has been the agency of political or official considerations, in the dispensation of its favors;—how often the sons of men distinguished for wealth, office, or popularity, have been dismissed or degraded, whenever by their misconduct or dullness, they have been found to deserve it. And on the other hand, how great has been the number of the poor and unassuming, who have attained to all the honors and rewards which were due to their merits alone.

But here, we apprehend, is the great difficulty: "Hinc flamma!"—"The very properties we are extolling as among the most excellent features of the Military Academy, we, fear, the chief, if not the only causes of hostility against it. To such exhibitions of stern and inflexible justice as we have described, some individuals have very naturally fallen victims. The pains of wounded vanity are hard to cure:—and men may be found, who, to avenge their mortified self-love, would gladly work the ruin of any institution, if, in its wreck, they could bury the remembrance of their discomfiture. From whencesoever the opposition may spring, ten thousand to one it is from this cause alone.

And what is the substitute proposed by those who desire the abolition of the Military Academy? What plan have they devised to procure and preserve amongst the military and scientific knowledge of which the West Point School is confessedly possessed, and the Repository? What other source, from whence to supply our Army with educated officers;—men, endowed, as it is indispensable they should be, with those professional attainments necessary to an honorable fulfillment of their functions?—Nothing. They would simply appoint citizens to the army, with little or no effort, to satisfy the enlightenment on the subject of their vocation. They would reduce the scale of professional requirement, but gain not one point of exemption or relief from those very corruptions of which they now affect to complain. An army so composed, might form an excellent "Pretorium band," nurtured under influence and reared by the Government, —-but far useless to the country, or consistent with the permanency of our modest republican institutions, let the reflecting of all parties judge.

We have, in this country, but few institutions of a purely national character,—fewer perhaps than the national interests may require. Among these is the Arsenal, a general hospital for decayed veterans,—these, all, are objects of public necessity;—yet from that jealously observance of Constitutional restraint

which forms a characteristic and salutary feature in our Congressional institution, (but occasionally carried out to an extreme of fastidiousness and rigor,) obstacles are apt to arise against which, even the most salutary propositions, sustained by the most reasonable arguments, are sometimes urged in vain. Knowing, therefore, the difficulty of building up, let us beware how we shape ourselves in the facile province of pulling down. Druticiency and weakness are not apt to exercise of infantile strength. Experience and reason are required to appreciate the value of existing creations,—and a master's skill superadded to these,—to bring them into being. The Military Academy had its origin in times, and under the sanction of names, which will not allure themselves to compete with the system. It has not been without impediments to its growth, but it has already shed abroad throughout the land some precious fruits. In the absence of a standing army, it is an Institution altogether essential to the ultimate purposes of National defence and dignity. In its moral and intellectual efficacy, as an instrument of military energy, it is worth an Army of 40,000 men,—without the peril or the cost of this.

Our foreign relations are not likely to become less complex by the increase of our commerce, or the complacent sense of our own potency;—let us then beware, in our vehement love for the name of a republican government, how we compare that which may be only essential to our republican existence.

V.

DOMESTIC INTELLIGENCE.

From the Charleston Courier.

THE INDIAN WAR.

St. Augustine, Jan. 31.

"We are going on quietly with our camp duty, without interruption from the Indians. Captain Porter, the officer in command at this post, received a note last night from Gen. Clinch. Gen. C. is at present at Fort Drummond, and is anxiously waiting for troops in order to take the field. He has left it at the discretion of Capt. Porter, either to join him now, or, if he thinks it more prudent, to remain for the present where he is.

"Powell, or Oseola, as he is called, had no doubt a regular plan of operations. He is, from all accounts, a superior man possessing great personal courage, and capable of combining and arranging a regular and comprehensive campaign. His plan evidently was to cut off Dade's detachment of one hundred men, to attack and defeat Clinch, and then to make a sudden descent upon Picolata and St. Augustine, and lay them both in ashes. In the first step he succeeded, but the sharp repulse he received from Clinch, has probably deranged his plans. He cannot advance for fear Clinch will fall upon his towns, particularly as he would place himself between two fires—Clinch on the one side with re-inforcements he will certainly receive, and on the other, the forces now about to be concentrated at and around St. Augustine. His object now must be, to cut off detached parties with provisions, and to prevent all communication and junction."

Extract of a letter dated Feb. 2.

"Powell wrote a letter of defiance to Gen. Clinch, about ten days since, stating that if the General would only give him a few days for defence, he would be prepared to carry out his designs. The letter was written in a style very concise, and quite characteristic of its daring and intrepid author. I presume it has been published, ere this, in the Charleston papers, but lest you should not have seen it, I will here give you the concluding part, as near as I can recollect.

"It says:—You have guns, and I have we—you have powder and lead, and I have we—you have men, and I have we—your men will fight, and so will ours, till the last drop of the Seminole's blood has moistened the dust of his hunting ground."
Florida Volunteers.—For the last two days our city has been all commotion. Drums and fife, and parading by companies are the order of the day. During that time nearly seven hundred and fifty men have volunteered their services to go to the defence of Florida; and taken together, it is hardly possible that a better set of looking fellows could be found. The company formed by Captain A. F. Burke, is particularly numerous and well uniformed and equipped, and composed of good looking men, mostly well known in this city, many of them of the best families. The company commanded by Major Marks, from Felicianas, is however the finest of the whole corps. It was formed in less than twenty-four hours, of Planters and others at St. Francisville, and the adjacent country, and is composed of the very best society the county can boast, from the same neighborhood, many of them wealthy, one particularly makes 400 bales of cotton annually, and the officers are men skilled in the use of arms, enjoying the full confidence of their soldiers.

The whole corps is to be commanded by Gen. Pernfor F. Smith. It was an inspiring sight to witness them yesterday, when mustered to receive their arms and equipments; they appeared all to be animated with the warmest feelings of patriotism and military enthusiasm, and gave a cheering promise of what might be expected of them in the event of a war with France. The first detachment composed of a part of the U. S. troops, and a few volunteers under the command of Col. Foster, left the barracks to embark at one o'clock, the remainder did not march until the evening. They embarked on board the steamers Merchant and Watchman. Col. Twiggs with another detachment of U. S. troops and re- mained of the volunteers will leave to-morrow in the David Brown.

Success and good health attend them, and a happy return to their homes.—True American.

From the Baltimore American, Feb. 11.

EXTRAORDINARY PERFORMANCE.—The Iceboat Relief returned to this city yesterday afternoon. From her report it will be seen that she towed the brig Arctic, with the United States' Troops on board, from Annapolis to the mouth of the Potomac river. We learn that in the performance of this trip, she encountered ice in many places piled to the thickness of several feet, through which she made her way only by the exercise of the most determined perseverance on the part of her incumbent commander, his officers and crew. When she left the brig she was entirely beyond the region of ice, and was pursuing her way under full sail.

Captain Weems deserves the highest praise for his unwearied exertions during the late very cold weather, in surmounting obstacles which would have had cause from a most encumbered situation, in the Chesapeake Bay on the 8th February, and to the Community of Baltimore, their estimation of the efficiency of the Iceboat Relief, by which means Captain Weems succeeded in cutting the Transport through 60 miles of ice. The iceboat makes this kind of service of which varied from two to three feet in thickness.

In testimony of their admiration of his intrepid bearing throughout, the Committee recommend, that a Silver Cup be presented to Capt. Weems, with an inscription, expressive of their favorable sentiments.

BRIG ARCTIC, 2
Chesapeake Bay, Feb. 8th, 1856.

SIR:—In accordance with a resolution of the officers on board this transport under the command of Maj. Wm. Gates, we the committee on their behalf have or- dered this cup to be made by Mr. Kirk of Baltimore st. Baltimore, of which they ask your acceptance.

We tender for ourselves and brother officers this slight testimonial with the greatest pleasure and offer our best wishes for your further success.

J. DIMICK, Capt. 1st. Artillery,
A. HERBERT, Lieut. 1st. do.
MONTGOMERY BLAIR,
Lieut. 2nd. do.

From the N. Y. Com. Advertiser.

DEATH OF COL. Loomis.—We have a letter from Otsego county, announcing the death, last week, at Cherry Valley, of a venerable man many years a resident of this city, greatly esteemed. We refer to Colonel LeBeau Loomis, who removed to Springfield, in Otsego, some five or six years ago. Colonel Loomis was a native of Colchester, Connecticut. At the age of sixteen years he entered the revolutionary army, and served until the close of that memorable contest. He was an adjutant at the battle of Monmouth, and served with great credit. He was courteous in his manners, exemplary in his Christian character, and beloved for his social qualities. Since the above was prepared we have received the following order.

N. Y. STATE SOCIETY OF THE CINCINNATI,
New York, January 21, 1836.

General Order.—The President is again called upon to announce to the Society the death of another of their distinguished Revolutionary companions. Colonel LeBeau Loomis departed this life at Cherry Valley, in Otsego county, in this state, on the 10th inst., in the eightieth year of his age.

Col. Loomis was a volunteer at the battle of Bunker Hill, near Boston, on the 17th June, 1775, being then about 17 years of age. He subsequently entered the continental army as a lieutenant, in Col. Proctor's regiment of that line of army; and was in the battle of the Brandywine in September, 1777— in the battle of Germantown in the month of October of the same year; after which he was appointed Adjutant of Col. Swift's regiment, with the rank of Lieutenant, and was with that rank in the battle of Monmouth on the 26th June, 1778.

Adjutant Loomis was a gallant and brave officer, and universally respected in the army, then commanded by General Washington, in which he was serving, and continued in service until the close of the revolutionary war.

After the war, Adjutant Loomis settled in the city of New York, and soon took an active part in the organization of the State Militia, which was attached to the continental army, and were embodied, in order to preserve the institutions which had been formed by the war of the revolution; he was first Major, and afterwards Colonel of

He retired from military duty about the year 1799, possess- ing the highest esteem of his associates in arms, and the respect of the public. About eight years since he removed to Cherry Valley, where he died January 19th last.

The members of the Society will wear the usual badge of mourning for thirty days, as a mark of respect to their deceased friend and companion.

By order of
Major Gen. MORGAN LEWIS, Pres't.
CHARLES GRAHAM, Secretary.

DEATH OF GENERAL NORTH.—It was not until past 12 o'clock to-day, that we were apprised by a note—(without particulars,) of the death of one of the last
ARMY AND NAVY CHRONICLE.

DOMESTIC MISCELLANY.

From the Richmond Enquirer.

TOPOGRAPHICAL CORPS.—An old officer has been gratified to see that a movement has been made in Congress to place the Topographical Corps of Engineers on an eligible and more useful footing; and, that both the President and Secretary of War approved the plan of doing so, as suggested by the intelligent head of that Corps.

Our country is young; but every rising sun beams upon new developments of her hidden resources, both moral and physical. Who can foretell the proud and splendid destiny that awaits her, if we can only prevent the rancour of party spirit, and the madness of faction, from bursting the bonds that bind American strength, overturning it with the only free institutions, on earth! Let us move onward one other generation on the flood-tide of Union, and Peace, and Prosperity, and we rise upon the plane of the first nations on earth—free and unconquerable.

But, in the meantime, we must collect the knowledge of our physical condition and resources. During the last war, those of us who were in the field and upon the ocean, had but a very imperfect knowledge, either of the face of the country, or of the numerous bays and rivers and estuaries of the Atlantic or lake frontier. This has been a consequence of the dissolution, and, in some instances, defeat. It was out of these circumstances that the present able Corps of Topographical Engineers grew up. For some years they have been ardently engaged in surveying the land and measuring the waters of the United States, and by the use of science and industry, have essentially contributed to make known some of the wonderful advantages of our favoured country. They have visited many of our noble rivers and fathomed and explained the hidden mysteries of their navigation. On the land, they have exhibited many of the strong holds and defences of two long lines of our frontiers. They have marked out the military roads, and have accomplished charted surveys with national views, they have surveyed and located the most facile routes for canals and rail roads, so essential to our union, happiness, and thrift. All these works have been performed under orders from the Federal Executive, and have, comparatively, cost the people nothing. The expense of the whole Corps is but a trifling item; it is less than a great, compared with the advantages derived from such science and skill as that body of Engineers is known to possess. They have only made a favorable commencement in the career of their usefulness. They will have much to do for the next quarter of a century. I have read the plan and sensible report of Col. Abert, in which, as the head of the Corps, he asks nothing but a military organization of it; which, if made, is to cost less than the present expense of it; and it seems to me, that Congress cannot hesitate a moment on the subject.

From the silent manner in which the bill for this purpose moves, simultaneously, in both branches of Congress, I do not anticipate any objections to it. All that I say is wholly disinterested. I served, during the whole of the last war, at the head of the most important staff departments, both on lake and on the Atlantic frontiers; and in both extremes of the Union, I saw enough to satisfy me of the most deplorable want of Topographical information. And it is the memory of the previous necessities of the country that keeps me alive, in my quiet retirement, to whatever promises good to my country.
ARMY AND NAVY CHRONICLE.

either in peace or in war. The Topographical Corps
serve us most usefully in either situation—and it is, there-
fore, that much interest is taken in its behalf by
AN OLD OFFICER.

ICE IN THE POLAR SEAS.

We lately mentioned that an expedition was about to be
fitted out from Hull in England, under the command of
Capt. John Clark Ross, for the purpose of proceeding to
the coast of Greenland, to the relief of a number of Bri-
tish Whalers, who, there is abundant reason to believe,
are enveloped by the closing ice in those polar regions.
These vessels may, under certain circumstances, encounter
impenetrable barriers, and in a climate so intensely
cold, with merely a distant prospect of ever again be-
holding their home, their friends, or their native coun-
try, must indeed be a melancholy one—and the attempt
to rescue them from their perilous situation, is a gallant
enterprise, which will command the best wishes of the
civilized world for its success.

The navigation of the Greenland seas, is at all times
a dangerous undertaking, in consequence of the im-
mensely numbers and vast magnitude of the fields of ice
in those regions—which from the mast-head present an
appearance—sometimes extending for many
miles without exhibiting to the view any opening or
terrace. These ice fields are sometimes set in motion by
winds and currents, which act upon them according to
their size and depth in the water. It is often the case
that currents are strongest near the surface of the water
—and which is of moderate thickness will be carri-
aged along at the rate of three or four knots, while ice
which is immensely thick or heavy, will be affected in
a much less degree.

It will therefore be seen that while high winds or
strong currents prevail, the ice cannot be drifted along
in a body. Partial separations and openings are con-
stantly occurring; and sometimes two or three ice
fields will seem to rush towards each other, as if mutu-
ally biding defiance, and meet with a tremendous shock.
Indeed it is difficult to conceive of a more grand or sub-
lime sight than the meeting of two of these enormous
bodies of ice, each weighing many millions of tons.
The smaller or weaker field is not infrequently crushed
into a thousand pieces, and sometimes they are both
much mutilated—perhaps completely broken up. All
intervening substances are of course crushed to atoms,
or buried in the ruins of the opposing fields. It is this
which adds to the dangers of the whale fishery. When
ships, which during storms or fog are continually sub-
ject to get involved in these immense masses of ice, which
are approaching each other, their destruc-
tion is inevitable. Sometimes they are crushed like an
egg-shell—sometimes they are forced beneath the sur-
face of the water, and sometimes they are fairly lifted
out of the water, and thrown upon the surface of the
ice. During some seasons, as many as fifteen or twenty
vessels have been crushed by this irresistible pressure.

It is as often the case that the commanders of vessels,
when involved in these dangers, cut with immense la-
bors corresponding docks in the field of ice, into which
they haul their vessels, and thus lie for a time in com-
parative safety, until the force of the wind or the cur-
rents make openings in the fields, through which the
ships may be extricated. It is, probably, an unlocked
for blockade of this description, which has occasioned
the protracted absence of the Greenland ships. If so,
Capt. Ross may be expected to relieve them from their
awkward and dangerous predicament.—Boston Journal.

REMARKABLE FACT.—In the last number of Silli-
man's Journal, in an article "On Currents in Water," it
is asserted that if a tub or vessel be filled with water,
and a hole made near the middle of the bottom to dis-
charge it, the water will acquire a rotary motion from
west to east, and so continued, making a point or two of
sun; and if means are used to produce an opposite mo-
tion upon withdrawing those means, the former direction
will be resumed. This cannot be the effect of chance,
but of natural laws, constantly operating.

From the St. Joseph's (Florida) Telegraph.

We have been favored with the inspection of several
English and Spanish maps of Florida within the last two
or three months.

We first noticed on a chart made in 1774, by T. Jef-
fries, Geographer to H. B. M. "FORT CREUCECOUR
demolished" on the shores of St. Joseph's Bay. By
the chart, the fort appears to have been situated on the N.
W. of a small creek, about a mile north of the town.
We have visited the spot for the purpose of ascertaining
the correctness of the chart, and in this respect, the ruins
of the fort are sufficiently discoverable. The chart states
the creek to be "fresh water," which also proves cor-
rect. From this chart it would seem, also, there was at
that time a natural water communication between St.
Joseph's Bay and the Apalachicola, which is stated as
"salt water." We do not doubt such communication
once existed from a branch of Bayou Lelant, now grown
into a swamp, and that it could not now be cleared out
if it should be considered expedient. A river is laid
down in the chart as the Calistoble river, which we are
inclined to think, is what is now called the Chipola.—
Cape St. Joseph is called Roebeck point. Crooked ri-
er, in the chart, is called Lockeckey, Duck's or Oke-
ckey's river. The Waculla, is called the Tapaloca. St.
Juan is the name of a place a short distance further up
the St. Marks, and a little higher up the same river, is noted
Aspalaga, located in modern times on the Apalachicola.
The river next below St. Marks, is called Ashley river,
on which is noted a village called Okone, and one called
Ayala. Next, southwardly, is a river called Okonoe
creek, Hatcha Hollowayggy, and St. Mathu. The Su-
wanee, is called in another chart, by the same author,
Leguazo. We have heretofore considered its proper
name to be the "Little St. John's," and that its present
name was an Indian corruption of the Spanish San Juan
or Juan, the name adopted for a small or back river to
designate little or lesser. This chart notices a little
sand key in the gulf, bearing from Cape St. Blas, S. 15
M. E. thirty miles, as having been seen by the Prov-
idence schooner, Capain G. Ross, while in 100 fathoms
water.

This chart gives 9 feet water on the middle ground at
the entrance of St. Joseph's Bay, 80 feet in the North-
ern Channel and 84 feet to the south; and from 24 to 48 feet
water in the Bay. Inch Keith or Black's Island, is called upon it Turtle Island.

We are informed the history of the destruction of Fort
Creucecour is one of fearful character. It is said the
bones of three hundred Frenchmen are entombed be-
neath what now appears to be a mound of sand; but
for two hundred years since, was a forested region,
on the taking of which by the Spanish, after a gallant
defence, every soul was put to the sword.

A Map, made by John Senex in 1719, lays down the
route of Hernando Soto through Florida in 1539 and
1540. It appears that he landed at the "Bay of the
Holy Ghost," [Esplirito Santo] on the Peninsula, and
proceeded up the same to the Tallahasssee country, at a
place called the head of a river, or river head of rivers.
At about the place where Tallahassee is situ-
ated, he turned his course northwardly, and marched di-
rectly to the place on which Charleston, S. C, is now
built. A note on the map at the mouth of the Ockle-
ckney, states, "St. Mary de Apalache destroyed by the
Albans, Dec. 1705." We have heard of the ruins of an
old fort having been discovered by Capt. Cotts. The river
Waculla is called Tatalcalza; St. Marks, "Toushachee."

An Indian village, said to belong to the "Tocatopa
wanderers" is noted at the head of the "Vasia," now
called Wealiss. The Savannah river, Ga. is called in
this, the river "May." We notice in another ancient
map the river St. Marks is called the "Samabahachi-
chee."

We invite those who can furnish any authentic data
of the early history of Florida, to use our columns as
the medium of communication to the public of all infor-
mation on this interesting subject.
FOREIGN MISCELLANY.

FROM PAPERS RECEIVED AT THIS OFFICE.

The North Cape. This Cape forms the most northerly point of the continent of Europe, and may be regarded as one of the sublimest wonders of nature. It is situated within the arctic circle, in 71 degrees 10 minutes north latitude. It has been accurately described by a late voyager, from whose account the following particulars are extracted:

In approaching the Cape, a little before mid-night, its first appearance was to be a nearly equal height, until they terminated in a perpendicular peak; but, on a nearer view, those within were found to be much higher than those of the extremo peak, or point. Their general appearance was highly picturesque. The sea, breaking against this immovable rampart, was dashed with violence, closed the bay, and admitted but a limited view of the ocean. To see as far as possible into the interior, our navigators climbed almost to the summit of the mountain, where a most singular landscape presented itself to the view. A lake in the foreground had an elevation of at least 99 feet above the level of the sea; and on the top of an adjacent, but less lofty mountain, was another lake. The view was terminated by peaked rocks, chequered by patches of snow.

At midnight the sun still remained several degrees above the horizon, and continued to ascend higher and higher till noon; when having again descended, it passed the north point of the horizon. This phenomenon, which is as extraordinary to the inhabitants of the torrid and temperate zones, as snow is to the inhabitants of the torrid zone, could not be viewed without a particular interest. Two months of continued day-light, during which space the sun never sets, seems like the sun in a new state of existence; while the effect on the inhabitants of these regions is singular. During the time the sun is perpetually above the horizon, they rise at ten in the morning, dine at five or six in the evening, and go to bed at one. But, during the winter season, when, from the beginning of January, the sun never rises, they sleep above half of the twenty-four hours, and employ the other half in sitting over the fire—all business being at an end, and a constant darkness prevailing.

The cause of this phenomenon, as it affects the northern and southern regions of the earth, may be readily understood. The sun always illuminates half the earth at once, and shines on every side 90 degrees from the place where it is vertical. When he is vertical over the equator, or equal distance from both poles, he shines as far as each pole—and this happens in spring and autumn. But as he declines to the north in summer, he shines beyond the north pole, and all the countries near that pole turn round in perpetual light; and the parts between the north pole and the equator an equal number of degrees, and those parts turn round in darkness. The effect is contrary at each pole in our winter—the sun then declining south of the equator.

About three miles from the North Cape lies Maso, the northernmost port of Norwegian Lapland. It is famed of a very fine bay, in which ships may winter with the greatest security.

Submarine Structures. The most imperfect of animals, scarcely possessed in fact of animal organization, or locomotion, have succeeded by force of numbers, and constant industry, during a succession of centuries, in constructing enormous edifices, in founding mountains, islands and continents.

Though some species of coral are found in all countries, they abound in the tropics and in regions near the equator. Those of the colder seas are the smallest and least solid. The great coral bank of New Holland is 1000 miles long, and its height, though as yet measured only in about twenty places, cannot be estimated at less than 1000 to 2000 feet: it forms a chain of mountains which occupies a space three times that of England, and is equal in height the mountains of Scotland. Such is the produc tion of a misshapen insect, imprisoned in a narrow cell, and which lives only for a few days.

Navigators are at present aware that the great Southern Ocean is studded with a great multitude of coral islands and submarine rocks of the same nature, which are rapidly being explored. The great coral polypus continues to increase and multiply; and there is no reason why this Archipelago, increasing with the progress of time, should not finally be consolidated into a single continent.

This progressive operation is visible in the Red Sea; this Sea becomes daily less navigable from the multiplication of these coral banks, and the day must come when one plain will unite the opposite banks of Egypt and Arabia.

Let us now notice how nature completes the work commenced by the coral polypus. After the silent and unnoticed labor of myriads of atomic architects, obeying the universal and immutable law, comes the sudden and instantaneous crisis which, by the racy of its action, seems to belong to the miraculous processes in which the Deity sometimes exhibits his power. The volcano and the earthquake complete the edifice of which the coral has laid the foundation, raise the mountain and sink the valley, and, in a word, construct the great hydraulic machine which is to assemble the clouds, to fertilize the earth, to give rise to the fountains and the rivers of the earth. All the earth is animated.

If, then, the coral insect has not been made in vain, volcanoes and earthquakes are not solely destined to destroy; and it is thus, that by means the most diverse a single object is attained.—French paper.

Haydn and the English Naval Captain. During his stay in London, a captain of the navy came to him one morning, and asked him to compose a march for some troops he had on board, offering him thirty guineas for his trouble; but requiring it to be done immediately, as the vessel was to sail next day for Calcutta. Haydn was at the time about to go down to the piano-forte, and the march was ready in a few hours. Feeling some scruple at getting his money so very easily, Haydn wrote two other marches, intending first to give the captain his choice, and then to make him a present of all the three as a return for his liberality.

Next morning the captain returned and asked for his march. "Here it is," said the composer. The captain asked to hear it on the piano-forte; and having done so, laid down the thirty guineas, pocketed the march, and walked away. Haydn tried to stop him, but in vain! the march was very good. "But I have written two others," cried Haydn, "which are better; hear them, and take the choice." The first was a march that would do, and the second was not a bad one at all; but the first was enough," answered the captain, pursuing his way down stairs. Haydn followed, crying out, "But I make you a present of them!" "I won't have them!" roared the seaman with a nautical asseveration, and bolted out at the street door. Haydn, determined not to be outdone, hast
tended to the Exchange, and discovering the name of the
ship's home port, sent the mail on board with a
polite note, which the captain, surmising its contents,
sent back unopened. Haydn tore the marches into a
thousand pieces, and never forgot this liberal English
humourist as long as he lived.—Hogarth's Musical
History.

THE ENGLISH AND RUSSIAN NAVIES.—On the 11th
ult., Lord Durham and suite dined with Admiral Laza-
ref, Commander-in-chief of the fleet, and of the ports
of the Black Sea, who had invited several of the prin-
cipal inhabitants and the chief naval officers at Nicho-
allia. The Admiral gave as toast, "The King of Eng-
land," and the American, "The Ambassador to the
Emporer of Russia." The first was accompanied with "God save
the King," sung by a chorus of vocal performers, and the
second by the Russian National Hymn. The Ambas-
daor rose again, and with the glass in his hand
spoke to the following effect in the French language:
"Let us drink this glass in honor of the Russian navy.
I wish it may attain the highest degree of perfection and
power. May a friendly relation always subsist between
it and the British fleet, and may they never meet, except
to assist each other in promoting the common advantage
and glory of both empires. To these wishes I add one
for the health of the Imperial Russian Navy." The Russians
must certainly have felt themselves highly flattered by
such a compliment from his lordship; that is, if they
could believe any Englishman sincere in wishing his own
country to lose the supremacy of the seas. Did Lord
Durham in reality feel what he is reported to have said,
he deserves to be shaven with an iron hoop, and subjec-
ted to all the horrors prepared for novices in crossing the
line. On the 12th, his lordship visited the Admiralty,
the Observatory, some ships in the roads, and, after din-
ing again with Admiral Lazareff, proceeded on his jour-
ney to Kicco.

Among the curiosities which are contained in the ar-
senal or Zarakosolato, at St. Petersburg, are several relics
of Napoleon, among which are eye-glasses used by him
at the battle of Austerlitz, the pocket-book which he
carried about him in the campaign of 1812, his knife,
fork, and spoon, taken at Waterloo, and the little cross
of the Legion of Honour, which he wore. There are
also the following:—A letter from Berthier, announcing
to the Prince d'EHmuhl the departure of the French
from Moscow; the helmet of Bayard, the armour of
d'Alba, the knife of Pugalschew, the infantile armour
of Charles le Temerare, the sabre of King Stephen
Barbor, so formidable to Russia; the remarkable scimi-
tar of Sciamscial, of Tarku, with which Sciaciaia,
the brother of Sciamscial, clef in twain an adversary,
from the shoulders to the hauouch; the blade of this
crimson, wrought in India, has never been equalled either in Da-
ghestan or Persia; it was preserved in the family 400
years; the cane of Catherine II., engraved with the
initials of Prince Paul of Saven, and the two little drums,
which served for the amusement of the Emperor Alexander
in his infancy.

NAVIGATION OF THE DANUBE.—The steam
navigation of the Danube has ceased for this year since the
16th, in consequence of the severe cold. The ac-
ccounts of this vast enterprise for the present year (which
is particularly patronised by the Archduke Palatine,) give
the most striking proof of the progress of this naviga-
tion since its commencement. Next spring there
will be eight steam-boats from this city to Galatzes,
the newest of which is 80-horse power. The effects of
this great undertaking on the state of civilisation of the
inhabitants of the banks of the Danube in Wallachia,
&c., become more and more apparent. Little colonies
are already springing up at the several landing-places,
which will soon become considerable. On the appear-
ance of the first steam-boat, not six years ago, the Wall-
achians conceived it to be a work of Satan, and fled
from it. Now they anxiously wait for: the day of its ar-
ival, to offer their services to the passengers.—Allgemeine
Zeitung.

RUSSIAN SOLDIERS—are far from being formidable in
their appearance. At St. Petersburg the guards, which
are in general, almost the only force there, are drawn in
at the waists like wasps till they can hardly breathe;
and so helpless do they seem that the idea occurred to
me, when looking along the line, that by means of a sin-
gle good bullet on the ear of the nearest man, the whole
rank might be floored. On the hills of St. Petersburg, they
are taken in the mass, small, mean-looking, shuffling
fellows. Their undress is peculiarly unbecoming; and
even in warm weather you see them shuffling along but-
toned up to the throat in coarse, grey, great-coats. When
they spy an officer on the road, even at a considerable
distance, they pull off their bonnets and do not presume
to put them on again till they are far beyond his reach.
The officer, on his part, however low his rank, hardly
ever deigns the smallest salutation.

THE SARDINIAN FLOTTILLA.—The Sardinian flotilla
whose destination is not yet known, will be composed of
five 80-gun frigates, the Commerce, the Redicho, the
Maria Theresa, the Carlo Alberto, and the Carlo Felix;
three frigates from 44 to 50; a sloop, a cutter, two brigs,
and six gun-boats. A levy en masse of seamen has been
made on the coasts of Piedmont, from Nice to Spiezia,
which includes all adults between 18 and 45 years.

The French Admiral Reralio de la Brucholliere has
lately bequeathed the most munificent donation that any
country can boast of, to establish a college at Brest for
invalid seamen. The sum is a million of francs (40,000l.
sterling,) the entire fortune of this truly great and noble-
medeet veteran.

ORIGINAL POETRY.

THE ASSEMBLY.

BY LIEUT. G. W. PATERN, U. S. A.

Hark! 'tis the trumpet's call
Booms o'er the sea,
Crowd for your banners all,
Sons of the free,
Send the hoarse battle yell
Back to the main;
Arm for the citadel—
Arm for the plain.

War from his battle cloud
Beckless his hand;
Wore is the crimson shroud
Drum be't be brand.
Up! from the mount and glen,
Forest and ford—
Rally! ye free-born men,
Arm with the sword.

Omens are gathering
Fast o'er the lea;
Red is the eagle's wing,
Restless the sea.
Where the mast quivered,
Deepens the storm;
Arm 'mid the trumpet's breath—
Marshal—and form.

SELECTED POETRY.

From the New York Times.

ON THE DEATH OF LIEUTENANT JENKINS, U. S. N.

Like a bird on the wave, rides a frigate in beauty,
Half mast drop her colors, her crew shed a tear.
For no more to report himself ready for duty,
Shall Jenkins the brave and the youthful appear.
THE SIOUX MOTHER

To her Son, on Arriving for Battle.

BY F. WALKER.

You're going, my son, from home afar—
To join our tribe in the ranks of war:
To fight by the veteran warriors' side,
Your father led, in his day of pride:
To follow up his well earned fame,
And win for yourself a glorious name.

A warrior's dress is on thee now—
From the moccasin to the painted bow.
Thy father's once, they, were brought to me,
From where he fell so valiantly:
And treasured since with a mother's care,
For you, at an after time to wear.

For I've cherished long the promised joy,
The day would come, when my youngest boy,
Would go forth at a ripened age—
A gallant chief where the battles wage;
To strike the foe with a Sioux' ire,
And 'venge the blood of his murder'd sire.

Take care of this!—tis an eagle's plumage!
A token of pride for thy gay costume,
And a trophy, won from the Ottawa!
With this battle-axe, and tokye claw.
This war-club belt, so well inlaid
With colored beads, your mother made
Years ago; and she worked the strings,
Which fasten this bag of lucky things.

Thy calumet keep in the safest place,
And guard it well, for all thy race
Have used it oft in the council ring—
And it bears the name of a charmed thing.
Remember this,—and morrow again,
Let some of the pale face dare profane
The sacred gift with his impious lip,
Or 'twill fame no more for fellowship.
And swear to me now, never with life,
To smite the blade of this scalping knife,
So long as the white man treads our lands—
And stains our homes with his mad'rous hands.

These arrow points, I've sharpen'd anew,
And dipp'd 'em deep in the poisoned glue;
A message of death they will not fail
To carry on in their winged trail.

Now go my boy! from the haunted plain,
Where the bones of your father long have lain;
A voice in the wind waifs on my ear,
Angry with me, for keeping you here.
Pill count the moosies as they roll away,
Till you return; and the Spirit pray
To send you back with your scalp to me
Flushed with the joys of victory!
MORE SPEED.—A package of the *Army and Navy Chronicle* of November 19, with a large printed direction on the wrapper, was received at the Chicago Post Office on the 12th January, in good order, via Green Bay. It has, no doubt, been on a visit to St. Louis, and the mining country.—Chicago American, Jan. 16.

We extract the above as the text for an explanation of the frequent complaints recently made, of the delay in the receipt of our paper. At this season the mails are always irregular throughout the country. It is hardly possible that more care should be used, than is always taken at our office to secure the safe transmission of the Chronicle, by strong wrappers and legible direction.

The numbers of the new series have not been printed until a day or two after their date, owing partly to circumstances beyond our control. We hope there will be no delay in future.

Col. Bankhead, Major Lylte, Major Van Buren, aid to Gen. Scott, Lieut. Dimmock, of the U. S. Army, and Drs. Caldwell and Cabell, attached to Gen. Scott’s staff, arrived in Savannah on Saturday, 6th inst., on their way to Florida.

PASSENGERS SAILD.

COMMUNICATIONS.

PLAN FOR THE DEFENCE OF THE UNITED STATES.

In proposing a plan for the defence of the country, the means attainable for that purpose are first to be considered. They consist of the Army and Militia,—with the forts and batteries, and the necessary ordnance and supplies, including steam batteries,—for the defence of the land and harbors; and of the Navy for exterior defence.

*Land Defence.*

It is presumed that every effort will be made, to complete the system of fortifications already begun and considerably advanced, for the protection of the principal seaports and inlets from the sea. The next thing is, to man these works, for which purpose our regular army is too small; but it is susceptible of enlargement.

The army consists of:

- Four regiments of artillery,
- Seven regiments of infantry,
- One regiment of dragoons,

making, in all, an aggregate of about 7,000 effective.

The dragoon and infantry regiments have 10 companies of each; and the artillery regiments, 9 companies, of about 55 men each.

Now let each company of artillery consist of 140 men, as in the European service; and each company of infantry and dragoons, of 100 men. Then, instead of ten companies to each regiment of infantry, let there be 16, so as to form two battalions, and add another regiment to the infantry, making 8.

The present regiment of dragoons has ten companies; let there be two regiments of 8 companies each; and give to each regiment of artillery one additional company, so as to make 10.

To offer this force, we have nearly the requisite number of officers in the army, including cadets, at present. The regular force would then be 20,000 men, composed as follows:

- 4 regiments of artillery, 10 companies each—40 companies, of 140 men each, 5,600
- 8 infantry, 16 companies each—128 companies, of 100 men each, 12,800
- 2 dragoons, 8 companies each—16 companies, of 100 men each, 1,600

20,000

In addition to this regular force, we should require a Militia force of 20,000 men, to be embodied and put in a state of discipline, and stationed at certain important points, as will hereafter be designated; to be called out to serve one year; to be drilled and equipped by the United States, like regular soldiers, on the following plan:

*The Militia.*

The whole of the Militia of the United States to be organized, agreeably to the act of Congress, passed 8th May, 1792, which organization cannot be improved. It was suggested by Washington, and is the true plan, so far as it relates to organization. Then let the militia be classified and divided, thus:

All the single men, from the age of 18 to 28, to constitute the first class, or active militia; and all the rest to constitute the second class, or local militia.

The active class to be subject to be drafted, to serve in any part of the United States, the local to remain at home, for the protection of their immediate vicinity, and to be organized into companies, battalions and regiments, according to the act of Congress, but not to be called out unless the enemy should approach their vicinities. With the local militia, the active is to be enrolled as at present; but the active alone subject to draft.

Then say that 300,000 active militia shall be drafted every year, in peace and in war, apportioning among the States, Territories, and District of Columbia, their respective quotas; the names and residences of the drafted men to be enrolled in the offices of the Adjutant General of each State, and in the War Office of the United States; the active to be liable to service for the term of one year, unless sooner discharged; when drafted to be by lot, and the individual so drafted is obliged to hold himself in readiness to turn out when called on in the course of the year; but if not called on, his tour passes and he is not liable to be drafted again, but becomes a local militia man.

The States will now suppose that 20,000 men are wanted. The States are to dispose of the quota which they must furnish, both of officers and men, according to the call of the President, made through the War Office. The States appoint the officers, and the whole rendezvous at the places designated, where the Government should provide the necessary accommodations of barracks or tents, according to circumstances,—Commissaries to supply them with rations and every thing necessary for the comfortable support of the officers and men, including clothing for the latter.
Then some competent officers should be ordered to the rendezvous, to assist in organizing and instructing these new levies, according to the prescribed rules of service. One month would be generally sufficient for the purpose, after which the officers and non-commissioned officers would be enabled to carry on the duty, and drill themselves.

It is proposed that the 20,000 militia, so called out, be kept up during the whole war, by drafts, so as to discharge only one half at a time; thus having in every company at least one half of the men well instructed. — The officers to be kept up as long as they should desire it, and during good behavior; with the right to retire at the end of each year, like the soldiers; but it is believed that there would be no difficulty in making, on this plan, good State officers, and in having them as long as it might be desired.

Having organized the officers and men into companies and battalions, and having provided them with every convenient comfort, there is no doubt they would be diligent in the service, and do their duty with spirit and satisfaction, and be equal, in a little time, to regular troops. The active militia being composed of young men without families, and with little care, would perform their tour of one year with pleasure, particularly as they would every six months have a change of stations, to be as operative as the local militia, which would hardly ever be called upon, as the active is sufficiently numerous for all purposes.

The pay, rations, and clothing, now furnished to the regular troops, are so very good, that the tour of one year would be little more than an agreeable and interesting pastime, and would thus be cheerfully sustained by every patriotic youth, who should be drafted under the law to take part in defence of their country.

While the militia troops would be commanded by their own officers, according to the provisions of the Constitution, they would receive all their supplies from persons appointed by the General Government, in a regular manner, to be paid once a month.

There are many details, which is not our purpose here to enter upon, which would render the militia very comfortable and very effective, without creating any unreasonable expense.

Having given the plan for obtaining the personal, the material can be had without difficulty. The Staff will attend to that.

Among the powerful engines to be applied, steam batteries may be considered highly important, as auxiliaries to the land defence, especially against ships of war, that may attempt to enter any of our large harbors or bays — New York, New Orleans, and Mobile, and to the prevention of military incursions into the interior.

They are to the land batteries and forts, in the defence of harbors, what flying artillery is to an army in the field. Steam batteries will be able to take positions, suitable for annoying ships of war, and attack them to advantage under every circumstance. They properly belong to the artillery department, and ought to be under the direction of military Commanders, and not to the Naval Officers, who, with their sailors, will have employment enough on the ocean, their proper element.

The Navy is the only means to be applied on the ocean. Twelve ships of the line, and a proper proportion of armed vessels, will be required to be maintained in a war with any European power; especially as we should always be the defending power and not the attacking one. To compete with such a force, it would require on the part of an European power, to possess and keep in activity, 36 ships of the line of respectable strength, to be under strict command and kept always in a state of efficiency.

A squadron to consist of 12 ships of the line, with a due proportion of frigates and sloops, to be on the coast; another similar squadron to be ready in the West Indies, to relieve the one on our coast; and one at home, to watch its interests on the Atlantic coast and in the Mediterranean. Now, 36 ships of the line, with the frigates and sloops, will require 40,000 sailors to man them, and no foreign power but Great Britain can man such a force.

France has, by her own reports, only 33,000 seamen. The United States have more than three times that number; and as for ships of war, she can build them as rapidly as may be required, after the money is once appropriated. The experiment on the Lakes, last war, proved that. There is no necessity to season the timber; if the ship will only last three or four years, it will be long enough for our purpose; and after the war, there will be none to season for building any more ships. Better burn them, and save the iron and copper for another war; it will be economy. Keeping always our 12 ships of the line and frigates in proportion, ever ready for service, as a peace establishment. We are growing so fast in population and in resources, that we can afford to maintain for the protection of commerce, a respectable marine. But such a marine, manned by volunteer sailors to man the fleets, would not be proper and fair to enroll all the watermen, who are exempted from military duty, and make them liable, like the militia, to be drafted for the public defence, on their proper element? This certainly could be done, and as brave a set of fellows thus procured as ever walked the deck of a man-of-war.

It would also be highly advantageous to have ready, at well chosen points, contiguous to the narrows of rivers and bays, where ships must pass to attack a town, a proper number of 18 pounders, mounted on travelling carriages, to be kept in readiness for the purpose of heating shot. These furnaces to be constructed in a simple manner, like the ranges for Lehigh coal, or like the stoves which burn that fuel, and transported on common carts or wagons, in which also the necessary quantity of charcoal and other fuel may be conveyed. Two guns, properly posted, would soon destroy any ship, or cause her to retire, as there is nothing which ships dread more than hot shot.

An Old Soldier,
Not of the Revolution, but of the last War.

FORWARD OFFICERS OF THE NAVY.

Mr. Editor — I should have answered the remarks made by your correspondent Barney, upon forward officers, before this, had I not been under the impression, that it would have been done better by some person of more talent than myself. In this I have been mistaken, for the subject appears to be dropped, and your numerous readers may construe silence into acquiescence. To prevent this, I trouble you with what are well known facts.

"Barney" says, "that of the many, who have been appointed, a few only remain, who have served in that capacity ten years;" and attributes this to their vici-
osities and other habits. "With a view to improve, and make himself acquainted with the facts, before publishing his erroneous opinions, he would have found that the smartest men that we have had in the capacity of boatswains and gunners in the Navy, have not either been dismissed, or died," but have resigned in disgust at their treatment; or otherwise having been kept so constantly employed on foreign stations, that they were either compelled to do so, or cut ad single every tie of domestic friendship.

"Barney", must be aware that it is not uncommon for a forward officer to come home from a three years, cruise, and in a month, or two, be ordered upon another. It is true that a few of each of the forward officers have for many years been allowed to remain as fixtures, in some of our Navy yards, where they have enjoyed the comforts of domestic life to the manifest disadvantage of the ship in which they serve. Permit me to ask "Barney," if a man choosing the name of officer, ought tamely to submit to such injustice? The number of these officers is so limited, that they are constantly employed; many acting appointments are given, but what incentive have these men to a rigid performance of their duty? they are liable to be reduced at any moment, and for any trivial offense.

If a boatswain or gunner, after having served under an acting appointment, six or twelve months, was to receive a warrant, the case would then be different; but as it is, at present, a man may serve three years, and
when he returns, be discharged with the crew. It has many enough to support himself on shore, until and unless one comes to him, or he is elected or appointed in the service, and he is one of the most successful individuals of that character in the Navy, and the most successful of our officers at theamsung of the Navy.

If this is encouragement for men of "education and talent," (such as Barney supplies forward officers ought to be,) I have no more to say. Exclusive of the boatswain and gunner, who are good man, and under their command is one of the "education and talent" (which "Barney" believes the wants of o) might enter and remain in the service; and as it is, only those, who can do no better, and who have no love for their country, or tie of friendship, to bind them to the land of their birth, will put up with the privations and hardships that these men have to undergo.

That a few have injured their who grade, I will admit. For acting appointments are so often given, and when given, they are so easily taken away, that almost any seaman who applies, may get one; and their imputrant conduct has brought a stigma upon the whole; and some of them have gone to the prejudice that at present exist against them. But is it fair in one of themselves, (as I think Barney is) to expose their faults to the public? He might, at least, have stated what he knows to be the case, as "Cavendish" (or the patrician at sea) says: "some Captains in the Navy make a point of treating them, (boatswains and gunners) just three degrees worse than their dog."

Some think, in a case of emergency, we will always find men enough for boatswains or gunners; in this they are mistaken. A man may be a good boatswain's mate, or quarter-gunner, and yet not capable of doing a boatswain's or gunner's duty. But even admitting that they were as plenty as is supposed, would it not be better to have tried men, when their services could be insured for an amount so very trifling, that many wonder at the apathy of the Secretary on a subject of so much importance to the Navy? It is in his power to increase the number of warrant officers; but so long as the right of giving acting appointments continues, without being followed by warrants, just so long will the Navy be deficient of forward officers.

"Barney's" accusation, "of drinking a half a pint of spirits before eleven o'clock," I will take no notice of. I hope Barney has not given the coat to another that would fit him himself. I pity the poor carpenters and sailmakers, that have been corrupted by the bad example of boatswains and gunners. That officer and gentleman ought to be synonymous term, I admit; but let them (the forward officers) be treated as such; if they serve twelve months and receive a recommendation from their commander, give them a warrant. This will be an inducement to good conduct, and they will then consider themselves as officers, and conduct themselves accordingly; but while serving under an acting appointment, the duty of an officer is expected from them; and they are no more thought of than one of the crew. I appeal to the officers of the Navy for the truth of these statements, and remain very respectfully yours.

GRAMPUS.

THE NAVY.

The Navy of the United States has always been an object of some notice abroad; it is now beginning to attract attention at home. The people are now looking to the matter, and those who have taken the pains to make themselves acquainted with our maritime affairs have universally expressed their astonishment that our naval force has been neglected in the report of the examination of our commercial interests on the ocean. It would be as useless as unprofitable to inquire where lies the blame. It is sufficient for us to state facts as they now exist. Our actual force in service at this time is one seventy four (on her return home,) four frigates, eight sloops, three gunboats, and one schooner. What kind of a production is this to a commerce which annually pays twenty millions into the Treasury; to our hundreds of ships, and our hundred thousand seamen scattered over every sea? Leaving the condition of our foreign relations entirely out of view, we will again ask, what kind of a naval force is this second to none in its ample resources, its rising population and wealth, the industry and enterprise of its inhabitants. Can it be generally known to the people of this country, that our navy, our "gallant little navy," the "right arm of our national defense," the "pride of our country," is second to none in its ample resources, and its power. Will it be believed? No—and as proof to the contrary, the Register will be produced, where may be counted the names of fifty-one vessels. The words," in ordinary,"" repairing,"" on the stocks, &c. if not overlooked, are certainly not properly understood. We know, from respected conversation with citizens, on this subject, that it is the impression of many, very many, that all the above fifty-one vessels are either in actual service, or immediately available. It is sincerely hoped, and indeed believed, that the present Congress will place the navy on a respectable footing, and that will unite with the navies of other powers. This is the favorable time. The people have now their eyes opened to the true state of things. The leading public journals of all parties are directing the attention of their readers to the importance and necessity of an increased naval force. Without any reference to the French question, it may truly be said that four times the force afloat would not be more than our mercantile interests demand. We have been waiting to see something proposed by those who have more experience than ourselves in such matters; but, being thus far disappointed, we would respectfully suggest the following as a national peace establishment.

1. Medeterrean stationed—2 ships of the line, 4 frigates, 6 sloops, and 2 schooners.
2. West Indies—3 frigates, 4 sloops, 4 schooners, and 1 steamer.
3. Pacific—3 frigates, 4 sloops, 3 schooners.
4. Brazil—3 frigates, 4 sloops, 3 schooners.
5. East Indies—1 frigate, 2 sloops, 1 schooner.
6. Home Station—2 frigates, 2 sloops, 2 steamers.
Total—2 ships of the line, 16 frigates, 23 sloops, 11 schooners, and 3 steamers:—for which (together with the shore stations and the usual relief,) the following would be about the proper number of officers: viz.

20 Captains,
40 Lieutenants, 800 Midshipmen,
65 Commanders, 65 Boatswains,
350 Lieutenants, 65 Gunners,
70 Surgeons, 65 Carpenters,
120 Assistant Surgeons, 65 Sailmakers.
70 Purser.
Officers not mentioned above to be in the usual ratio.
A corresponding increase would also be required in the marine corps.

The introduction of the grade of Admirals is conceived to be an act of justice, as well as of necessity. It needs be intended with any increase of power except to those who are in the actual command of a fleet; the rest might be paid the same as Captains are now paid.

These hints are thrown together for the consideration of the peoples' representatives, and for all who feel an interest in the welfare of "our country," and it is also hoped that able hands may be induced to assume the subject.

Philadelphia, Feb. 8, 1836.

NEPTUNE.

POLITICS AND OFFICERS.

WASHINGTON, D.C., Dec. 1st, 1835.

Mr. Editor:—In your paper of the 7th ultimo, I had the pleasure of seeing an article, signed "Albutades," approving in the most flattering terms a piece
ARISTIDES. 

Mr. Editor.—Allow me, through the medium of the Chronicle, to call the attention of the proper authorities to a subject which calls loudly for their interposition.

I refer to the practice of disposing, at public sale, of soldiers’ old uniform clothing. It is any thing but grateful to the eye and feelings of the profession, to see its uniform disgraced by exposure to public view and sale. The back of every negro and ragamuffin he meets with, and these are the only persons who will purchase or wear it. I trust that due consideration will be given to this matter, and that the saving of a few dollars and cents will not be regarded in a matter touching the pride and honor of the profession. Let this clothing be distributed among the several Military Posts, and thus at least the creation of the Commanding Officers to soldiers on fatigue duty. Or if the system must be continued, let the trimmings be taken off the clothing before the sale.

A SUBALTERN.

PROCEEDINGS OF CONGRESS,
IN RELATION TO THE ARMY, NAVY, &c.

SENATE.

MONDAY, FEBRUARY 1.

Mr. McKean presented the memorial of the Chamber of Commerce, of the city of Philadelphia, soliciting the attention of Congress to that important public work, the Breakwater, in the Delaware Bay, and praying that such appropriations shall be made, as to ensure its completion; which was referred to the Committee on Military Affairs.

Mr. Goldsborough presented the petition of George W. Howard, late a lieutenant of the Baltimore Riflemen, who was wounded at the battle of North Point during the last war with Great Britain. Referred to the Committee on Pensions.

Mr. Wall presented the petition of the heirs of Col. Philip Johnson of New Jersey, who was killed at the battle of Long Island; which was referred to the Committee on Military Affairs.

Mr. Hubbard presented the petition of Samuel White, of Vermont, a Sergeant of the Revolutionary Army; and also the petition of Philip Taylor, both of which were referred to the Committee on Pensions.

The joint resolution from the House of Representatives, authorizing the President of the United States to cause relations from the public stores to be delivered to the sufferers of Florida, who have been driven from their homes by the Indian hostilities, was read the first time and ordered to a second reading; and,

On motion of Mr. Benton, and by unanimous consent, the resolution was then passed through its second and third readings and passed.

On motion of Mr. King of Georgia, the Committee on Foreign Relations to which has been referred the petition of Janett Taylor, niece and heir of Commodore Paul Jones, moved that the committee be discharged from the further consideration of the same, and that it be referred to the Department of State, which was agreed to.

Mr. Goldsborough submitted the following resolution, which lies on the table one day:

Resolved, That the President of the United States be required to communicate to the Senate any information that may be in his possession relative to the causes of the existing war in Florida with the Seminole Indians; and also, any other intelligence in relation to the same that he may have in his power to give, and may think useful to impart.

The special order of the day, being the bill to regulate the deposits of the public moneys, was announced by the Chair; when—

On motion of Mr. Hubbard it was postponed till morning, and the Senate took up the resolution submitted by Mr. Benton for the appropriating the surplus revenue to the national defence.

Mr. Buchanan, who had the floor, addressed the Senate until a late hour, when, without concluding, he gave way to Mr. Clayton, on whose motion the Senate adjourned.

TUESDAY, FEBRUARY 2.

The Chair communicated a report from the War Department, transmitting the annual list of the Officers and other persons employed in the Indian Departments.

Also, a report from the same Department, made in ob-
HOUSE OF REPRESENTATIVES

SATURDAY, JANUARY 23, 1855

Mr. JARVIS, from the Committee on Naval Affairs, reported a bill making appropriations for the, support of Government, the naval and military service, may be continued, if sufficient money for that purpose be appropriated.

The bill being read twice and committed.

TUESDAY, JANUARY 26

Mr. MASON of Virginia, from the Committee on Foreign Affairs reported the following resolution: Resolved, That from and after Tuesday, the second day of February, the several bills making appropriations for the support of Government, the naval and military service, may be continued, and the Department, at the hour of one o'clock each day, except on Fridays and Saturdays, shall take precedence in the order of business, and shall be considered until the same shall have passed the House. A motion for reconsideration of the said resolution was adopted, by ayes 159, nays 59.

Mr. CAMERLING, from the Committee of Ways and Means, reported a bill making an additional appropriation of $7,000 for repaying hostilities on the part of the Indians in Florida.

Mr. CAMERLING advertised the proprity of a speedy action on the bill, and by unanimous consent, moved that the House go into a Committee of the Whole on the state of the Union, upon the same, which was agreed to.

The House then went into Committee, Mr. HOWARD in the Chair, upon the foregoing bill.

Mr. HOWARD offered to amend the bill, by adding a section authorizing the President of the United States to cause to be enlisted a regiment of 1,000 mounted riflemen, by and with the consent of the Senate, for twelve months, if, in his discretion, he shall deem it necessary. Mr. HARDIN opposed the motion, as being for receiving volunteers as well as regulars, and spoke of the advantages of that description of troops over persons enlisted. His own country would raise five hundred men.

It was then ordered that a proviso authorizing the President of the United States, to disband the force at an earlier period than twelve months, in case their services should be no longer required.

Mr. WILLIAMS of N. C. moved to add the word "required" to the amendment, which Mr. HARDIN accepted as a modification.

Mr. ADAMS opposed the modification, as an unnecessary restriction on the Executive.

Mr. VANDERPOOL begged to inquire if the amendment of the gentleman from Florida, had the consent of the Secretary of War.

Mr. WHITE believed it would have, and pledged himself to withdraw it when the bill came into the House, if it had not.

Mr. JARVIS, Mr. ASHLEY, Mr. RIPLEY, and Mr. UNDERWOOD opposed the amendment, and after a few words, in its favor by Mr. GLASCOCK, Mr. WHITE withdrew it.

Mr. SHELDON then moved an amendment authorizing the President of the United States to accept the services of 1,000 volunteers, for the period of nine months; which, after some remarks from Messrs. SHELDON, C. JOHNSON, CRAIG, and WHITE of Florida, was negatived.

The bill then rose, and read the bill without amendment to the House, and it was ordered to be engrossed and read a third time.

The bill having been engrossed, was then read a third time and passed.-The Speaker, Mr. JARVIS, from the Committee on Naval Affairs, reported a bill amending the several acts establishing and regulating the Treasury, War, and Navy Departments, which was read twice and committed.

Mr. WHITE of Florida, by consent, submitted the following resolution, which was agreed to:

Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of organizing a regiment of mounted riflemen or dragoons to operate against the Indians, if, in the opinion of the President the public service requires it.

Mr. RIPLEY asked the consent of the House to submit a resolution of a similar character.

Mr. GRIFFIN moved an adjournment, which was carried, and at five o'clock, P. M., the House adjourned.

WEDNESDAY, JANUARY 27

Mr. JARVIS, from the Committee on Naval Affairs, reported a bill for the relief of James Taylor Wooster, which was read twice and committed.

Mr. JARVIS, from the same committee, reported a bill to reward the captors of the Tripolitan frigate, late the frigate Philadelphia, which was read twice, and committed.

Mr. JARVIS, from the same committee, reported a bill to change the title of certain officers of the navy, which was read twice, and its further consideration postponed until tomorrow.

Mr. WISE, from the Committee on Naval Affairs, reported a bill to provide compensation to James Barron, for the use of his invention, called the Ventilator of ships, which was read twice and committed.

Mr. GRAY, from the Committee on Naval Affairs, reported a bill for the relief of Philip F. Vorhees, which was read twice and committed.

On motion of Mr. WHITE of Florida, the proceedings of a public meeting at St. Augustine, in relation to the depredations of the Indians, and several letters on the same subject, were referred to the Committee on Military Affairs, and ordered to be printed.

THURSDAY, JANUARY 28

Mr. JARVIS, from the Committee on Naval Affairs, reported without amendment the bill from the Senate supplemental to the act to regulate and fix the compensation of clerks in the Naval Department, which was passed 20th April, 1818, Mr. J. stated that the committee recommended that the bill be rejected.

FRIDAY, JANUARY 29

Mr. INGBRILL, from the Committee of Ways and Means, reported a bill making an appropriation for the Military Academy of the United States, for the year 1855, which was read twice and committed.

A bill for the relief of Lieutenant Washington Seawell, was read a third time and passed.

SATURDAY, JANUARY 30

Mr. JOHNSON of Kentucky, from the Committee on Military Affairs, reported the following bill:

A BILL AUTHORIZING THE PRESIDENT OF THE UNITED STATES TO ACCEPT THE SERVICE OF VOLUNTEERS.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States be, and he hereby is, authorized to accept of any company or companies of volunteer soldiers, and to direct the same to be furnished by them, and the services of the President, for the service, whom shall be clothed at their own expense; and the mounted troops shall furnish horses at their own expense, and shall be armed and equipped at the expense of the United States, after the expiration of the term, except such of them as may choose to furnish their own arms, and whose commissioned officers shall be appointed in the manner prescribed by law in the several States and Territories to which such company or companies shall respectively belong.
ARMY AND NAVY CHRONICLE.

Sec. 3. And be it further enacted, That any corps of volunteers thus offering itself for the service, shall be liable to be called upon to do military duty, at any time the President of the United States shall judge proper, and shall be bound to render in service, during the term of their service, after they shall have arrived at the place of rendezvous, unless sooner discharged; and when called into actual service, and while remaining therein, shall be under the same laws, rules and regulations, as other regiments, brigades, battalions, companies and platoons, at their respective stations, forage, and emoluments of every kind, discharging, excepted, with the regular infantry of the United States; Provided, That in lieu of clothing, every non-commissioned officer and private in any company, who shall be called into actual service, shall receive the cost of the clothing of a non-commissioned officer or private, (as the case may be,) in the regular troops of the United States.

Sec. 3. And be it further enacted, That the President of the United States be, and hereby is authorized to organize the companies so tendering their services, as aforesaid, into battalions, regiments, brigades, and divisions, as soon as the number of volunteers shall render such organization in his judgment expedient.

Sec. 4. And be it further enacted, That in case any volunteer above mentioned, while in actual service, shall sustain any damage, by injury done to his horse, or such other equipment as shall be furnished at his own expense, or by loss of the same, without any fault or negligence on his part, a sum equal to the cost of such horse, or other equipment, shall be allowed for the same, the same to be paid by the Secretary of the Treasury, and the officers of the United States Military Department shall give the same due consideration.

Sec. 5. And be it further enacted, That the officers, non-commissioned officers, musicians, artists, and privates, of the mounted companies, shall be entitled to one day's pay, subsistence, and allowances, for every twenty miles travel from their places of residence to the place of general rendezvous, and from the place of discharge back to their residence; that the officers shall each be entitled to receive forage, or money in lieu thereof, for two horses, when they keep private servants, and for one horse, when without private servants, and that they shall be allowed for the use of each horse; that each non-commissioned officer, musician, artist, and private, shall be entitled to receive forage in kind for one horse, with forty cents per day for the sustenance thereof; and twenty cents per day, to defray the expenses of himself, or twelve and a half cents per day for either, as the state may be.

Sec. 6. And be it further enacted, That the volunteers who may be received into the service of the United States, by virtue of the provisions of this act, shall be entitled to all the benefits which may be conferred upon persons engaged in the service of the United States.

The resolution was seconded, and on motion of Mr. Johnson, committed to a Committee of the Whole on the part of the Chair's decision, and Mr. Parks against it, the decision of the Speaker was sustained by the House.

The resolution was seconded, by Messrs. B. B. B. and B. S. N., and the main question, which was on the engrossment of the resolution as modified and amended, was then ordered to be put; and on the main question

Mr. Pinkney asked for the yeas and nays, which were ordered, and the result was as follows; yeas 178, nays 14.

The resolution was ordered to be engrossed, and the same having been engrossed, was then read the third time and passed.

MONDAY, FEBRUARY 1st.

Mr. Carey introduced a joint resolution of the Legislature of Illinois, praying that competent engineers of the United States corps may be appointed to make a survey of the Great Wabash river, to ascertain the probable amount that will be necessary to remove the obstructions to the navigation of said river, and asking a donation in land to aid in said improvement; which, on his motion, was referred to the Committee on Public Lands.

ARMY

Companies F and K, of the 5th Infi. were to have left Hancock Barracks, Houlton, Me., on the 9th inst. for Boston, under orders to garrison Fort Independence. The officers attached to these companies are Brevet Major G. D. D. Dow, Lieuts. S. L. R. G. D., H. D. G. W. F. T., J. V. B., and H. W. W.

Vol. II.—No. 8.] WASHINGTON, THURSDAY, FEBRUARY 25, 1836. [Whole No. 69.

NAVAL ACTION ON LAKE CHAMPLAIN.

Until the publication of the Life of Benedict Arnold, by Mr. Sparks, few persons of the present day had read or heard much of the particulars of the engagement between the British and American fleets on the Lake, in the early part of the Revolution. After the unfortunate treaty of peace,acb, when the two nations were at war, the prize of the American forces under General Carleton began to be the subject of many speculations, particularly as regards the fate of the British fleet to Crown Point and Ticonderoga. The British forces under General Carleton began to collect a formidable flotilla at St. Johns; for the purpose of making their way over the Lake. Some of these vessels were constructed at Quebec or Montreal, in such manner that they could be taken to pieces, transported over land to the lake, and the parts there united, and soon made ready for service. Active preparations were immediately commenced on the part of the Americans to put about a sufficient force to meet the enemy, and bulle their movements. General Arnold, who, as is well known, had been a prisoner in his youth, was appointed to the command, and under his direction a squadron consisting of two sloops, three schooners, three galleys, and eight gondolas, was in a short time ready to sail. The sloops carried twelve guns, the schooners 'two eight to twelve, and the galleys and gondolas from three to twelve each. Having received his instructions from General Gates, who had command of the army in that quarter, he sailed down the lake, and when within a few miles of the Isle-aux-Tetes, discovered it to be occupied by the enemy. At Windmill Point he moored his vessels across the lake, so as to prevent the enemy from passing. The decks of his vessels being very low, Arnold sent a party of men on shore to cut fancies, for the purpose of erecting around them barricades, to prevent their being boarded by superior numbers in small craft. While engaged in this service they were fired upon by the Indians, and three of their number killed and six wounded. Finding his position so much exposed, he returned eight or ten miles to Isle-la-Motte, and took a more advantageous station. Here he received information of the formidable fleet fitting out at St. Johns, and determining it unadvisable to hazard an action where he would be compelled to engage a superior force under great disadvantage, he ordered his ships to be got into the line, on which the enemy, long since arrived, had placed their on shore batteries; in which situation they remained for some time. The wind was likewise in their favor, as some of the larger vessels could not beat up sufficiently near to engage in the attack. While the enemy's fleet was coming round the island, Arnold had ordered his three galleys, and a schooner called the Royal George, to come in and advance up the lake. On their return to the line the schooner grounded and was afterwards destroyed, but the men were saved. At half past twelve the action began. The two fleets were on a line, and the American line was about twenty yards in advance of the British. The galleys and schooner within musket shot of the American line. They were round about two o'clock, when they withdrew from the contest and joined the ship and schooner, which a head wind had prevented from coming into action.

"During the contest Arnold was on board the Congress galley, which suffered severely. It received seven shots between wind and water, was hulled twelve times, the mainmast was wounded in two places, the rigging cut in pieces, and the proportion of killed and wounded was unusually great. So deficient was the galleys musketry that Arnold had to supply from the vessel that fired from his vessel. The Washington galley was equally shattered—the first lieutenant was killed, and the captain and master wounded. All the officers of one of the gondolas, except the captain, were lost; and another gondola sunk soon after the engagement. The whole number of killed and wounded was about sixty. The enemy landed a large body of Indians, who kept up an incessant fire of musketry from the island and the opposite shore, but without effecting much injury.

A consultation was held by the officers as soon as the gunboats were near the shore, and they agreed that considering the exhausted state of their ammunition, and the great superiority of the enemy's force both in ships and men, prudence required them to return to Crown Point, and if possible without risking another attack. The British had anchored their vessels in a line within a few hundred yards of the Americans, stretching from the island to the main, apparently to frustrate any such design. The night was dark, but a favoring breeze blew from the north, and before morning Arnold had passed with his whole fleet through the British line entirely undiscovered. This manoeuvre was not less bold in its execution, than extraordinary in its success. Arnold himself brought up the rear in his own galley, and, before their departure was known to the enemy, they had ascended the lake ten or twelve miles to Schuyler's Island. Here they were obliged to cast anchor for half a day, in order to stop the leaks and repair their sails. Two of the gondolas were abandoned and sunk. In the afternoon they set sail again, but the wind had died down, and it now sprung up from the south, equally regarding the pursuit of the enemy and their own progress.

"On the morning of the second day the scene was changed. The Congress and Washington galleys, with four gondolas, had gained the rear, all being disabled to sail freely. The advanced ships of the enemy's fleet, in one of which was General Carleton, were found to be gaining upon them, under a press of sail, and in a short time were on the side. After receiving a few broadsides the Washington struck, having been extremenly weakened by the fire of the Americans, and being falling off in the first engagement. The whole force of the attack now fell upon Arnold in the Congress galley. A ship of eighteen guns, a schooner of fourteen, and another of twelve, poured forth an unceasing fire within musket shot. The contest was kept up with unparalleled resolution for four hours, when the Congress had received almost a wreck, and was surrounded by seven sail of the enemy. In this situation Arnold ran the galley and the four gondolas into a small creek, on the east side of the Lake, about ten miles from Crown Point; and as soon as they were aground, and were set on fire, he ordered the marines to leap into the water armed with muskets, wade to the beach, and station themselves in such a manner on the bank, as to prevent the approach of the enemy's small boats. He was the last man that remained on board, nor did he leave his galley, till the fire made such progress that it could not be extinguished. The fragmen kept flying, and a floating mass of fire and smoke on the shore, till he saw them consumed, and the whole of his flotilla enveloped in flames. There are few instances on record of more deliberate courage and gallantry, than were displayed by him from the beginning to the end of this action.

"Being no longer in a condition to oppose the enemy,
he proceeded immediately through the woods with his men to Crown Point, and fortunately escaped an attack from the Indians, who waylaid the path two hours after he had passed. The same night he arrived at Ticonderoga. All his clothes, papers, and baggage had been burnt in the Royal Savage at Valcour Island. He found at Ticonderoga the remnant of his fleet, being two schooners, two galleys, one sloop, and one gondola. General Waterbury, who commanded the Washington galley, and one hundred and ten prisoners, were returned on parole by General Carleton the day after the last action. The number of American losses in killed and wounded was between eighty and ninety. The enemy report theirs to be about forty.

"Notwithstanding the signal failure of this enterprise, the valor and good conduct of the commander and his officers were themes of applause throughout the country."

COMMUNICATIONS.

GEN. CLINCH AND THE INDIANS.

Mr. Editor:—Recent occurrences on our southern border will render a recurrence to events, which have long since transpired, at least justifiable, if it should not be deemed necessary to vindicate the distinguished officer whose name stands at the head of this article. To that object, it was necessary first to appoint the army to the second war of independence, who knew the high reputation which he sustained throughout that war, it would seem unnecessary to go into a history of his Indian wars for the purpose of inspiring the public with confidence in him as a Commander of the forces that have been sent into the field against the hostile Indians. But as his reputation is not known to all, and as the events which preceded the Seminole war, which raged twenty years ago, were, from political motives, or Governmental policy, either suppressed or kept as much as possible from public view, it may not be uninteresting to remove the obnoxious mantle which has been thrown over them.

In July, 1813, the 4th regiment of Infantry was ordered to Charleston, South Carolina. Col. Clinch who belonged to the regiment repaired with promptness to the post, notwithstanding the dangers of going in midsummer from the interior of the west, and the dangers which attended many officers who were arranged to that regiment from joining it, immediately. Here he remained from the above period till sometime in October, and by his correct discipline and admirable police his detachment were in such health and order that every man was capable of duty, till, during the last week of October. Col. King, the Commandant of the 4th regiment, now arrived, with the remaining detachment of his regiment. Hostilities being indicated by a part of the Creeks and the Seminoles, Col. Clinch's detachment was ordered to Fort Hawkins to be convenient to the scene of action. Such was the attachment of his officers and soldiers to their Lt. Col., that though it was made optional with some of them either to remain in the enjoyment of the luxuries of Charleston or to encounter the fatigues of the march, and the hardships and dangers of a winter campaign, not an individual would remain. Every man on board, for which he was, I believe, rewarded, and the country benefited by the improved health and discipline of his troops. It is a singular fact that while the epidemic which had swept off thousands of soldiers and citizens in Canada, Norfolk, and further south, (as seeming in some places the form of typhus pleurisy, in others the quinine, and in others the influenza,) was raging round Col. Clinch's encampment; while citizens were daily falling victims to it, and the soldiers of the 7th regiment suffered from it, not a man of Col. Clinch's detachment died. All were in readiness to march to the Chatahoochee when ordered there, in the spring. On the Chatahoochee the troops were detained for some time in negotiating a treaty with the Indians: the duplicity, chicanery, trickery, the deceitfulness of the亩or, the acuteness, cunning and hypocrisy of the Little Prince, Chief of the Creek nation, whose talents were worthy of more civilized men, who while extending the hand of friendship to the whites, were secretly encouraging hostilities amongst their tribes, and holding intercourse with the Seminoles, (required tact, discernment and talent to counteract their influence.) In the strict secret in which he was annually rewarded, he continued to observe the highest credit; he drew around him the chivalrous and magnanimous McIntosh, (Tustunugge Had ke, the White Warrior,) the eloquent Mad Tiger (the motion of whose finger alone spoke a language that went to the soul,) the sncere, benevolent and hospitable Noble Kanard; and through their influence enabled to baffled all the machinations of those who were their superiors in council. After maturing his plans he advised Gen. Gaines of the advantage of his personal presence at a talk, which it was determined should be held with the Chiefs. He accordingly came, and soon after, Gen. Gaines absolved the 7th Regiment to descend the Chatahoochee and act according to circumstances. With a celerity and despatch, which even the present improved means could not surpass, boats suitable, as well for navigating the rapid stream which was to be encountered, as for transportation and defense, were provided, by the state and the United States, out the expense to the United States. And in the face of many scowling tribes of Indians, the detachment was conducted in safety to a bluff just above the junction of the Flint and Chatahoochee rivers, which form the Apalachicola. After remaining a short time at this well selected position, which is now Fort Scott, Col. Clinch received information of the proceedings of the hostile Indians, which induced him to plan an attack upon the Fort on Apalachicola; it was garrisoned by Indians, Negros, and a few Spaniards. The events of this expedition are detailed in the official report of Col. Clinch, to which I beg leave to refer the public:

Camp Crawford, 2d August, 1816.

Sir,—I have the honor to inform you that I received a letter from Gen. Harmer, from General Gaines, that he had ordered a supply of provisions, two eighteen pounders, one five and a half inch howitzer, and a quantity of ordnance stores, to ascend the Apalachicola river toみて the convoy. I also instructed him to have a supply of the same opportunity, which was not to be made by the fort occupied by negroes and Choctaw Indians, to the passage of the convoy, to take measures for its reduction.

A subordinate chief, called Lafarks, was immediately despatched with a letter from the officer commanding the convoy, with instructions to remain near the bay until the arrival of the vessels. On the 16th ult. the chief returned, and took a boat from them. I was met the same day by Lafarks, who informed me that he had not been able to
ARMY AND NAVY CHRONICLE.

115

deliver my second letter to the officer commanding the gun vessels.

At 2 o'clock in the morning of the 20th, we landed without a shot of the fort, but protected by a skirt of wood. I again sent Lafarke with a letter, notifying the officer commanding the conveyance of my arrival. My plan of attack was communicated to the chiefs, and a party of Indians was directed to assist me in the attack. It was impossible to carry my plans into execution without the assistance of artillery, I ordered Major McIntosh to keep one third of his men constantly hovering round the fort, the other two thirds to assist me in getting up the vessels. In the evening a deputation of chiefs went into the fort and demanded its surrender; but they were abused and treated with the utmost contempt. The chief head Quaquin and Quaquin and the head chief were left in command of the fort by the British government, and that he would sink any American vessels that should attempt to pass it; and blow up the fort if he could not defend it. The chiefs also informed me that I must put out a red flag, and that the English Jack was flying over it.

On the 21st, I ordered Lieut. Wilson to descend the river with a small party, to assist in getting up the vessels, and to get a boat to enable me to get at the mouth of the river. We were completely surrounded, and that he might ascend the river in safety. On the 28th, I went on board gun vessel 149, about four miles below the fort. I had previously deter- mined on the course and the movements of the boat, as well as on the proper signal and position of the boat, and directed the transport Similacite to be in readiness to land the officers under cover of the night.

In the course of the evening, after consulting with the commanding officer of the fleet, I directed him to move up the two gun vessels at day light next morning. About 6 in the morning they came up in handsome style, and made fast along side of the intended battery.

After reconnoitering the river below the fort, in company with the commanding officer of the gun vessels, I determined to erect a battery, and blow up the fort. Lieut. McAllister and Captain Taylor to cross, with their companies, leaving Lieutenant McGavick and a party of men with the main body of the Indians, to secure the rear. I immediately commenced the battery, and the gun vessel was placed in a proper position, and directed the transport Similacite to be in readiness to land the artillery under cover of the night.

The war yells of the Indians, the cries and lamentations of the wounded, compelled the soldier to pause in the midst of victory, to drop a tear for the sufferings of his fellow beings. The fort contained about one hundred effective men, and was defended by two hundred and fifty savages, and three hundred and fifty women and children. More than one-sixth part of which number were saved. It stood on the east side of the river, about twenty-five miles from the bay, and one hundred and twenty, by water, from this post. The parapet was about seven feet high, and the fort stood on a small knoll, thirty-two, thirty-four, thirty-nine, six, two, six, and an eighth foot, and a half-inch bowitzer.

It was situated on a beautiful and commanding bluff, with the river in front, a large creek just below, a swamp in the rear, and a small creek just above, which rendered it difficult to be approached by artillery. But under all these disadvantages, it was taken without the loss of a single man on our part.

The property taken and destroyed could not have amounted to less than two hundred thousand dollars. From the best information I could obtain, there was in the fort about two thousand and forty barrels of powder, and a great quantity of fixed ammunition, &c. One magazine, containing 163 barrels of powder, was saved, which was a valuable prize to the Indians. The enclosed paper, (marked E) contains a schedule of the property taken and destroyed. The greatest part of the negroes belonged to the Spaniards and Indians. The American negroes principally settled on the river, and a number of them had left their fields and houses to the north and south of the river. Their corn fields extended nearly fifty miles up the river, and their numbers were daily increasing. The chiefs passed sentence of death on the outlawed Chocaw chief and the black commandant, (Lissol,) for the murder of the four Americans, and the sentence was immediately carried into execution. The Spanish negroes were delivered to the Spanish agent of Messrs. Forbes & Co., and the American negroes were delivered at this post.

At 8 o'clock, the transports were unmoored, as I found it impossible for them to ascend the river, and the provi- sions, ordnance, and ordnance stores, put on board small boats, and ordered the transports to proceed to Lynchburg.

On the evening of the 1st inst. I received information that a large body of Seminole Indians was within a day's march of us, and in a few hours the report was confirmed in a letter from Major Custer, left in command at camp Crawford, informing me that a large body of Indians was descending the Appalachee. I immediately ordered Major Muhlenberg to keep the boats together, and to be in readiness to receive them, and directed one hundred armed men to keep with the boats, and to act in concert if necessary.

I advanced with two hundred Cowetas and was within the gallant Major McIntosh, to meet them; but the cowardly wretch- es dispersed, without our being able to get a view of them. I should do injustice to my own feelings, and to the officers and men that were with me on this expedition, were I to close this report without belonging to them the warmest acknowledgments for their conduct, for their patience and perseverance under the most trying circumstances. To the distinguished Lieut. Randolph, and to Dr. Buck, (who composed my staff,) I am under many obligations for their coolness and interposition, which were only equalled by his great skill, and humane and generous attention to the wounded.

I must beg leave to recommend to my Government the gallant Major Mcintosh and Lieut. John Lovett Blue, and Lieut. Billy Miller, (all from Cowetas,) for their distinguished conduct during the whole expedition.

With considerations of the highest respect, I am, sir, your most obedient servant,

D. L. CLINCH.

Col. R. Butler, Adjutant General.

Division of the south.

Another letter on this subject, written by an officer attached to Col. Clinch's command to his father and published in the Virginia Argus, it may not be improper to insert, as it gives more in detail some of the circumstances connected with that engagement.

CAMP CRAWFORD, Aug. 4, 1816.

Dear Father,

I have the pleasure to announce to you the success of our Army and Navy in Florida; since the 17th ult., the hos- tile Chocaw Indians and the negroes who were united with them, have been almost exterminated by the explosion of the Negro fort. I left yesterday the command of the Negroes, under Col. Clinch, with one hundred men, a suitable number of officers and a body of Indians under McIntosh, embarked for the Negro fort, to secure a passage for our transports from New Orleans, which were under convoy of two gun boats. On our way, many slaves from the United States escaped to the Indians near the Appalachee were apprehended; amongst others a fellow bearing a scalp from the commander of the Negro fort and the Chocaw Chief to the Fowl Town, Mickasoo, and Seminole Chieft. The scalp was that of Midshipman Lushborough, or one of his boats crew, who war-
murdered by them while getting water for the gun boats. There were five men in the boat, one of whom made his escape by swimming, having been knocked overboard by the falling of one of the slain men. On the morning of the 20th we arrived off the fourth from the fort, and about six in the morning the enemy opened a fire of round shot, shell, grape, and rockets, which was continued with occasional intermission until the explosion of the 23d, but with little injury on our part. While shooting the Col. chose a more secure position for our camp, until the gun boats and transport, which contained our ordnance, should arrive, and which were then ascertain'd to be farther from the Fort than was expected. The firing of the enemy was intended in securing, foraging, preventing the escape of the enemy, and destroying their provisions, which consisted of green corn, melons, &c. During this time the friendly Indian Chiefs sent in a flag to the Fort, but the garrison refused to receive them, unless they should be sanctioned by the Chiefs of Fowl Town, McKee-skaok, &c., observing that they wished to fight, and had gone into the Fort for no other purpose. We were pleased with their spirited opposition to the purposes of our Indians, though they were Indians, negroes, and our enemies. Many circumstances convinced us that most of them determined never to be taken alive. On the 27th our western posts the firing of the Fort, and our detachment joined them for the purpose of erecting a battery near them, so as to co-operate. On the morning of the 25th about sun rise, a fire from the fort was commenced on the ground, and promised to be more formidable. The fire, which was the first hot shot thrown, entered the magazine, and sealed the fate of the garrison. You cannot conceive, nor I describe the horrors of the scene. In an instant, hundreds of these bodies were dashed upon the piles of sand and rubbish, or suspended from the tops of the surrounding pines. Here lay an innocent babe, there a helpless mother; on the one side a sturdy warrior, on the other a bleeding savage. Pigions of bodies, heaps of guns, accoutrements, &c. covered the scite of the fort. The brave soldier was dismembered of his remains, and checked his victorious career, to drop a tear on the distressing scene. Such is the fame of this expedition. (To be continued) They were ensconced with fifty out of three hundred souls who were in the fort. Amongst these were the Negro and Indian Chiefs; but they enjoyed but a short respite from the Indians. The Indian Chief, who was captured alive, when captured, the Chief was shot. By the great exertions of our humane Col. and his officers, the other sufferers were saved from such a death; but several have since died of their wounds. Ten pieces of large supply were taken, and a large reservoir of two hundred stands of arms, and accoutrements, with two schooners, and other articles amounting probably to $200,000 have been taken in this expedition. Their pieces were the same as those on the twenty-four gunners' ships, sizes, howitzer. Our largest piece was an eighteen pounder. While we were carrying on our operations against the fort, the hostile Indians had embodied themselves, and had advanced within three miles of our rear. I have accomplished as to the purpose of attacking our rear, but the work was accomplished too soon for them, and on our returning they made a precipitate retreat. They have since sent word that they wish to make peace. The Chiefs are as anxious for the acceptance of any proposal as I am for the acceptance of the resistance which was offered in June, to take effect when Indian hostilities cease. The Colossal has consented to my return to Fort Hawkins, where I shall remain in charge of a detachment until informed of its acceptance.

With the greatest affection, Your son, MARCUS C. BUCK.

N. B. First rate land can be purchased in Florida for fifty cents per acre. What speculation! it if it should ever be ours, which, I think, will be the case.

Both the Colonel and the writer have omitted to mention many events, from motives of delicacy, which if detailed, would reflect great credit on the troops engaged in that expedition. They have mentioned many little incidents, on their descent of the river, which proved the sagacity, the energy, and humanity of the American soldiers in counteracting the mercenary and cruel disposition of the savages; often the troops were landed on the shores of the Chatahaoochee, and captured Indians and Negroes, who had absconded from their owners in the states. Many of them would have been the only topic of sport, but for the enmity of the whites, who regarded the orders and example of their esteemed Commissary. They might, also, have mentioned the gallant bearing of this Spartan band, when informed that the whole Seminole tribe had emboldened themselves to come to their encampment. Without an ounce of liquor to fortify them, the sick, the elderly, and Episcopalian, with but a few friendly Indians as allies, and with no means of transportation, they received the news with composure; and with smiles turned their faces to their encampment, determined to cut their way or die in the effort. Fortunately the news of the destruction of the Apalachicola Fort had preceded them; the hostile savages who were not sufficiently fortified to cut them off at a single blow were panic struck, and fled on their approach, and thus Col. Clinch and his detachment, with the friendly Indians, passed in safety to their encampment. Here was the first and perhaps one of the most hazardous expeditions of the Seminole war. Notwithstanding the nearness of the United States that our troops should have done precisely what they did; notwithstanding they acknowledged privately the merit of the troops engaged in the expedition; such was the apprehension of giving offence to the Spanish authorities, or of incurring the censure of political opponents, that they carefully withheld their public all information on the subject, and so far as they were concerned, the whole history of this transaction would have been a tabula rasa. Fortunately for historic truth, the industrious Editors of the National Intelligencer held of Clinch's report, and another letter that was printed on the subject, three years after the event, and entered them on their journal, where they now stand as monuments to the memory of some who have left this stage of action, and lasting monuments of injustice towards those who were placed in perilous circumstances, without chart or compass for their direction. Where, if they had fallen into eternal disgrace must have overwhelmed them; and though successful, no public acknowledgement of their chivalry could be made. Such was the effect of this expedition upon the Creek Indians, that the hostile chieftains united with those friendly to the United States, and almost unanimously petitioned Col. Clinch to remain and become the National Intelligencer stores the first specimen of an unsuccessful destiny awaits him. When a correct account of his late proceedings in Florida shall be obtained, my word for it, he will be found to have done all that a prudent, experienced and chivalrous officer could have done under the circumstances. And if a sufficient force is entrusted to him, I will undertake all my reputation as a soldier, that he will give such an account of his services as the friends of those who have fallen wish to receive. If properly sustained, his military acquisitions, his prudence and knowledge of the Indian character, which he has studied for twenty years, cannot fail to crown his success. I did not receive Clinch's detachment, I arrived in Florida shortly after the events here alluded to. I had the account from those who were present. My memory has been recently refreshed by conversation with two of the officers of that detachment who are now in the city, and will confirm every statement that is made. A SOLDIER.

January, 1836.

P. S. Since the above was written I am pleased to see a letter from an officer who served with Gen. Clinch in the late action with the Seminoles, which fully justifies the opinion here advanced of his talents and bravery. An article in the Globe also does justice to his conduct, on that occasion.

ON THE MILITIA, AS A MEANS OF DEFENCE.

Mr. Editor—I will not be thought ill timed, I hope, to call the public attention to the subject of the employ-
the reflection arises, that such is the only resource for the defence of the country which appears to come within the contemplation of our rulers; at a time that threatening war, in various shapes and from various quarters, call for speedy and energetic measures for meeting the crisis.

The people have been too long deluded by the flattering notice—originating in their own vanity and fostered and perpetuated by aspiring demagogues—that it is upon the militia, the "bone and sinew of the country," that we are to depend for protection in the event of foreign aggression, internal combinations, or Indian disturbances upon our frontiers. This blind confidence in their own strength, if persisted in, will prove their ruin; and too late will they discover that they have been leaning upon a broken reed.

I know that it is unpopular and impolitic to utter sentiments which justify the action of the respectable mobs, exhibited in our streets on "training days," by doubting their efficiency, whether "on drill," or upon the field of battle. I know that I shall be told, as has been said a thousand times before, that many of the battles of former wars could not have been won without the aid of the militia, and how we have encountered British regular troops with success. But these could be rendered nugatory, so far as the argument is concerned, by counter statements. I know, too, that there are many who, to subservise their own ends, will ascribe false and interested motives to any member of the militia that attempts to destroy the system, which has hitherto been established in the militia as our right hand of defence. But every military man, whatever his experience, and every intelligent and unprejudiced reader or observer of past events, whatever his profession may be, will confirm my assertion, that militia should be employed only as auxiliaries to regular troops, with a view to the more efficient effect of their numbers, rather than to their actual efficiency.

I am sustained in this opinion by the testimony of one whose memory all venerate, and whose name is, and shall be, through all time, the pride of the nation, Washington; in his letter to the President of Congress, dated 16th Sept. 1780, he says:—"I am happy to find that the late disaster in Carolina has not been so great as its first features indicated.—This event, however, adds itself to many others, to exemplify the necessity of an army, and the fatal consequences of depending on militia. Regular troops alone are capable of the work sought. The records of the next and succeeding sessions of Congress will show how great were their sufferings—how manifold their losses—especially in arms and horses. And it is, then, upon so frail a support that the nation is to depend, to combat the accomplished and veteran troops of France. Shall we discard the lessons of experience, the admonitions of the wise and good, and persevere in the pernicious and fatal course we have heretofore pursued? Or shall we reform, repair and equip our ships of war, arm our fortifications—encourage the military spirit in the people, and by an increase of its numbers, to such an extent as to preclude the apprehension of defeat by the misconduct of militia associates?

BROWN. Jan. 81.

POLITICAL ECONOMY THE ARMY.

It is sincerely to be hoped that after a few more butcheries of our troops, the rulers of our land may discover the absolute necessity of an increase in our "Standing Army." When a few hundred more shall yield their life's-blood in an unequal combat; when surprised and ambushed by a superior force, a few hundred more shall meet their death in his most ghastly form; perhaps the expediency of abolishing the "regulars" and "well organized militia," may enter the minds of some sapient public servant. Whatever difference of opinion may exist regarding the true policy of the government in other matters, no man in any manner acquainted with circumstances and facts can for a moment
pretend to doubt that our present land force is altogether inadequate to the maintenance of peace at home, and a proper or just respect for our country—our own, our native land—among the nations of the old world. How much more intense and valuable this subject should be studied, in relation to its commercial, agricultural or other resources, calculated to increase the revenue, and exalt the State; how much soever politicians, prudent, wise, and economical, may by their joint endeavors seek to place our republic in an attitude enviable and unequaled by that of her principal rivals; how much soever discussion lowers the discussion upon the mere of common-place and trivial party measures, while men high in place endeavor to quell disturbance by rooting up old and long existing difficulties, dead in the minds of all, save a few who are desirous of adding fresh laurels to a crown of undying brilliancy; while our difficulties with foreign powers are on the eve of an audible adjustment; while our country is prosperous and rapidly increasing in everything which can constitute political greatness, the glittering of the tomahawk, the report of the rifle, the cries of the houseless widow and orphan, the burning habita-
tions and smouldering ruins are heard, and seen only by the handful of troops and the gallant militia, ordered to subdue and drive to the uttermost bounds of humiliation, a nation of five or six thousand warlike and blood-thirsty savages, headed by a chief who, although glowing with the red-man's blood, is worthy the name and character of a citizen of the "seven billion city," even had he existed in the days of Washington, when the sea behind and the land in front of Florida now the seat of savage warfare, has been, and yet may be the common grave of our massacred soldiers; the fruitful soil has been and yet may be moistened with the blood of victims who might have lived, if a sufficient force had been at the disposal of the commander in chief. Suppose for instance that a thousand savages could have lain in ambush, surprised and placed in one bleeding pile such a number? Is it probable that a thousand savages would have attempted such an act, and if attempted, is it probable they could have succeeded? and if successful, is it not possible that they themselves, or a majority, might have licked the dust side by side with the victims of their most recent brutality? These questions are easily answered. It is almost certain that if, instead of one, a body of five hundred troops had attempted the march, the journals of the land would never have contained the relation of the unnecessary and "crueL massacre of the United States Troops in Florida." If mercy had been the object, the act of any pity or pity would have availed, one of the most gallant, brave and worthy officers in our army would have never been forced to say "nine!" soldiers, "Men I am the only officer left, I will do the best I can;" an example of heroic greatness and lion-like bravery, which ought to shine on the page of history in juxta-position with the glorious deeds of a Leonidas, while the name of virtue, or the protection of courage deeds shall be admired by mankind. In all probability if a greater force had been in such a situation, and the one hundred and twelve of Major Dade's part of this force, they might have been the victims even then; but others would have been left who might have sent not a few savages to their final reckoning, who are now all ready, eager and willing to exact their victims at any time and in any place. But it may be said that the unexpected slaughter of an hundred men, paid by government for their lives and services, is not of sufficient moment to induce our rulers to increase our fortifications and our army. To any indi-
vidual having the welfare, honor and safety of his country for a guide, this increase is evidently necessary, and required by motives of interest, pride, and true poli-
cy. The Bill for the increase of one corps in the service is undergoing the scrutiny and prudent consideration of Congress; and honorable gentlemen cannot do better to consider the nakedness of our country as regards fortifications, and recom-
manded as it is by our venerable Chief Magistrate and the honorable Secretary of the War Department. The re-
"Engineers" are evidently too few in number when the object of their servicers, the extensive resources, popu-
lation, and wealth of the country is considered. When the bill for the increase of this corps shall have become a law, and fortifications from Maine to Louisiana shall have been commenced and completed, when the surplus revenue, now amounting to nearly thirty millions shall have become almost incalculable; the Army, (Arti-
illerists, Infantry, Dragons, etc.) must be increased.

Then perhaps no dire necessity may demand the services of the troops; then the fairest portion of the Union, the "garden of the South" may not become desolate and untenanted; then those who are ready and anxious to fight in the cause of their country may not be surprised and butchered in companies of a hundred without the shadow of an equal cause. But now every thing requires immediate action. Every tie of friendship, every tie of patriotism requires decisive action. But how shall we act? If the forces are withdrawn in sufficiency to strike terror in to the hearts of the Indians; if the western fron-
tier is left destitute, open to the attacks of savages; if the sea frontiers are left without a man to defend it; if every fort in the country is stripped and the troops marched to the seat of war; even then the great and prosperous "Union" could oppose the small but gallant force of six or seven thousand men, against the same number of a savage and warlike enemy! It is acknow-
ledged that such a force ought to have been at the dis-
posal of the General in Chief, in order that this "Semi-
noir war" might have been quelled at once and without delay. But if such a force had been ordered there, look at the defenceless situation of other portions of our common country. Why not at once increase the "Army the size of the people," as has been proposed to ten thousand rank and file. There are numbers of our young officers who would gladly proceed immediately to Florida; some with a zeal and patriotic courage which does honor to their names, have applied for orders to proceed immediately to the spot where the bones of our countrymen are buried and where their bodies lie hidden by the red tide of a golden savag fe. It is for the purpose of defending the common interests and the public rights in a day of peril that these officers have been educated at the public expense; it is to repay the bounty of the government, that these officers, urged by the fire of patriotism and bravery which burns like an ever burning light in the bosom of every American citizen, may be enabled, by the aid of the people, in the defence of the helpless families of Florida. But they must remain at their present posts and perform duties there which the rules of the service and military discipline demand. If they should be ordered to Florida, in what capacity could they go, unless our Army is im-
mediately increased?

ENLISTMENT OF BOYS FOR THE NAVY.

I am induced to make a few remarks on this subject, in consequence of reading an extract from the New York Herald, in the New York Chronicle of Oct. 16th, and more especially, as I consider those who are so earnest in recommending the enlistment of a greater number of boys for the Navy, — friends to the ser-
vice.

I cheerfully undertake the task of endeavouring to explain to them the utter impracticability of doing so,
without materially diminishing its effective force. The complements of seamen, ordinary seamen, &c., occupy at the room that can be allotted to them on board of our vessels of war; and if a greater number of boys were sent to sea, the discipline would not enable the boys in their navy as we do; (in proportion,) nor have they any Naval School for boys (except Greenwich) at the public expense; and none are, I believe, admitted into it, except the orphan children of public servants; it thereby appears that the object is to provide for such boys as are of present all, and then in order to be in- duced to her coast trade, and law respecting appren- tices, for her seamen; and was a similar law put in force in our country, we would in a few years have native sea- men enough to conduct our increasing commerce, and main our vessels of war to protect it.

The editor of the New York Herald in his zeal for the navy, carries a good thing rather too far, by recom- mendating a hundred of the graceless scamps, to be found about the streets in N. Y. for enlistment in every vessel of the service. I would be pleased to know whether the merchants of New York would be willing to trust their property to such persons, or whether other methods of discase employing in their own vessels. It would cer- tainly be a good plan to clear the City, and House of Refuge, of bad boys; but for my life, I cannot see how the navy would be benefitted by its adoption. The Naval officers and employment enough in their complic- ated duties at present; without having the additional one of correcting the morals of boys, who set paternal authority at defiance. The navy is not; (as is supposed) as asylum for every man, or boy, without a character; corporeal punishment merely occurs it: it now, and the time is not far distant when the seamen of the navy will be looked upon as men, and treated as such, and not degrading or half-breeds.

Let parents, if they have boys who wish to go to sea, apply at the Rendezvous, when they are open, and they will get them enlisted; but I have known in the very city of New York when wanted boys, that we were obliged to send to the House of Refuge for them.

Perhaps it is not known to an average, we take 200 green hands into the service annually. I should sup- pose, for the size of our navy, this was pretty fair. Added to this economy is a primary consideration, as far as regards naval matters; and the limited appropri- ations made by Congress for its support do not leave it in the power of carrying on the most simple or tho- nocratic schemes into practice, even if lie were disposed to do so; and the yearly pay and rations for one hundred boys at $27,200 more. When these all things are duly con- sidered, every one will acknowledge, that the boys that are employed in the navy at present (which is one to every two guns the vessel mounts) are as many as can be useful; but even allowing that a greater number were to be shipped, it would require much longer than three years to make them seamen, "Orders are already made," and a mechanic may serve 5, 6 or 7 years and be master of his trade, but of a sail- or it may be said, that he never thoroughly learns his.

The seamen of our navy have to serve eight and ten years before they are so rated, and the petty officers from fifteen to twenty-five years. It appears that the editor has overlooked the small matter of deeper interest to the service than he is proba- bly aware of—namely, what is to be done with those men comprising the present school? could his very able proposition be acceded to, and carried into effect, would not those men who have suffered and served through the period of a captain and master, be left to the incertitude of those meritorious youths he is so anxious to provide for. In the course of a few years they (by the editor's calculation) must be necessarily driven from their em- ploy in our navy to make way for the regenerated imp's of the poor and work house, and to seek their bread in a land of strangers, far from the places that have so greatly defined a time too soon worth made the man,—and for what reason? to prove to an all admir- ing world the gratitude of the American republic? Has not the present system of manning our navy been as productive of chivalric bravery, honor, and deeds of no- bile during, as ever graced the annals of a nation? Will they then depart from a custom that has at all times, since the foundation of our infant republic, been found efficient? No—if schools are to be established, let it be on the bosom of the ocean; there is the best academy for seamen—and those youngsters, whom it is necessary to carry to sea to complete the complement of the crews, at least, will be brought out of the danger to which they are exposed by the time they reach the age of relaxation from duty, by a competent master, an insight into the theoretical part of their destined profession,—and it is well known that the practical part of their educa- tion is never neglected on board an American man of war. It is an established rule, on board our ships, to mark the worthy and deserving for promotion, and were it not that delicacy forbids, I might lay before the editor's view, a list of as noble commanders, and other offi- cers, in our navy, as ever graced a quarter deck, and who did not make their way through the School of Re- form to their well meritsted honors; but manfully wrought their way through the harshest and most severe temper, to command a ship, but in case of emergency to work one and handle a martine spike.

If my plain remarks carry conviction with them, I shall be satisfied, and my object will be obtained,—if not, it is all one to

BARNEY.

The Admiralty have ordered an addition to be made to the demonstration ships at this port, and the Impregnable, 74; Donegal, 78; Kent, 73; and Stag, 46, have been brought down the harbour to lie in a fit state for commissioning, if wanted. These, with the four sail of the line, viz:—Impregnable, 104; Talavera, 74; Middlen, 74; and Cornwallis, 74, brought forward some time since, will compose a strong force, which may be speedily sent to sea in case of need.—Devonport Telegraph.

ORIGINAL POETRY.

WASHINGTON'S DAY IN THE MORNING.

[Tune "Patriot's Day."]

When Oppression's vile power assumed the command,
And freedom was destined for Slavery's chain,
Then genius did drop with her bays in her hand,
And Beauty sat weeping and scorning.

'Tis then heaven's rays illuminated the sky,
It gildeth the heart, and it dazzled the eye,
It vanquished the tear, and it conquer'd the sigh.
On Washington's day in the morning.

For O! that fam'd morning, remember'd must be,
That gave to our country, this child of renown,
Whose manhood was glorious, distinguished and free,
All gallantry ever adorning.

Let the sons of Columbia forever proclaim,
And daughters of Freedom all join in the theme,
And children lay out his heroic name,
On Washington's day in the morning.

All countries and nations at present that know'st,
His name have re eco'd with praise and delight,
In wisdom and valor his precepts have shone,
The feters of Slavery scorning.
So now hand in hand, let us jovially twine,
Sing harmonic verses at Liberty's shrine.
While over our heads the Star banner with shine
On Washington's day in the morning.

FORT MCHENRY, MARY.

J. R. McC.
THE SOLDIER'S DIRGE.

By Lieut. G. W. Patten, U. S. A.

"Toll not the bell of death for me,
When I am dead."

Felix Alvez.

Oh! toll not the bell,
When I am gone;
Let not a bugle swell,
The mournful tale to tell.
But let the drum,
With hollow roll,
Toll when the angels come
To take my soul;
And let the banner borne before me,
Wave in azure glory o'er me,
When I am gone.

Oh! shed no tear,
When I am gone;
Unmanly 'tis to hear
Sobs at a soldier's bier.
But let the peal,
Solemn and slow,
From minute gun reveal,
That I am low.
And with no costly pomp deride me,
But lean on arms rever's'd beside me,
When I am gone.

To the editor of the Savannah Georgian.

Dear Sir:—I hope you will find room for the enclosed beautiful lines from the pen of Miss Mary E. Lee, of Charleston, which appeared in the last Southern Rose. They breathe the genuine spirit of poetry. Miss Lee is the author of "the Lone Star," &c. in the Southern Literary Journal, and a constant contributor to the Rose Bud, under the signature of M. E. L. The last number of the New York Mirror, in speaking of M. E. L. says, "At some future time we will offer evidence to our readers that we do not over-rate this young lady in predicting for her, if she proceeds as she begun, great eminence."

T. From the Southern Rose.

THE BRAVE VOLUNTEERS.

A voice from the South tells a sad mournful story,
Of ruin and carnage, and war's dread alarms,
And the Angel of Freedom moves by in her glory,
And summons Columbia's proud patriots to arms!—

Not in vain does she call, for the pure flame is gushing,
Like the sun when it breaks through the morning's mist,
And the light of true courage is joyously flashing [tears],
The unclouded brows of the brave Volunteers.

Think not that they part, without feelings of sorrow,
From friends that are nearest and dearest on earth,
Oh! no, but they trust from the future to borrow
Some meed of high valour to double their worth:
Each bright, sunny spot of their childhood seems pleasant,
And warms them over its hearth-stone years,
But affection itself cannot weaken at present
The chivalrous truth of the brave Volunteers.

Each father looks proud, and each mother surrenders
With kisses and blessings the son that she bore,
While with quick kindling ardor each fond sister tenders
The well burnished weapon, thus struggles once more,
To hide the foul traitors of grief that still gather,
And burst in her bosom its torturing fears,
For who sadness would not a thousand times rather
Give all than dishonor the brave Volunteers?

For their country they strike: and a fair constellation
Of beauty looks on as they mount the sea-car.
While there comes, like the cry of a union-bound nation,
From the land of their sires a parting kurrah!
They go, but amid that wild shout of commotion,
That like music unrivall'd bursts full on their ears,
What heart does not swell with the voice of devotion,
"God prosper the cause of our brave Volunteers!"

M. E. L.

Charleston, S. C.

WASHINGTON CITY;

THURSDAY, FEBRUARY 25, 1864.

Correction.—The poetical article in our last number, entitled the Sioux Mother, should have been credited to the Baltimore Athenaeum, a highly interesting and well conducted paper.

Owing to the large quantity of original matter, accumulating upon our hands, we have placed several communications in the first part of this day's paper.

Leave of absence for three months has been granted to all the officers attached to the U. S. ship Delaware to take effect as soon as their services can be dispensed with on board; and also, for the same period, to all those who came passengers in her.

The funeral of Miss Patterson took place at Norfolk, on Friday.

The ship John Taylor sailed from New York, on the 16th inst. for Savannah, having on board 96 recruits for the U. S. army in Florida.

The steamer Merchant, from New Orleans bound to Tampa Bay, with officers and troops on board, put into Pensacola on the 6th inst. for wood and water.

Major Gen. Gaines and suite arrived at Pensacola, on the 6th inst. in the steamboat Watchman, on the way to Tampa. The W. had on board 250 troops. Gen. G. was accompanied by Captain Hitchcock and First Lt. G. A. McCall.

Brigadier General Eustis and suite, accompanied by Captain Canfield and Lieut. Temple, (Aids to Major General Scott,) with Captain Van Ness's Company, (H 1st Artillery) left Charleston on the 12th inst. in the Steamer Dolphin for St. Augustine.

ARRIVALS AT WASHINGTON.

Feb. 22.—Capt. H. W. Fitzhugh, 2d Art'y. Fuller's Lieut. A. Beckley, 4th Art'y. do

COMMUNICATIONS.

Mr. Editor,—When the readers of a Public Journal disapprove the opinions of its editor—and in the present condition of the our American Press, the thing is not unfrequent—I see no reason why such dissent should not be unhesitatingly expressed.

Even in the case of a party paper in politics, established to support particular men, or to sustain particular measures, though the mind of the Editor ditionises the party complexion of his paper, yet he does not present his own dogmatism to his readers as the infallible standard of opinion. Although to judge correctly is the ability of few, to think freely is the privilege of all; and the right to express honest opinions is as extensive as the right to form them. A party editor, of common liberality, would rarely decline to publish a hostile review of his own editorial writing, provided the literary execution of the criticism merited such respect. Your paper, moreover, is not sectarian; but is declared in the comprehensive and somewhat redundant professions in the leading editorial article, of the 7th of January, to be

"We wish O. P. Q. would explain the meaning of this word; we can make nothing else out of the MS. but the letters above printed.—Ed."
"neutral, impartial, candid and accessible to all"—open to all parties, influenced by none." I do not therefore anticipate that you will now recede from the judicious and liberal course of conduct which you have commenced, nor wish to prescribe what sentiments your paper shall be the means of diffusing: I therefore offer you for publication some remarks on an editorial article, which appeared in the Chronicle of the 7th of January, under the head of "Army Pay." It is presumptuous in me to protest against what is its expressions of opinion, and its insinuations of fact, and likely to be mischievous in its consequences.

In the first place, Mr. Editor, it tends to produce, so far as its influence goes, what it professes to design to obviate. I mean discord between the Army and Navy. Kindness and indulgence cannot, in my opinion, be useless to attempt to plant its seed in the bosom where it is not of native growth. Argument and reproaches are of trifling force to establish affection.

You cannot compel feeling. If, therefore, there does not exist, as you intimate, "harmony and cordiality between the members of the two services," your public declaration of the fact, though accompanied by regrets however persuasive, or arguments however convincing, of the inconvenience of such a state of feeling, will not operate to produce a better. But in truth the Army and Navy are now told for the first time, what they did never before the respect of the existence of this mutual jealousy and unkindness. (1) I trust, however, they will pass, before they take assertion or insinuation for fact. It is in itself a thing so very improbable, a thing for which it would be so very difficult to find a priori any cause, that in the absence of any fact to fortify such an assertion, we may very safely trust to general reasoning, and boldly deny it. It derives—and our personal acquaintance with the members of both Army and Navy is not so limited as to disqualify us to speak confidently—it derives no colorable support from any occurrence in the personal intercourse of the two services, nor any event in their particular careers and courtesies of private life depend, for the most part, on individual character and pecuniary ability. But whenever opportunity has permitted, in the casual meeting of the members of the two arms of our national defence, professional considerations have always quickened and extended the kindness and civilities, which as gentlemen pass between us. (3) Nor can any thing be culled from our public history to sanction the opinion I am now combating. Our action and duties are generally separate; sometimes, though unfrequently, in concert; never in conflict. It has indeed happened on some of the very rare occasions where we had feeling arguments, that parties, whose principles as officers have subsequently arisen between individual officers in appropriating their respective achievements and honors. But that must as readily have occurred, had they belonged to the same corps, and in such cases the two services have allowed the parties to the controversy to settle the precedence of good conduct and adjust the proportion of glory between them, without much interest or any participation in the dispute. It needs no very acute observation of men to know, that public sentiment may be very accurately judged from the general run of language, and the current use of epithets. Common courtesy is the rule, the admission of which will put everything in the balance, and the proportion of glory between them, without much interest or any participation in the dispute.

For the present, I merely notice it to remark the points of similitude between it and the article of the Chronicle—the evidence of time—the identity of sentiment—and the similarity of verbal expression. (5)

My objections to the order of the General are the same as those I have had occasion to protest against the article of the editor, which may be thus briefly recapitulated: if kindness subsists, the exhortation is supererogatory; if unkindness subsists, it is not mitigated by remonstrance: in both cases the injudicious counsel defeats the good it means, and works the opposite evil. In the case of the Army, I read in the Chronicle "has reason to know that the officers of the Navy will do nothing to impede the progress of the army application through Congress." Without adverting to the probable
source and authenticity of the editor's knowledge, the army will be very willing to believe the assurance; but indeed, they could never have needed any voucher to the fact. It is impossible it can be otherwise—thwildest imagination can furnish no motive for their opposition (9).

We are further told that “no notice will probably be taken of the communications which have already appeared in the Chronicle, on the subject of the “Army Pay.” This protest of impatience is a little gratuitous. If any thing false in fact, or fallacious in argument, has been urged, it may be expected to be examined. (?)

Finally, we are told that the navy must regard any allusion to their pay as “unkind and ungenerous.” (8) Does the editor of the Chronicle by commission and authority throw down the gauntlet? (9) The arguments drawn by the army claimants for increase of pay, from a comparison with navy pay, are cogent, consistent, and consistent with the most exquisitely nervous sense of propriety and delicacy. The navy thought so a year ago. The mutatis mutandis does not materially affect the principle. It is surely but a decent professional pride to be unwilling to serve for less than others. A pride too, which pervades all the employments of life down to the humblest mechanic trades. In subordinate public stations, salary is the measure of the honor of office; especially must it be so, in military services, during inactive seasons.

The editor of the Chronicle recommends that the army rest on the plea of “the inadequacy of the present pay” while he apparently rejects the important principle of political economy, that the value of labor is a comparative not a positive thing. The pay of all the European services is less than our own; but something similar is observable throughout all the modes of life; for in the overcrowded population of the old world, all labor, whether physical or intellectual, is nominally cheaper than in this country, where industry can always find the opportunity and the choice of employment. The most obvious way of proving our “pay inadequate” is by a comparison with the navy. Even should the army make no reference to the navy, Congress will make the comparison; and whenever the subject comes up before Congress, the arguments in our support will assuredly be based on that ground.

O. P. Q.

NOTES BY THE EDITOR.

In the foregoing communication there is a curious admixture of truisms which no one contests, a sprinkling of satire with a modicum of praise. We have had our scuffles whether we should be justified in again devoting so much space to a subject which must be uninteresting to all, save perhaps the authors of the communications themselves.

We gave so large a portion lately to a similar article, and our comments thereon, that we feel reluctant to present our readers with another chapter, to the exclusion of matter which is of more general interest.

Without any sacrifice of character for consistency or impartiality, we might deny the right of any one to catechise us for the exercise of a privilege, common to every editor—that of determining in some measure the character of the contents of the paper which he offers to public inspection. We are willing that others should be heard through the columns of the Chronicle, despite their endeavors to make us appear in the wrong. But we must brief.

(1.) If it be intended to convey the idea that we have stated the existence of mutual jealousy and unkindness between the army and navy, we deny, pointedly and unequivocally, the imputation. We have only designed to say that communications, referring to the pay of the navy, were calculated to produce jealousy and unkindness between the army and navy; and that such would be their inevitable tendency, if repeated, cannot admit of a momentary doubt. We wished to put a stop to all causes of irritation, and therefore expressed "a hope and desire that our correspondents [would] omit every allusion to, or comparison with the pay of the Navy."

Let us put a question or two, to "Subaltern" and "O. P. Q.,” and to all who are of their mind:—Who bears the censure for the insertion of such articles as have been alluded to? The writers thereof? Not they; for they are not known; they are sheltered behind their masked batteries, and can look on in safety upon the mischief they are making. No one has a right to ask for their names, so long as personalities are avoided, and they may feel themselves secure in their covert. The editor comes in for the whole censure; his judgment is impugned; his liberality condemned. If he rejects the communications, he offends the writers—if he inserts them, he offends some one class of his readers.

(2.) O. P. Q. speaks of the kindness and civilities which have passed between members of the two arms of our national defence, whenever opportunity has permitted. May such interchange of courtesies always subsist. But if an officer of the navy were aware of the fact that O. P. Q. had thrown the apple of discord among them, would he grasp his extended hand and accept his proffered hospitalities? No, he would scorn both. Yet O. P. Q. can meet, with a smile of welcome, the man whose feelings he has wounded, while himself stands securely sheltered behind his anonymous authorship.

(3.) O. P. Q. may rest assured that the harmony and cordiality between the two services is not too firmly established to withstand the frequent allusion by one to the pay of the other. We feel a perfect conviction that if many more communications of this nature had been inserted in the Chronicle, we should have lost one half of our subscribers in the navy. Even as it is now, we know not to what extent our interest may have suffered in this respect, for when a subscriber withdraws we never pretend to ask his motives, or solicit his continuance.

(4.) The order to which O. P. Q. refers we have never seen; nor did we know of its existence before he mentioned it; neither have we now any knowledge of it, other than what his communication contains.

(5.) The imagined resemblance between the order and the editorial article is entirely accidental. The editorial article, headed "Army Pay," in the Chronicle of Jan. 7, was written by the editor, without consultation, request or prompting from any quarter whatsoever; it was shown to no one, nor was it seen by any one not attached to the editor's office, until it appeared in the Chronicle. The pretended or imagined resemblance between the two, is but a repetition of the stale charge of a sinister influence—a charge as groundless as its repetition is at this time malicious. We know not what the opinion of the Commanding General of the Army may be upon the subject, never having exchanged a word with him in relation to it.

(6.) In the quotation made last week from the first article of "Subaltern," the navy was directly charged.
with "laboring to defeat the efforts the army may make" to obtain an increase of pay. We thought it probable that some officer of the navy might take upon himself to deny the allegation; but in conversation with those who had opportunities of knowing the sentiments of many others, and the general sentiments of all, we learned that the officers of the navy would not reply to the communications which might appear in the Chronicle in relation to Army Pay; we believe that, without exception, they wish success to the efforts of their "breth-" ""erm of the army to obtain an increase of pay.

(7.) We have already exposed one false statement of "Subaltern," (unintentional, we have not the slightest doubt) and the fallacious arguments founded upon that statement fall to the ground.

(8.) If O. P. Q. has any, the slightest, doubt upon this point, let him make enquiry of the first Navy Officer he meets.

(9.) We spoke neither "by commission"—*by authority"—nor by request; nor did we throw down the gauntlet.

We disclaim the remaining portions of the remarks of O. P. Q., having answered all that have any bearing on the question at issue, viz: the propriety and expediency of referring to the pay of the navy, in discussing through the columns of the Chronicle, the claims of the army to an increase of pay.

In the efforts now making to attain that object, we hope we shall not be charged with egoism, afection, or self-interest, in declaring our wishes for its early and complete success.

MEDICINE.

A writer in the National Intelligencer of Monday last remarks, when speaking of the medicine guns now in use in the Navy, that an officer of high rank in service has the utmost confidence in them, while others, of equal standing and experience, esteem them as worse than useless. The whole affair reminds us of a controversy, which we have somewhere read of, as having occurred between two rival Monasteries. A new form of exorcism had been packed off upon the one as that in use among the Jesuits, and they, without enquiring whether or not it was genuine, immediately adopted it. The pious monks of the other establishment instantly took fire at the insubordination, and stoutly maintained that the Jesuits were wrong, and that the ancient form was the only orthodox one. Ten years had this war of opinions raged with various successes on either side, when, to the astonishment of both parties, some most cunning wight luckily hit upon the simple expedient of enquiring of the College of Jesuits respecting the form they used, and was informed that it had never departed from the ancient one. Now if the present high contending parties would but adopt a similar expedient, and refer the matter to the guns, which will speak for themselves when put to the test, and appear, as yet, never to have been consulted on the subject, we have not a doubt but the controversy would be as soon terminated.

TOMPION.

The Pantaloons went to sea on Thursday. The impressions left on the minds of our community of the gentlemanly demeanour of her officers are of the most favorable kind. The sudden departure of the vessel anticipated several public manifestations of respect, which would have been shown to the gallant officers who had been on such a grand service to the nation. But Commander Corry was compelled to put to sea the day after his return from Washington. We cordially wish him and his gallant company a prosperous voyage.—Norfolk Beacon, Feb. 13.

ORIGINAL MISCELLANY.

LEGENDS OF WEST POINT.

Methinks Mr. Editor I can already see a smile lighting up your countenance at the idea of legends at West Point. Of all places in the world this is certainly the last in which one would expect to be entertained by a traditioanal tale. The principles of Vanbrugh and Corromontaigne, together with the various methods, analytical and synthetic, of demonstration philosophical, are sufficient to banish from the minds of those who are within sight or hearing of the academy all idea of things which can be measured by feet and inches or subjected to some philosophical experiment. Indeed I know from my own experience that the two first years are alone quite sufficient to unshackle every idea previously constricted, unless it be philosophically supported, and to lead to the rejection of every other which is not enough to stay times, triangles, or some other mathematical authority. So accustomed does the mind here become to demonstration, and so confirmed in the habit of inquiring into the manner of proof, that all subjects, without distinction of kind, run the risk of being subjected to the same process. I recollect a student giving hint to one of his friends occassion by saying: My dear fellow, you've got a hole in your breeches. His reply was in the usual form, "How will you prove it?" Notwithstanding all this however, a tale of by-gone days is now and then to be met with, even in the midst of our mathematical circles. And we have only to range the years of time to find ourselves among the ordinary haunts of wonders, which, though new to us, are not untold. Penetrate where we please among the Highlands; enter any solitary glen; and we find some humble mountaineer, ready to entertain us with a story of the past. Though secluded from society, and ignorant of the events which have occurred during half a century, he will recount to us with the greatest readiness, those scenes of the revolution in which he or his ancestors were disturbed in their solitude by the presence of contending foes. It is one of these tales, said to be a true one, which I now take the liberty to send you.

On the east bank of the Hudson, and opposite to West Point, is an elevated plateau, extending some distance along the river and having on its eastern border a range of high and rugged hills. From this range two projecting mountains advance to the river's bank and this range and the plateau stand on extremities. This position was one of the favourite stations of the American army. It was here, at the house of Col. Beverly Robinson, that the commanding officer of the Highlands fixed the head quarters of his command. A few guards were sufficient to give perfect security. Even a few piquets, posted advantageously in the gorges of the hills, would have been enough to stay the armies of Britain. Under such circumstances the soldiers were necessarily much at leisure; and various expedients were employed to while away the time allowed them. Every nook and corner of the Highlands was reconnoitered, every glen and cave explored, every hencoop and barn riddled, and every mountain scaled which seemed attainable by human means. There was one feat however, yet to be performed which had long been an object of ambition and of anxious consultation among them. As has been already stated, the northern barrier of their position was a mountain which rose by the river's side. Here huge blocks of granite, piled one upon another, and capped with overhanging crags of enormous size and horrid aspect, reared their heads high over the river and adjoining plain. The aspect is terrific and sublime; and the mountain is richly entitled to the appellation of Break-Neck-Hill which it bears. High among these rocks, and under the shelter of a great eagle, had fixed her aerie; and here, in a solitude of her own, she had continued year after year, to rear her young and send them forth to share her airy dominion. It was the desire of our mischievous soldiers to rob the nest of its young. Accordingly a plan was adopted and a par-
ty of adventurous spirits selected to carry it into execution. They proceeded by a circuitous route to gain the rear of the mountain; where the ascent, though difficult and dangerous, was not impracticable; and having borrowed a sufficient number of strong ropes of the farmers on the way they finally reached the summit and advanced upon the crag which overhung the object of their pursuit. Here the ropes were tied together at their extremities, and the framework of the bridge was produced was passed under the arms and fastened around the body of the individual who volunteered for the descent. The rest of the party took their proper positions and holding the rope securely in their hands they suffered their comrades to descend slowly over the crag. Continuing their descent, sometimes freely, at others interrupted by ragged projections of broken rocks, he finally passed the edge of the crag which sheltered the aerie. On giving the concerted signal to his companions his descent was stopped and he found himself suspended near the object of his pursuit. In the meantime the eagle, unnoticed by the soldiers, had been soaring high above them and observing their movements. And in proportion as the danger approached she descended in narrow circles for the defence of her offspring. The cry sent forth by the first eaglet which the soldier attempted to take from the aerie no sooner reached the mother than she plunged with all her might and fury upon the intruder. The diet of her offspring formed her food; and while suffering the painful lacerations inflicted by the talons of the eagle, his thrusts were dealt convulsively in whatever direction chance might offer. Unfortunately one of them struck the rope which sustained him and severed two of its cords. The third began immediately to untwist and our hero, whirling round and round, expected every moment that it would give way and precipitate him among the jagged rocks below. These at the distance of two or three hundred feet beneath him gave him the horrid assurance that he would be broken and rent in pieces. A shriek of terror notified his companions of his danger and the bird darted rapidly onwards. On arriving at the very edge of the uppermost crag, and while he was yet half suspended over it, the rope gave way. A shudder of horror ran through every frame. But fortune designed to save him. At this very spot a dwarf pine had struck its roots deeply among the crevices of the rock, and leaning over the cliff, presented its trunk to his approach. Hewas thus preserved; and a moment after was extricated from his dangerous situation to the no small relief of himself and his companions. The effect produced upon the individual however was no less remarkable than the singular good fortune by which he was saved. Though he had bravely stood on many a field of battle, and was renowned for his adventurous daring, yet, so soon as he was taken from the pine and the convulsive effort by which he had clung to it had subsided, he sunk upon the ground, exhausted by exertion and stumped by terror. Within twenty-four hours his hair had changed its colour; and instead of its original black, it assumed the snowy whiteness of a man of eighty years. His stupidity continued many days but finally left him by degrees.

For a long time after hearing the above story I could not believe it, on account of the remarkable change said to have taken place in the colour of the hair, which I did not believe to be possible. But from what I have since learned it appears that this curious physiological fact has been established. And that not only terror but some of the other strong passions have been known to produce a similar effect. A French gentleman, of whom I am indebted to inform me, that one or two of the kind once came under his observation. It was that of a French actor, who was so terrified in passing over a bridge which was suspended across a chasm between two mountains in France, that in two or three days his hair became perfectly white.

HABITATOR MONTIUM.

WEST POINT, Feb. 9th, 1866.

DOMESTIC INTELLIGENCE.

SEMINOLE WAR.

Col. James Gadsden has been appointed Quartermaster General of the Florida Militia, an office which we have no doubt he will fill with credit to himself and usefulness to the country, in the present critical juncture of our affairs.—Tallahassee Floridian.

MAJOR DADE.—A new county has been organized by our Legislative Council, embracing the country bordering on New River, and including Indian Key, to be called Dade County, in honor of the lamented Major Dade.—Ibid.

Letters from St. Augustine state that a Lient. Ward of the Volunteers, attached to General Clinch's command, had mutinied, and threatening to shoot his Commanding Officer, Col. Parish, was immediately shot dead by the latter. Col. Parish had been tried by a Court Martial. The consequence of this unfortunate occurrence was, that all the volunteers had left General Clinch, leaving him only his five companies of regulars and he had at that time received no reinforcements.

Capt. Porter, with the company of U.S. Troops under his command, left St. Augustine for Bulow's, on the 9th inst. and the two companies of regulars from North Carolina and last from this place, were shortly to depart for Cup King Creek, via Jacksonville.—Charleston paper.

SAVANNAH, Feb. 15th.—Col. Bankhead left this city yesterday, in the steam packet Florida for Picotela.

The steamboat Dolphin touched here on Saturday last on her way from Charleston for Florida. She has on board, Brigadier General Eustis, Capt. Van Ness, Capt. Canfield, Lieuts. Temple, Prentiss, Pettes, Allen and Betts, and Assistant Surgeon Berry, all of the Army, with Capt. V's company H, of 1st Artillery, from Fort Moultrie. The Dolphin departed the same day for St. Augustine.—Georgian.

Gen. Scott was still in Savannah on the 16th, but would depart for Picotela in the Dolphin, which boat was daily expected.

ST. AUGUSTINE, Feb. 15th.—Indian Depredations.—The whole of the country south of St. Augustine, has been laid waste during the past week, and not a building of any value left standing. There is not a single house remaining between this city and Cape Florida, a distance of 200 miles, all, all have been burnt to the ground.

NEW ORLEANS, Feb. 9th.—On Friday, three hundred U.S. troops and volunteers embarked on board the steamer David Brown, for Florida. The officers were, Lt. Colonel Twiggs, commanding. Majors Sands and Leear, Lieutenant Buchanan and Scott, and Assistant Surgeon Leavenworth.—True American.

NEW YORK, Feb. 19th.—Military Movement.—We understand that the detachment of U.S. Dragoons ordered from this recruiting depot to Florida, embarked last Thursday on board the ship Wharton at Savannah, where they will probably be provided with horses. The detachment consists of nearly one hundred men, under the command of Captain Wharton, who has with him Lieutenants Simonton, Wheeler, and Beall. They have been detained for some time past, waiting for their arms and camp equipage. The soldiers are a fine set of fellows, of the character of their officers is a sufficient guaranty for their efficiency in the field.—Courier and Enquirer.

A melancholy suicide occurred on Saturday evening, 18th inst, at the Washington Hotel, New York. Mr. S. R. Allston, aged 35, late of the 4th regiment, U.S.
The Army. The Army—The news of a few days since of the situation of our Army, by the Hon. Mr. Tipton, of the U.S. Senate, presents to the country a more correct view, and a more detailed account of our little force, than has been given to Congress for a long, long time. Our whole sea-board, from Portsmouth, N.H., to New Orleans, (with the exception of Florida,) is garrisoned by 19 or 18 companies of Artillery, averaging from 45 to 50 rank and file, to at least 25 or 30 Forts. The troops which have been ordered to Florida—in consequence of the smallness of our force—have been drawn (some of them) 1290, 1600 miles. Three companies have just left for the vicinity of Washington, on the Potomac, from Annapolis. Had our army been as strong as the increase of our population and the extent of our frontiers demanded, no blood would have been shed by Black Hawk's companions,—many widows would have spared the agony which they now suffer from the butchers of the Seminoles or the Cherokees, if we should not have to regret the loss of so many of our noble comrades by the treachery of those savages. What immense losses would be saved to individuals, and what immense sums of money would the Government have saved. Mr. Tipton deserves the thanks of the Army, and of the whole country, for bringing the subject home, at once to the attention of Congress. Almost nowhere, in these times, have those who have been the most active in the public service been more timid in their language, than in the risks they have been afraid to take for the safety of their country.

I beg leave, respectfully, in addition to Mr. T's remarks, to say, that he has viewed the subject of increase, properly, viz: in the rank and file. In 1821 the Army was reduced, but the number of company officers retained to the full or war establishment. We have 4 Regiments of Artillery, 9 companies each, consisting of 50 rank and file. We have also 11 companies to add to another regiment; thus having 4 Regiments, each of ten companies, they be increased to 100 rank and file, and thus give us for the Artillery 4,000, with only an addition of 35 officers. The infantry to be increased from 50 to 60 rank and file, and instead of 7 Regiments of Infantry, 5000 rank and file, instead of the present number, 3640, with an addition of the officers of a regiment, viz: 83.

I consider the talk of a Standing Army in this country being dangerous, as visionary as any scheme can possibly be. There are our supplies, pay, ammunition, in short every thing we get from, if Congress do not expound it? No, Messrs. Editors. I flatter myself that blood is a purely Republican flows through the veins of our officers as through those of any profession in this country, and there is as little danger of their proving recreant as the Representatives themselves. As to the 2d Resolution of Mr. Tipton, the Military Committee have the facts before them, and if open to conviction, it can be proved to them in a few minutes, that almost all the grades in the Army are not paid sufficiently. Clerks in most of the military bureaus in Washington receive more pay than 2d Lieutenants—and many of these very clerks have been employed for a short time since Surgeons have been selected for them. From our situation in life, we are obliged to expend much money in equipping ourselves to appear as officers should do on parade and in society; and after passing our lives in our country's service, from youth to age, we are at last compelled to close our eyes in death with the reflection that after all our toil and exposure, we are compelled to leave our families destitute, to struggle through life without even so much as a pitiful pension to look forward to. The above remarks are presented to you, hoping that Mr. Tipton's resolution will be thoroughly and without delay acted upon, for our country was well provided and well maintained, to meet the exigencies required by an increase of fortifications and extended frontier.

A FRIEND TO THE ARMY.

Extracts from a communication of Commodore A. J. Dallas, commanding United States squadron in the West Indies and Gulf of Mexico, to the Secretary of the Navy, dated.

U.S. Frigate Constellation, Key West, February 5, 1836.

Sir:—In my communication, No. 17, of the 3d of February last, I had the honor to report to you the renewal of the Light at Cape Florida, and enclosed to you the report of Lieutenant Bach, who had charge of the expedition, since which I am most happy to say, that the sea officers and scamen sent in charge of the vessel taking the marines to the relief of the military at Fort Brooke, Tampa Bay, have returned all well, having left the detachment of marines from this ship and the St. Louis there.

From a letter received from Major Belton, commanding at that post, a copy of which is herewith enclosed, you will perceive that the force arrived most opportune.

There being so immediate danger to be apprehended for the safety of this, or the adjoining Keys, I shall leave here to-morrow morning, accompanied by the St. Louis, for Pensacola.

The Vandallia is now at Tampa Bay, with orders to co-operate with, and assist, as far as possible, the movements and objects of the troops in that vicinity.

I have the honor, &c.

A. J. DALLAS.

Hon. MARION DICKERSON, Secretary of the Navy, Washington, D.C.

FORT BROOKE, TAMPA BAY, Feb. 1, 1836.

Sir: I have the honor to acknowledge the receipt of your communication of the 17th instant, handed me by Lieutenant Waldron of the Marine corps.

Pursuant to your instructions, Lieut. Waldron, and his effective detachment, joined this garrison on the 22d ultimo, and has been considered so important a part of the defence as to make it necessary for them to remain, if it should meet your concurrence, until the reinforcements from New Orleans reach this place, which, if I am rightly informed, may be about the tenth instant.

But, sir, on the part of my comrades of this garrison, allow me to present to you my deep felt acknowledgments for the patriotic act of your kind feeling. I shall with the most unflinching; and martial barbarians our nation had ever struggled with, without retreat or negotiation in reserve, had tested our constancy, and daily and nightly, for weeks, every moment we expected to revenge our murdered brethren; under such circumstances, our emotion is to thank you in a tone and manner worthy of your efforts, and our responsibility to preserve this post at all hazards. I have, the honor &c.

Capt. 2d Reg't Art'y, Com'g.

To Com. Dallas, Com'g &c., &c. Frigate Constellation.

The following resolution has been passed by the Corporation of Georgetown, D. C., and was approved by the Mayor of that town on the 11th inst.

A RESOLUTION expressive of the thanks of the Corporation to Messrs. Turnbull and Ewing, United States Engineers.

Resolved by the Board of Aldermen and Board of Common Council of the Corporation of Georgetown, That the Commissioners for improving the channel of the river below the town, be, and they are hereby requested to convey to Capt. Turnbull and Lieut. Ewing, United States Engineers, all thanks of this Corporation for the prompt and able manner with which their services as engineers, have been afforded to the work (now so happily and nearly completed) of deepening the channel of the Potomac below Georgetown.
In the House of Assembly of the State of New York, on the 12th inst.

"Mr. Wetmore offered the following resolution:

'Resolved, That the committee on the militia and the public defense be instructed to inquire into the facts connected with the death of Lieutenant DuBois Turner, of the U.S. Navy, from the vote of the legislature of this state, for the presentation of swords to each of the officers engaged in achieving the victory of Lake Erie; as were secured in the state of New York; and that the committee report to this house whether in their opinion, it is not due alike to Capt. Turner, and to a proper sense of public justice, (if it shall appear that any wrong has been done on that officer,) that the necessary measures should be adopted to repair the injury."

The New York Commercial Advertiser adds:

From the remarks of Mr. Wetmore, made on introducing the resolution, it appears that Lieutenant (now Capt.) Turner, was the officer third in rank, at the battle of Lake Erie—that he was specially noticed in the dispatches of Commodore Perry, as having brought his ship gallantly into action, &c. The Legislatures of New-York and New-Island voted swords to all officers killed in that battle, from each of their own states respectively; but the name of Lieutenant Turner was omitted by the legislature of New-York, from a supposition that he was a native of Rhode-Island—and rice versa. The fact, however, is, that Lieutenant T. is a native of Staten Island, in this state.

DOMESTIC MISCELLANY.

A HAUNTED SHIP.

A TRUE STORY—AS FAR AS IT GOES.

By Washington Irving.

The world abounds with ghost-stories, but it is exceedingly difficult to get them at first-hand—that is to say, from persons who have actually seen the ghosts: this may be the reason why they have fallen into some discredit with the dubious. I once, however, heard a story of the kind from one who claimed an acquaintance of being an eye-witness, and who believed in it most honestly.—He was a worthy captain of the sea—a native either of Nantucket or Martha's Vineyard, I forget which—any rate, of a place noted for its breed of hardy mariners. I met with him in the ancient city of Seville, having anchored his brig in the Guadalquivir, in the course of a winter voyage. Our conversation one day turned upon the wonders and adventures of the sea—when he informed me that, among his multifarious cruises, he had once made a voyage on board a haunted ship. It was a vessel that had been met with drifting, half-dismantled, and with flagging sails, about the sea near the Gulf of Florida, between the mainland and the Bahama banks. Those who boarded her found her without a living soul on board—the hatchways were broken open—the cargo had been rifled—the decks fore and aft were covered with blood—the shrouds and rigging were smeared with the same, as if some marauding beings had been there and clung to them. It was evident that the ship had been plundered by pirates, and, to all appearance, the crew had been murdered and thrown overboard.

The ship was taken possession of by the finders, and brought to Boston, in New England; but the sailors who navigated her to port declared they would not make such another voyage for all the wealth of Peru. They had been harassed the whole way by the ghosts of the murdered crew; who at night would come up out of the companion way and the forecastle, run up the shrouds, station themselves on the yards, and shoot at the mast-heads, and at all the usual duties of the ship. As no harm had resulted from this ghostly seamanship, the story was treated lightly, and the vessel fitted out for another voyage; but when ready for sea, no sailors could be got to embark in her. She lay for some time in Boston harbor, regarded by the superstitious seamen as a falsed ship, and there she might have rotted had not the worthy captain who related to me the story, undertaken to command her. He succeeded in getting some hardy ters who stood less in awe of ghosts, to accompany him, and his brother-in-law sailed with him as chief-mate.

When they had got fairly to sea, the hobgoblin crew began to play their pranks. At night there would be the deuce to play in the hold; such racketing and rumbling, as if the whole cargo was overhauled; bales tumbled about, and boxes broken open; and sometimes it seemed as if all the ballast was shifted from side to side. All this was heard with dismay by the sailors; but even of a night, and wherever he appeared, he was a very sagacious man, was exceedingly troubled at it. As to the captain himself, he honestly confessed to me that he never saw nor heard anything; but that he slept soundly, and when once asleep, was hard to be awakened.

Notwithstanding all these ghostly vagaries, the ship arrived safe at the destined end of her voyage, which was one of the South American rivers under the line. The captain proposed to go, in his boat, to a town some distance up the river, leaving his ship in charge of his brother-in-law. The latter said he would anchor her quietly, and proceed up the river in the boat. He got on shore at night, and yet be at hand to keep guard upon her; but that nothing should tempt him to sleep on board. The crew all swore the same. The captain could not reasonably object to such an arrangement; so the ship was anchored opposite to the island, and the captain embarked on his expedition.

For a time all went well; the brother-in-law and his sagacious comrades regularly abandoned the ship at night fall, and slept on shore; the ghosts then took command, and the ship remained as quietly at anchor as though she had been manned by living bodies instead of hobgoblin sprites. One night, however, the captain—his brother-in-law was awakened by a tremendous storm. He hastened to the shore. The sea was lashed up in foaming and roaring surges; the rain came down in torrents—the lightning flashed—the thunder bellowed. It was one of those sudden tempests only known at the tropics. The captain's brother-in-law cast a rueful look at the poor forlorn and libertieship. He saw numbers of uncouth beings about her, who were only to be described by the flashes of lightning, or by pale fires that glided about the rigging; he heard occasionally the piping of a boatswain's whistle, or the bellowing of a hoarse voice through a speaking trumpet. The ghosts were represented to save the captain, but it was too late; he is sometimes an overmatch for ghosts, or goblin, or even the himself. In a word, the ship parted her cables, drove before the wind—stranded on the rocks, and there she laid her bones.

When the captain returned from his expedition up the river, he found his late gallant vessel a mere hulk, and received this wonderful account from his sagacious brother-in-law. Whether the wreck continued to be haunted or not, he could not inform me; and I forgot to ask whether the owners recovered any thing from the underwriters, who rarely insure against accidents from ghosts.

ARMY AND NAVY.—The democracy of, 98 protested against a large standing army and navy, on the ground that it was a heavy and unnecessary tax on the people, but more especially, it strengthened the executive power, and might be used to erect a military tyranny on the government. It was not contended that a large standing army and navy might be the cause of provoking quarrels with foreign nations, and interrupt that peace and tranquility so essential to the prosperity of a young and promising country. The Study democracy of those days were jealous of power. They held that vigilance, strict and constant vigilance, was
ARMY AND NAVY CHRONICLE.

essential to public safety—that accountability to the people, on the part of public servants, was an imperious duty, and that men and money might be abused, and converted to purposes of ambition. The times have changed, and the policy of former times must also change. It is no longer the naval and military power of the nation that is to be apprehended—it is the accumulation of national wealth, and increase of patronage connected with the Executive branch of the Government, that is formidable alarming—hence the Emperor asks for a cabinet of military officers, for national objects, whenever it overflows. Besides the measures of defence for the government of five millions of people, just emerging from the chaos and irritation of a revolutionary war, are essentially different from those required for thirteen millions of people, twenty-six states, an extensive, open public sea as the Communication, and a trade and commerce which cover the ocean—the great rivers and the inlets of nearly all the world. Our army and navy require increase, considerable increase. We do not refer to any supposition of a war with France; that question is settled. We allude to the permanent force of the country. Our army for our extent of territory, for the protection of our frontiers, and to mass our fortifications, should at no time be less than ten thousand men, exclusive of officers, with all the necessary equipment. Our navy to guard our trade on the coast, in the Atlantic, the Mediterranean, the Pacific, the Indian Ocean and Chinese Seas, for harbor duty and to foster a school for seamen and officers, should consist of ten sail of the line, twenty frigates, twenty sloops of war, and an equal number of gun brigs and schooners, together with steam batteries for harbor defence; and the present is a fit and suitable occasion to provide a force of this extent by specific appropriations and judicious arrangements. New York Star.

OLD CONTINENTAL.—Amongst a parcel of records there was found the other day the following memorandum, which is sufficiently curious to induce us to preserve it in print. We have published it verbatim, in toto; although not very perfectly intelligible. Uniform for the Officers of ye Boston Brig, by Order of the Coll: Apr 29, 1772.

Hat. Gold Lace the Size and Cock like one at Mr Jennings.

Wig. Two curls (curl'd) like one at Mr. Carpen-
ter's Coll:.

Coat. Scarlet Fac'd of the same, Lin'd with white.

A plain Double Wash'd yellow Button—Holes, bound with gold, Prussian Binding like the Majors.

Waiscoat. White Cloth—hoses bound with gold, Prussian binding on each Breast as low as the Pocket Front, and same lines, and same binding on the Breaches.

White and Plain without Lace.

Stocking. White and No Spatter Dashes.

Bash and Gorget. Black Ribbon about the Neck. United States Gazette.

The above appears to be a naval uniform. We have seen one that was made for an American gentleman in Paris, at the time the American revolution broke out. It was for the rank of Lieutenant, and for taste and elegance certainly equalled any thing in the world. The dress sword and the white vest and breeches were particularly neat. N. Y. Star.

FOREIGN MISCELLANY.

FROM PAPERS RECEIVED AT THIS OFFICE.

A PROCESSION OF THE EMPORER JOSEPH II. This march was very fond of adventures inigo, and oftentimes met with many amusing enough. Before the French Revolution, when Belgium was under his sway, he would frequently repair to Brussels, and take up his abode at the palace of Leeken, in the neighborhood of the city. One day he was driving himself in a small coach on the road to Brussels, attended only by one servant out of livery, and attired as plainly as possible, when it began to rain rather heavily. He had not proceeded far when he overtook an old soldier of one of the invalid regiments, who stopped on the road as though he wished to accost him. The Emperor drew up, and the soldier, after many apologies, begged to be allowed a seat in the carriage. "I am one of my Majesty's Braves, and at the private cost of his Majesty; so you see, since I am bound to be careful of my uniform, which the cover of your carriage will shelter." "Jump in, my brave fellow," said the Emperor, "we will take care of your uniform." After he was seated by his side, the Emperor asked him if he had been on the road that morning. "Oh," said the old man, "I have had such a treat; I have been to breakfast with one of the Emperor's gamekeepers; and he smashed his lips at the recollection. "What have you eaten there that was so very good?" asked his Majesty. "Guess!—How can I tell?—perhaps some fried fish?—Better than that; try again." "A bit of roast veal." "Better than that; try again." "Ah, I can't guess any more," said Joseph. "A pheasant, my worthy sir; a pheasant!" said the veteran, "taken from his Majesty's own preserve. What think you of that for a breakfast?" "Why, said the Emperor, "if it were taken from the royal preserve, it must be good."

As they approached the town, the Emperor asked his companion where he would like to be set down. "Ah, Sir, you are too good, said the old man, 'any where will suit me.' "No, no! where do you live?" inquired the Emperor. The veteran then told him, and asked the Emperor if he had to thank him. The Emperor replied, "Well," said his Majesty— "Why, I should say that you were a military man; perhaps a lieutenant," hazarded the veteran. "Better than that; guess again." "A captain?" "Better than that; guess again." "The devil! ejaculated the old man, in a very small voice, and making himself into the smallest possible compass; then you must be a general, or, perhaps, even a field marshal!" "Better than that; guess again." "My God!" said the soldier, trembling from head to foot, 'you are the Emperor himself! The carriage was too small to allow him to go on his knees, but he prostrated himself in order to follow him to get out. 'What?' said the Emperor, 'you have eaten my pheasant, and now you want to get rid of me as quick as you can. No, no, you do not part with me till you get to your very door,' and there the Emperor put the old soldier down.

Admiral Sir Isaac Coffin died with the king at Brighton on the 29th of November; being 74 years of age and suffering much from gout, he was wheeled to the royal table in a 'guilty chair.'

ELECTRICITY AND MAGNETISM.—Mr. P. Cunningham, surgeon, R. N., has lately made the following interesting discovery of electric conductors being to a certain extent, also magnetic conductors, and of non-electric conductors being non-magnetic conductors, thereby adding another powerful proof to the many already existing of the identity of the electric and magnetic bodies. The above result was obtained by placing two copper wires perpendicularly, connecting the poles of a galvanic battery, pieces of steel cut off from a united end to end by brass solder, or simply retained in close contact in the above position by a copper tube, fitting tightly round the point of junction, each needle being found on removal from the helix to be a perfect magnet with two poles, the same as if it had been constructed in the usual way, by only one.
of the mariner's needle; even soft iron which under other circumstances loses its polarity as soon as the magnet is removed, retains it when united in pieces as above. Mr. Cunningham has also constructed a magnetic needle, the ends of which point East and West by magnetising it transversely instead of longitudinally; being led to attempt this by the accounts of ships struck by lightning, having their needles changed to point East instead of West, which he concluded could only be effected by a transference of the polarity from their ends to their sides.

A SAILOR'S CLASSICALITY.—"Ah! I thought we should come to it at last," said Ben. 'Young eyes are soon dazzled by female beauty, and then away their hearts are whirled into the eddies and races between the Sily and Cribdish of love; and then they found amongst the Syringes, who will not so much as throw them a coil of their long hair to hold on by to keep them from sinking.' 'Well done, Ben!' exclaimed the Lieutenant, after indulging in a hearty laugh; 'why you are quite poetical. Pray, where did you learn any thing of Scylla and Charybdis?' 'Why, Mr. Hamilton,' answered the veteran, with solemnity, 'the counsel of gray hairs is not to be despised; and respecting them there places, our parson—it was when I was a boy in the old Billy-roughen, up the Mediterranean—our parson used to compare the temptations of the world to the whirlpools of Messina and that way; and he told us the rocks on each side were the Sily and Cribdish of the ancients. And then he used to spin a long yarn about loose women, whom he declared were like the beautiful Syringes that floated on the green sea like a cork, but which it takes to be maimaidle; and they sung 'Tom Tough,' and 'Poor Tom Bowline,' and other like songs, with so much sweetness that they 'ticed men to destruction.'—Land and Sea Tales.

Mr. Grayson, from the Committee on Naval Affairs, reported the following bill: Jan. 28.

A BILL
To establish a Navy Yard in the harbor of Charleston, South Carolina.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States be, and he is hereby, authorized to select and purchase a site for a navy yard and depot in the port of Charleston, South Carolina, and to erect such buildings and make such improvements thereon as he may judge necessary for the accommodation and supply of the U. States vessels of war in that quarter, and for the construction and repair of sloops of war and smaller vessels, or for the building and refitting of such vessels in that port in any other manner, as he may think expedient it; and that the sum of one hundred thousand dollars be appropriated for such purposes, from any money in the Treasury not otherwise appropriated.

ARMY

Feb. 23.—Major J. Ellis, 1st Inf., assigned to the duties of Superintendent of the recruiting service in the Western Department.

Asst. Surgeon McDougall, now at Cincinnati, directed to repair to Jefferson Barracks, for duty.

Sgt. R. Waters, under command of Capt. D. S. Herring, 3rd Artillery, sailed from New York, on the 14th inst., for Savannah, destined thence to Florida. Lieut. B. Poole, 3rd Artillery, and A. C. Humphreys, 3rd Artillery, accompanied this detachment.

NAVY

From the Norfolk Beacon, Feb. 17.

ARRIVAL OF THE DELAWARE. The U. S. ship Delaware, Capt. Patterson, arrived in Hampton Roads, yesterday morning, from the Mediterranean, last from St. Thomas.

LIST OF OFFICERS.

Commodore.—Daniel T. Patterson.

Captain.—J. H. N. Olson.

Purser.—Francis A. A. Thornton—Surgeon, William Turk; Acting Medical Master, Wm. S. Young, 1st, Overton Carr, 2d; Commodore's Sec'y, Henry J. Handy; Chaplain, George Jones—Asst. Surgeons, Robert M. Baitzer, N. C. Baradine.

MARINE OFFICERS.

Captain—John Harris.

Lieutenants—Wm. E. Stark, Wm. Lang.

PASSENGERS.

Officers from the different Vessels of the Mediterranean Squadron.

FRIGATE CONSTITUTION—Midshipman Charles Hunter.

SLOOP JOHN ADAMS—Acting Lieut., Lewis G. Keith—Captain's Clerk, William B. Creecy—Carpenter, Eliza Ellis—Professor of Languages, Lewis Beaucakiewicz.

EXTRA PASSENGERS.

Mrs. George Ann Patterson, Miss Harriet Patterson, Miss Eliza Patterson, Miss George Ann Patterson.

Mr. Andrew Ritchie of Boston, Mr. Gambardella of Naples.

The Delaware sailed from Mahon the 19th Nov.; touched at Gibraltar and sailed thence 12th Dec'r.; put into St. Thomas and left there 21st January—experienced very severe weather on the coast.

Miss Harriet L. Patterson, eldest daughter of Capt. Daniel T. Patterson, aged 23 years, died on board the Delaware, on Monday night last, after a long illness.

The Delaware was towed up from Hampton Roads on Thursday, and anchored off the Naval Hospital.

The U. S. Schooner Boxer, Lt. Com'd'g, H. N. Page, was at Callao, on the 14th Nov.

MARRIAGE.

In Alexandria, on Tuesday evening, 16th inst., by the Rev. J. J. Johnston, LAURiston B. Hardin, Esq., Register of the Navy, (late of North Carolina,) to Miss ANNA M. H. HOXE, daughter of Bernard Hove, Esq.

DEATHS.

At his residence, near the Navy Yard, in this city, the 18th inst., TIMOTHY WINN, Esq.; Purser in the Navy of the United States.

In New York, on the 14th inst., Captain ANDREW McINTIRE, formerly of the U. S. Army.

REVOLUTIONARY SOLDIERS AND PATRIOTS.

In Duxbury, Mass., ISAAC DREW, 90; SERAFIN GLASS, 91; WILLIAM WINSO, 92; JOHN BARTON, 80. Barton was one of the life guards of Gen. Washington.

In Portsmouth, R. I., on the 17th inst. Capt. Gideon Gir-rod, in the 76th year of his age.
SURVEY OF THE COAST.

Fourth report of F. R. Hassler, as superintendent of the survey of the coast, upon the operations performed in that work between the months of May and December, 1885; with an estimate of the appropriation required for the next year's work.

1. My report of last May has shown how much has been prepared by the primary and secondary triangulations of the preceding year; the works of 1881, and all the works connected with them; and how these have been furnished with the most essential element of an accurate base line.

2. The map of assemblage joined to my last report shows that near 50 maps were prepared, to be executed last summer, if the appropriation had allowed to carry on the topographical works with the activity which I had contemplated, and which it would have been most economical to make immediately.

3. My report also stated the different direction which I was compelled to give to the work under the circumstances which I have here detailed, and I must take here the liberty to refer to it.

4. This effect was still increased by the ordering of the schooner Experiment, in the coast survey work, to a station for which the necessary previous calculations had been deferred, with a view to begin the soundings of Long Island sound only next spring, as the state of the works well as of the appropriation would naturally have dictated.

5. This circumstance necessitated me to stay in Washington with two assistants, all engaged in executing the calculations and projections, upon which all the detail works and soundings connected with it had necessarily to be propagated.

6. However, this delay gave me, also, the facility to attend more closely to the construction of standards of weights and measures, which is equally my task as the coast survey, according to the letter of the Treasury Department of 9th August, 1882; and upon which I made a separate report to the Treasury Department under which it stands.

7. The reconnoitering and placing of signals for the junction of the survey of Maryland with the coast survey, by which the work is intended to be brought so much the quicker to the Chesapeake, as was always contemplates, if nothing unforeseen should not be entered upon until in October, when Mr. Alexander joined me in Washington; from whence we proceeded selecting stations and placing signals on both sides of the Potomac and the western shore of the Chesapeake until Philadelphia, when the press of time required me to go to New York, and I committed the further examination to some of the assistants in the coast survey.

8. The works performed by my assistants during the last season are as follows:

Captain Swift has extended the triangulation between Connecticut and Long Island from New Haven so far eastward as the main triangulation would allow. Besides his very laborious task of keeping the very extensive and complicated countability over the coast survey expenditures, he has not been favored enough by the weather to present a completed result, though he has done much work. There are only two triangles remaining that can be done; these works will then unite the work near New Haven with the eastern extremity of Long Island sound, near the Rhode Island state line.

Mr. Ferguson has made the secondary triangulation, which included in my main triangulation 1877, over all the inner bay of New York, and the surrounding divisions of New York and New Jersey.

Mr. Blunt has extended his triangulation, begun the year before, all over the part of Long Island west of the base line and Ruland's hill.

These two gentlemen joined their works by several stations common to both.

Mr. Renard has continued the topographical works which he had begun last fall, over the whole extent of Mr. Blunt's triangulation on Long Island, and a great part of the bay of New York, until to the Neversinks, over an extent of about 80 miles of coast. In this course he has, besides, constantly worked jointly with Lieutenant Gedney, to furnish him with the necessary fixed points for his operations of soundings.

Lieutenant Gedney has finished the soundings which he had begun in Great South Bay, and from thence continued westwardly along the coast until the light-house of Sandy Hook, including all the offings and outer bar of the bay of New York.

Mr. Eakin has finished the topographical detail survey from the neighborhood of Black rock westwardly, until Narroton, between the turnpike and the shore; always furnishing Lieutenant Blake with determined points to ground his soundings on.

Lieutenant Blake has made the soundings of the shore of which Mr. Eakin made the topographical survey, and was proceeding to the opposite southern shore, when the weather became so unfavourable as to prevent his progress in the work there, because that part of the shore presented no safe enough harbor for his vessel.

Lieutenant Mackay, after having assisted in Washington in the projecting and laying out of points for different detail and sounding marks, proceeded to the north shore of Long Island, opposite to Lieutenant Blake's station; which he left afterwards, as Lieutenant Blake did not work in that neighborhood, to make with him a small addition to Mr. Eakin's works towards the east, over the neighborhood of Bridgeport.

Passed midshipman Dahlgren continued with me all the time that the calculations and plottings lasted, occupied at these calculations, and, after that, joined Mr. Ferguson in his secondary triangulation, and the consequent calculations.

9. The maps thus produced are, of course, all upon too large a scale to be presented with this report, and are to remain in the office of the coast survey to be further worked out, and then to be employed when the whole of the country between New York and Block Island shall be finished; to be formed in proper special and general maps over that whole part of the coast.

10. The copy of the map of assemblage, here joined, exhibits the works of this year, by its comparison with that presented last spring, by the sketches of the country surveyed topographically, and the results of those parts added this year, the intermediate previous secondary triangulations last year being expressly omitted, and only the main triangulation of that part preserved, to show the connexion.

11. It is now necessary to execute, if possible, in constant regular succession, all the topographical part of the country which is now covered by the primary and secondary triangulations, because the signals now standing present the proper facility and economy for the work, and also on account of the great chance of their being lost, by the want of respect paid to such public works, and by the secret destruction of the signals, and even of the secret marks placed in the ground. It might be desirable that they could be properly protected by a secret law, as that is the habit in Europe, where such well-secured triangulations exist, and are still daily making, from Sicily to Laponia, and from Brest across Turkey and Petersburg.

12. Having thus rendered account of the faithful exertions and works of my assistants, it would be improper for me to omit mentioning how painful it is for me
to see those of my assistants who are connected with the army or the navy deprived of that additional remuneration which was stipulated for them at the beginning of the work, and which the so much increased personal expenditure, which has, of course, the coast survey, deserves, by the application to them of a law of Congress of last winter, which I cannot conceive ever having been intended to apply to the case, in which they are, by the extra expenses unavoidable in the constant travelling life which they have to lead; and particularly, I think, those who have so long been led by it to load an officer from one department with a heavy responsibility for accountability upon funds under another department, which has, in the common order of things, no control over him. If this difficulty cannot be overcome otherwise, I would like to suggest the proposition of a special law in that behalf.

13. The increase of compensation granted to the civil chiefs of secondary parties, on account of the unavoidable increase of their expenses in these situations, has been very gratifying to me as well as to them. I considered it an unavoidable and proper act of justice, so much the more, as we are assured that some of the assistants in the coast survey have been employed in so high a position as they would be for similar works if in the employment of private companies of citizens.

14. In respect to myself, I do not like to do more than simply to state here the fact, that the allowance of $1,500, made to me for the personal expenses which unavoidable increase of the expenses in those cases, is insufficient, as I had already in the beginning stated that they would likely prove, (letter of 12th Aug. 1832, printed documents, page 87.) This amount does but scantily cover the half of the difference between the life of a steady home and that which I have to lead in that work, which, is, of course, what is to be compensated by this allowance. It is, besides, well known that the compensation of a chief engineer of a railroad or canal is generally rated and paid at $6,000 per annum, and that many come much higher, though the requisite requirements, labor, and responsibility are by no means equal to what is in a coast survey. That the coast survey has made great pecuniary sacrifices in this work since as early as 1811, is well enough known to many persons. I may therefore also hope that this subject will receive a more adequate consideration.

15. The Fourth Auditor's refusal to admit in the accounts, the accounting officer the whole of the expenses of certain operations, unavoidably necessary for the work, has laid great impediments in the way of the work. An officer in that situation can impossibily have a just idea of the propriety of any operation in this work. In fact, none but the director of such a work is competent to independently properly judge upon the necessary operations, and the proper manner of performing them. By the measures of the 4th Auditor, that officer would become the sole and full director of the work, which is entirely inadmissible. If the main direction of the work is intrusted to me, the minor directions, all the directions, must be understood as equally intrusted to me. I have, of course, by that, been obliged to refrain from taking in proper time a variety of measures beneficial to the work, and fully within the limits of the stipulations of the contract under which I work for the coast survey; the loss produced by the delay of the work has been very great, I might say upwards of $10,000, under the fallacious appearance of trifling economy. I hope that also this difficulty will be leived by the Department, maintaining the exact observance of the contract with me, and, if needed for better information, ordering the impartial investigation which I have so long claimed, in order that the Department may be furnished with more accurate data to assess a just judgment.

16. I am sorry to be obliged to repeat here again that the large instrument, with which the main triangulation is to be continued, has not yet arrived from London. I have lately again taken measures to press its forwarding, by means of our chargé d'affaires in London. I hope there will be no doubt of its arrival before the opening of the next campaign, when I shall make the most diligent and constant use of it; it is eminently calculated to accelerate the work, by its superior arrangements and accuracy. However, if even it had been here, I could not have been satisfied with it last summer, on account of the insufficiency of the appropriation to bear the expenses, after what had been applied for the expenditures of the two vessels employed in the soundings, as it would have caused the stopping of the whole work for want of means.

17. The story of the two works, of the coast survey and the construction of the weight and measure standards, which are equally under my charge, according to my contract with the Government, have been considerably complicated by the separation of the coast survey, from the Treasury Department. Both works are equally drawn in the interest of the commerce, and have no reference to the navy. The accurate survey of the coast is made with the view to protect the property afloat on vessels from shipwreck, and the regulation of the weights and measures, by establishing accurate standards, is to regulate the distributive justice in all commercial intercourse. The knowledge and a part of the means which are now employed, and indispensable, for the weights and measures. The reunion of the works in the Treasury Department would be a real advantage.

18. With respect to the appropriation which it will be proper to propose to the session of Congress now opening, I am enabled to give more detailed information from the data which experience has furnished than it was possible to give last year, and to which may be attributed the insufficiency of the last year's appropriation. For the most advantageous and economical advancement of the work, it is very desirable and necessary to avoid in this year, on account of the great detriment which would accrue to the work from it. The following are the results which are presented for the different items:

1st. The expenses of each party of secondary triangulation have proved to be about $4,100 per annum; three parties have been annually engaged, and an equal number it is proper to employ next year; their amount will, therefore be

$12,300

2d. The annual expense of every topographical party has been at the rate of $4,000; the next year it will be necessary, for the best advantage of the work, to have five parties, amounting to

$20,000

3d. The expenditure from the last year's appropriation by the naval agent in New York, it appears that the two vessels have cost, during the time they have been employed, $16,124 28; at which rate, the same two vessels must be rated, for next year, at

$20,000

4th. The main triangulation, according to the experience in 1833, and the nature of the work, and necessary persons and means to be employed, must be rated at

$22,000

Instruments, telescopes, reflecting instruments, drawing instruments of all kinds, books and other similar apparatus, necessary, and to be paid this year, and such as are still to be ordered, or constructed under my direction,

$6,000

Before the next appropriation will likely be made, there will probably be expenses incurred, to be covered by it, to the amount of

$4,000

$57,800

ARMY AND NAVY CHRONICLE.
FOREIGN MISCELLANY.

FROM LONDON PAPERS RECEIVED AT THIS OFFICE.

THE FRENCH NAVY.—A letter dated from Havre, 11th Dec., states that a considerable promotion in the navy will take place on the first of January next. Another from Toulon, 6th Dec., states that in the course of next month the Hercules, of 100 guns, built on an American model, will be launched, and immediately afterwards put into commission; that the Trident was ready for sea; and that all the officers or lieutenants of absence from marines and sailors were suspended. A third, dated Brest, 9th inst., states that the ships intended for the fleet of observation in the West Indies had not yet sailed; that the positive order for fitting out the Santri Petri and the Jea had been received, and that a new levy of seamen had, in consequence, been ordered in every direction. The amount of the companies were hourly expected to be doubled, and twenty companies of marines were being formed in that port.—United Service Gazette.

PURSERS.—It is expected that the Purser's, both in commission and on half-pay, will be put on a new footing at the beginning of the year. The principal feature of the alteration will be to give them fixed pay, according to the ship's rate, doing away with all tenths and necessary money; but, as an incentive to the due care and dispatch of the provisions, slops, &c., a bonus will be given according to the correctness of the accounts which they may keep; and after the lights are all necessary are delivered and furnished by the dock-yards, a scale is already drawn out, fixing what these bonuses shall be:—the pay of a first rate is to be £650, and of a sloop of war, £200 per annum. The half-pay is to be increased from the land which has been accumulated for that purpose, from £4. to £6. £8.; from £4. to £6. and from £4. to £6.

SOLID CHANNELS.—A correspondent, in noticing the loss of the St. David, owing in a great measure to her not being enabled to get clear of the wreck of her masts, &c., calls the attention of ship-owners and ship-builders to Mr. Couch's Patent Solid Channels, which are not only adapted for to dangerous a case, as by, but, by presenting a solid inclined plane to the sea, entirely prevent the violent concussion underneath the "channels," which has occasioned the loss of so many vessels after carrying away their masts—West Devon Standard.

BRITISH NAVY.—A letter from St. Petersburg, dated the 20th ult., announces that since the Emperor's return the greatest activity prevailed among the members of the Russian diplomacy. The Emperor personally attends most particularly to the navy. He is continually tending to inspect and press the execution of orders transmitted to him by Kars, Bessarab, and Belgorod. The battle is also observed in the dockyards of Ochita and St. Petersburg. It is calculated that he will shortly have in the Baltic seven or eight ships of the line, five or six frigates, and about ten smaller vessels.

DOMESTIC MISCELLANY.

MASTERS OF VESSELS.—Among the many callings, in the busy scenes of life, of high trust and responsibility, there is perhaps no one involving greater anxieties than that of a ship-master; and yet how little is known of those to the mere landsmen who has never traversed a mighty sea, to the burning heat of the tropical sun, or the chilling blasts of the frozen zone. About to launch his bark upon the fathomless and trackless ocean, the master of a vessel must have his mind constantly employed while in port, in preparing his "little world" for the fate that is to await him—the hull of his vessel, his may be his fate to, when the seas rage, all must be looked to, that they may be found sufficient to meet the tossings of the mountain wave, and the fury of the storm; water and provisions of every kind must be provided, for far away from all supply, it is to him alone that his "little nation" looks up with confidence, when winds howl through the burning teeth of the tempest roar; and his neglect in one particular may endanger, not only the large property entrusted to his charge, but his life and the lives of all "who go down to the sea in ships." Hence, while on shore, his mind is constantly occupied with cares and anxieties, that he may not overlook any part of his charge, for when on the bosom of a boundless ocean, there will be no remedy.

But he has attended to his duty, and now the skillful pilot leaves him to steer his course; still in his mind is concentrated every care, for there is to originate every order which is to govern in each case that may arise; and will be the last man to think of the dangers he endures for the safety of his passengers; the crew, and the goodly merchandize with which his vessel is freighted. Not an hour, not a moment, is the charge absent from his thought; his experienced eye must be every where. He watches with ceaseless gaze the appearances of the heavens, to judge of the prospect of the weather, to know if it be safe to trust the lofty sails to the lighter breeze, and to cause them to be taken in, preparatory to the freshening gales which may endanger them. His experienced eye, is, that foresees the impending blast, and no matter what the heat or cold, the pouring rain, or the ceasing thunder or freezing snow, he has a provision of artillery of heaven," he must brave it all. The command, "all hands reef topgall, aloh," can be given by him alone, and should the times portend a heavy gale, on deck he stands, nothing dismayed, as one after another he orders the sails to be taken in, until, perhaps, he finds the necessity of his carriage of the ship to be left to keep the ship poised on the tumbling wave, and for a time he feels that they are safe. But the high trust with which he is charged augments as he finds the fury of the storm increase; his sails are blown to pieces, and nothing is left but to scout before the gale, perhaps, under bare poles. The master of the vessel, before the wind is seized upon, and away she goes, the howling tempest is driving her amain; the sea rolling mountains high behind, and threatening to engulf him. Fearful to trust the ship one moment to his officers, he must keep the deck; though drenched with the pelting rain, or freezing cold, he cannot leave his post. His officers, his seamen, may claim his relief, but to the captain there is no rest. Perhaps he is caught on a lee shore, and cannot bear away—who can imagine the state of torment to which, from a thousand causes, he may be reduced almost to despair? Who can tell the agony of soul with which he may be obliged to acknowledge, in the exercise of the most profound skill, that all is lost?

Among his passengers there may be every tender tie of life—the husband and wife, the mother and child, the gay and blooming bride, the fond lover too, with the darling
ARMY AND NAVY CHRONICLE.

object of his heart; each occupied with their own awful situation—all leaning upon the commander, and looking to him for a ray of hope! To some, this may appear a picture highly colored, because it is not often realized; but this does not exempt the ship-master from its terror. As it has not seldom happened, it may happen again, and every ship-master is liable to some awful scene.—Salem Gazette.

From the Burlington (N.J.) Gazette.

CHRISTMAS HOLIDAYS IN JERSEY, 1776.

When the British army went into winter quarters, in 1776, they cantoned about 4000 men on the Delaware, at Trenton, Bordentown, the White Horse and Mount Holly, and the remainder of the army was distributed from that river to the Hackensack. Strong corps were stationed at Princeton, Brunswick and Elizabeth town. General Washington at once perceived this dispersed situation of the army, and meditated a blow which might retrieve our then almost ruined state of affairs. He formed the plan of attacking all these posts on the Delaware at the same time, and if successful in any or in all of them, he hoped to inspire new courage into our people—to defeat the designs of the enemy, and relieve Philadelphia, which then seemed plainly to be threatened. The American army was posted above Trenton, from Yardly's up to Coryell's ferry. The Pennsylvania flying camp and the Jersey militia, under Gen. Irvine, extended from Yardly's to the ferry opposite Bordentown. Below Bordentown, the Pennsylvania militia, lay at Bordentown, and still lower down the river. It was arranged that Gen. Washington, with 2400 continental troops, should cross at McConkey's ferry, nine miles above Trenton. Gen. Irvine was to cross at Trenton ferry, and secure the bridge below the town. Gen. Cadwalader was to cross at Dunk's ferry, and carry the post of Mount Holly. Of the manner in which Gen. Washington made the masterly passage of the Delaware, we shall not here speak. He crossed on the night of the 26th of December, 1776, amid the misted obstacles of a violent snow and hail storm—a severely cold night and a river filled with ice, and began the battle of Princeton, at 8 o'clock in the morning. He captured 1000 British regulars, took six field pieces, and 1000 stand of arms. The same causes which impeded his progress, prevented the passage of this river by the other Generals, and thus a great part of the original plan was defeated.

Had this plan would have been, if executed, may be judged from the condition of the British troops during the Christmas festivities. Col. Reed, of Cadwalader's division, crossed at Dunk's ferry, with some infantry on the same night, and despatched trusty messengers to Mount Holly. They reported that they had locked all the houses, in which the soldiers were quartered, and had found them generally fast asleep, under the influence it was supposed of the spirituous liquors they had drank the preceding day. There appeared to be no apprehension of danger, and no attempt to guard against it.

The complete success of Washington's division at Trenton, effectually roused the British general, and he again, after a few days of marching and counter-marching, placed the American army in a very critical position. They were prevented from re-crossing the Delaware by the state of the ice, and were in the presence of a superior army. In this state of things, he formed the bold and judicious design of abandoning the Delaware, and passing in the night by a circuitous route to the rear of their forces at Princeton, where he knew they could not be very strong. In the evening of January 2d, 1777, the baggage was moved down to Burlington, and at 1 o'clock on the morning of the 3d, after renewing the attack on Trenton, the British were vanquished, and the field set on fire. They had already crossed the ice, and were thinking of the utmost secrecy over a frozen ground, by the quaker road to Princeton. Early on the morning of the 3d of January, was fought the battle of Princeton, where Washington was again victorious. These two battles have been styled the turning points of the whole Revolutionary war, and it is believed were exceeded by none in the importance of their results. They saved Philadelphia; they recovered New Jersey; more than all, they revived the drooping spirits of America, and gave a sensible impulsion to the recruiting service throughout the whole United States.

From the Globe.

GENERAL WILLIAM EATON.

Among the bills ordered to be engrossed for a third reading in the Senate a few days ago, was a bill for the benefit of the heirs of the late General William Eaton. In looking into the bill, we perceive that it makes allowance to General Eaton's heirs, for his great and almost romantic services on the Barbary coast, by paying him according to his rank, and compensating him for his actual losses. Thus during the last few years, the Republic is showing its if grateful to a chivalrous and meritorious officer, who was supposed, at the time, to have received hard treatment from his own Government. We understand that the vote was unanimous in the Senate, and we subjoin the brief report from the Committee on Militia Affairs, by Col. Benton, which presents a rapid view of Gen. Eaton's merits and services.

Mr. BENTON made the following report:

The Committee on Military Affairs, to whom was referred the petition of the heirs of General William Eaton, report:—We having carefully examined the contents of the petition, and compared its statements with the official correspondence and public documents of the period to which it relates, they find the history of General Eaton's services on the Barbary coast correctly set forth, and refer to that petition for the principal facts necessary to be known to the Senate. From these facts, it is evident that General Eaton had the merit of planning, organizing, and leading the expedition to Derne, which had the immediate effect of compelling a peace, by which the future degradation of tribute was avoided, a demanded ransom of two hundred thousand dollars reduced to sixty thousand dollars, the four hundred captives, including the crew of the Philadelphia, immediately set at liberty, and a resolution agreed upon, by which future American prisoners were to be exchanged as prisoners of war, and not ransomed as captives. These were the positive advantages immediately accruing to the United States from the heroic enterprise of General Eaton, and probably would have been far greater, if the pasha of the reigning bashaw of Tripoli had not been precipitated by the negotiator without communicating with General Eaton. But there was another advantage which did result, and the value of which is above calculation; it was to show the Barbary powers that there was another way, besides ransom, to relieve Americans from Tripolitan dungeons—it was to go and cut them out with the sword.

At the moment when the success of Derne produced these great results, and promised still greater, in the immediate march to Tripoli, the overthrow of the reigning bashaw, and the establishment of solid peace upon our own terms, General Eaton was required to abandon his expedition, and to come on board the United States frigate Constitution. The embarkation of his Christian followers, of Hamet Caramalli and his principal friends, had to be effected by stratagem, at midnight, and with the loss of every thing, to escape the rage and vengeance of the deserted Arab troops, and of the inhabitants who had been induced to revolt against the reigning bashaw.

For all these services and losses General Eaton received the pay of consul, or navy agent, at the rate of one hundred dollars a month, and sixtens per cent. The committee are of opinion that he ought to be paid as a general commander, and compensated for his losses, and report a bill accordingly.

American State papers, folio, ii. p. 715.

DOMESTIC INTELLIGENCE.

From the New York Times.

The brig Padang, Captain Williams, arrived yesterday from Smyrna, bringing advice to the 6th of December, from our squadron, a part of which was lying at that port. There were a French, an Austrian, and a Dutch of an English squadron there also. The French Admiral had treated the American Commodore with the greatest politeness. It was the Constitution and Shark that lay at Smyrna, the other vessels of the squadron being divided about the Mediterranean, and all kept in a state of great activity. The Commodore had applied to the Count of Dardanelles, intending to visit Constantinople, but it was uncertain whether it would be granted. Indeed the news of the prevalence there of the plague, which was broken on the 23rd Nov. by the steamer plying between the capital and Smyrna, might prevent its going if permitted. If so, the ship was to return to Athens, where they had lain a week, and thence proceed to Malta. She would reach Mahon about the 15th March.

While at Athens the Commodore and all his officers were received by King Otho at his palace. He conversed very freely with Com. E. using the French language, and the visitors speak of him as a very amiable young man, civil and in manner highly respected, and apparently intelligent. The party were conducted by the aid of duty through a suite of rooms, lined with japery and furnished much like ordinary drawing rooms here, to the throne rooms where they were received by the king standing. He wore the uniform of a Colonel of his Guards—light blue coat and pants, the collar embroidered in silver, with epaulets, and insignia of his breast. The throne was an arm chair covered with purple damask and gilded upon a carpeted platform, and surmounted by a canopy and coronet. The room was pleasantly furnished—six chairs, a mirror and table on one side, and several pictures of the King's father and mother. The King accepted an invitation to visit the fleet, which was dressed for the occasion as when here on the 4th July. A French and an Austrian frigate joined in the salute fired on his entering and leaving the ship.

While the Commodore was on a visit to Mr. King, the American Missionary, Colocotroni, the famous Greek chief, and several other distinguished officers, called upon him—a compliment they have not paid to the officers of other nations, even of those who aided them in their war; but they reverence the great Republic.

A battle took place at Smyrna on the 1st December last between two Turkish frigates, with which the American squadron, named Barton and Wood, in which the former was hit just below the knee, the effect being a severe fracture. Mr. Barton is the son of Dr. W. P. C. Barton of the navy, now residing in Philadelphia, and Mr. Wood the son of Mr. Wood of the Chestnut St. Theatre in that city. The American vessels are Ringgold of the Constitution, and McDonough of the Shark. Barton had been detached from the Shark, while the vessels were under quarantine; he was received into the propermess, but mortally by all, and Wood refused to mess with him, on the ground that the consular officer was located between them before leaving the United States. This new guard, in which his mess-mates took sides with Wood, and Barton challenged him; the result is stated above.

Some dissatisfaction appears to have been caused among the officers by the severe manner in which the commodore manifested his dissatisfaction of the affair.

The correspondent of the New Castle (Del.) Gazette, under date Dec. 4, says: "Our tranquillity was yesterday disturbed by a duel between two officers who came out with us and are attached to the Shark—Passed Midshipmen Harry Wood and Jesse Orillon Barton; the latter had his leg broken near the knee, and the surgeon fears mortification will follow, and that he will lose his leg; the former was uninjured, as Barton did not go off, although two shots were passed by Wood. Commodore Elliott has suspended all the parties—the seconds were Ringgold, of Washington, and McDonough, of Delaware, both Passed Midshipmen—and reported the affair to the President, insisting on their promotion being stopped. They, he says, will be kept in durance, until he hears from Washington. This is hard, as McDonough's health is very precarious."

THE NAVY. — It is to be feared that the recent advice from France, which are of a tendency decidedly pacific, have the effect of reducing the amount of the appropriation, which was proposed by the President, for the improvement of the Navy. Our Navy, which conferred so much honor and glory on our country during the late war, has been too much neglected during the present administration, and we did hope that the warlike spirit which prevailed a short time since, would have had the beneficial effect of causing this strong arm of our National defence to be strengthened. Ships of war are required for the protection of our commerce, which is carried on to a great extent in every sea. They are also required to protect the country from insult and aggression, and thus prevent a war. Our Flag ship in each quarter of the globe, should be a ship of the line—instead of which but one ship of the line has at any time been in commission, for the last twenty years. The number of frigates and sloops of war in commission, should also be increased—and by this means, we should be able to avoid obligations to foreign powers, particularly Great Britain, for protecting our commerce in various parts of the world.

It is difficult to account for the motives of the present administration, in neglecting the Navy. To cherish it, and cause it to be respected by foreign powers, inspire confidence in our friends, and strike terror to our enemies, would not only be a judicious measure, but far the interests of our country are concerned, but decidedly popular.—Boston Journal.

IMPROVEMENT IN FIRE ARMS.—A Mr. Colt, of Connecticut, has exhibited in this city, a newly invented rifle and pistol, of admirable construction. The chamber contains tubes for several charges of powder and ball; it may be made to contain from 8 to 10. In cocking the gun to shoot, the chamber revolves on an axis, and brings in succession every tube in the chamber in line with that of the barrel; and when discharged, the act of cocking brings the next tube into position, until all are discharged. All the tubes may be recharged as quickly as a single gun of the ordinary structure. This new implement of war has been shown to the President, the Secretary of War, and the Navy, many officers of both the army and navy, and is considered the most efficient instrument of the kind ever invented. We made a trial experiment with this rifle and pistol, and found it as sure in firing, and accurate to the aim, as the best of the common construction.

We are informed that Mr. Colt has already obtained a charter from the New Jersey Legislature, and is about to organize a joint stock company, with a capital of $30,000,000, for the purpose of manufacturing rifles and pistols, for private orders, and that in a few months his guns will be in the market.—Globe.

MOBILE, FEB. 13.—Col. Lindsay of the U. S. Army, 2d Artillery, has arrived in this city, under orders from the Government to marshal the forces required from Alabama to aid in the siege of Pensacola. The number of men ordered from this State is seven hundred and forty—and the Colonel of this Regiment is in hourly expectation of the requisition of Gov. Clay to raise the quota of men apportioned from Mobile, Baldwin and Washington counties.—Mer. Adver.

ST. JOSEPH, (E. F.) JAN. 20.—The steam boat Eclipse, from Pensacola, touched in this harbor, on the 18th inst. with a company of Marines, from the Navy
Yard at that place, under the command of Lieut. Dough-ty, of the U. S. Navy, on their way to Tampa Bay, to
aid the suppression of the Indian hostilities. We are in-
formed that this expedition was got up by Lieut. Golds-
borough, who accompanied them, and that the boat is
intended to convey soldiers up the rivers in the vicinity of
the Indians.

UNITED STATES SOLDIERS.—We mentioned on Mon-
day, that a number of United States Troops from Houl-
ton, were in our city. We are informed that they con-
cluded of two companies, "F. and K." of the 2d Regi-
ment, United States Infantry, and are to garrison Fort
Independence, Boston Harbor. They left here yesterday
in sleighs.—Bangor (Me.) Courier.

JOICE HETH, probably the oldest woman in the world,
died in this city on Monday, at the advanced age of one
hundred and sixty two years.—N. Y. Mer. Jdo.

ORIGINAL POETRY.

THE WARRIOR BARD.

BY LIEUT. G. W. PATTEN, U. S. A.

Up from his harp the minstrel sprang,
And drew his shining blade;
"I cannot sing, as once I sang,
Nor play as once I play'd.

An omen strange invests my soul,
And breaks her wonted dream
I hear far off the war bolt roll,
I see the red mana glan
While swiftly 'mid the darkling sky,
As hores the trumpet sings,
There seems an eagle rushing by,
With blood upon his wings.

It is no dream, no mocking sight,
It is no mind-wrought spell:
Come from thy sheath, thou vasaal bright,
And smooth my war path well.

Where floats amid the battle storm,
Yea emblem of the free;
There, in the foeman's life blood warm,
I'll trace my name with thee."

He said—and left the peaceful plain,
To seek the hostile shore;
But ere his harp was tum'd again,
He fell, to rise no more.

SELECTED POETRY.

From the Washington Mirror.

PRAYER DURING BATTLE.

Translated from the German of Körner.

BY RUPUS DAWES.

Father, I call to thee!
Wrap'd in the battle-cloud's bellowing sound,
Midst volleying lightnings that hustle around,
Leader of battles, I call upon thee,
Father, direct thou me!

Father, direct thou me!
Lead me to victory—lead me to death!
Lord, I acknowledge thy sovereign breath,
Lord, as thou wilt, I will follow with thee,
God, I acknowledge thee!

God, I acknowledge thee!
Midst the rush of the leaves when the autumn winds blow,
Alike in the thunder of battle, I know
The fountain of grace, and I call upon thee,
Thou father, shadow me!

Thou father, shadow me!
My soul I commend to thy guardian sway,
'Tis thine, for thou gav'st and cannot take it away,
In life or in death pour thy spirit on me,
Father, I hallow thee!

Father, I hallow thee!
We fight not for conquest, we fight not for gain,
Our swords are laid bare for the rights we maintain,
Thus falling and triumphing, praise be to thee,
God, I submit to thee!

God, I submit to thee!
When the thunder of war bows my spirit in death,
And my veins force my life blood away with my breath,
My God, still submissive, I bow me to thee,
Father, I call to thee!

From the Washington Mirror.

There is no ordinary talent evinced in the following spi-
ried lyric, which we present to our readers, with a hope of
hearing again from the author.—Ed.

NAPOLEON.

We saw thee ascending, a comet of glory,
The terror of millions, to blaze for a day;
And while Fame to the earth was repeating thy story,
Behold how the comet has faded away!
And the cloud that it lighten'd,
The heaven that it brighten'd,
More dark from thy splendor, are scowling as then;
While the tempest that lowers,
No rainbow is ours,
Of promise, as thou wast to scatter again.
Thou art naught, and the hurricane bursting at last,
May shatter a world, thou hast left to its blast.

There is blood on the wave, there is blood on the moun-
tain,
Thy name was the charm that commanded it start,
Thy spell-word of freedom, the holiest fountain,
Exhausted in vain of the high swelling heart!

But the stream that thro' thee,
Hath been swell'd to a sea,
Ensuagin'd shall roll to the feet of thy God,
Who for every foul stain
That hath crimson'd the plain,
Shall cause thee to bend at each tyrannous nod,
Of monarchs who quail'd the th'o' thy brand was unbar'd
When the hand that should wield it for battle prepar'd.

Thou art fallen, but 'twas not that victory, frightened,
Deserted thy battles, or clouded thy sun,
But that honor, and virtue, and liberty, slighted,
Thy fame was resign'd to establish a throne!

But that throne hath been shaken,
And thou art forsaken,
Thy glory forgot, in the blood thou hast spilt;
While kings who assembled
Before thee and trembled,
Now hold thee a by-word of shame and of guilt.
Oh! shade of the mighty! thy glory is o'er,
And the fruit hath been death of the blossoms it bore.

D.
WASHINGTON CITY;  
THURSDAY............................................MARCH 3, 1836.

LAUNCH OF THE FRIGATE COLUMBIA.—Should the Eastern Branch of the Potomac be free from ice, and the weather favorable, it is probable that the U. S. frigate Columbia will be launched from the Navy Yard in this city, on Saturday next, 5th inst. at 12 o'clock, M. Due notice of the arrangements for the occasion, we presume, will be given in the daily papers.

 Commodore D. T. Patterson has been appointed to the command of the Navy Yard at Washington, and will enter upon the discharge of his duties as soon as he can make arrangements for the removal of his family to this city.

Lieut. Charles Boardman has been appointed to the command of the U. S. s.h. Grampus, now fitting for sea at Norfolk. The other officers will probably be ordered in a few days.

Three steamboats arrived at Tampa Bay, from New Orleans, on the 9th ult., having on board 800 volunteers, from Louisiana, and six companies of the 4th regiment U. S. infantry, 300 strong. Gen. Gaines and Col. Twiggs accompanied the troops.

We are requested to state that officers of the Army and Navy, visiting New York, will at all times find free admission into Hudson’s Merchants’ News Room, corner of Wall and Water streets.

The Pensacola Gazette of the 18th ult., states that Major J. D. Graham, of the Topographical Engineer Corps, has been assigned to the duty of opening the road from Marianna to Apalachicola.

Mr. R. E. Hudson will act in future as agent for the Army and Navy Chronicle in New York.

Our late agent, Mr. D. Stimson, has given entire satisfaction, but his other avocations will not permit him to devote his attention to the business any longer.

An index to the first volume of the Army and Navy Chronicle has been prepared for some weeks past, but delayed by untoward circumstances; it is now forwarded with the present number to all subscribers who commenced with the first number. Should any not receive a copy, who are entitled to it, they will be supplied on notifying the editor—post paid.

An index has been made for the Chronicle of 31st Dec.; there was none published on that day, the index being intended as a substitute.

Three numbers of the Military and Naval Magazine remain to be published, to complete the sixth volume. There are about one thousand dollars now due on account of this work. The whole receipts from every quarter, during the month of January, were $312.25; and during the month of February $25. The paper alone costs upwards of $60 per month. Is any farther excuse necessary for the delay?

ARRIVALS IN WASHINGTON.

Feb. 28—Major J. D. Graham, Top. Eng’rs., I street.

Mar. 1—Lt. Thomas Johns, 2d Infantry, Geo’town.

LETTERS ADVERTISED

PASSENGERS ARRIVED

Mobile, Feb. 14.—Per steam boat Ploughboy, from Columbus, Captains E. Harding and J. Green, U. S. Army.

New York, Feb. 25.—Per ship Alabama, from New Orleans, Captain M. C. Perry, of the Navy.

EDITOR’S CORRESPONDENCE.

"U. S. Ship Warren,

Gulf of Mexico, February 8th, 1836.

"My Dear Sir:—As you, of course, know, we left Norfolk on the 28th of December last. Never before were men favored with such weather as we experienced for the first three weeks out. A constant succession of fair winds wafted us as far as the Cayos by the 6th ult., and we ran through the passage which takes its name from these islands on the following night. Passed in sight of San Domingo; were two or three days cruising along the south side of Cuba, and saw Jamaica on the 10th.

"Language is inadequate for conveying an idea of the loveliness of the scenery, or the beauty of the nights in this vicinity. Certain am I that even now these charms quite as much as in the days of the great discoverer, and, like him, (see the 1st volume of Irving’s Columbus,) I was oft ready to exclaim, of Cuba, ‘it is the most beautiful island that eyes ever beheld.’

"The Warren is not a fleet sailer. When by the head (her best trim for sailing,) she is a perfect diving-bell, and it does not require very rough weather to bury her decks in water. That she is in bad condition for a long cruise seems the general opinion; and experience has painfully convinced us of the inexpediency, to say the least, of fitting out vessels of war, when not absolutely necessary, during the cold season. But where all is harmony, one would cheerfully abide a multitude of ills.

"You may recollect that the character of Captain (then Lieutenant) Taylor was attacked in a Middletown, Conn. paper—the ‘Sentinel,’ I think—soon after Com. Creighton’s return from his command of the ‘Hudson,’ in 1830; and the author of the article I refer to, whose signature was Junius, endeavored to impress the community with the belief that much of the difficulty on board that frigate was caused by her first lieutenant. I might add that I was among those disposed to attach a degree of credit to the statements of that writer; and, having been so, I feel in duty bound, now that I have personally observed the true character of the man, to correct that impression in

Digitized by Google
others, and do an injured officer a meed of justice. Was he what Junius represented him to be, his ship could never be so desirable as is the Warren. I do not forget that a great deal depends upon the component parts of the machinery, and would not detract from the merits of any.

"Detesting, as heartily do, this too-much-a-matter-of-course-style of panegyric, adopted by correspondents, generally, on board our national vessels, I would be the last to fall into it, did I not consider it due in this instance to an officer who has suffered in his own character, when his only fault seems to have been that he belonged to the command of one whom every body condemned. And, while on the subject, let me state my gratification at noticing, in a late number of the "Army and Navy Chronicle," your remarks touching communications from on board our men of war. I agree with you, and should never hesitate giving my friends any intelligence I might think of interest—and would alone select my medium for this communication.

"In the appendix to 'Reynold's Cruise of the Potomac' there is contained copies of some of the instructions of the Navy Department to Com. Downes, and in one of these letters, the Commodore is instructed to do his utmost to prevent his officers from writing home information relative to the cruise, &c. I regret the work is not within my reach, that I might quote from it verbatim.

"It seems to me it would be much more in accordance with the spirit of our institutions, should an end be put to the practice of secret reports from Commanders, before an attempt be tolerated thus to deprive officers of a right not relinquished by them when they accept appointments in any service of our Government. I look upon this system of secret reports as more abominable than any existing relic of barbarity. Beyond doubt, many a young man is ruined through the personal malevolence of Commanders, who, if he had been aware of the existence of such accusations as are often secretly lodged at the Department, where they accumulate for years, might easily and satisfactorily have explained away every thing. While, therefore, I repeat it, this is tolerated, it seems highly absurd to suppose that a subordinate should so far do himself injustice as to acknowledge the legality, or binding force of any order prohibiting him from writing about matters and things within his own immediate observation, he being amenable, like men in other situations, for anything of a pernicious tendency he may state.

"And, in the same connexion, let me remark that it would, doubtless, go far to produce desirable consequences, in this respect, if Congress would but pass some act, by which the public should be put in possession of authenticated copies of all records of Courts-Martial hereafter held on officers of the service. Such a step would conduite. In some measure, to put officers on their guard, in their treatment of inferiors;—it would also be advancing towards the abolition of the practice above complained of. All would then see exactly what should be alleged against them, before a court-martial, which, under the present arrangement, they seldom, if ever, know, for the regulations prohibit one witness hearing another testify; and often a witness's character is most grossly

truncated, and he, as it were, much more on trial than the accused, while, at the same time, he is left in utter ignorance of what's being done.

"It is indeed strange that, when gentlemanly deportment succeeds so much better in the execution of a cheerful performance of duty than the reverse, and may be extended with no especial prejudice to the service, or a proper regard for the strictest discipline either (though few have tested it, perhaps,) so many officers prefer the harsh and unofficerlike manner of the tyrant. Any one to have seen the experiment on board the W—- would wonder at this as much as I have done.

"We cruised off the coast of Texas, or rather between the 25th and 29th degrees of latitude for three weeks. Off Cape San Antonio, on the 15th ult. fell in with, and boarded the barque Cuba, of Boston, Capt. Storer, from St. Thomas for Havana. We passed nearer this cape, which in by-gone days has proved a terror to all honest and defenceless voyagers, than to any other land during the cruise. There are a few huts, apparently fishermen's, on its sandy beach,—beyond, the view is obstructed by a growth (characteristic of the Tropics) of immense mango trees.

"The reputed severity of the Northers, which blow in the Gulf at this season, had made us, for the whole passage, greatly dread our cruise to Texas. On the slightest indications of one, every thing was put in readiness, so that we suffered comparatively nothing from their visitations. The most violent we experienced blew for about sixty hours; this is longer than they ever continued, we were told by those who had felt them before. The thermometer ranged between 78° and 57° Fahrenheit, during the while, and the temperature of the climate off the coast did not much vary from 62°.

"The Warren behaves admirably in bad weather, and we have experienced but little else in the Gulf. I can assure you that we are perfectly willing to leave the rest of cruising in it, to the other vessels of the squadron. Under close reefed foresail and mainsail, and fore storm stay sail, she lies to like a duck. We find India rubber clothing far less indispensable to one's comfort than it would be in most of our slopes of war under like circumstances. By the bye, as I have adverted to this manufacture, let me add that the garments made up by the "Boston and Lynn Company" are not obnoxious to the faults found against the article by the officers of the "Peacock," as represented, you may recollect, in a letter, purporting to be from an officer on board that vessel, (under date of Rio de Janeiro,) which was published pretty generally in the papers of the day. There are two or three suits among our officers which have proved a complete shelter both against the pelting of the storm and the surges of the sea. These are prepared with the caoutchouc between two cloths, and, of course, do not possess the objectionable, adhesiveness, qualities, complained of in the above alluded to communication.

"We have been out forty-two days, and have passed, per log, a distance of —- miles. The greatest rate of going was nine.

"Hope to find at Pensacola, whether we are now bound, the first numbers of your new paper. Sincerely hope you will find your interest in it, and can but regret
that you were induced to unite your two former works in one, from the causes which actuated. But, should it prove to your benefit, we will the more cheerfully abide being deprived of the monthly.

"For squadron intelligence I must ask you to wait till my next, from port, and I remain, &c."

COMMUNICATIONS.

STEAM PROW SHIP.

The attention of the public having been invited to a plan of a Steam Prow Ship, proposed by Commodore Barron of the Navy, and an opinion having been expressed in your journal, which has the appearance of being editorial, "That a vessel of this description must prove a valuable auxiliary in the defence of our coasts, bays, and rivers, and would be in a short time to sink an entire fleet of enemies' ships;" and further, "That officers of the highest responsibility in our Navy concur in the opinion of the efficacy of the Steam Prow Ship;"

As I have paid some attention to this subject, and dissented from the opinions above recited, I think it a duty which I owe to my readers, and to the country托, with frankness the objections which present themselves to my mind upon considering the specification and description of Commodore Barron's Steam Prow Ship. I am willing to allow the ingenious inventor of this vessel much credit for his untiring efforts in endeavoring to perfect a ship of war, but with full and unreserved respect for his skill and ingenuity. It is proposed to build this steamer of solid timber, to consist of three distinct hulls, tria juncta in uno, connected by cross logs, of which the central vessel is constructed; the centre vessel of superior dimensions to the two outer ones, projecting part of its length twelve feet by four at its point, and this last the weapon of offence. Of steam, quantum suff. It is confidently asserted that a steamer on this plan is competent to run down not only a single ship but whole fleets may be sunk by consecutive attacks. To effect this object, the inventor has perceived the necessity of great strength and solidity in the construction of his vessel; and at the same time of great speed, and he has ventured to assert that he can propel this unwieldy mass with the velocity of eight to ten knots per hour; under the impression no doubt that such momentum at the least is necessary to effect the object of crushing in the ship by the most powerful gun. It shall be left to the practical, or the work of human ingenuity—a first-rate ship of the line."

Granted that the first requisite of strength and solidity is obtained by the plan detailed—it is denied that it will be possible to give the desired momentum to a body thus constructed. Ten knots, all practical seamen know, is not far from the maximum velocity which has been attained by the best models in naval architecture. It is true that this is sometimes exceeded a knot or two going large, under a great pressure of canvas; but ships only of the most perfect construction now known can ever attain the highest point indicated, and under the most favorable circumstances of wind and water. With the rapidity of a horse at full gallop, notwithstanding all the obstacles enumerated, the blow is given by the steam prow ship, in the true direction. What will then be the effect of the conclusion? Relatively to the Prow Ship, I have no doubt every pipe and joint of the steam engines would be disconnected; and as for the other structure, it would be well for them beforehand to look out for a soft place to slant among the logs, as it is very evident they will be hurried forward somewhat unceremoniously. —

The inconvenience to them may, however, be provided for, or remedied, by cushioning the bulkheads and timber ends. Sufficient, some such precautions, if it is intended that the ship shall be used for future attacks. Leaving the crew of the Prow Ship to the skill of the surgeon, we will suppose the object of the attack fully accomplished—the Prow fairly driven home, through the crushed and riven sides, decks and all. How is it to be got out? The enemy ship instantly fills. The mo-
ment her equilibrium is lost, she topples over, and if it is on the side of the rising waters, which would be the case from the weight of water first falling on that side—most, spars, and rigging overwhelm the steam prow ship, and they share one common fate.

The practice of the Romans and Carthaginians has been adverted to, in favor of the feasibility of the plan under discussion; but there is no analogy in the case.

The ships of the Romans and Carthaginians, were comparatively but men of war launched of the present day, propelled by oars, and consequently incapable of a greater momentum by that power than three to four knots per hour. It is therefore plain that we must look for some other cause to account for the vessels produced by the case ships or row galleys coming into collision, which is an easy task. The vessels were slightly framed, not constructed for resisting cannon shot, or supporting the burden of artillery; their gunnels were low, to accommodate the rowers; the advantage was therefore taken from that necessity, giving them strong and projecting bows or prongs. In their naval engagements, the opportunity was as eagerly sought of falling on board of their antagonists, bow on, as it is at this day most cautiously avoided; they were exposed to no raking fire, unless from stones or arrows; their armed beaks projected over the gunnels of the vessels with which the event of the engagement. The weight of the vessel upon the gunnel, and a very few blows, in any thing of a swell, suffice to cut down the vessel so attacked, to the water's edge. Thus it appears, (if I am correct as it regards the ancient mode of attack) it was not so much the momentum of the attacking vessel in the first instance, as the blows which they were given after falling on board, from the heaving of the sea.

An array of figures is given in the article, which is the subject of these remarks, intended to show the force of the concussion; and this is done by multiplying the specific gravity of the three vessels, 1,063 tons weight, by their velocity, 10 knots. We are afterwards given in such calculations, let us assume a different velocity from the inventor, using his own data. Suppose 3 knots assumed, that is of the velocity pretended, and about the movement of the tides of the Hudson and Delaware rivers.

Specific gravity of the three vessels, 4,328,000 lbs. multiplied by their velocity 3.33 gives as the whole momentum 14,400,000 lbs.

Momentum on each foot of the prow 300,000 lbs. With these figures in view, 300,000 lbs. momentum on each foot of the prow, what would be the effect in practice? Is it possible that any vessel could come flooring down the tide and fall on board of a ship at anchor, moving with the velocity of 3 knots per hour—will the bows or sides of a first-rate be crush'd in by the 300,000 lbs. momentum on each foot of the prow? I think not. I do apprehend, the paint might be a little scratched.

It has been asserted that "officers of the highest responsibility in our navy concur in the opinion of the efficacy of the Steam Prow Ship." No man will subscribe more readily than I do to the doctrine that just weight should be attached to the opinions of Naval officers who have charge of the steam prow ship. To shun the personal and profession, I, who know them well, accord them that most frankly; but it does appear to me, with due deference to the opinions of officers of the "highest responsibility of the Navy," that their acquaintance with the delicacy of steam machinery, and the facility with which it may be disordered, is not a sufficient voucher, for the correctness of their opinions. I have endeavored to controvert them, believing them in error, and that error leading to important results. One thing is certain, the public will lose nothing by hearing the other side.

OLD IRONSIDES.

THE NAVY.

A writer in the Telegraph, signing himself "Perry," (angels and ministers of grace defend us!) has undertaken to express the sentiments of the officers of the navy, and shown such an ignorance of their opinions that really we cannot believe he is attached to the service.

We had not the honor of writing the article in the Chronicle which draws forth such a torrent of eloquence from Mr. Perry; and we really are, what he supposes that gentleman to be, "an inexperienced correspondent," and intently beg that Perry will use with generosity any indulgence which the experience of paper war may give him over one who just begins to wield his pen.

We do not mean to defend the article in the Chronicle; its own writer is doubtless able to do so, and should he undertake it, we are sure that he will easily succeed.

Mr. Perry says, that when the late Pay bill was under consideration in the Senate, he advocated a principle which were admitted by all to be so liberal, it was thought the officers of the navy would feel the utmost devotion to the service, and in the event of a war, perform their duties with increased alacrity. We are sure that Perry is mistaken, and that the last Pay bill was passed not as an ineptive to "increased alacrity," but as an act of tardy justice; and a man, himself honorable, would not lightly assert that a corps of gallant men measures its patriotism by dollars and cents, or that its devotion to the service ebbed and flowed with the purser's pay roll. But Perry, like Shakespeare, "dips his pen in his own heart." Mr. Perry must have quite overlooked that the officer should like to see some better reason given for creating Admirals than that of squandering away the public treasure on those whose necessities have no bounds, and tending to blow up those already sufficiently inflated." And can no better reason be given? In foreign ports we meet men, superior in rank to our highest grades, command- ing forces; their inferiority is felt in all possible ways; behold men in other navies, more highly rewarded for less services. These men of higher rank, in case of collision, would necessarily take precedence; and in the event of co-operation, would take command, and thus gather those laurels which our exertions might have reaped. History might sound their fame, written in our blood.

In battle men are strenuous in their exertions, in proportion to their share in the stakes of the day; officers are as much braver than privates, as their conduct is more conspicuous; and an Admiral is as much more conspicuous than a Captain as his is superior.

Our officers are to serve abroad, and not at home.—Abroad, rank confers respect, and he who knows any thing of the human heart, knows that "man will do more to support a character than to raise one."

Perry asks: "Were Commodores Yeo and Hardy more influential in the late navigation, when the shipping come flooring down the tide and falls on board of a ship at anchor, moving with the velocity of 3 knots per hour—will the bows or sides of a first-rate be crush'd in by the 300,000 lbs. momentum on each foot of the prow? I think not. I do apprehend, the paint might be a little scratched."

Perry asks: "Were Commodores Yeo and Hardy more influential in the late navigation, when the shipping come flooring down the tide and falls on board of a ship at anchor, moving with the velocity of 3 knots per hour—will the bows or sides of a first-rate be crush'd in by the 300,000 lbs. momentum on each foot of the prow? I think not. I do apprehend, the paint might be a little scratched."

It is a melancholy truth, that in our service, the "commission on officers" gives the most ample authority to an Admiral, not only a single ship, but a large fleet;" but it is because we have no higher grade, and the warrant of the boatswain in a like case, gives the same authority; for always the officer highest in rank commands such vessel or vessels as he may be attached to, be that rank what it may. I profess I am ignorant of what authority is given the Commodore, by the warrant of the boatswain, as his Captains do not command large fleets, it is reasonable to conclude that they cannot. Admirals command on all important stations.

Says Perry: "With respect to increasing the other grades of officers, no friend of the Navy should desire it, unless the number of ships shall be immensely increased." That Perry does not desire it, is sufficiently apparent; but that he is a real friend remains to be proven. If he be, his wisdom is, either much greater, or far less, than that of the multitude.

Our writer does not condescend to enter into calculations to show what he asserted in his opinions, more officers would not be required if our navy were doubled; and since the calculations in the Chronicle are not controverted, we think, we might venture to take them for or against.
POLITICS AND OFFICERS.

I am not about to enter into a discussion, touching the political or military duties of officers of the army, or the navy; I have not assurance enough, to put in a word, in a conversation between two such distinguished gentlemen, as "Aristides" and "Alcibiades," nor do I choose, that on this occasion I should be looked upon by those ancient and much respected personages, even if I had enough presumption to induce me to take part in their colloquy—and therefore, I wish it to distinctly understand, that what I am about to say, will be uttered without special reference to either of them, and that I can on my own authority, and without reference to "Aristides." If I should quote from the one, or the other, I hope it will not give offense, as I hereby give either, or both, the liberty to quote from me, and to criticize what I say, and promise not to lose my temper, but to take it all in good part, as coming from a brother, and it feels far nearer brotherly interest. I do not know that it would be material to the matter in hand, whether I belong to the army or the navy, but lest it should be thought that I am dabbling in a mess which does not concern me, I inform the public, that I wear Uncle Sam's uniform, and have done so, for some years; and therefore I may say, I am a "poor" and a "military aristocrat." I will say further, that I am one of that most unfortunate of all unfortunate individuals, a poor, inferior, and I would not be misunderstood, and therefore explain the term "poor," as here used, to mean poor in purse; and I shall not thank any one for giving it any other interpretation, because I am rich in feeling, for my honest, genuine officer, and I am rich in good spirits too, and my vanity makes me think that I am also rich in character and standing. But I have told more about myself than I intended to, and will proceed to the main subject matter of this article.

I have thought much on politics, as connected with officers and their duties, and I have found many reasons why they should not, at all times, "express their opinions as unhesitatingly as any other class of citizens, and enter into the political arena without disguise." I am perfectly clear, as to the right of officers to express their opinions on political subjects, and believe that it is their duty, to form those opinions calmly, and without reference to the "powers that be;" but I am equally clear, as to the impropropriety of expressing them on all occasions. Why should they do so? Can they do any good thereby? If an officer of the army, or navy, thought a sentiment peculiarly consonant with the interests of the country, and believed that he could prevent the meditated sacrilege, by expressing his opinion, or by arguing with his fellow citizens, it would be his highest duty, to use all his energies, mental and physical, to defeat the unholy project. But I apprehend that such a case could never occur. I do not think officers should engage in politics, because they can do no good, and may do harm—because it would be calculated to destroy that good feeling, harmony, and esprit du corps, which is the soul of military efficiency, and without which, military bodies would be worse than useless; because all political studies and literary pursuits are, or ought to be, sufficient to occupy all their time usefully, and because it would withdraw their attention from their proper and appropriate duties. These are a few among the many reasons, why I would discourage officers from giving their attention to political subjects, and entering warmly into political discussions. A man would be the last to serve his country, in either branch of our national service, who would chain himself to the car of any man, civil or military, or who would blindly follow the dictation of any mortal. Officers should form their opinions on all subjects, independently; and on proper occasions, they should express them, freely, boldly, and without consequences. But, a sound discretion should be exercised, to determine when a proper occasion arrives for expressing an opinion, whether on politics, military subjects, or any other of the infinite variety of topics, on which the mind dwells. Freedom of thought, and of
speech, is the birthright of the American citizen, and he that would barter that for any temporal consideration, is unworthy to bear the proud name of an American. I am proud to call myself a citizen of the United States. I love my profession, and am happy that I am in a situation to serve my country; but as fondly as I cheer and highly I esteem my mission. I love yet more dearly, the rights and privileges which the name of citizen confers upon me; nevertheless, I should feel that I stepped out of the bounds of duty and propriety, were I to "enter the political arena," and proclaim my political prejudices on all occasions.

Officers ought to keep pace with the politics of the day, and they ought, also, to know the political history of their country, but they can be much more usefully employed, than in attempting to control, or influence the direction of the political current.

In conclusion, permit me to remark, that I do not know whether my observations are unduly colored by the "spite sentiments" alluded to by "Aristides," in the Chronicle of the 18th instant, but I know they are made in honesty of feeling; nor do I know, Mr. Editor, whether I am one of a "certain class of scorners," hinted at, in the letter of your correspondent; but I have opened my "safety-valve," and my steady hand is on the "steam-blower," which shall be in danger of bursting my boiler, for a week or two, and therefore take my leave, with the best wishes for your prosperity and happiness, and with the hope that "Aristides," and "Alcibiades," may have all the promotion their warmest wishes may covet.

OLIVE BRANCH.

ARMY PAY.

Mr. Editor:—The subject of Army Pay being at present before Congress, I am induced to offer a few remarks in relation thereto; which are respectfully submitted to the consideration of such honorable members of both houses as may chance to peruse them.

To those who are unacquainted with the peculiar situation of military officers, it may appear that their pay is sufficient; but when the subject is examined, I trust it will be viewed differently. They were located more permanently at their different stations, they might perhaps, with rigid economy, lay up something; but more than twenty years experience has proved to me that their pay is altogether inadequate to enable them to meet the many expenses and sacrifices which they are compelled to encounter, from frequent removals and changes to which they are subject.

To those having families, these oft repeated changes of station prove oppressive in the extreme, and often keep them on the verge of destitution; yet such is the nature of the service, that these removals must sometimes be made. What then can be more reasonable, than that the pay of the officers should be so far increased as to enable them to meet such demands upon their pecuniary resources.

Some may argue that officers should have no families, and that in such case, a small compensation would suffice.

But where is the patriotic and high-minded American, who would, for the sake of retaining in the coffers of the treasury a few thousands or even tens of thousands of dollars, be willing to see our armies exclusively commanded by men who are unpledged to the country by the ties of offspring and of social relations.

From the extent and situation of this great and happy republic, it is obvious that a respectable military force will always be requisite for its protection.

Does it require more than an ordinary degree of reflection to perceive the comparative safety of entrusting the arms of the nation to men pledged as almost all others are, whose affections and interests are alienated and identified with those of the citizens? Far be it from me to ascribe to the unmarried portion of the officers of the army the possession in any degree, of immorality, insolence, selfishness, or an undue personal ambition; but I believe that most persons who weigh the matter, will agree that such are the tendencies induced by a determined state of celibacy. As far as my acquaintance extends among the class of officers last mentioned, I have no doubt that most of them would each be willing to take up legal and honorable protection one of the fair and loving daughters of their country, and contribute towards the rearing of respectable citizens for the republic; but unless they happen already to possess a competency, warned by the struggles of their married brethren to support families on their pay only, and unwilling to involve themselves in like difficulties, they remain single from motives of prudence; and without an augmentation of their resources, they must continue to look upon themselves as debarred from entering into that relation which their more fortunate fellow citizens of other callings usually engage in, and which relation it is for the interest of a flourishing republic to encourage.

In many instances, should officers be cut off by death, deplorable indeed must be the situation of their families; unless they have other resources to depend upon besides their pay; and officers of the army have few chances of increasing their means of support by speculations, or avocations employed for such purpose by men in civil life.

Few, I trust, will contend that none but the sons of the wealthy ought to be commissioned in the army. —And if such rule be not established, a portion of the officers must depend solely upon their pay; which, it appears to me, would be sufficient to put them upon a footing with respectable citizens of other professions.

The greater portion of the officers of the Army enter the service in early youth; and their attention is devoted to it exclusively. They often witness their former acquaintances rise to wealth; while they have barely a present support, without the most remote prospect of a provision for age or infirmities; or for the maintenance of a family.

The foregoing remarks apply chiefly to the lower grades of officers, who form a great majority in point of number. I think it will be granted, however, that the higher grades are not sufficiently paid, when their heavy responsibilities and a variety of other circumstances are considered.

It strikes me that it would be the best policy to pay officers in such manner as might enable them to retire from service, when age should render them unfit for its duties.

AN OFFICER OF THE ARMY.

ORGANIZATION OF THE NAVY.

The following is the result of a calculation, made in order to show the prospects in the Navy of the United States, and the end the present organization of this arm of national defence must come to. Also some views of the necessity of a re-organization, on the assumption of our becoming, or rather taking our proper place among nations as a, Naval power.

We suppose a Midshipman to be 14 years of age (the youngest) when he can be admitted into the Navy.

When admitted, 14 years.

Service as a midshipman 6

" Passed Mid. 6

" Lieutenant 25

Making him 51 years old when he is promoted to a Commander!! Or rather when he becomes entitled to command one of our smallest class of vessels of war.

It is needless to say that nine out of ten are totally unfit, at that time of life, for anything like active service at sea, and consequently of little or no use in the situation to which the Government have promoted them. This is an evil that is only the desire the active energies of our Navy, and in the course of a few years the personnel of the Navy will be gray-headed, from the highest to the lowest. Gainsey it, who may, it is very easily demonstrated.
It may be asked, how do other great naval powers prevent this state of things? The answer is obvious and clear: the King, or Executive Head, has a certain number of promotions within his gift, by which young officers are brought forward, some from merit, and some from influence, and accord to commands; whilst the older officers are suffered to retire on half pay. This is the remedy, which we have not, neither can we possess it. But there is another and, if now adopted, fully as effective a plan, which is by graduating the service on the basis of its known decrease (which has been acceler-ated to be between 4 and 8 per cent., during the last 20 years).

For this purpose, let the Navy (its personnel, including officers and men,) be organised equal to the naval power it is determined the United States shall occupy among nations.

Our commerce, and the number of our seamen, would lead us to believe we ought to be the second, and soon destined to be one of the first. We now occupy the seventh naval rank.

What signifies our having, building, and launching ships, if your officers, who are to command them, are altogether worn out when they are entitled to such commands? The first and, as a consequence, the most necessary, is to re-organize your navy to ensure the most efficient service to the country in all time to come; and the only way to do this effectively, is to keep life and energy predominant in the navy.

It may be asked, how is this to be done? Nothing more easy. It is to determine what rank among nations your navy is to occupy. This would be based upon the number of your seamen, or ability to man a force. The number of our seamen at present is 195,000—one fourth of which (say 30,000) may be calculated upon safely for our war establishment; and one third of the war establishment (say 10,000) as an effective peace establishment.

Then organize your grades of officers, to ensure that they shall arrive, in the ordinary course of events, at the command of your ships, at the proper ages when they will be most efficient. Then employ such number of vessels as will not only afford ample protection to your commerce, but ensure to your officers, in all grades, and men, sufficient experience.

The personnel of your navy, with its power of extension, and not your ships, would thus represent your naval rank among nations; with the materials on hand, particularly all those of the first character, with your docks and dock-yards well established, we can soon build ships, when they are wanted, over and above the numbers required for our wants in time of peace, as a great commercial nation. Seventy-fours have been built in ninety days, when the resources of this country were in a state less than they now are.

Believing that we must and ought to occupy the position of the second naval power, we have made the calculation, that would ensure to us that rank, at the same time ample protection to our commerce in every sea, and sufficient employment to all classes of our officers and men.

It has resulted in the following list, supposing the force to be composed, as above, of 10,000 men:

- Vice Admirals, 5
- Rear Admirals, 10
- Commodores, 80
- Captains, 180
- Commanders, 400
- Lieutenants, 1,000

Masters, Passed Midshipmen, Midshipmen, and other warrant officers, at the discretion of the Department, not exceeding numbers.

Force to be kept afloat, in active service, and manned with 10,000 men:

- 4 seventy-fours
- 14 frigates
- 20 sloops
- 10 brigs or schooners
- 3 steam vessels, and
- 4 store ships.

COMPROMISE.

PROCEDINGS OF CONGRESS.
IN RELATION TO THE ARMY, NAVY, &c.

SENATE.

WEDNESDAY, FEBRUARY 3, 1856.

Mr. Benton submitted the following resolution, which was considered and agreed to.

Resolved, That the President be requested to cause the Senate to be informed of all the measures taken by the Administration to suppress the Indian hostilities in Florida; and, also, to communicate all the information in his power relative to the cause of those hostilities.

The Senate then proceeded to the consideration of the special order, being the resolution of Mr. Benton for appropriating the surplus revenue to the national defence.

Mr. Mangum, who was entitled to the floor, rose and addressed the Senate on the subject, and continued his remarks till the usual hour of adjournment, when, without having concluded, he gave way to Mr. Tyler, on whose motion The Senate adjourned.

THURSDAY, FEBRUARY 4.

The Chair communicated a request from the Navy Department, made in pursuance of the 3d section of the act of May, 1820, containing a statement of the appropriations made for the naval service for the year 1836.

Mr. McLean presented the memorial and documents of William B. Foster, of the city of Pittsburg, a Deputy Commissary of Purchases for the Army of the United States during the late war, praying compensation for extra services; referred to the Committee on Military Affairs.

Mr. Robinson, from the Committee on Naval Affairs, to which had been referred the petition of John M. Gamble, reported a bill for his relief; which was read and ordered to second reading.

The Senate then took up Mr. Benton's resolution for appropriating the surplus revenue to national defence; when

Mr. Mangum, who was entitled to the floor, yielded to Mr. Clay, who addressed the Senate till the usual hour of adjournment, when without concluding, he gave way to

Mr. Porter, on whose motion The Senate adjourned.

FRIDAY, FEBRUARY 5.

Mr. Tilton presented a memorial in behalf of the widows and orphans of the officers and soldiers who have fallen in the different engagements with the Seminole Indians, in Florida, in 1835 and 1836. Referred to the Committee on Pensions.

Mr. Benton, from the Committee on Military Affairs, to which had been referred that portion of the President's message relating to military appropriations, reported the following bill, which was read, and ordered to second reading:

A bill making appropriations for the collection of materials, and for the purchase of sites, and to commence the construction of central armories, and for other purposes,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the following sums be, and the same are hereby, appropriated, to be paid out of any unappropriated money in the Treasury, for certain fortifications, viz:

For fortifications at Pensacola bay, one hundred and one thousand dollars.

For fortifications at Kennebec river, one hundred thousand dollars.

For fortifications at Portland harbor, one hundred and three thousand dollars.

For fortifications at Portsmouth, New Hampshire, one hundred and fifty thousand dollars.

For fortifications at Salem, Massachusetts, one hundred thousand dollars.

For fortifications at Provincetown, Cape Cod, fifty thousand dollars.

For fortifications at New Bedford, Massachusetts, one hundred thousand dollars.

For fortifications at Rose Island, Narragansett bay, fifty thousand dollars.

For fortifications at New London, Connecticut, one hundred thousand dollars.

For Fort Tomskins and dependencies, Staten Island, New York, two hundred thousand dollars.

For a fort at the debouch of the Chesapeake and Delaware canal, one hundred thousand dollars.
For fortifications to cover the artificial harbor at Cape Henry, one hundred and fifty thousand dollars.

For a fort on Sellers' Point bluffs, one hundred and fifty thousand dollars.

For a fort on Point Patience, Pottawattamie river, one hundred thousand dollars.

For a fort on Cedar point, Potomac river, one hundred thousand dollars.

For a fort at the mouth of St. Mary's river, fifty thousand dollars.

For a fort at l'Anse aux Meadows, fifty thousand dollars.

For a fort at St. Philip, seventy-seven thousand eight hundred dollars.

For steam batteries, six hundred and sixty thousand dollars.

Sec. 2. And be it further enacted, That wherever the same be necessary, the President of the United States be, and he is hereby authorized to purchase the sites for the aforesaid works, to be paid for out of the appropriations made by this act for them respectively; and he is authorized, under the restrictions of the act of May, eighth, hundred and twenty-third, to make transfers from one head of appropriations for fortifications to that of another, for the like objects, whenever, in his opinion, the public interest requires it.

Mr. Banton gave notice that he had asked the Senate to consider this bill at an early day. He should, therefore, move to take it up at an early day next week.

Mr. Tipton submitted the following resolution:

Resolved, That the Committee on Military Affairs be instructed to inquire whether the army is sufficiently numerous for the duties they are required to perform, and for the occupation of our various forts.

Reported, That the Committee on Military Affairs inquire and report to the Senate whether in their opinion the pay and emoluments to the officers of the army is sufficient compensation for the services they are required to perform.

Mr. T. said, in relation to the second resolution for increasing the pay of the officers of our army, he was not prepared to give an opinion that such increase was necessary. Some have said the pay of the commissioned officers of the various grades in the army should be increased. He considered the officers of the army a most meritorious class of men, who bore the dangers of every climate when duty called them—who risked their lives in every storm, in every tempest. He felt confident that every citizen of our country would concur in giving them an ample compensation—he would say a liberal one. He hoped the Committee on Military Affairs would give the subject the most serious investigation, and report the facts to the Senate; and he felt confident the Senate and the country would do this valuable class of men justice; and he knew the officers would be content with a just reward for their services.

Mr. T. gave some of the reasons that have induced me to offer the resolutions which I hope will be adopted.

Mr. Links wished the resolutions might be again read, to see whether they were not analogous to some he (Mr. L.) had already offered.

The resolutions were again read and laid on the table.

Mr. Tipton, from the Committee on Military Affairs, reported a bill making an appropriation for the payment of two companies of Missouri and Indiana militia, who were called into service for the protection of the frontiers against the Indians in 1832; read and ordered to a second reading.

Mr. Banton submitted the following resolution, which lies on the table:

Resolved, That the Committee on Naval Affairs be instructed to inquire into the propriety of establishing a navy yard at Baltimore, in the State of Maryland, and that they report their opinion to the Senate.

Mr. Sheeply submitted the following resolution, which was considered and agreed to:

Resolved, That the Committee on Naval Affairs be instructed to inquire into the propriety of making provisions to extend to the officers and soldiers of the army, the benefits of moral and religious instruction.

The resolution submitted by Mr. Banton on the appropriation of the surplus revenue, was taken up as the unfinished business, and, after some remarks from Messrs. Clay, Wilson, Grundy, Webster, Benton, King, and Leigh, the adjournment of Mr. Leigh, The Senate adjourned.

TUESDAY, FEBRUARY 9.

Mr. Buchanan presented the petition of Elizabeth Flicker, widow of Henry Richardson, of the town of the Wasp, stating that she had neglected to avail herself, within the period limited, of the benefits of the law passed in favor of the widows and orphans of the officers and crew of the Wasp, and praying that the proper allowance now be granted to her. Referred to the Committee on Naval Affairs.

Mr. Linim submitted the following resolution, which lies on the table:

Resolved, That the Secretary of War be directed to send to the Senate the official report of the expedition of the United States dragoons, under the command of Colonel Dodge, during last summer to the Rocky mountains, with the journal, and map, which so much interested the Senate; making such change in the map as will show the position of the different Indian tribes situated on the frontiers of Louisiana, Arkansas, Missouri, and the northwest frontier.

The bill for the relief of Capt. Augustus A. Nicholson, was read the third time and passed.

The resolution of Mr. Benton was then taken up, and the Senate was addressed at length on this subject by Messrs. Leach, Erastus Bown; but before Mr. Bown concluded, he gave way to Mr. Grundy, on whose motion, The Senate adjourned.

WEDNESDAY, FEBRUARY 10.

A message was received from the President of the United States by Mr. Donelson, his Secretary, transmitting, in compliance with the resolution of the Senate of the 3d instant, a report from the Secretary of War, on the subject of the Indian war in Florida; and on motion of Mr. Grundy, It was referred to the Committee on Military Affairs, and ordered to be printed.

Mr. Speer from the Committee on Claims, to which had been referred the petition of Francis Allen, reported a bill making an appropriation of $4,000 to compensate him and the owners of the ship Cadius, for bringing General Jackson's army, out of this country in 1814; which was read, and ordered to a second reading.

Mr. Benton's resolution for the appropriation of the surplus revenue, was then taken up as the special order;

Mr. Brown continued, and concluded his remarks begun yesterday.

After some remarks from Messrs. Ewing, of Ohio, Webster and others, Mr. Patten submitted the following amendment, as a substitute to the original resolution, to come in after the word 'resolved':

That such appropriation as may be necessary for the purpose, ought to be made to carry on the system of general defence, and permanent protection of the country.

Mr. Wright made a few observations, expressing his intention of amending the Senate, in order to put it before taking the question on the amendments; but as the hour was late, he would yield the floor to any gentleman, who desired it.

On motion of Mr. Webster, the further consideration of the subject was then postponed till to-morrow.

The following bills from the House were then severally read the second time, and considered as in Committee of the Whole, and ordered to a third reading:

The bill for the relief of Lieut. Washington Seawell; The bill to authorise the settlement of the accounts of Marinos W. Gilbert, an army sutler.

THURSDAY, FEBRUARY 11.

Mr. Rains, from the Committee on Naval Affairs, to which the petitions on the subject had been referred, reported a bill to compensate the widows of Capts. Freebly and of Stephen Decatur, and the widows and children of the officers and crew of the frigate Philadelphia, who served under them for the destruction of the frigate Philadelphia in the harbor of Tripoli; which was read, and ordered to a second reading.

Mr. Southard, from the Committee on Naval Affairs, to which had been referred the memorial of Melachion T. Woodard, reported a bill for his relief; which was read, and ordered to a second reading.

Mr. Tomlinson, by unanimous consent, submitted the following resolution, which was considered and agreed to:

Resolved, That the committee on military affairs be instructed to inquire into the propriety of establishing a navy yard at Baltimore, in the State of Maryland, and the public convenience, and public service.

The Senate adjourned.

The resolution submitted by Mr. Banton on the appropriation of the surplus revenue, was taken up as the unfinished business, and, after some remarks from Messrs. Clay, Wilson, Grundy, Webster, Benton, King, and Leigh, the adjournment of Mr. Leigh, The Senate adjourned.
Resolved, That the Secretary of the Navy be directed to communicate to the President of the United States a report of the topographical survey and the soundings of Bridgetown harbor, made by the officers employed under his direction in executing the coast survey during the last session.

Mr. Davis, on leave, introduced a joint resolution authorizing the Secretary of War to receive additional evidence in support of the claims of the State of Massachusetts for services, disbursements and expenditures during the late war with Great Britain; and the following resolution was twice and referred to the Committee on Military Affairs:

The resolutions submitted some days since by Mr. Tipton, the first directing the Committee on Military Affairs to inquire how far the army of the United States, as at present organized, is sufficient for the protection of the frontiers and to garrison the forts of the United States, and the second directing an inquiry, whether the pay and emoluments of the officers of the army was a sufficient attraction and, if not, what measures should be employed to make them so, were taken up for consideration.

Mr. Lincoln said that the first resolution was the same, almost word for word, with one on the same subject offered by his some days since, and adopted by the Senate. It had been sent to the War Department, from which no answer had yet been received.

The Chair read the resolution which was adopted on the amendment offered. He said that there was a slight difference between that and the one just offered. The inquiry in the first was directed to the War Department, while that of the second was directed to the Committee on Military Affairs. Mr. Tipton observed, that the two resolutions were in substance the same, the mode of inquiry only being different. That introduced by the Senator from Missouri (Mr. Linn) was directed to the Secretary of War and would give the necessary information to the Senate; while under the present resolution, the committee would necessarily have to obtain the same information from the War Department. It seemed to him, therefore, that the second resolution was unnecessary.

Mr. Tipton then withdrew his first resolution, and the calling for information relative to the pay of the officers of the army, was adopted.

Mr. Benton also read a memorial of a large number of citizens of the United States, being merchants and shipowners interested in navigating the Atlantic Ocean, and east of the United States, southward of Sandy Hook, praying Congress to authorize the establishment of a light house at New Jersey, which was referred to the Committee on Commerce.

Mr. Benton, from the Committee on Military Affairs, reported Mr. Lincoln's and Mr. Linn's resolutions, approving and sustaining the resolution of Lieutenant Vintoun, and the committee was discharged from the further consideration thereof.

Mr. Benton, from the Committee on Military Affairs, to which the same was referred, reported without amendment, the joint resolution authorizing the Secretary of War to receive additional evidence in support of the claims of the State of Massachusetts for disbursements, services, &c. during the late war with Great Britain; and the following resolution was considered as in Committee of the Whole, and ordered to be engrossed and read the third time:

House of Representatives.

TUESDAY, FEBRUARY 3, 1836.

Mr. B. presented resolutions of the Mayor and City Council of Baltimore, which were referred to the Committee on Naval affairs, with instructions to inquire into the expediency of establishing a navy yard in said city.

Mr. Cambleton, from the Committee of Ways and Means, reported various estimates from the Departments, for fortifications, &c. which were ordered to be printed.

On motion of Mr. Turner,
Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of making an appropriation for the defence of Havre-de-Grace, in the State of Maryland.

Mr. T. submitted the following resolution, which was read twice and referred to the Secretary of War:

Resolved, That the Secretary of War be requested to communicate to this House, if in possession of the War Department, a copy of the survey, plan and estimates for the improvement of the harbor of Port Republic, with the accompanying drawings and estimates.

On motion of Mr. Bragg,
Resolved, That the Committee on Revolutionary Pension be instructed to inquire into the expediency of making some provision for the widows of revolutionary officers and soldiers, who were married before, or during the term of the service of their husband.

WEDNESDAY, FEBRUARY 4.

On motion of Mr. Cushing,
Resolved, That the Committee on Naval Affairs be instructed to inquire into the expediency of making an appropriation, for the purpose of erecting one or more harbors at the naval yards, or any other place.

The Speaker announced the special order; but on motion of Mr. Bridges, and by unanimous consent, the House determined to dispose of several bills from the Senate.

The following bills from the Senate, were read twice and committed:

A bill providing for the increase of the corps of engineers, and for other purposes;

A bill for the better organization of the corps of topographical engineers.

THURSDAY, FEBRUARY 5.

Mr. Pickering, by unanimous consent, presented a communication from the Secretary of the Navy, in relation to a naval depot in the harbor of Charleston, which was ordered to be printed.

The Speaker laid before the House the following communications:

1. A letter from the Secretary of War, transmitting an abstract of the general returns of the militia of the United States; which was laid on the table, and ordered to be printed.

2. A letter from the Secretary of War, transmitting a list of the persons employed in the Indian Department; which was referred to the Committee on Indian Affairs, to be ordered to print.

3. A communication from the Secretary of the Navy, transmitting a statement of the expenditures of appropriations for the naval service for the year 1833; which was laid on the table, and ordered to be printed.

Mr. Thompson, from the Committee on Military Affairs, reported without amendment, bills from the Senate, providing for the increase of the corps of Engineers, and for other purposes; and for the better organization of the corps of Topographical Engineers; and the same were committed to a Committee of the Whole on the state of the Union.

Mr. Ash, from the Committee on Naval Affairs, reported a bill for the relief of Captain F. A. Parker; which was read twice and committed.

FRIDAY, FEBRUARY 6.

Mr. Cambleton, from the same committee, reported certain estimates from the War Department, for additional naval appropriations for the Quartermaster's Department, &c.; which were ordered to be printed.

Mr. Jarvis from the Committee on Naval Affairs, reported, without amendment, the bill from the Senate for the relief of Mr. Shubrick; and the same was committed.

Mr. Johnson, from the Committee on Military Affairs, reported a bill for the settlement of the claim of the State of Connecticut against the United States, for the service of her masts during the late war; which was read twice and committed.

TUESDAY, FEBRUARY 9.

APPROPRIATION BILLS.

On motion of Mr. Cambleton, the House then resolved itself into a Committee of the Whole on the state of the Union, Mr. Miller in the Chair.

Naval Appropriation Bill.

On motion of Mr. Cambleton, the committee took up the bill making appropriations for the Naval Service for the year 1838.

The bill had before been under the consideration of the Committee of the Whole, and had been reported. Mr. Cambleton's to strike out $860,000 and insert the sum of $2,000,000, for repairs of vessels in ordinary, and the repairs and wear and tear of vessels in commission, and completing those already authorized, was agreed to.

Mr. Cambleton withdrew the amendment, so as not to embarrass the passage of the present bill, and especially as the subject would come up in a separate bill to be reported
ARMY AND NAVY CHRONICLE.

by the Committee on Naval Affairs. This being the ordinary appropriation bill, and Mr. C. having withdrawn the only amendment pending, he hoped it would pass without delay.

Mr. Bell moved to reduce the several appropriations for the Navy Yard, one-half the amount proposed in the bill. Mr. B. raised another item on the subject, and maintained that such large appropriations might not be passed, in the prospect of a contingency that might probably ensue. The item was as follows:

For improvements and necessary repairs of the Navy Yard at Portsmouth, N. H.

Amount.

$67,000

At Charlestown, Mass. 166,000

At Brooklyn, N. Y. 54,500

At Philadelphia, Penn. 11,750

At Washington. 32,500

At Gosport, Va. 167,000

At Pensacola. 64,000

On motion of Mr. MANN, of New York, Committee the item rose, reported progress, and

The House adjourned.

ARMY.

Feb. 29.—Lt. J. H. Simpson, 3d Arty. assigned temporarily to duty in the Commissary's department, to be stationed at Charleston, S. C.

RESIGNATIONS.

Asst. Surg. S. E. Myers, to take effect 31st March, 1836.

NAVY.

MARRIAGE.

SHIP BICUT.

NAVY COMMISSIONERS' OFFICE, 18th February, 1836.

PROPOSALS, sealed and endorsed "Proposals for said Ship Biscuit," will be received at this office until three o'clock, P. M., of the tenth day of March next, for furnishing and delivering at the navy yard, Gosport, Virginia, any quantity of ship biscuits, to be made wholly from the flour manufactured by the yard or the year 1830, and furnished to the same yard, to be subjected to such inspection as they may direct—not be in all respects satisfactory to them or the Commandant of the said yard, and must be packed and delivered in gold subjoined and bright coppered hoops at each head, for which no charge must be made, and in good boarding order, free of all cost to the United States.

An application to the Commandant of the navy yard, Gosport, Virginia, or at this office, printed forms of orders to furnish the ship biscuit, to be received at the same yard, and be subject to such inspection as they may direct—not be in all respects satisfactory to them or the Commandant of the said yard, and must be packed and delivered in good boarding order and bright coppered hoops at each head, for which no charge must be made, and in good boarding order, free of all cost to the United States.

To the Commandant of the said yard, and be subject to such inspection as they may direct—not be in all respects satisfactory to them or the Commandant of the said yard, and must be packed and delivered in good boarding order and bright coppered hoops at each head, for which no charge must be made, and in good boarding order, free of all cost to the United States.

Ten per cent will be withheld from the amount of all payments on account of the said yard, as collateral security, in addition to the bond to be given, to secure its performance, not in any event to be paid, until the contract is in all respects complied with, Feb. 28—31.
PROCEEDINGS OF CONGRESS, IN RELATION TO THE ARMY, NAVY, &c.

SENATE.

MONDAY, FEBRUARY 15.

Mr. Naubain presented the memorial of a number of owners of vessels navigating the Delaware, praying for an appropriation for deepening the entrance of Christiana river. The memorial was referred to a Committee.

Mr. Niles presented the petition of W. H. Freeman, Lieutenant Colonel of the Marine corps, setting forth the evils and grievances which the petitioner and other officers of that corps suffer from the act of June, 1854, and praying for the repeal or alteration of the same. Referred to the Committee on Naval Affairs.

Mr. Tilton submitted the following resolution, which was unanimously adopted:

Resolved, That the Secretary of War be requested to prepare and transmit to the Senate a statement showing the effective force of the army of the United States, and the pay and allowances made to each soldier who shall serve in any of the United States army. This gentleman highly distinguished himself in the last war in some of the bloodiest battles fought on the Niagara frontier, in one of which he was captured and held in jail. For his services he received the appointment of paymaster, and, as he says, in one of his voyages to pay off troops stationed on the Mississippi river, the public money confided to his care was lost by the sinking of his canoe, by which loss he became a debtor to the Government 12 or 14,000 dollars, for which he wishes relief. The situation of this gallant man is truly deplorable. He is now entirely ruined in fortune, and wholly destitute of a situation and a character, and deprived by construction of our means of support, and I am of opinion that his claims upon the Government should be met, in consideration of the services he rendered it.

"My story is a short one. I lost the money, and the canoe and the horse which was sold for money to purchase the canoe. It was twenty one years. I entered the army with two others, and came out with one; all I ask of the Government, is to have my account settled, and I will relinquish all claims to the end of the chapter, for a pension. If I cannot be granted, I have nothing to pay with but flesh—and how much money I will not undertake to say. If I have, however, as is now, as it always has been, at the service of my country, when I came back out of jail, and no authority was pleased to direct. If there is to be a fight with the French, I will work out the balance I owe in the war, or pay it off by instalments of arms and legs, at as low a rate; as the French are not the only inferiors in the army. There may appear something like levity in my style, but in substance, there is truth and gravity of a painful character.

"Will you be pleased to write me a line or two, and give me your opinion in the case."

I am organizing an enlisting party of young men for the army; they may get a league of land each, or enter a tract of 62 by 62. Mr. Rice, of Alabama, submitted the following resolution, which was considered and agreed to.

Resolved, That the President of the United States be requested to come to the Senate, and be informed whether any further defenses are proposed to be erected at Key West, and Mobile Bay; and if so, whether it is expedient to commence such work this year, and the amount necessary to be appropriated for those objects.

WEDNESDAY, FEBRUARY 17.

Mr. Benton, from the Committee on Military Affairs, to which the petition of Captain Henry Smith, made an unfavorable report thereon.

Mr. Benton, from the Committee on Military Affairs, in respect to the appropriation of the surplus revenue of the United States, and the surplus revenue of the United States, and the surplus revenue of the United States, made an unfavorable report thereon.

Mr. Wright, who moved the floor, addressed the Senate in favor of the resolution, and after he had concluded, the debate was further continued by Messrs. Calhoun, Wall, Preston, and Niles.

THURSDAY, FEBRUARY 18.

Mr. Benton presented the petition of W. H. Bell of North Carolina, a Captain in the Ordnance Department, and now in the City of Washington, stating that he has made some valuable improvements in the fusing and pointing of iron, and praying that the Government shall take advantage of his improvements on terms whereby they may be paid to himself. Referred to the Committee on Military Affairs.

Mr. Benton, from the Committee on Military Affairs, to which the petition of Captain Henry Smith, made an unfavorable report thereon.

Mr. Benton, from the Committee on Military Affairs, to which the petition of Captain Henry Smith, made an unfavorable report thereon.

Mr. Benton, from the Committee on Military Affairs, to which the petition of Captain Henry Smith, made an unfavorable report thereon.

SPECIAL ORDER.

Mr. Benton's resolution for appropriating the surplus revenue to national defense, was taken up as the special order.

Mr. Robinson addressed the Senate in a speech of some length in opposition to the resolution, and after he had concluded, Mr. Calhoun moved to lay the whole subject on the table.

Mr. Benton said, as this motion was to put a final conclusion to the debate, he would ask for the yeas and nays, which were accordingly ordered, and the question was taken and decided in the negative—yeas 15, nays 23.

The question was then taken on Mr. Gwin's amendment, which struck out the word "surplus," so as to leave the depot of arms and munitions of war on the frontiers of Missouri, made a report accompanied by a bill making an appropriation for that object.

On motion of Mr. Swift, the report of the Committee on Military Affairs, unfavorable to the petition of Captain Henry Smith, was considered and passed in.

Mr. Benton, from the Committee on Military Affairs, unfavorable to the petition of Captain Henry Smith, was considered and passed in.
two horses lost in the service of the United States; referred to the Committee on Military Affairs.

Mr. Benton, from the Committee on Military Affairs, to which the subject had been referred by a resolution of the Senate, reported a bill making appropriations for the establishment of an armory on the western waters; which was read and ordered to be referred.

Mr. Benton gave notice that he would on Monday next introduce the morning's business, move to take up the bill making appropriations for fortifications, reported by him from the Military Committee some days since.

The bill from the House to provide for the payment of the expenses of the volunteers and militia corps in the service of the United States in Florida, was read twice and referred.

HOUSE OF REPRESENTATIVES.

WEDNESDAY, FEBRUARY 10.

Mr. Smith, from the Committee of Ways and Means, reported the following bills; which were read twice and committed: A bill making additional appropriations for the Delaware breakwater and for certain harbors, and for removing obstructions in and at the mouths of certain rivers, and for other purposes, for the year 1836; and a bill directing the Secretary of War to report annually certain information in relation to works of internal improvements.

Mr. Johnson, of Kentucky, from the Committee on Military Affairs, reported a bill fixing the compensation of the officers of the army, employed on duty in the Military Bureau of the War Department; which was read twice and committed.

A bill from the Senate for the relief of Captain Augustus A. Nicholson, was read twice and committed: APPROPRIATION BILLS.

The House, on motion of Mr. Camberling, resolved itself into a Committee of the Whole on the state of the Union, Mr. Miller in the Chair.

NAVY APPROPRIATION BILL.

The Committee resumed the consideration of the bill making appropriations for the naval service for the year 1836. The question pending, was the proposed amendment of Mr. Bell, to reduce the appropriation for the improvement and necessary repairs of the navy yard at Portsmouth, New Hampshire, from $67,000 to 33,500. And after a few remarks from Messrs. Mann, of N. Y., Everett, Lincoln, Smith, Jenifer, Wise, Cushman, Camberling, Jarvis, and Bell, Mr. Pearcy, of Rhode Island, moved that the committee rise; agreed to. Ayes 53, noes 48.

The Committee, accordingly rose, reported progress, and asked leave to sit again, and, on motion, the House adjourned.

THURSDAY, FEBRUARY 11.

APPROPRIATION BILLS.

The House then, on motion of Mr. Camberling, resolved itself into a Committee of the Whole on the state of the Union, Mr. Miller in the Chair.

NAVY APPROPRIATION BILL.

The Committee resumed the consideration of the bill making appropriations for the naval service for the year 1836. The question pending, was the proposed amendment of Mr. Bell.

Mr. Pearcy, of Rhode Island, addressed the House at length on the whole system of our navy yards.

Mr. Cushing, succeeded in reply, principally so far as regarded the navy yard at Charlestown, Massachusetts.

Mr. Hardin briefly replied.

The remarks of Mr. Hardin and Mr. Cushing were rather of a personal character; and at the conclusion of Mr. Cushing's remarks, some individual in the ladies' gallery applied to be heard.

Mr. Reed and Mr. Hannegan rose simultaneously—Mr. Reed moved that the gallery be cleared; but understanding it came from a single individual, he withdrew the motion.

Mr. Hannegan then renewed it. Mr. Lee, of N. Y., moved that the committee rise; agreed to.

The Committee rose, and the chairman having reported progress.

Mr. Hannegan renewed the motion he made in Committee of the Whole.

Mr. Williams, of N. C., moved that the rule be enforced; which was agreed to, and the south gallery was ordered to be cleared.

Mr. Mercer said, as he was given to understand that the abolition of slavery was recognized by a member of the House, he moved that he be taken into custody.

Pending this motion, the House adjourned.

On motion of Mr. Allan, of Kentucky, the following resolution, submitted by him on the 7th ult., was again taken up and agreed to: Resolved, That a select committee be appointed, whose duty it shall be to inquire into the expediency of extending the provisions of the act of Congress, for the benefit of the surviving officers and soldiers of the revolutionary army, passed the 7th of June, 1832, so as to embrace those who served in the war of the United States, which occurred between the treaty of peace with Great Britain in 1783, and the treaty of Greenville with the Indians in 1795; and that the said committee have leave to report by Messrs. Brown and Brown, as the accompanying drawings and estimates.

By Mr. Love: Resolved, That the Secretary of War be directed to furnish to Lieutenant Thompson S. Brown, of the United States corps of Engineers, relative to the harbor at Naufrage Islet, with the accompanying drawings and estimates.

By Mr. Gibbons: Resolved, That the Secretary of War be directed to inform this House whether, in his judgment, an additional armed force be necessary to prevent the Creek tribe of Indians from aiding the Seminole Indians in the War of Florida, and from the commission of other depredations; and if so, whether any legislation by Congress will be necessary.

On motion of Mr. McKay: Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of establishing an arsenal in North Carolina.

On motion of Mr. Hawes: Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of establishing a public armory on the waters of Green River, in the State of Kentucky; and that said committee be instructed to report on or before the first of March next.

On motion of Mr. Dromgoole: Resolved, That the Committee on Invalid Pensions be instructed to inquire into the expediency of allowing Major Gen. Winfield Scott the same rate of pension as the late Colonel of Artillery, as if the testimony in support of the disability sustained by him in the battle of Niagara, July 25th, 1814, had been completed and filed at that date.

On motion of Mr. Bond: Resolved, That the Committee on Commerce be instructed to inquire into the expediency of erecting a Marine Hospital at the town of Portsmouth, in the State of Ohio.

Resolved, That the Secretary of the Treasury be directed to cause to be laid before this House, a statement of claims for horses and other property lost in 1831—2, on the frontiers of Illinois and Michigan, that have been presented for allowance, under an act for the payment of horses and arms lost in the military service of the United States, during the late war with the Indians on the frontiers of Illinois and Michigan Territory, approved 30th of June, 1834—the number that have been allowed, and the number that have been rejected, or suspended, and the reasons for such rejection or suspension.

On motion of Mr. Dunlap: Resolved, That the Committee on Military Affairs be in
ARMY AND NAVY CHRONICLE.

On motion of Mr. Johnson of L. A., Resolved, That the Committee on Commerce be instructed to inquire into the expediency of making an appropriation for the erection of a Marine Hospital in the city of New Orleans.

Resol. That the Committee on Commerce be instructed to inquire into the expediency of making an appropriation for the erection of a custom-house, and a public storehouse in the city of New Orleans.

On motion of Mr. Loyd, Resolved, That the Committee on Naval Affairs be instructed to inquire into the expediency of placing the matter of several navy yards, upon a more permanent footing as to appointment and pay.

On motion of Mr. Lincoln, Resolved, That the Committee on Naval Affairs be instructed to consider the propriety of continuing to marry J. E. Rice, the widowed mother of Fitz Henry Rabbit, late a Lieutenant in the Navy of the United States, on board the Frigate President, Stephen Decatur, Esq. Commodore, who was killed in action with a squadron of the line of battle of the French on the 11th of September, 1812, and that the person granted to her for five years, from the 19th of November, 1830, now expired by an act of Congress of 24th March, 1833.

On motion of Mr. Pinckney, Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of establishing an arsenal of construction at or in the vicinity of Charleston, South Carolina.

TUESDAY, FEBRUARY 16.

Mr. Milligan, from the Committee on Naval Affairs, reported a bill for the relief of Samuel Hamilton; which was read twice and committed.

On motion of Mr. Grayson, and at the instance of the Committee on Naval Affairs, the Committee of the Whole House was discharged from the further consideration of the bill for the permanent establishment of a navy yard at Charleston, South Carolina, and the same was committed to a Committee of the Whole on the state of the Union.

Mr. Proctor, from the select committee appointed on the 15th January, 1832, for the relief of the officers and soldiers who served in the Rhode Island brigade, in the Revolutionary war, their heirs and assigns; which was read twice and committed.

By order of the 15th January, the select committee raised on the subject, made a report, accompanied by a bill, to extend the provisions of the act supplementary to the act for the relief of certain surviving officers and soldiers of the Revolutionary war, approved 7th June, 1822; which was read twice and committed.

WEDNESDAY, FEBRUARY 17.

Mr. R. M. Johnson moved to suspend the rule for the purpose of considering the bill providing for the payment of the volunteers and military corps in the service of the United States, which was negatived.

Mr. Johnson subsequently moved to suspend the rule in order to enable him to submit a motion, making the foregoing bill the special order for one hour to-morrow morning after the reception of reports from committees.

Mr. Johnson moved to suspend the rule, so as to include the bill authorizing the President of the United States to accept the service of volunteers; which was negatived.

The motion to suspend the rules was agreed to—ayes 112 and nays 7.

Mr. Johnson then submitted the motion indicated, which was carried.

Mr. J. Symon, from the Select Committee on that subject, moved to take up the joint resolution in relation to the monument proposed to be erected to the memory of Captain Nathan Hale, for the purpose of reading it a second time by title, and committing it; which was agreed to.

At two o'clock, a second time, when Mr. J. Symon moved that it be committed to a Committee of the Whole on the state of the Union.

Mr. Vinton moved to commit the resolution to a Committee of the Whole, which was negatived.

Mr. J. Symon, from the Select Committee on that subject, moved to take up the joint resolution in relation to the monument proposed to be erected to the memory of Captain Nathan Hale, for the purpose of reading it a second time by title, and committing it; which was agreed to.

SEC. 2. And be it further enacted, That the officers of all mounted companies shall each be entitled to receive forage, or money in lieu thereof, for two horses, when they shall actualy keep private soldiers, or private servants, and to forty cents per day for each horse, with forty cents per day for the use thereof, and twenty-five cents per day in lieu of forage and subsistence when the same shall be furnished by himself, or twelve and a half cents per day for each, as the case may be.

SEC. 3. And be it further enacted, That the non-commissioned officers, musicians, and private, of all mounted companies, shall be entitled to receive forage for each horse, with forty cents per day for the use thereof, and twenty-five cents per day in lieu of forage and subsistence when the same shall be furnished by himself, or twelve and a half cents per day for each, as the case may be.

SEC. 4. And be it further enacted, That the volunteers or militia, who may be received into the service of the United States, shall be entitled to all the benefits which may be conferred on persons wounded or otherwise disabled in the service of the United States.

SEC. 8. And be it further enacted, That when any officer, non-commissioned officer, musician, or private, of said militia, or volunteer corps, who shall die at any time in consequence of wounds received in service, and shall leave a wife, or if no wife, a child of mature years of age, such widow, or if no widow, such child or children, shall be entitled to receive half the monthly pay to which the deceased was entitled at the time of his death, and during the term of five years, and should continue and the survivor of the deceased or intermarriage of such widow before the expiration of five years, the half-pay for the remainder of the time shall go to the child or children of said decedent: Provided, always, That the Secretary of War shall adopt such forms of evidence, in applications under this act, as the President of the United States may prescribe.

Mr. R. M. Johnson moved the following amendment to the second section, to come in after the word "compa-" in the second line, "where it shall be entitled to receive, or who may hereafter be, in the service of the United States," which amendment was agreed to.

Mr. Williams moved the following amendments to the second section, in the words wherein the word "shall," so as to read in the first place, "for the use and risk of each horse, except horses killed in battle, or dying of wounds received in battle;" and in the second place, "for the use and risk thereof, except such horses killed in battle, or dying of wounds received in battle;" which amendments were agreed to.

The fourth section was then amended by Mr. Johnson and Mr. Whart in the words wherein the word "service, to suppress Indian depredations in Florida, shall be entitled to all the benefits which are conferred on persons wounded or otherwise disabled in the service of the United States;" which amendments were agreed to.
FOREIGN MISCELLANY.

From the Hampshire Telegraph.

BARHAM AND VERNON.—THIRD AND LAST TRIAL.

For a long period we have avoided the insertion of the relative sailing qualities of different men of war; not that we have been averse to opportunities of doing so, for we have had many; but for the reason that, in all the trials, the contention has not been between ships of similar forces. We have had a line-of-battle ship, a large frigate (or donkey, one), a sloop and a whaleboat, with the result that we have been generally unsuccessful in our arduous task. We think that the Commodore not to tack another was bent, but the signal was made to tack, which, in a strong breeze, caused much delay in bending the new sail, having everything ready on one side, and being obliged to shift over and tack without any after-sail to bring the ship to, as these days of economy were obliged to wear sails till they are rotten, and cannot be trusted.

Barham was forty minutes without a mizen topsail; it was now blowing very strongly; directly the new sail was bent the signal was made to tack again together. Barham's main sheets in stays got foul of the spare anchor, obliged to shift over and tack, and during the but caused a visible loss, the ships being so close together.

At 12:30, the wind shifted two points in favour of the Barham, whose signal was made to tack; she passed exactly the same distance to leeward of the Vernon that she started, namely, three cables, and was going on with the race, when the Vernon shortened sail, and we think that her main-top-sail yard was sprung; which was a great pity, as had Vernon been obliged to tack again, she would have been put against the sea, as Barham then was; we also understand that orders were sent out, that should the ship lose a race from loss of spars, it would be given in favour of the one who proceeded with the men to be the winner of the ship.

This was the strongest breeze the ships have been out in yet.

10th Trial, Dec. 8. — By the wind, all sail set, wearing instead of tacking. Barham had so decidedly the advantage this day, Revenge did not want the bearings and distance at the finish, it being about a mile and half in favour of the Barham, but made the signal of recall.

11th Trial. — Off the wind, a fresh breeze, rate of sailing from eight and a half to nine and a half, length of trial seven hours and a half, distance run 68 miles. There was scarcely any difference in this day's trial, it being about one quarter of a mile in favour of Barham's long run; studding sails and number of ships beat Revenge as much in this as in every other trial.

12th Trial. — Bore away to leeward with Vernon, a fresh breeze at starting, double reefed top sails and small jib; but just after starting the wind died away and bore away, and the Vernon made it the more as she was belayed; Commodore made recall, and annulled sailing.

18th Trial. — A strong breeze from N.W. with a fine clear day; bore away to leeward per signal, in company with the Vernon; under treble reefed top-sails in her jib, and reefed spencer; an hour after starting much reduced, no sail set, set up bolt, top-gallant yards, and mainyard; up boat, cease topsails and set up top-gallant yards, set sail with jib, and signal to tack frequently, and then Barham's signal to tack, when she passed to leeward of the Vernon and the recall was made. Why were we stopped in the middle of the race we cannot tell, and why Barham should always have the last tack we cannot account for; besides Vernon in perfect condition, and the most well known long chase. Vernon only gained two cables this day, Barham having to tack once more and to go against the sea, in crossing which makes a great difference.

The same day after dinner, bore up for Malta, and started again, steering with wind a-beam, rate of sailing ten miles per hour; studding sails; sailing exactly as we started; both ships beat the Revenge more than a mile an hour — distance run thirty miles.

This is a faithful account and one made on the spot.
DOMESTIC MISCELLANY.

GENERAL THOMAS NELSON, GOVERNOR OF VIRGINIA.

[From the Custis Recollections and Private Memoirs of the Life and Character of Washington.]

Among the patriots, statesmen, and soldiers that Virginia contributed to the Congress and armies of the Revolution, THOMAS NELSON will ever claim an elevated rank. Descended from ancient and highly respectable English ancestry, Gen. Nelson was educated in England, and was engaged, prior to the Revolution, in mercantile concerns upon an extensive scale, at Yorktown, in Virginia, strange to say, at that period, the importing city for Philadelphia.

Upon the breaking out of the troubles, Nelson joined the cause of the Colonies. He was a man of large fortune, having many and valuable estates in different counties, particularly the county of Hanover. He was the confidential and beloved in his native colony, he held a high and commanding influence among the people. He threw all into the scale of his country, in her struggle for the natural rights of mankind.

After the battle of Lexington, Virginia put forth all her strength in the Senate and in the field. The very elite of her statesmen had been sent to the Congress of 1774, while the pride of her chivalry took arms in the succeeding year. Among the illustrious names that composed the Virginia delegation to the Roman Senate of 1776, we find the name of Thomas Nelson, Jr. who affixed his signature to the Declaration of Independence on the ever-memorable 4th of July.

The state of society in the South in the olden time, was very different from that of modern days, under the Republic. Under the ancient regime there were but two orders in society—the rich and educated, and the poor. Hence, the highest individuals were not rich, and held no material influence over those who were not so fortunately situated. Men of extensive personal influence over the minds of the people at large, were all-important to the cause of American liberty in the commencement and during the whole progress of the Revolution, with the view of diffusing and fostering the Whig spirit, in opposition to the powerful and shly directed efforts of the Tories.

It is well known to history, that the Commander-in-Chief spared, at a very critical period of the war, an active and valued officer, (Missinn,) that he might exert his personal influence among the people of his native State, to recruit his army. On his return to Virginia from serving in the Continental Congress, General Nelson exerted himself in keeping alive the spirit of the Revolution, often flagging from the severe disasters that had attended our arms. He was also actively employed in organizing a Volunteer corps of Cavalry and Infantry, and the families served as volunteers. This corps he commanded up to the double invasion of 1781, when upon being elected Governor of the State, he took the command in chief of its militia.

The invasion of Arnold was more immediately desperate, but that of Cornwallis swept like a tempest through the devoted Commonwealth, already much weakened by her untried exertions to sustain the army of Greene in the Carolinas, and to defend the most points of her territory, assailable by the attacks of the enemy's naval power.

The forces under Steuben, Lafayette, and subsequently Wayne, were too limited in point of numbers, and too much straitened for supplies of every sort to be able to check the victorious career of the enemy. Indeed, the resources of Virginia, great as they originally were, had been sadly reduced in the previous campaign by the capture of her veteran elements on the surrender of Charleston, by the total disembarkation at Camden, but above all, by the enormous depreciation of the paper money; all which causes combined to elevate the hopes of the enemies, and cast a shadow over
those of the friends of American liberty. To such a wretched state of depreciation had the paper money arrived at this period, that, in numberless instances, persons were known to have concealed their horses and oxen in the woods and swamps rather than hire them to the transportation department of the army, where the hire was to be paid in depreciated Continental bills, which had become almost valueless.

Here the patriotic Nelson set a noble example; his crops were left to their fate, his ploughs left in the furrows, while the teams were harnessed to the cannon and munitions of war moving to the investment of Yorktown.

At the ever-memorable siege of Yorktown, Governor Nelson rendered important services in blockading the enemy previous to the arrival of the combined army and the fleets of France. It was on the venerable Lafayette's last visit to Mount Vernon that he related to the author of these memorial inscriptions an anecdote of Governor Nelson, which we shall give in the good General's own words: "I had just finished a battery," said the Nation's G. est., "mounted with heavy pieces; but before I entered on the town, I requested the attendance of the Governor of Virginia, not only as a compliment due to the Chief Magistrate of the State, but for a wish already entertained, that a company of the localities of a place in which he had spent the great part of his life. To what particular spot would your Excellency direct that we should point the cannon," I asked. "There," promptly replied the noble-minded, patriotic Nelson, "to that house; it is mine, and in it I lodged my guest; but to my surprise, I found the best one in the town, and there you will be almost certain to find Lord Cornwallis and the British head-quarters. Fire upon it, my dear Marquis, and never spare a particle of my property so long as it affords a comfort or a shelter to the enemies of my country." The Governor rode away, and in an instant an instance of devotion to patriotism that would have shed a lustre upon the purest ages of Grecian or Roman virtue."

Another anecdote we will present to our readers ere we close this brief memoir. "During the campaign of 1781, when the ruined state of the finances had caused every thing like hard money to have almost entirely disappeared, Nelson learned that an old Scotchman named R——, had a considerable sum in gold, which, like most other moneyed persons of that period, he kept carefully concealed. The Governor waited upon the man of gold, a rare instance in those days, and begged him for a loan for a long period on behalf of the State. Sawney was inexorable, saying, 'I ken naething of your Government, but if ye wull ha the siller for yourself, General, de'il tak me but every bawbee of it is at your service.' Nelson accepted the offer, and obtained on his own bond, and by his own personal influence, a loan of the State of Virginia, a loan that prominent State had neither a coin in her treasury, nor credit to obtain one. The Governor clutched the gold, and quickly did its circulation give a new and cheering aspect to our destinies at that momentous period."

And now, it would be naturally asked, who paid the bond, and at whom interest? Posteriorly would answer, a grateful and admiring country, surely. Say, rather, the impoverished family of the patriot. This, with other facts of equal moment, caused the American author of these memoirs to blush for his country, when, during the triumph of Lafayette, and upon his last visit to Mount Vernon, the veteran introduced the subject of his gallant services, untiring patriotism, and his unexampled and devotional sacrifices for the cause of American Independence, and presumed that a grateful and admiring nation had long since rewarded the descendents of his old companion in arms, beloved and beoomed friend.

It will be matter of interest to all future ages of the Republic, to learn who, of the many worthies that flourished in the age of Washington, were nearest to the heart of the Pater Patriae. All tradition will agree upon Greene and Robert Morris. But if they were in the heart's core of the Chief, as assuredly they were, Nelson, of Virginia, was at their side. Beloved in life, Washington showed his esteem for Nelson's memory by appointing the son, named after the sire, as one of the Secretaries to the first President of the United States, on the commencement of the Federal Government in 1789.

Such was Nelson, of Virginia, who, in the times that tried men's souls, pledged for his country in the Halls of her Independence, his life, and perilled it in her battles for Freedom, and, in his former days, for his country's cause; pledged his sacred honor, and redeemed it by a life and actions honored among the most honored.

Such was a patriot, statesman, and soldier, and the American Revolution, the admired of his countrymen, the beloved of Washington and Lafayette, whose respected descendants have appealed, in the name of the services and sacrifices of their ancestor, to the justice and magnanimity of a free, powerful, and prosperous empire.

An article in the American Magazine of useful and entertaining knowledge gives an interesting description of the business of shipping in America, particularly in Duxbury. The reputation of American vessels, for soundness, is similar to that of American captains for intelligence and trustworthiness. Mr. Sidell, in the American in England, mentions the respectable sober air of the American captains on 'change in their business, and in their conversation. A sailor's eye is acute, and a sober man's is sharp. A similar contrast is noticed in all the ports of the world, and it may be safely asserted that the captains and officers of our merchant-men contribute largely to impress foreign nations most favorably as to the intelligence and substantial worth of the American people.

If a great many instances they are part owners of the vessels they command. To the same circumstance may probably in some degree be ascribed the excellence of the New England vessels. In Duxbury, a town of less than three-thousand inhabitants, there are one hundred and ten ship-masters, and forty mates, with a large number of hardy and sober seamen. In the last ten years there have been built in this one town thirty-three ships, forty-seven brigs, forty-three schooners and several sloops, amounting in all to twenty-eight thousand four hundred tons. The rate of insurance shows the estimation in which their vessels are held. They are built of pasture oak, much of which is brought twenty miles in teams. — Baltimore American.

NARROW ESCAPE.—We learn from a correspondent of the Boston Traveller, that while the Delaware was off Cape de Gatt, bound home, an accident occurred which left the high prow directed to make a heap of the Commodore's, and a gore of blood on the breast of the Commodore. In the stormy gathering, the Commodore fell into the sea, where he saw, by a most advantageous escape, nine hundred souls were rescued from a swift and terrible death. —Albany Daily Advertiser.

We were pained and mortified, on perceiving the other day in Chestnut street, some of the silver plate belonging to the late Commodore Dacur, exposed for public sale in a jeweller's shop. One of these pieces is particularly beautiful; and an inscription upon it, set forth that it was presented to the Commodore by the citizens of Baltimore. Is it not shameful, that this humiliating sale should be rendered necessary by the surviving relatives of that gallant officer? Why cannot Congress grant a tribute from the swelling public purse, to the benefit of those who were near and dear to one of its brave defenders. Must it still be said that republics are always ungrateful.—Philadelphia Gazette.
DOMESTIC INTELLIGENCE.

SEMINOLE CAMPAIGN.

Savannah, Feb. 18.

We understand that there will be in Florida, in all this month, an army of between four and five thousand men, viz: from Georgia, two regiments or one brigade, of 1480 men, about one half mounted; a like force, mounted and foot, from South Carolina; a regiment of foot, (740 men) from Alabama, and say 900 regulars including 100 dragoon recruits expected from New York.

This force is exclusive of the gallant volunteers, who, some weeks ago, harrassed from Savannah and Charleston, for the special defence of Picola and St. Augustine, and who will probably soon be honorably discharged.

We learn that no detachments have been called for from Florida or Louisiana, although it is reported, that a force of some 700 men have arrived at Tampa Bay and Pensacola, from New Orleans; and it is known that the Governor of Florida has, in the field, perhaps 4 or 500 men. The latter force will probably be held for the immediate defence of the settlements of the Territory nearest the theatre of active operations.

A fourth of the Georgia quota (foot) is already at Picola; another fourth (mounted) will be there by the 28th inst. and the remainder, (mounted and foot) by the end of the month.

A regiment of South Carolina foot (under Col. Briscoe) must have reached St. Augustine, from Charleston, on the 14th or 15th inst. and her regiment of mounted men, under Col, Goodwin, will cross the Savannah at Sister’s Ferry, above this, in all the present week.

The Alabama regiment, it is said, will rendezvous at Mobile, to sail thence to Tampa Bay, where it will find three companies of regulars, and perhaps, a detachment from New Orleans, volunteers or regulars. Col. Lindsay, of the Army, it is said, will command all the forces which may assemble at Tampa, and effect thence a junction with the main Army, at Fort Dougherty.

Of the 900 regulars, three companies are reported to be locked up in theice of the Chessapeake, and the dragoon recruits from N. York, had not sailed at the date of our last advices. Horses purchased for them at St. Augustine, await them at this place.

The South Carolina brigade is to be commanded by Brigadier General Bull, who is here. We have not learned what general has been detailed for the command of the Georgia brigade, nor the names of the Georgia Colonels.

Brigadier General Eustis, of the U. S. A. probably at St. Augustine on the 15th inst, and Brigadier General Clinch at Fort Dougherty or Fort King. Those posts have been secured and are considered as secure.

Major General Scott, the General in-Chief, with his staff, is expected to sail hence, in the first vessel, for Picola. He will arrive ahead of three-thifts of his forces, and has been detained here a week in directing their movements and in causing the supplies to be forwarded which will be required in the field.

The best information we have received, represents the enemy’s forces at 3000 armed men, and mostly mounted. — Georgian.

MORE TROOPS FOR FLORIDA.—Ninety U. S. Dragoons arrived yesterday in the ship John Taylor from New York. They are commanded by Capt. Wharton, U. S. A.; Lieuts. Wheelock and Beall are the other officers.—Georgian.

HEAD QUARTERS.

Left Wing Army of Florida.

St. Augustine, Feb. 15, 1838.

ORDERS:

The services of the four companies of volunteers from Charleston and Hamburg, being no longer deemed necessary for the protection of St. Augustine, they will be mustered for discharge, and will embark for Charleston in the transports provided for them.

The gratitude of the country is due to this gallant band. Brig. Gen. Eustis tenders his sincere thanks for their services, and best wishes for their safe and happy return to their homes.

By order of Brig. Gen. Eustis,

J. H. PRENTISS, A. A. Adj. Gen.

MOBILE, Feb. 22.

Captain B. Vincent, who went a few days since with his steamboat, the Watchman, from New Orleans to Tampa Bay, to convey the troops from that city, writes from Pensacola by yesterday’s mail, as follows:

I have no news particular from Tampa—the army left that place on the 14th inst. under the command of Gen. Gaines, and in fine spirits, leaving Major Sands in command of Fort Brooke, with about 150 effective men, strongly picketed. They did hold three of the hostile Indians prisoners, one of whom attempted to escape the morning after our arrival, and was shot. We had no news further from the army, when I left, on the evening of the 16th instant.” — Mer. Jde.

By a communication received at the Adjutant General’s Office from Major General Scott, dated the 22d of February, it appears that he arrived at Picola, Florida, the day previous, and he had reached the 1st battalion of Georgia foot in position. He reports the 1st battalion of Georgia mounted men on the south side of the St. Mary’s river, and that the 2d mounted battalion had most probably commenced its march from the interior of Georgia. The head company of the South Carolina mounted regiment had reached the Ogeechee. The regiment of foot from that State, under Colonel Brisbane, was at St. Augustine. General Scott received a dispatch from Brigadier General Clinch, dated 20th of February, with a return of the troops under his command at Fort Drake and its vicinity, dated the 17th. This force composed of 220 men, including volunteers. Brigadier General Clinch states that on the arrival of Colonel Lindsay at Fort Brooke, Tampa Bay, with the Alabama regiment, Major General Gaines will have at that place near 2,200 men, and about 100 friendly Indians.—Globe Mar. 7.

In noticing the military intelligence from Florida, in yesterday’s paper, we omitted to state the present computed force of the hostile Indians. In his report of the 20th of February, to Major General Scott, General Clinch states the force to be about one thousand five hundred warriors and 145 horsemen; and he believes the principal part of it to be concentrated on the Ouhitlachoochee, thirty-five or forty miles from Fort Drake.—Ibid. Mar. 8.

The Steam Boat Watchman, Capt. Vincent, arrived here yesterday morning from Tampa Bay. He left Tampa on Wednesday, but brings no news of consequence, concerning the Indian War. On Tuesday last, the Troops to the number of 1030 under command of Gen. Gaines, left Cantonment Brooke, in pursuit of the enemy, it having been ascertained that a considerable force had assembled near Tampa. Capt. Vincent reports that on the day of his departure, an Indian, hiring himself in the direction of the line of march of the whites. Seventy friendly Indians are with Gen. Gaines’ command. They have been placed under the direction of Capt. Saunders, formerly Butler of the Troops at Tampa Bay. Capt. V. further informs, that a few days before he sailed, three hostile Indians had been killed—one of them believed to be a spy. He came to cantonment Brooke pretending to be drunk. When he found that his device would not avail him, he attempted to make his escape and was killed.

The sloop of war Vandalia is still lying at Tampa, and will remain there so long as there is any use for the services of the marines, now on duty at the canton-
TRIAL OF COL. PARISH,
FOR KILLING LIEUTENANT WARD.
From the Pensacola Gazette, Feb. 20.

It is with great pleasure that we learn that a court of Inquiry ordered by Gen. Clinch at the instance of Col. Parish at Fort King, have unanimously acquitted Col. P. of all improper conduct in the unhappy occurrence which caused the death of Lieut. Ward. We have examined the proceedings and testimony of the court, and are satisfied that the shooting of Lieut. Ward was a melancholy, painful necessity, imposed on Col. P. not only by the rules of military discipline but by a still higher principle of self preservation. He ordered Lieut. Ward to be arrested; Lieut. W. resisted the order—used offensive language to Col. Parish, and armed with three pistols, one of them cocked and loaded, stood on the parapet, and declared that he would shoot down the first man who attempted to execute the order. Much of the testimony goes to show that Lieut. W. was in the act of presenting his pistol at Col. Parish when the latter shot him. We are informed that much excitement against Col. Parish, exists about Tallahassee, but there can be no doubt that as soon as the facts are made known, the excitement will give way to unqualified approbation of his conduct. In the bereavement which the family of Mr. Ward has suffered, all must sympathize; and none, we feel assured, from a knowledge of Col. Parish, will sympathize with them more deeply than he. The deceased was a brother of George Ward Esq. of Tallahassee.

The following is the finding of the Court of Inquiry.

'The Court having patiently and carefully examined all the witnesses who were named to them, and investigated fully the causes which led to the death of Lieutenaut WILLIAM WARD, of Volunteers; proceed in obedience to the order instituting the court to give its opinion thereon.

'The court is of the UNANIMOUS opinion that Lieutenaut William Ward was killed by Col. R.C. Parish; the said Col. Parish being in the legal execution of his office; and that he is fully justified, from the circumstance of the case, in doing so.

'It would be impossible to conceive a case which would more entirely justify an officer in command, in taking the law into his own hands. His legal and necessary authority as commanding officer, was defined and resista nced as usual and legal means were in every case fruitless; he seized and disarmed repeatedly: no one would obey his order. He was obliged, therefore, to execute the order himself, and in doing so his conduct is fully justified in the opinion of the court.

C. M. MARTINUS
Captain 3d Artillery,
President.

HORACE BROOKS,
Brev. 2d Lieut. and Recorder.

LATE FROM FORT KING VIA PICOLATA.—We learn from Lieut. Ruggles, U.S.A., who arrived yesterday from Capt. Gates, that that post on Friday last, from Fort King, which post he left on the 16th or 17th—that he reports that no volunteers had, at that time, joined Gen. Clinch, except the Richmond Blues, Capt. Robertson, and the volunteers from Camden, Glynn, Chatham and McIntosh, under the command of Captains Bryan—that nothing of interest had occurred there. Our Georgia volunteers were all well.—Savannah Georgian.

Capt. Bones, with the Richmond Hussars, (dismounted) was to take up the line of march on Sunday last for Fort King, as an escort to a train of wagons sent from Fort King under Capt. Gates.

The battle of volunteers from Macon, &c. under the command of Major Cooper, was still encamped at Picolata on Saturday last, (when Lieut. R. left) waiting (it is presumed) orders from General Scott, who had not then arrived there, but has doubtless reached it ere this. The two companies of U.S. troops commanded by Capt. Merchant and Lieut. Irwin, were still at Picolata.—Ibld.

Capt. Gatewood, of the U.S. Revenue Cutter Morris, has made an interesting Report to the Collector of Portland, of his cruise upon the eastern coast during the late severe weather, in which he encountered many dangers, but was finally delivered from the perils of the rocks, waves and winds in safety. Speaking of the eastern shore, the Captain says—'The dangers on the eastern shore of this coast extend to the extreme limits and jurisdiction of the cruising ground assigned to the Morris, from Cape Elizabeth to Mount Desert, a distance of about 40 leagues, and the numerous rocks which intercept a free navigation, lie concealed beneath a foaming surf, whose towering waves would instantly crush, and dash to pieces, the strongest specimen of naval architecture."

"It is astonishing that on a coast so much frequented, and so liable to fatal shipwrecks, there are no sailing directions to be had, which can be relied upon, and the eye, assisted by judgment and discretion, is the only guile which can direct the mariner, in the responsibility attached to the command of a vessel, with the valuable lives confided to his care and protection."

The Captain says that it has been too cold to smuggle; he thinks the severity of the climate sufficient to protect the government against frauds of this nature in the winter season.—Boston Statesman.

SELECTED POETRY.

From the Norfolk Beacon.

THE GALLANT MARINE.

BY FERDINAND JEFFERSON.

AIR.—The Humours of Glenn.

In the far distant clime and upon the rude ocean,
There's one who tempest and battle will brace,
Who feels for his country a sacred devotion,
And ever will cherish her cause on the wave.

From kindred and home, and the bright smile of beauty,
He wanders through many a varying scene;
But valiant in war and unfaltering in duty,
He's honored and known as the Gallant Marine.

When purple-hued Phoebus hath sunk o'er the billow,
And the stars are all muffled in heaven's domain,
A brave'slast drop of his hammock and pillow,
'Tis he that must law and good order maintain;
His vigilant eye must the peril discover.
His voice must proclaim when the foeman is seen;
And the weary may rest, when their labours are over.
Secure in the guard of the gallant Marine.

To war! be the theme, let the trumpet be sounded,
Far, far speeds the ship on her watery way,
The cheers of the brave and the shrieks of the wounded.
Denote that the foe are in dreadful array.
The cannon's loud roar in the tumult is swelling,
The flag of Columbia triumphant is seen—
When lo! the sulphurous vapours dispelling,
Discover the form of the Gallant Marine.

And then when the olive and laurel entwining,
Bring honour and peace to the warrior's home,
'Tis sooth, as he feels that his years are declining,
To settle in quiet no longer to roam;
But long be his actions remembered in story,
His virtues be kept in our memories green;
Let pensive tell of his worth and his glory,
And hallow the name of the Gallant Marine.
WASHINGTON CITY; THURSDAY, MARCH 10, 1886.

To Correspondents.—"Blakely" and "Justitia," shall appear next week.

We decline publishing the communication of "Subaltern," in reply to our remarks of the 4th ult. It is useless to prolong a discussion, which it is plainly to be perceived would end in convincing neither party of his having been in the wrong. We have not the slightest disposition to recriminate, but could not permit the insinuations of "Subaltern," to go forth without accompanying them with stronger language than we wish to apply. We have acted solely on the defensive, and intend to preserve that attitude.

If "Subaltern," or any other correspondent, has anything to say in relation to the pay of the army, our columns are open to him; but we can find more useful and interesting matter with which to fill them than such as "Subaltern," and "O P Q," last favored us with.

Latest from Fort King.—We are informed that despatches were received yesterday at the Adjutant General's office, from Gen. Gaines, mentioning his arrival at Fort King with the troops under his command. They passed over the ground where the lamented Major Dale and his companions were slaughtered, counted and buried the dead; the number found on the field confirms the previous accounts that the three who made their way, wounded, to Fort Brooke, were all who escaped. Nearly all the bodies were scalped.

Thus vanishes the remaining spark of hope, if any were left, that some few might have been taken prisoners, or eluded the savage butchery.

The U. S. frigate Columbia was launched yesterday, about 12 o'clock, from the navy yard in this city, in beautiful style; she is pierced for 64 guns.

We have heard it mentioned that the Columbia will soon be fitted for sea, as the flag ship on the Brazilian station. We know not, however, what are the intentions of the Department in this respect.

Naval Magazine—No. 1, Vol. 1—New York: We have received the first number of this work, published by the United States Naval Lyceum, and which would have appeared much sooner, but for the great calamity which occurred in Dec. and involved the publication office, in the course of its ravages.

The contents of this number justify the opinion which we have before expressed, (and which in fact never could have been doubted) that the officers of our Navy possess the most abundant means and ability to render such a work valuable; and we shall rejoice if the success of the Magazine should prove that they have found an acceptable medium through which to favor the public with the results of their labors and observations.

Although it was not our good fortune to secure that extent of cooperation, which we aimed at, and which was needed to sustain a similar work, we are not so selfish as to envy others their better success. We have barely room and time, at present, to acknowledge the receipt of the Magazine, and must postpone a more particular notice for a week or two.

American Monthly Magazine—New York, G. Dearborn—Boston, E. R. Broaders. We have had for several days in our possession the numbers of this work for January and February, waiting for that rare occurrence in an editor's life—a leisure moment, to examine them. We have now the March number, issued with commendable promptitude, and in its usual style of mechanical excellence.

The American Monthly sustains a high character for its literary contents, and judging from the glance at the table of contents of the numbers before us and the rapid perusal of one or two articles, it is well deserved.

There are many officers in our services who are good belles lettres scholars and advocates of polite literature. To them and to all others, the American Monthly may be safely commended for its intrinsic excellence.

The British brig of war Wanderer, Captain Dilbo, arrived at Annapolis on Thursday last, having on board Mr. Fox, the newly-appointed British Minister at Washington. The wanderer left at Rio the U. S. ship Ontario.

Major Gen. Scott and Staff left Savannah on the 26th ult. in the steam boat Etuwan, and arrived at Picola on the 22d.

Major Gates and his command left Savannah on the 27th ult. in a steam boat for Florida.

Major J. B. Brant, Quarter-Master U. S. A. at St. Louis, Mo., has given notice that he will receive proposals, until the 23d Feb. for the service of two light draught steamboats, to be employed in the transportation of the U. S. troops from Jefferson Barracks to Natchitoches, on Red River, La. The commissioned officers are to be furnished with the usual cabin accommodations. Total number of passengers of all grades from 477 to 507—with baggage, subsistence, &c., &c.—Each steamboat is to be accompanied with a good keel boat or barge; and they are to be in readiness to depart on the 23d February.

Arrivals in Washington.

March 2—Lieu. E. S. Sibley, 1st Arty., Mr. Larned's.
3—Capt. P. St. G. Cooke, Dragoons, Mrs. McPherson's.
7—Lieu. G. W. Mapes, Gen. Grant's.

Communications.

New Infantry Tactics. No. VI.

The Report on the new French Tactics thus proceeds:

"TITLE V.—EVOLUTIONS OF THE LINE.
"PART SECOND.
"ART. 3. To play the line into close column, or mass.
"The ployments are here presented in the same order as in the School of the Battalion. We have preserved the principles of the Ordinance, but have made certain changes in the means of execution.
"The subordinate battalions, instead of plying themselves while marching, as the Ordinance prescribes, and taking half steps until all the divisions are abreast with the directing one, each executes its formation from a halt, and it is only when a battalion has formed the close column that it puts itself in march to take its place in the general column. This manner, which requires no more time than that of the Ordinance, is more regular and much the most safe.
ART. 5. To close the column to half distance or in mass.

This movement, as in the School of the Battalion, is executed on the head or on the rear of the column, and yet more advantageously on an interior battalion, which different manners give the facility of placing the column in a single movement, on the ground to be occupied in line.

ART. 8. To change direction in column closed in mass, marching.

The means given for changing the direction of a column of one battalion, closed in mass, while marching, cannot be employed when such column consists of several battalions. In this case we cause the movement to be executed as follows:

If the head of the column has arrived at the point where it is to change direction, we cause to be taken, by the head of the column, the distance of forty paces between the batteries, and then each executes its movement as if it were alone. The first battalion, after having wheeled, prolongs itself on the new direction until it has reached a distance sufficient to contain the general column in mass; it then halts; the other battalions close on the first, and when the last has closed, the column resumes the march.

If the point of change be not in the direction followed by the column, and is yet at some distance, the change is executed as follows: the leading guide, instead of marching directly upon the point of change, executes successive slight changes of direction which bring him nearer and nearer to that point, so that, when he reaches it, his division, which conforms itself to his movement, is found in a direction perpendicular, exactly so, that the column ought to follow, and this without obliterating the division to lengthen, except slightly, the step. Each following guide marching exactly in the trace of the preceding one, and the divisions, conforming themselves to the movements of their guides, the change of direction is successively effected.

This change of direction [see plate 40] much prompter than the preceding one, which itself is more so than that of the Ordinance, is also the easier; it gives the means of marching a closed column, whatever its depth, in any direction, without retarding its advance; and to execute it, it is only necessary to choose well the intermediate points for the direction of the leading guide, and to ascertain the divisions to conform themselves by degrees to the movements of their guides. We have the conviction, founded on numerous experiments, that when officers and sergeants shall be made to comprehend fully the mechanism of this movement, which is, in effect, the march in column [see No. 994] it will be executed with much facility as the simplest movements of the Ordinance.

PART FOURTH.

ART. 6. Columns closed in mass; deployments.

We have followed, under this head, the general principles of the Ordinance. We first deploy the column by battalion in mass, unless the state of depth renders this intermediate movement unnecessary. Deployments by mass are made according to the principles prescribed by the School of the Battalion for ordinary deployments, except that the battalions placed in the rear of the directing one, instead of halting when they are unmasked, face to the left or right, in marching, in order to bring themselves on the line of battle.

The Ordinance fixes at six paces the interval between battalions deployed in mass. We have extended this interval to twenty-two [American] paces, as between battalions deployed into line. This new disposition is followed by all the commands of the column, in masses, to move in all directions, and facilitates the deployment of the masses, because an interval of twenty-two paces is sufficiently great not to be filled up by the almost inevitable elongation of divisions marching by the flank.

The Ordinance does not permit the establishing of the line of battle on any other than the leading battalion. Yet, when the column is deep, it is sometimes desirable to establish the line on an interior battalion. The Commission has provided for this case, although not a frequent one, and it has prescribed for it the following rules:

—the portion of the column, in front of the line of battle, faces by the rear rank [rear rank leading] and deploys in the following order as if it were faced by the front rank: the battalions, as they successively arrive, cross the line of battle, and when past it, each halts, and faces by the front rank.

Note. In the third volume of the New American Tactics, in an evolution under this head—paragraph No. 2071, it is said of the battalions, in front of the sixth, will pass to the left. This is evidently a type error. The single word except ought to be in the place of in front of, as in the copies printed for the House of Representatives.

Deployments faced to the left and to the right.

The means indicated in the Ordinance for the execution of these formations, which consist in causing the whole column to change direction by the flank, and then deploying it, have the advantage of being applicable to all cases; but they are, at the same time, of a most inconvenient length. Those which the Commission substitute are safer, and require much less time. They are as follows: the masses of each column on the division distance and faces of paces [see No. 2101] and then each changes direction by the flank. This movement ended, the column stands deployed, by battalion in mass, faced to the left or right, with intervals of twenty-two paces between the masses.

If the column, having the right in front, is to be deployed faced to the left, it changes direction by the right flank; if it is to be faced to the right, it changes direction by the left flank; but, in this second case, the battalions will find themselves in the inverted order. This is an inconvenience; but it is so much the less, as the masses may be deployed, each in the direct order.

Movements which may be executed by a line of battalions.

This part of the Ordinance is incomplete. It is confined to prescribing rules for marching the line in advance. The Commission has filled up this chasm, and given the means of marching a line of battalions, in masses, in every direction.

To advance in line.

This movement, as in the Ordinance, we subject to the rules of march in line of battle deployed; but we have changed several of the means of execution.

We have thought that, although a line of battalions, in masses, has but rarely great distances to pass over, yet it was necessary that all the battalions should be directly subordinate to the march of the directing battalion. Accordingly, instead of causing those battalions, as indicated in the Ordinance, to march as if each were isolated, we have, in this respect, prescribed the following rules:

The directing battalion, being designated, its right or left general guide (according as the right or left may be in front) is charged with giving the direction; to this end, he throws himself six paces in front of the guides, is correctly assured on the perpendicular, and conforms himself, in marching, to what is prescribed for the colour-bearer of a deployed battalion. The subordinate battalions regulate themselves on the directing one, both in respect to the fullness of marching, the interval of intervals, and they take the guide on the side of direction, instead of in the centre, as the Ordinance prescribes.

The line marching in advance, to cause it to change a direction.

The battalion on which the movement is made, executes it by a wheel in mass to the right or left. In this movement, the guide, following the leading guide, successively and insensibly, advances the shoulder opposite to the direction, so as to cause his battalion to arrive on the line perpendicularly.

To change direction of the line marching in retreat.

This movement is executed according to the same principles as in the march in advance, with this single difference—the battalions face by the rear rank, because
it would not be as easy to direct them if their leading divisions were masked by file closers.

"To break the line, formed by battalion in mass, and to re-form the column in line."

"To break the line, we cause each battalion to change direction by the left or right flank, according as it may be intended to march to the line to the right or left; and, to re-form the column in line, we cause each battalion to change direction to the left or right.

"The column, formed by battalion in mass, takes, when in march, the guide on the side to which it ought to form line of battle—that is, on the right, if the right be in front, and on the left, if the left be in front; the lieutenant colonel of each battalion looks to, pinding the march, to preserve the distance between the column and that which precedes it, and when the column has to change direction, each battalion executes this movement by a wheel in mass.

"A column, thus formed, has, as is seen, all the mobility of an ordinary column at half distance, and in thus breaking the line, we may march it in any direction that may be desired—more easily and safely than by marching it by the flank.

"To play the line of masses into general column, closed in mass."

"This movement is introduced as the complement of the movements which may be executed by a line of battalions in mass. It cannot be executed according to the principles of movements, because the distance between battalions being equal to their depth, they cannot march diagonally towards the points of entrance into the general column; they are consequently obliged to march perpendicularly to the front or rear, till up with those points of entrance, and then to take their places in column, by facing to the right or left, in marching.

"The rules given in the School of the Battalion for formations in the inverse order, not being applicable to battalions which are inverted in respect to each other, whilst the subdivisions of each are in the direct order, and the case being liable to occur often, the Commission has deemed it a duty to indicate the manner of breaking and playing a line thus formed, so as to replace the battalions in the direct order in respect to each other. In the first case (breaking) each battalion breaks to the right to march to the left, or the reverse; and when broken, all the battalions are put into march by the same command; in this way, the column finds itself formed in the direct order and as such, the subdivision of each battalion arrives on the new direction. In the second case (playing) the directing battalion plays itself on an interior division, right or left in front; each of the other battalions plays itself on the subdivision the nearest to the directing battalion in the same order as the latter, and then marches to take its place in the column.

"PART FIFTH.

"ART. 7. March in line of battle of a line of battalions in columns, with deploying intervals."

"The march in line of battle of many battalions deployed, is attended with great difficulties, particularly among obstacles, and through taken grounds. The battalions, encountering obstacles, cannot preserve their alignment, nor regularity of advance; they are necessarily delayed if the obstacles frequently present themselves, and in consequence of such delays, the line may be forced to halt. These inconveniences may be avoided, by deploying, before commencing the movement, causing each battalion to play itself into column, and prescribing that it shall, pending the march, preserve, on the side of the directing battalion, the interval necessary for deploying. Battalions, formed into columns, turn obstacles with ease, and then may readily bring themselves again on the direct course, by accepting the pace. If in returning, they find that they have lost their intervals, these may as easily be regained by causing the leading guide, of each, to advance insensibly the proper shoulder. Each are the advantages which have induced the Commission to adopt this order of march, and which has long been in use in the army. The numerous trials which have been made of it, leave no doubt as to its advantages, nor on the practicability of preserving intervals with exactness, independent of the better experience of war.

"To take this order, the battalions may be formed into columns in either of the several manners, but the double column, by battalion, appears to be entitled to the preference: 1. It is more promptly formed and deployed than any other; 2. It can commence firing in the act of deploying; 3. It is prepared to form square; 4. It can, like the simple column, form line of battle faced to the right or left."

"A line of battalions formed into columns, as above, marches in advance or retreat according to the rules prescribed for a line of battalions in masses, except that the direction is traced in front of each battalion.

"This line also changes direction advancing and retreating according to the same principles; but as the battalions are sooner by intervals much wider, marched officers, as in the formations forward and faced to the rear, throw themselves on the new line to mark the points of arrival for the subordinate battalions.

"ARTS. 4 and 7 of the Ordinance of 1791 [and the old American books.] To fire advancing and retreating.

"The Commission has suppressed the fires advancing and retreating, because they can be of no use in war: The odd and even battalions fire at intervals too great, from each other, for effect. If advancing, as the line marches in common time, the enemy, who retreats in retreat, will soon be beyond the reach of fire. If, on the contrary, we march in retreat, our fire will not arrest him, and in this case, it will be preferable, instead of retreating in common time, to gain promptly a position whence he may be successfully resisted.

"By covering the line with skirmishers we obtain a more effective method of that of the ordonnance, and, under such cover, the line may advance or retreat in the order, and at the rate of march, which may be judged the best.

"ART. 8. Passage of defiles in front."

"When the defile is in front of a battalion, the Ordinance prescribes that it shall be passed by the column of this battalion. This disposition establishes two orders in the column, and leaves the commander no mode of deploying the masses but on the leading subdivision. To avoid this double inconvenience, the Commission causes the defile to be passed in every case, by a wing of each battalion. If the two battalions are not the closest to the defile. In this way, the column finds itself formed of two simple columns, which may be deployed on any subordonation desired, and which may even act separately on issuing from the defile.

"When the column passes the defile, the Ordinance prescribes that it shall in its whole depth, close in mass, before deploying. In our project, each battalion, if it successively passes, moves up to the line of battle and closes in mass as it arrives. By this means, the column deploys itself by battalion, in mass, with the greatest promptitude, and the masses may then be deployed as soon as the battalion, on which the movements ought to be made, is established on the line and has closed. If in this case, there be yet battalions in the defile, they break off, in coming out, by a wheel to the right or left, prolong themselves behind the line, and form upon it, on the left and on the right in line of battle in connexion with the battalions already deployed. In this way, the line is re-formed in front of the defile at any subdivision found the most convenient, and with the utmost promptitude, because the movement of the column has not been arrested for a single instant.

"The Ordinance prescribes that the defile shall be passed in double column, even if it be not wide enough to contain the two platoons united. In such case, it provides for a diminution of front by breaking off files. The Commission has thought that, however advantageous the double column in passing defiles, it is preferable, in the supposition made, to pass in simple column, by the right or left; because, by employing the
means indicated in the Ordinance for diminishing front; the movement becomes too much complicated—whenece confusion and disorder might result, and under the most critical circumstances.

"Art. 9. To pass a defile in retreat."

The example given in the Ordinance supposes that the line, after passing the defile, ought to be re-formed to the rear in a position absolutely like that which it had occupied in front. As a contrary formation may often be necessary, we have given rules for re-forming the line of the defile, so as to place its right, for example, a battalion more than the right had in front of the defile.

This movement is executed without arresting the march of the two columns for an instant. The left column halts and forms itself to the left into line of battle as soon as its leading subdivision is at company-distance from the point of rest for the left. The battalion of the left column, which has to form to the right of the defile, instead of following the movement of this column, marches straight forward, closes in mass as it halts, counter-marches, and deploys. The right column, which has continued to march, halts when its last subdivision has passed (by the front of a column) the point where the left of its last battalion is to rest in line; this column then counter-marches, and is formed into line on the alignment of the other battalions.

"Art. 10. Changes of front."

The means indicated in the Ordinance for causing a single line of many battalions to change front, are simple and prompt, but not sufficiently safe; for, although the subordinate battalions are in echelons, their formation is but poorly calculated to resist cavalry, if charged pending the march, and their position does not permit them to form promptly into full line, should that be necessary (to meet infantry) before the end of the movement.

The manoeuvre, substituted by the Commission, is thus executed; the directing battalion, as soon as it has reached the order of the general-in-chief, changes in the manner given, School of the Battalion. The subordinate battalions ploy themselves into double columns at company-distance, march diagonally towards the new line of battle, close in mass, on arriving, and deploy themselves. If the change of front be to the rear, the battalions are deployed at the front rank, face by the rear rank, march to the line of battle, cross it, and when at the depth of a battalion in mass and three paces beyond, they are closed in mass, faced by the front rank and deployed.

This movement, equally prompt with that of the Ordinance, is, as is seen, much the safer: the battalions, ployed into double columns, finding themselves naturally in echelons, whilst marching towards the new line, may readily form squares; and if obliged to form themselves into full line, before the end of the general movement, it is easy for them to take the necessary deploying intervals.

"Changes of front of two lines."

In changing the front of two lines, the first always executing its movement as if alone, what is about to be said is only applicable to the second.

The sole advantage presented by the manner of changing front in the Ordinance, consists in the simplicity of the means of execution; but as that manner is entirely founded on the inadmissible supposition that the distance between the two lines ought always to be equal to the front of a battalion and twenty-two [American] paces; and as that distance, already too small, is rendered still less in the oblique changes of front—the Commission, without dwelling on other inferences, has remoulded the manoeuvres on new bases which permit its application to any case that may present itself in war. In that view, the following principles are laid down:—

1st. When two lines are placed, one behind the other, the position of the second is always subordinate to that of the first; thus, when the first line executes a change of front, the second ought to take such new position in the rear as may correspond with the views of the general in chief.

"2d. The distance between the two lines cannot be absolutely determined; but it ought to be sufficient to prevent the second from being incommode by the fire of musketry."

"3d. The direction of the second line may be either parallel to that of the first; and that line may be so disposed as to make its battalions correspond with those of the first; and again, it may outflank the first line, at either wing, by any number of companies or battalions deemed necessary."

The manoeuvre which we have substituted for that of the Ordinance, and which exactly complies with the conditions given above, is not only the union of two movements. The portion of the line on the side of the movement, breaks by company to the left or right, and formed into one column, it marches towards the new line of battle, prolongs itself on that line, and forms upon it to the right or left. In the other portion of the line, it forms a double column at company-distance; marches towards the new position by the means indicated for the change of front of a single line, and is then deployed in connexion with the battalions which broke by company.

It is certainly to be desired, with a view to greater simplicity, that all the battalions of the second line should be made to change front by the same means; but as the movements to be executed by the two portions of this line are determined with precision by the position of the lines, in respect to each other, no error can be committed; besides, the advantages to be derived from this manoeuvre, as have been shown, more than compensate this slight inconvenience."

HINDMAN.

THE NAVY.

In giving the result of the following calculations, we must premise, and that with great deference to the opinions of others, that we believe the subject of a navy has been but little examined into (since we have pretended to have, each by those who feel the greatest interest in it). We have reposed ourselves on the brilliancy of our actions and laurels won some twenty years since, contenting ourselves with thinking that the country was possessed of an efficient navy.

We are not one of those who believe the navy has deteriorated, but that the contrary that much has been accomplished in overcoming difficulties, and preparing the way for what must come sooner or later—we mean a well regulated naval establishment. It is needless to say we have none now; the truth has become of late too evident to question it; the fault lies in no particular branch of the service, but beyond the reach of its officers. It is not necessary to enquire where, when, or how it has originated; we are satisfied that it exists, and we are content to believe that every man has done his duty. Thus it has become evident that our navy is not what it should be, but wants reorganization, and the sooner it is had, the better.

On this subject, we now intend to offer some remarks supported by calculations on facts well established within the reach of all those who are disposed to examine into them, and in process, show what our naval establishment ought to be in both peace and war.

Our tonnage is 1,500,000 tons, our number of seamen 120,000, and our capital employed in commerce, nearly 250,000,000 of dollars. On these we may safely rely as the foundation of our calculations for the necessity of a navy, and the extent to which our naval power ought to be carried. Conviction has settled in the minds of many in the bosoms of officers and gentlemen, that one fourth of the number of our seamen, who are engaged upon our war establishment; whilst one-twelfth of them, (viz: 10,000.) will man a sufficient force for our peace establishment—affording ample protec-
Youngest age
serves Midshipman
must remain a Passed Midshipman
must remain a Lieutenant
Making him 60 years
old when he is promoted and entitled to the command
of a slop of war!!! Here are indeed prospects for our
officers, and every year must make them worse. What
efficiency may be expected from your ships and seamen
under officers grown gray in the service.

It is needless to say that nine out of ten are totally
unfit, at that time of life, for any thing like active ser-
vice at sea, and it is too costly a provision to the
Government to have them. This is an evil that will in
time destroy the active energies of our Navy, and in the
course of a few years the personnel of the Navy will be gray-headed, from the high-
est to the lowest.

It may be asked, how do other great naval powers
prevent this state of things? The answer is obvious
and clear: the King, or Executive Head, has a certain
number of promotions within his gift, by which young
officers are brought forward, some from merit, and some
from influence, and advanced to commands; whilst the
older officers are suffered to retire on half pay. This is
the remedy, which is long since left us, neither can we
achieve it. But there is another and, if now adopted, fully as
effective a plan, which is by graduating the service on
the basis of its known decrease (which has been ascer-
tained to be between 4 and 5 per cent., during the last
20 years.)

What signifies our having, building, and launching
ships, if our officers, who are to command them, are al-
together worn out when they are entitled to such com-
mands? The first object that merits our attention con-
ceives, is to re-organize our navy to ensure the most ef-
cient service to the country in all time to come; and
the only way to do it effectively, is to keep 25% of
energy predominant in the navy, by ensuring that our
officers shall arrive, in the ordinary course of events, at
the command of our ships, at the proper ages when they
will be most efficient.

The personnel of our navy with its power of extension
to the full war establishment, and the materials on
hand for such increase of ships, our docks and Navy
Yards well established, we can be prepared to meet any
emergency that may arise.

There are none we believe who do not think the Unit-
ed States is destined to become a great naval power, and
all are prepared to say that it shall be sufficient in time of
war for our commercial greatness, and capable of being extended to the war establishment
on an emergency. This is the rule laid down, and been
adopted for the army, why not for the navy?

The enquiry then naturally comes, what numbers and
grades of officers will it require for our peace establish-
ment of 10,000 seamen? and ensure at once effective
commands under a war establishment of 30,000 seamen.
This can be well ascertained we think, and before giv-
ing the results of our calculations, based on the forego-
ing decrease, we will offer a few previous remarks rela-
tive to the grades.

With a navy we must have fleets. This is evident, this has been the intent of this
country to have fleets, for what other reason did Cong-
gress authorize the building of line of battle ships, or
74's, but in order to form fleets to oppose an enemy.

Thus naturally results fleet officers, and having creat-
ed the necessity for them, we must have them, else we
ought to give up the idea of a navy. A fleet involves
these separate commands, viz: the command of the
whole, the command of a division, and the command of
a single ship. If there is a necessity for these commands,
there is a necessity of their being distinguished in name;
it is of little importance what it is, provided it is suf-
ciently designative; it does, however, seem to us some-
times ridiculous in these enlightened times, that we
should refuse that of Admiral to the Navy, as savouring
too much of aristocracy, and still adhere to that of Gen-
eral in the Army.
Thus we arrive at the necessity of Admirals for the command of our fleets, Commodores for the command of divisions, and Captains for the command of our single ships; further it is perceived we have vessels of different sizes, and therefore we have two grades of commands, Captains for large, Commanders for small.

The following references are to the number of grades; this is determined by the peace and war establishments, rather more in the upper grades than our peace establishment to afford sufficient experience in commands in case of an increase of our force, and to make allowance for casualties, sickness, reliefs, extra duties, &c. &c.

The following table will be sufficient to give us every efficiency we could desire as a naval power, and at the same time put the navy on that footing in which the vacancies caused by the annual decrease (before referred to) would ensure sufficient prospects to our officers, of advancement, viz.:

<table>
<thead>
<tr>
<th>Ranks</th>
<th>Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>10 Admirals</td>
<td></td>
</tr>
<tr>
<td>10 Commodores</td>
<td></td>
</tr>
<tr>
<td>80 Captains</td>
<td></td>
</tr>
<tr>
<td>100 Commanders</td>
<td></td>
</tr>
<tr>
<td>300 Lieutenants</td>
<td></td>
</tr>
<tr>
<td>70 Masters</td>
<td></td>
</tr>
<tr>
<td>400 Midshipmen</td>
<td></td>
</tr>
</tbody>
</table>

Now for the service of these. We have six stations viz. Mediterranean, Brazil and coast of Africa, Pacific, East Indies, West Indies, and Home Station. Upon five of these we want Admirals; then half the number will be allotted, the other half for reliefs and disabilities.

Commodores we should want six, one in command of the East India station—thus we have six employed about out of ten, and four for reliefs, &c. &c.

Captains we should want eighty for the command of our 74's, frigates, navy yards, steam vessels, ordnance duties, court martials, examinations, and other extra duties; of these there would be employed from forty to fifty, the remainder for reliefs, casualties, and with a sufficiency for increasing our navy one half more allotted under experienced officers on an emergency.

Commanders, or those on whom the command of our smaller vessels would devolve, we should want one hundred. Sixty-four of whom would be in constant employment, the remainder one-third for reliefs, casualties, &c. Thus we have 200 officers above the grade of Lieutenant and on which we found the basis of promotion through the annual decrease. The number of Lieutenants it is proposed to limit to the actual number required for our peace establishment (before mentioned) viz. 300, all in constant employment, and without making any claim for relief, sickness, &c.

The grade of Master to be made a regular grade in the line of promotion, and to be limited to the actual number required for the service, and all in constant employment, the number that would be required would be 200. It is believed that much advantage would be derived from making this change. A midshipman, on passing his examination, to receive instead of a passed midshipman's warrant, one as master, and to perform only the duties now performed by the grade of sailing master, consequently there will be no passed midshipmen.

The number of midshipmen it is proposed to limit to 400; this is nearly 200 less than the foregoing peace establishment would require under the present system, and ensure constant employment to them; these numbers would likewise preserve the rates of junior officers to the superior ones.

Of the effects of the above organization on the navy let us give an example which may be contrasted with the former one under its present organization, viz.:

We take the same case of a youth entering as midshipman on the 1st January, 1856, at the youngest age, 14
14 years of age when he arrives at the command of a sloop of war, and which, contrasted with the former, gives a difference in favour of the country and officers of twenty three years and that the most useful part of his life to the country. Thus we should have a constant and sufficient supply of all officers of experience and of proper ages to command our vessels, neither to waste our numbers in an idle or allotment, nor leave of absence except in the higher grades and on whom the extra and incidental duties of the service, and the commands in case of an increase through emergency, would devolve. This reorganization would not only revive the drooping energies of our officers, but at the same time we should adopt one of the most economical and efficient naval establishments, keeping life and energy predominant in the navy for all time to come—which the present organization can never accomplish, but on the contrary continue yearly to increase the forlorn prospects of all those who are to enter, or are now engaged in, the naval service of the country.

STEAM PROW SHIP.

Mr. Editor:—I have observed in your paper of the 3rd inst. an attack upon Commodore Barron's Prow ship, by one who, it would appear, is but a member of the Old Ironsides—I say, if he will not shift his ground, but manfully endeavor to maintain it, I think that with no other claims for the efficacy of the Prow ship than those which he has awarded to it, it will be no difficult matter to show that all that is proposed will be accomplished.

Old Ironsides admits, but with no ordinary degree of reluctance, that the Prow ship may be propelled 34 knots per hour; and that each foot of her prow, when moving at that rate, will operate with a force equal to 300,000 pounds. Now, this admitted, and compared with the effect of a 24 pound shot, and the result stands thus:—If each foot of the prow operates as admitted, each space of it that equals the effect of a 24 pound shot that will operate with seven times its force, which by experiments, that can be incontrovertibly proved, will penetrate sound seasoned oak four feet six inches. This being the incontrovertible fact, I ask "Old Ironsides" what part of any ship, six feet above or below the line of flotation, is or can be so formed as to resist such a shock?

I cannot conceive that any man, who really possesses the knowledge that "Old Ironsides" pretends to, can be serious when he gives as an example, Fulton's first attempt at a steam battery. What was the state of steam vessels at that time, compared with their present perfection? Yet any thing by a comparison of a double, treble, or quadruple steam vessel, only let those who have been in the habit of looking at the double steam boats' movements answer, and all doubts on that point will vanish.

There is little, if any, force in the remarks of "Old Ironsides," with respect to the sheering of the large size ships, by which he has chosen to illustrate his objections to the Prow ship; and also to the immediate movement by veering out cable, &c. But let me ask him how he can justify the operations when it is slack water, or the tide ceases to run? How will he be able to stop and drop his big ship about then?

I defy "Old Ironsides" to produce one solitary instance of a steam vessel having ever exploded her boilers, or started any of those delicate joints, which he alone knows to be connected with those machines, by a sudden concussion. There is no record of such an occurrence; while the effects of steam vessels on the hulls of other craft are most abundant; and even the attack of whales on ships in two instances are conclusive proofs of the effect of the moving body upon the stationary one.

I cannot but see the object of this attack on the Prow ship. Some of the figures drawn by "Old Ironsides" do really exhibit in lively colors, fears and tremblings but ill becoming a character competent to judge of or act in such cases; he has endeavored to engender in the minds of others his own unwillingness to lead on a bold
enterprise, and winds up by the destruction of the Prow ship as inevitable. Suppose such should be the event, how will the account then stand? Why, the Prow ship may cost $100,000, and the ship-of-war, $600,000; so, even in that doleful case, the Prow ship concern would have the advantage five to one.

As to cusions, I should all mean advise that they be resorted to by the author of the attack, if he could ever be brought to engage in such an expedition; and then it will be a matter of no moment where he falls—he will be protected. But if this heavy massive structure of logs can all be separated by the power of steams, and blown into the air, and the weighty writer along with them, is it not evident that it should be easy for the power to drive this same mass 3½ miles per hour through so yielding an element as water.

The attack of "Old Ironsides" may have some operation on the minds of those who are not familiar with the subject; but no practical seaman will believe that one ship of any description can be run into another with any force equal to from 3½ to 10 knots, without doing great injury; and I am confident that "Old Ironsides" must have had but little experience in matters connected with incidents of a sea life.

What an idea must this writer have of an ancient Roman war galley, when he compares it to the "old war-of-war" lance. The gallies, with three tiers of oars, were probably several hundred tons burthen; a launch somewhere about five or six. But even they had sufficient weight (say this knowing writer) to saw down each other's sides by their prows, when they ran them over the gunwales of their adversaries; and, in contradiction of the account of the attack, one of these times, he asserts that this latter course was the mode of attack then practised.

Polybius distinctly states that the destruction occasioned by the ancient vessels coming in contact with each other, was produced by the velocity of the vessels propelled by their oars.

"In the following year, Attalus the Roman Consul, who had the anchor in the port of Tyndaris, having perceived the Carthaginian fleet passing very near him in a careless manner, and without any order, made haste immediately to pursue them with ten ships, and gave orders to the rest to follow as they were ready. But when the Carthaginians saw that one part of the enemy were already under sail, while others had scarcely yet got on board, and that the foremost ships had advanced far before the rest, they manned their oars with the force of their hands, and making a rush towards them from every side, sunk the other vessels, and had almost taken that in which the Consul sailed. But because his ship was lighter than the rest, and well supplied with a hand of the most skilful rowers, he made the most of those advantages he had to escape the enemy. But in a short time after the rest of the Roman squadron advanced in order, and having all turned their prows, in one line against the enemy, they engaged them with such vigor and success, that they took ship of their ships with all the men, about eight more, and forced the others to retreat in haste to the Liparean Islands."—Hampton's Polybius, p. 30.

In an account of a battle between the Carthaginians and the Romans in Hampton's Polybius, page 35, he says:—"Twenty-four of their [the Roman] ships were sunk in a sea, more than thirty of the Carthaginian fleet." "If the enemy advanced too far in the pursuit, they then turned suddenly to the rear, being the only ones making their attack with vigor and agility, now on the sides and sometimes on the stern, sunk many of the Roman vessels, which being unshaken by their bulk, and encumbered with unskilled rowers, performed all their motions heavily and without success."—Ibid., p. 61.

In an account of a battle between the Romans and Carthaginians, Polybius, page 72, says:—"The rowers, strong and dexterous, broke with ease the force of the winds and waves, and the vessels were soon ranged in a single line with the enemy on the canvas." He gives no particular account of the battle, but says, speaking of the Carthaginian fleet, page 73:—"fifty of the ships were sunk, and seventy taken by the Romans, with all the men."

As evidence, if any is wanted, of the great injury sustained by vessels coming in contact, I give two instances of recent occurrence.

From the Liverpool Courier, September 25.

A SHIP RUN DOWN BY A STEAMER.—On Sunday morning about 4 o'clock, the United Kingdom, from Jamaica, towed in her anchor off Portsmouth Sound, an Aberdeen steam-ship, of Northfleet, near Gravesend, under the following extraordinary circumstances. It appears that the vessel was riding at anchor, waiting to come into company with the near-by steamer of Scotland, which was bound for Scotland, was seen coming up at a rapid rate. The watch on deck of the ship immediately hailed the conductor of the steamer to keep their hands back, and repeated the words "heave a port," were repeated two or three times; but whether through misapprehension, or otherwise, were unheeded, and the person who was steering the steamer kept his helm on the board, and was run on the United Kingdom from the fore part to the starboard bow with such force, that her timbers were stove in, and the figure-head of the Q. of S. was carried away by the violence of the shock, which caused the steamer to rebound. The alarm was extremely dreadful, as it was expected they would both go down. The steamer, however, received very little damage beyond the loss of her figure head, and was able to pursue her voyage; but the United Kingdom immediately began to fill with water, and were being no other means likely to prove water to save the ship and the cargo, the crew slipped the cable, and ran her on the Essex shore. This was done with all possible expedition, but she turned over three times, and was entirely broken in three hours and a half, and on Wednesday morning nothing was visible above water but her masts, and it is feared she will prove a total wreck. She was laden with a valuable cargo of sugar, coffee and general merchandise, to the value of about $500,000. Fortunately no lives were lost, but one of the seamen, named Thomas Andrews, had a very narrow escape. He was in his hammock in the forecastle when the ship struck, and was unable to find his watch, but got through the hole in her side, then under water, and swam towards the steamer. He was saved by a shipmate, who cut the boat from her, and put off to his aid.

Extracts from the report of Captain Thomas A P. C. Jones' cruise to the Sandwich and other Islands in the South Seas, while in command of the U. S. Ship Peacock, in the years 1826-7.

"On the 22d. [March] between 3 and 4 P.M., a Sperm whale of large size, which had been playing under our lee bow for some time, as it were trying the speed of the ship, then going over eight knots by the wind, with a considerable head sea on, suddenly turned and ran directly towards the ship, which he struck, perhaps fortunately for us, with rather a glancing blow, and before he had gained much way through the water, across the forest. The shock was so great, as nearly to stop the ship's motion by a very strong current, and to cause her to drift, so that the whale to suppose the ship had struck a rock. The effect was, as far as could be ascertained at sea, the partial disjoining of the cut-water and false stern, the loss of some copper, &c., &c., and a leak of more than 12 inches per hour."—While the ship remained at sea, 40 days.

"The injury sustained by the whale was perhaps of a more serious nature, as he spouted much blood as he went down under our lee bow, a certain indication, when harpooned, of a mortal wound."

There is no occurrence of the kind in latter times more familiar to our ears, than the destruction of the ship Essex, of New Bedford, by a whale in the Pacific in the year 1819. The miseries endured by the records of her crew and ship are ably narrated in a pamphlet published shortly afterwards. I regret that I have not the pamphlet at hand; it ought to be inserted in your Chronicle, as we have no similar work of the kind, and in after times it will become invaluable as a record of reference.
MARRIAGE.

In Portsmouth, Va. on the 1st inst., Dr. GEORGE BLACKNALL, U. S. N., to MISS EMMA, eldest daughter of Col. GEORGE BLOW, of Sussex County, Va.

DEATH.

[COMMUNICATED.]

Departed this life, at the Suquehanna Agency, West of the Mississippi, on the 21st December, 1836, in the 50th year of his age, Captain GEORGE VASHON, Sub Agent to the Cherokee Nation. In his death, society has lost a most amiable and worthy member, and the United States a meritorious and valuable officer.

Captain Vashon was a native of the State of Virginia, and was a distinguished officer of the late war; he was retained, as a Captain in the 7th regiment of infantry, in the year 1815, and served as such with that regiment until the year 1819, when he became weary with the toils of a military life on a peace establishment, and resigned his commission. During his services in the army, his deportment was uniformly that of a high-minded and strictly honorable man; he performed his military duty in every respect with great zeal and ability, and at the same time was most beloved and esteemed by the officers and soldiers with whom he served.

Several years subsequent to the resignation of his military commission, he was appointed Agent to the Cherokees, residing on the Arkansas. The arduous and multifarious duties of which office, he continued to perform with great deliberation, zeal and ability, and in a manner highly satisfactory to the nation, until the year 1834, when by an act of Congress the office of agent to that tribe was abolished. He, however, soon after, was appointed a sub agent to the same nation, and continued in the performance of the duties incident to that office until the period of his death.

All admirers of modest merit and strict integrity, who knew the deceased, will deeply lament his loss; and those who had the pleasure to know him best, knew his worth. His remains were brought to Fort Gibson on the 5th instant, and on the day following were interred with military honors.

Jan. 16, 1836.

SHIP BISCUIT.

PROPOSALS, sealed and endorsed “Proposals for furnish Ship Biscuit,” will be received at this office until three o’clock, P. M., of the tenth day of March next, for furnishing and delivering at the navy yard, Gosport, Virginia, within sixty days after receipt of order by quantity of ship biscuit, of the best fine flour of the manufacture of the year 1836 or the year 1837, that may be required during the year 1836 at that navy yard, for the use of the Navy. The said ship biscuit must be equally equal to the quality, and must correspond in size, to the sample new lodged in the said navy yard by the Commissioners of the Navy, and be subject to such inspection as they may direct—must be in all respects satisfactory to them or the Commandant of the said navy yard, and must be packed and delivered in good substantial and bright flour barrels, with double lining hoops at each head, for which no charge must be made, and in good shipping order, free of all cost to the United States.

On application to the Commandant of the navy yard at Gosport, Virginia, or at this office, printed forms of offers to furnish the ship biscuit, and samples of the biscuit, will be furnished. Should any offers not be used, the bidder will be considered bound by the stipulations and conditions of the printed forms, conformably to which the contract and bond will be drawn up.

Feb. 26—7.

JOB PRINTING

Executed with neatness and dispatch, at this Office.
Coercive measures, therefore, were adopted by Lord Rawdon and Col. Balfour, which proved particularly calamitous to Col. Hayne. The country about his plantation was in the possession of the British troops, and the small pox, which had been prevalent in the south of South Carolina, had entered his own dwelling. At the unhappy moment when his wife and two of his children were in the last stage of this loathsome disease, Col. Hayne was summoned to bear arms as a royal subject, or repair to Charleston as a prisoner. Enraged by the ties of connection to his love and family, and by the feeling that his situation seemed impossible; he appealed to the invidious privileges without avail. These entreaties, however, led to a debate, in which Col. Bellingall promised Hayne that on going to Charleston he should be speedily released. With these assurances he went to Charleston; on his arrival he made his request, which Gen. Patterson promptly refused, unless he would swear allegiance to the British King. Thus seduced, he was obliged to abandon the dying bed of his wife and children, or join against his country's cause. The forlorn condition of his family, without a protector or friend to aid him, seemed inappopitable. He took the oath, but not with all its requirements. He consented to assume the title of Hayne, which required him to support the King with his arms; these objections were admitted by the British commander, and Hayne again returned. Soon after the affairs of the South became more favorable. Gen. Greene once more unfurled the banner of his country, and rallied round him the soldiers of the southern colonies. In this advance; the British troops were defeated and compelled to retire before the American army. The British being driven from the vicinity of his plantation, Col. Hayne was again surrounded by his friends. They entreated him to rejoin their army, but he refused; Col. Hamilton, a companion of his youth, solicited him to engage in the war, to furnish provisions, but he declined, considering himself bound to the fulfillment of his promises of neutrality, as long as the British officers kept their inviolate. But a few days intervened before these engagements on the part of the British were broken. Col. Hayne was ordered to repair to the rendezvous of the Royal army, and take up arms for the reduction of the Americans. This violation of the compact, by Lord Rawdon, gave Col. Hayne an equitable right of resuming arms in favor of his country. His heart was with his brethren, and he instantly repaired to the rendezvous of the Royal army, and having thus openly violated his promise, Col. Hayne entered into a treaty of the duties of a soldier. Having received the commission of Colonel, he engaged in actual service, which unfortunately terminated in his being captured. He was put in close confinement, where he was confined for many weeks. When Lord Rawdon returned to Charleston, Col. Hayne was informed that on the following day a council of officers would assemble to give him trial. Soon after, counter measures were determined upon, and instead of a council of officers, a court of inquiry was instituted. Before this court Col. Hayne was brought; the members of the court were not sworn, or the witnesses examined, or the case submitted to investigation, no law was observed but the wills of Lord Rawdon and Col. Balfour. On the day after these proceedings had closed, Col. Hayne received notice, that in consequence of the decision of the Court of Inquiry, held the preceding day, "Lord Rawdon and Col. Balfour have been ordered to return to the ruins of their plantation on the 31st of July, 1781, for having been found under arms." A respite of forty-eight hours was granted him, to see his children. During that time a petition was sent to Lord Rawdon, for the release of Col. Hayne. The petition was returned, on the back written, in the hand of Lord Rawdon. "Major Andre." He was executed on the 4th of August, 1781. The fortitude with which
ARMY AND NAVY CHRONICLE.

he regulated his conduct through life, he exhibited in death. Though the veil of the dissembling royalist, and the influence of power in this transaction, screened Rawdon and Balfour from just and immediate retribution, the public will ever give the innocent its due reward, and hurl on triumphant guilt its indignant and merited reproach.

From the New York Star.

GENERAL DANIEL DELAVAN.

The race of revolutionary officers was a peculiar one—such as a country may possibly produce in time of oppression, tyranny, and misrule, when the spirit breaks through the shackles which confined it, and every hazard is encountered in preference to a life of submission or slavery. The patriots of our revolution were born to effect the objects of freedom—without rashness—no wild enthusiasm—no sudden and transitory feelings of patriotism—all was cool, collected and determined—firm of purpose—ever constant to the cause—fighting boldly for liberty, and calmly enjoying it when it was achieved.

Among the citizens of the state of New York, who took an early part in the revolutionary struggle, one who has lately been gathered to his fathers, was Gen. DANIEL DELAVAN.

He was a native of Westchester, a county which, in patriots and soldiers, yielded its full quota in support of the great contest for freedom, and was about eighteen years of age when the celebrated battle of Lexington was fought, which in every section of the country kindled a flame of patriotism. General Delavan was commissioned as a captain in the army, and continued to serve in a military capacity during the whole contest, and only sheathed his sword when the independence of the United States was acknowledged by the definitive treaty of 1783. His political principles and his early impressions were alike repugnant to the tyranny and misrule which prevailed in every direction; and he manfully opposed the minons of a foreign government, and denied their right to hold the country in a state of vassalage, and impoverish the people. He took up arms, therefore, with the ardor of youth, determined to live independent of foreign control, and to assist in emancipating his country from tyranny and oppression.

Fearless, prompt, active and powerful, all his energies were devoted to the cause to which he had devoted himself; and to a powerful athletic person, he added a clear, strong, cool head, and a resolution not easily shaken.

The situation of the country at that period, afforded very few facilities for the acquisition of knowledge—the schoolmaster was indeed "abroad," but in the Dutch settlements of New York and Westchester, the scholars soon acquired all that the teacher could impart—in fact the same facility in education was common to the whole country; and what Gen. Delavan failed to acquire in a classical education, he made up by his natural genius, and clear and sound intellect.

His quickness, intelligence and shrewdness, eminently qualified him for that sort of predatory warfare so remarkable on what was then termed, the "neutral ground;" and in after ages, in recounting his dangers and the successful ingenuity by which himself and his comrades were rescued in those spirit-stirring times, the natural traits of his fearless and ardent character were more generally appreciated. He was likewise a most trusted officer, strong in his attachments, and undisguised in his aversions; and the proud consciousness of his fidelity, during his temporary command of the posts at West Point, would occasionally break forth in contrast to the foul treason of Benedict Arnold. The northern part of Westchester was opened a hot bed for that species of partisan warfare which kept men continually on the alert against surprise. Sudden small military irruptions, and British plundering parties were constantly roaming where it was supposed they could ravage with impunity, which made every man in a measure a soldier and a sentinel. Vast numbers of the farms were deserted; the women, children and agricultural property were removed to a distance beyond the Highlands, and those who remained generally dwelt in the nooks and comparatively inaccessible spots along the Hudson. In the public mind, the distant population was regarded as the laborers and perilis. The agitated condition of the country often produced emergencies, which called into active service during the period of alarm all the able bodied citizens; and a circumstance happened in reference to General Delavan, which is too extraordinary, if not unparalleled, to be passed over as a most remarkable fact in the annals of this or any other country on earth.

The General on several occasions had eight brothers all engaged with him in active military duties at the same time; and thus nine members of the same household at once were engaged in the defence of their country. But although he commanded nearly eight hundred men enrolled with the army in constant service, he passed the dangerous crisis without any personal injury, except a wound in the left leg, which he received at the storming of Sandy Point. He was also present at the execution of Andre.

General Delavan was highly esteemed by General Washington; and as a token of his regard for him, Lafayette, prior to his departure for Europe after the revolutionary war, presented him with a sword, as a memorial both of the revolution and of his friendship.

General Delavan was a proof of the value of a good education, and a fine example of the events of life. He had the benefit of a sound education upon inexperienced youth of imposters, with an undisciplined mind and moral principles not thoroughly consolidated; and, for the 'peace of 1783, he found it difficult to cast off the turbulent habits of the garrison, and the restlessness of the military encampment, for the quietude of social life and the regularity of pacific employments. After a few years, however, he purchased a large tract of land around Sing Sing, and married a daughter of Judge Johnson, of Putnam county. His native and enterprising spirit soon was perceptible: and as he discovered that that spot included some of the best natural advantages on the Hudson river, for the taxation of trade, he gave himself up to the promotion of its interests; so that to him the present rapid growth of that village may chiefly be attributed. He procured the turnpike road from the northeastern part of the county to be made, which terminates at Sing Sing: The early and patriotic emotions of his youth were revived during his residence in Britain; and he volunteered his aid with that of all his working men, and united in erecting the barricade across Manhattan Island, which was designed to repel an assault by land upon the city of New York.

General Delavan had successively filled nearly all the civil offices which the counties have to bestow; and when he returned from the period when he had passed his best years, he lived mostly in retirement, gradually becoming more esteemed, and it is believed more thoroughly and seriously contemplative in reference to eternity. He departed from this life almost without any peculiar monitions of that approaching crisis in November last, in his 79th year, and during the time, where the mortal remains of his wife and his eldest son and daughter, awaited with him the resurrection of the dead. His funeral was attended by a large concourse of citizens of Sing Sing, nearly all of whom have become residents of that village, long after his hospitable mansion had been the constant resort of the principal citizens and public functionaries of the State of New York.

MILITARY STRENGTH OF NEW YORK.—By the report of the Adjutant General it appears that the number of the military forces of the state actually enrolled, is as follows:

| Cavalry and Horse Artillery | 8,467 |
| Foot Artillery | 11,666 |
| Infantry and Riflemen | 168,530 |

Total | 188,663 |
FOREIGN MISCELLANY.

FROM PAPERS RECEIVED AT THIS OFFICE.

From the London Nautical Magazine.

NAVAL ARSENAL OF VENICE.

The arsenal of Venice, probably the most ancient in Europe, was founded in 1104, about the time of the first crusade. It is situated at the eastern angle of the city, and covers an extent of about 50 acres, including an immense wharf rank between Burano and Torcello, of which is 100, the latter about 60 acres: it is in form nearly square, the northern point washed by the sea, or laguna, the other three sides enclosed by canals, thus rendering it insular. It contains two large and two small basins, covering an extent of thirty acres, in which may lie built any private or government ships. In these basins are placed the building slips, which at one time amounted to the extraordinary number of 55; all, excepting four, covered with standing roofs, under which the famous Venetian galleys were built. Many of these have since been converted into store-houses, &c., but upwards of twenty still remain, among others three for 80 gun, ships, on one of which was built the Rivoli (afterwards captured by the Victorious, in 1811). Two communications with the sea exist, one at the south-east of the yard. Here are no docks, a great defect, but every convenience for heaving down; all-foil, store-mast, and boat-houses, as requisite. The number of the small vessels is about 200. Green hemp chiefly used comes from near Ferrara, and is said to be superior to Russian. 1800 tons of it are annually exported to Great Britain. Here is a good park of artillery; the brass cannon are cast on the spot; those of iron come from Vienna. The model-room contains a collection of the models of the famous Bucentaur, upwards of 100 feet long, in which the Doge on Ascension-day embarked for the ceremony of expounding the Adriatic. The last of these magnificent galleys was burnt by the populace in 1797; a small piece of her mainmast is alone preserved. In the armoury is a singular mortar, made of rope, with bands of iron; a first attempt at artillery, and said to have been used against the Genoese in 1349. About 400 men are employed in the dock-yard. On the slips, are two transports and four gun-brigs, building; a 46 gun frigate hauled up for repair, and another in the basins besides a fine corvette ready for sea, and some small vessels are in repair. The arsenal, yet the stores, well arranged, have every thing ready for use; thanks to the exertions of Admiral Pauoci, the commander-in-chief, who is an active officer, and indefatigable in his attention to the dock-yard; nor would it be just if I did not notice the extreme civility I have met with from him, from his flag-lieutenant, Baron Accurti, and all the officers connected with the naval establishments here, and their readiness to give information in every thing relating to the profession. The navy consists of 23 vessels of war: 4 frigates, of 46 guns; 6 corvettes, of 20 guns; 5 brigs, and the rest of the craft, the whole amounting to 3000 man artillery, under the immediate command of Colonel Vitaliani, who has suggested several valuable improvements in locks, sights, &c., and about 1000 marines. Adjoining the dock-yard is the naval college, where 50 boys are instructed in every requisite branch of education; the course occupies five years, and the number of scholars is about 200, thus enabling them to add practice to theory. The superior professor, Emilio Tipaldo, is well known to the literary world in Italy; but the active superintendent is Sigur Bordigna, Capitano di Fregata, and under his management the whole appears orderly and well conducted. Tout plane, &c., among others the model of the world, are in the arsenals, and English, or German; a rule not unworthy ofimitation nearer home; as to no one is the knowledge of foreign languages of such practical use as to the sailor. I conversed with several who spoke English fluently. The expense to government is about 1600 florins, or 106l per annum each boy; to which the parents contribute about 45l; all who enter the navy are brought up here.

SCIENTIFIC EXPEDITION.—H. M. S. Sulphur, with her consort, the Starling cutter, Lieutenant Kellely, and his H. M. S. Ætna, attended by the Raven, Lieutenant Bedford, had just sailed, for the purpose of completing the surveys of the African and American coasts. The Sulphur, under the command of Captain Beechy, will proceed directly to the Pacific, where she will continue the surveys of the north coast of America, from the termination of Capt. Fitz Roy's operations, and will probably visit some of those interesting islands of the Pacific ocean that Beechy has so well described, and with the nature of which he is so well acquainted. The Spanish charts of the coast are so imperfect, and on so small a scale as to be next useless to a ship in long; and they give no correct size; and this becomes a matter of increasing importance every day, that we should be well acquainted with the hydrography of shores where British commerce is daily augmenting. We have heard of good harbors and anchorages, on that coast, by report, frequented by our ships, but of which places we are generally ignorant.

The Ætna, under the command of that enterprising officer, Capt. Vidal, whose name is already connected with Africa, will continue the survey of the coast of Africa from the Sherbro' river to Corisco bay, an extent, which includes the Gold Coast, Grain Coast, &c., and of course it is remarkable as the first time that the principal resort of our Liverpool ships in the African trade, should have remained to the present day unsurveyed, and next to unknown. A recent instance of this occurred in the circumstance of H. M. S. North Star striking on a rock off Cape Palmas. Bearings of the projecting points were taken for the position of the rock; but there were no navigators as far as their application to the chart was concerned, for the most experienced officers on the coast differed in their opinions as to which was Cape Palmas; and, if they had been agreed, the best chart was on so small a scale, as well as so incorrect, that it became useless, and yet this Coast is the very seat of the slave trade.

From the London Nautical Magazine of January.

STEAM TO AMERICA.—Amongst other projects that have been laid before the public within the last two months, is one to which we most heartily wish success. The great and powerful project to include the path of the British steam navigation company. It has long appeared strange to us, that while the small steam vessels of 400 to 500 tons have so successfully supplanted the Mediterranean packets, the importance of a line of steam-packets between Great Britain and America, should have been so long overlooked. The practical use of the passage by steam, and the advantage of the plan are clearly demonstrable. If a steam-vessel of 400 tons can make a passage of 1,000 nautical miles in 10 or 12 days, surely one of 1,200 tons will have no difficulty in performing one of 3,000 in a proportionate time. For ourselves, we have by no means' success, and most assuredly would be among the first to avail ourselves of the opportunity of thus expeditiously visiting our transatlantic friends.

THE NAVAL AND MILITARY FORCE OF EGYPT.

The Pacha's navy is said to be put up to a complete war footing. His ammunition and stores are daily increasing, and his crews are also rapidly improving. He has here six ships of 100 guns; two of 80; five of 60; two of 52; four of 24; two of 22; four of 20; three of 16; one of 14; and one of 10 guns. The Admiral, or Mirt-mirzaj, has under his command 40 officers of all ranks, besides auxiliaries. All the fortresses of this country are being put into the most formidable state of defence; and, from the revolts enlisted in the country, the army, by the spring, will amount to 35,000 effective men, with out including several garrisons. Among the Ordinances
DOMESTIC MISCELLANY.

From the Portland, Me., Jeffersonian.

Mr. King:—In some remarks which I lately presented through the medium of your valuable journal concerning the Military Academy at West Point, I ventured upon a short examination of the grounds of hostility against the Institution, which, from recent developments, its friends seem to have actually cherished in certain quarters as if every charge hereof made against the Academy had not been as promptly and successfully refuted. I endeavored to show that no public establishment for the education of youth could be trained upon principles more pure and equitable—more opposed to evil influences, to the principles of the democratic theory, or rather the theory of equal rights, equal opportunity, and equal encouragement, was fully and substantially carried out into practice. Seeing how frail and untenable was the ground upon which any serious charge against the Academy could be sustained, it becomes a matter of no little surprise to me that an opposition should still be cherished, by men too, who from their public position and experience in affairs, would not be supposed to have committed themselves on so important a subject without full cognizance of its proper merits, and naturally occupied, therefore, that the root of opposition must be still deeper;—that some reasons less apparent than those set forth, must somewhere exist to foster a spirit of hostility so important, against an institution, confessedly one of the most useful and admirable of our land. For why was it that no tangible danger had ever been induced in any form of hostility against its adversaries? Why was it, that year after year, the published reports of the Examining Committee, (a committee composed of citizens from every quarter of the Union, impartially disposed, or if prepossessed at all, rather as enemies than advocates,) why was it that their reports bore no influence for action?—no influence to act, but suffered to fall unheeded, like dead letters, to the ground? Could it have been because those reports bore no testimony of the Academy but that of praise and admiration? When, in a community like ours,—whose boast it is, that the channel of Reason and Intelligence is ever left free for the enlightenment of the public mind upon affairs of public interest, there appears to abide, even among a small minority, a pertinacious hostility to an institution which has grown up with the National prosperity and become fixed in the affections of the people,—it becomes the duty of every citizen zealous for the American commonwealth to utter the truth, with all the merits of the subject at issue, to let his testimony be heard;—to disabuse the public of prejudices if any are disseminated, and to detect those hidden springs of action whose tendency is as destructive as their character is dishonorable.

The Military Academy has found adversaries chiefly in the West. The opposition which gathered head in Ohio some few years since, is said to have originated nearly in the following manner.

During the early operations on that part of the Cumberland Road which passes through Ohio and Indiana, many contractors were given out for grading the road. Constructing the different sections of the work, many were taken by persons of leading political influence, and of some tact and zeal for its exercise. Now the contractors, who were rather more sedulous for their own interests than for the public benefit,—as was, assuredly, very many, by contractors,—found means of the contracts received in whole or in part and faithfully executed, even the frosts and floods of the ensuing winter showed to be slighted and imperfect. The road grew to be impassable for travellers almost before the accounts had been rendered of the payments which had been made for it. The unsalutary manner of the grading companies was порожден in the Cumberland Road, upon which millions had been expended, was destined to be a sort of by-word in Congress.—
subject of sneers and rebukes of one party, and melan-
choly disappointment of the other. The Government at length determined to place on the road, as superin-
tendents of the work,—officers of the Army,—graduates of
West Point—young men, with science enough to judge
of the quality of the soldiers, and experience enough to
receive and approve of none which came not up
with the strictest requisitions of the contract. Unused
to such uncompromising scrutiny of observation and
firmness of honest purpose, the contractors saw at once,
as end of their lucrative prospects and schemes of profit,
solemnly to discontinue the establishment so useful to
these young officers, whose inconvenient virtue and
marvellous susceptibility to political influence, pre-
sented such barriers to their success. The hue and cry
was accordingly raised against the Military Academy,
that "Nursery of a Military aristocracy," which sent
forth such stubborn and intractable fruits. The cry was
not entirely without its effect. A palpable blow was
to the popular prejudices, garnished with the usual trap-
pings of popular oratory, and a resolution was voted in
the Ohio Legislature, denouncing the Military Academy
as a nuisance that ought to be abated,—an establishment
which was unconstitutional and, what was more appall-
ing, unproductive.
A grave resolution, passed by the Legislature of a
sovereign State, is commonly received by the public as a
voice of solemn import and every way entitled to re-
spectful consideration. But there was so much of sophis-
tication in the reasoning, and so much of chicanery in the
manner of its presentation, that it seems to have met with
little favor from other quarters of the Union at the time,
and has now passed away unheeded, among the things lost
upon earth. A few discontented individuals still echo the last
wailing notes of querulosity and lamentation; but the Academy
will stand a perpetual and tangible refutation of all the calumnies
with which it has been assailed.
For those who have been most ready to believe the
imputation that in the distribution of cadet appoint-
ments, the rich have ever enjoyed any advantage over
the poor, there is one view of this subject which has not
always been sufficiently considered. It is the fact, that
through the instrumentality of the Military Academy,
more readily than by means of any other institution in
the country, native talent may be so developed,—so ele-
rated to its rightful sphere of exercise, that the obstacles
of an adverse fortune may be entirely overcome,—that
poverty and obscurity may be no bar to success and em-
ployment. Here the Imperial and the Republican
But because the poor man may thus be relieved of his
poverty—because the rustic may thus be made the gen-
dean,—is the institution therefore an aristocratic one?
Is the graduate therefore an aristocrat? The crude ore
of native talent is passed through the academic labo-
atory, and at last it comes out a metal. It is then made
to take its place amongst the illustrious of the land;
but unless some sinister principle be latent, host-
ile to human liberty and to good sense, there is no
increased chance that an aristocratic spirit will be super-
added by education. Our republican institutions on
favourable terms, are the resulting product of a popular
illuminated education. They are all their beneficent influ-
ences,—all their glory, to the light which has been shed
on modern generations by modern education.
But we are digressing from our immediate object; let
us illustrate which, we will tell the story of a youth
from Maine, who, though extremely poor and without
rich relations, was appointed a cadet. Born in one of the interior counties of the State, he had
never emerged from the depths of his native wilderness,
he knew nothing of the world, its modes or its propri-
eties. The crudest rusticity would betray itself in all his
mannerisms and mannerisms, but nature had nevertheless
enow to maintain his honest and unassuming
and vigorous bodily frame. He needed nothing further,
and he set out gaily on his journey to West Point.
"And how did you come," asked Col. T. the Super-
intendent of the Academy, as our young Cadet called to
"expect himself on his arrival. "Why, sir, I jumped on
rafter that was just floating down the Kennebec,
and worked along until we got to Augusta. There I found
a schooner just starting for New York, on board of
which I had a good passage; but as bad luck would
have it, the steam boat started up the river just before I
could get on board. So rather than turn there, I set out
and footed it,—and here I am, Sir."
Imagine this speech to have been delivered in the
quaintest specimen of Yankee dialect, and toned with
the true nasal twang, and you have a tolerable represen-
tation of the introductory interview. Such was the first
impression of our hew recruit in the world. The suc-
ceeding stages need not be described. Suffice it to say
that aided by his native sagacity and courage, he quick-
ly caught the conventional properties of life, overcame
his original awkwardness and the embarrassments at-
tendant upon it,—started fairly with his peers upon the
academic race,—seized on the great truths of science
with an eager and right spirit in the encounter, and
every year opened for himself a new vista of intel-
ligence and grasped new powers of thought. At the
expiration of his four years, he came forth, crowned
with academic honors and a commissioned officer in the Army;
—A polished gentleman, a patriotic soldier, a grateful
friend of his country, and eminent professional man. But
that country a full redeeming guerdon of service and de-
voion, even to his life's blood! He had gained for him-
self an education, such as in no other way could pos-
sibly have acquired. His country had gained an edu-
cated officer, a defender, a leader for her armies, such as
she might have awaited. The country thus was reciprocated,—in means, but not in measure. The
country had conferred bounties on one individual. He
might confer incalculable benefit on millions.
Soldiers, armies, we do not need. They are the sponta-
aneous growth of our own glorious land. But we may
often need good leaders for them: We have often need-

e. V.
From the National Trades' Union.
MESSRS. EDITORS.—Regimental instruction being a
subject of consideration in the army service of the pow-
ers of Europe, the following extract from the United
Service Journal, for January, 1856, is transmitted to
you, to show the success of the experiment in a French
Regiment of Hussars, commanded by Colonel de Brack,
an officer of superior qualities and experience, of the
Light Cavalry of Advanced Posts, under Generals Las-
sale, Monbrun, Pajol, Colbert, Maison, and an officer
of the Imperial family. The June, 1815, surrendered
Napoleon in 1815, and, after an absence of fifteen years,
re-entered the service about 1830. In May, 1831,
he published a work entitled "Avant Pentes de Cava-
lerie Legere," with an excellent address to the officers
and subaltern officers of the 8th Chasseurs. Brack's "su-
venir" is a book of peculiar merit, and contains a
description, conveyed in the cædical form, of the duties of
advance posts. A work, among many others, at this time,
meriting the attention of the War Department, all of
which Congress should authorize the translation of, for
the diffusion of necessary military information among
the people, for the reason that it best suits the neces-
sity for an efficient militia to revolt inexpensive.
It is hoped the example here quoted may awaken atten-
tion from the U. S. Dragoons, and other corps of
the Army and Militia.
A. C. G.

The following experiment has succeeded in a French
Regiment:
"In the Fourth Hussars, commanded by Colonel de Brack,
A system of interior and reciprocal instruction has been
lately introduced and pursued with a general
co-operation and zeal which alone could have ensured
the successful results of which we possess unquestion-
able evidence. These results have been obtained solely
by the internal and independent resources of the corps
itself. The plan adopted may be represented as a sort
of Regimental University, classed into schools of
the several branches of instruction, of importance, theoret-
ically, or practically, to the soldier—the officers and sub-

officers acting as the instructors. Principles of loyalty, patriotism, and propriety of conduct, are inculcated by precept and example, and the Regimental orders distinguished by their "rationality," are enforced with firmness. The "agreeable" is not wholly neglected for the "useful." Music is cultivated both for the education of the Regimental trumpeters and musicians, and for the general instruction of the officers. The individual officer, army, and regiment, to the perfect satisfaction of their gallant and illustrious inspectors. At the close of the exercises and examinations, prizes were distributed by the Duke of Orleans to the successful candidates, with much enthusiasm and good effect. Col. de Brack replying in an excellent expose of the origin, objects, and results of the system of Regimental instruction, which was found to present the following state upon that occasion. For greater exactness, we give the heads of instructions in the original terms:

**Gymnastique et Voltige.** (in three months) 175 pupils.

- Lecture et Ecriture, 97 pupils, 17 educations finished in the year.

- Theories Militaires, all the sub-officers, the brigadiers, (corporals) and 97 Hussars.

- Manège Civil, the whole Regiment.

- Cours d'Equitation Militaire, all the officers and sub-officers.

- Tir à la cible ou cheval—At the last practice at the distance of from 39 to 40 metres, of 592 shots, 102 balls struck the mark.

- Mathématiques, 156 pupils.

- Escrime, (fencing) 173 pupils.

- Portcavalerie, 130 pupils.

- Artillerie, 300 pupils.

- Marche la trompette—28 harriers, or pupils, so that each division (peloton) of the Regiment has a veterinary farrier, and from the adoption of Ballas's method of shoeing, it is unnecessary to have instruments at the forge for torturing restive horses, the latter no longer resisting the farrier.

- Musique, 52 pupils.

- Tactique, all the officers, sub-officers, brigadiers, and hussars—students of the other courses.

It is further stated, that the employment of the homoepathic system of medicine in the Regimental Hospital has enabled the physicians of patients by eight ninth.

The practice with regard to farriers is worthy of adoption in our service. Under the direction of the chief veterinary surgeon, they are instructed in anatomy, the elements of pathology, farriery, &c., so as to ensure, as far as education can aid, the soundness and efficiency of the animals upon which the agency of the dragoon depends.

"A model horseman," (cavalier modèle) equipped by Colonel de Brack, in conformity with his own extended experience, formed not the least curious part of this exhibition. He is dressed in black, his head covered with a black cap, his body with a broad blue coat, which perfectly protects him both from the blows of an enemy, and the inclemency of the seasons; he is bearded; his dress is light and convenient; his arms consist of a fusil, or carbine, (musqueton Robert,) which is discharged nine times in a minute, and a new modelled sabre by Maneux; the bridle scarcely covers the horse's head, and the bit acts powerfully. The accoutrements are of the utmost grace and lightness, and the horse feeds as easily with as without the bridle. Thus equipped, the model horseman was put to the three following tests.

- He unbridled and unsaddled his horse, disarmed and undressed himself in forty seconds.

- Saddled, bridled, and accoutred his horse, dressed and armed himself, mounted and commenced firing in a minute and eight seconds.

- Full gallop, he leaped from his horse, sprawled over a barrier four feet high, ran along a platform, leaped a ditch of fourteen feet, fired, re-passed the ditch, jumped into the circus, and springing into the saddle, without using his hands, re-commenced firing.

The whole dress, equipment, arms and accoutrements of a horseman weigh fifty-one pounds; that is, one half less than the existing regulation for the light cavalry. There is nothing shining or resounding about him, which gives the light horseman an advantage in reconnaissances and surprises. Such is the "Cavalier Modèle," of Colonel de Brack, who was warmly complimented by the Princes.

On the whole, this example deserves the attention of the British Army, and should at least tend to excite the emulation of its officers. 

---

From the *N. Y. Journal of Commerce*.

**BRITISH REGULATIONS CONCERNING SEAMEN.**

The annexed Acts of the British Government have been put into our hands for publication:

**ACT RELATIVE TO MERCHANT SEAMEN,**

**PASSED JULY 20th, 1835.**

Repeals numerous Acts in relation to the same subject.

Sec. 2d.—Masters of Vessels of 80 tons or upwards, not to carry to sea any seaman or other person, as one of the crew or apprentices, without first entering into an agreement in writing, to be signed by the Master, and distinctly read over to every seaman, in order that he may understand the purport and meaning of the engagement.

Sec. 4th.—Penalty of £10 on Masters, for carrying to sea any seaman without signing agreement.

Sec. 7th.—Seamen to forfeit two days wages if absent. If seamen shall quit the ship at port of delivery before being discharged without leave of the Master, such shall forfeit one month's wages,—such absence to be entered in the log book.

Sec. 17th.—Vessels sold in foreign ports, seamen and apprentices to be sent home and wages paid, with the consent of the Consul.

Sec. 19th.—Seamen hurt or injured in the service of the ship, shall be attended to and returned to the United Kingdom, at the expense of the Master or Owner of the vessel.

Sec. 25th.—British seamen dying in foreign ports, his Majesty's Consuls to take charge of all money and effects to which they were entitled, for the benefit of the next of kin of the deceased.

Sec. 41st.—Masters not to discharge any of their crew, either British subjects or foreign, at any place abroad, without the sanction in writing of the Consul or Vice Consul.

Sec. 45th.—No Master to leave behind either on shore or at sea any person of his crew, on the plea of incapacity to proceed, unless upon a previous certificate in writing of the Consul, &c., that such person is not able to proceed or has deserted or disappeared.

Sec. 44th.—Seamen so permitted to be left behind, wages, to be paid; offending herein either as to leaving behind or not paying wages, Master for such offence to forfeit in addition to the wages, £2 25.

Sec. 45th.—Master to deliver on arrival to Consul, the agreement with the ship's crew. Penalty for omitting to do so, £2 25.

Sec. 49th.—No seaman to be shipped except with the written consent of the Consul, to be endorsed on the agreement. Penalty of £2 25, for every seaman who shall be shipped contrary to the provisions of this Act.

---

**AN ACT OF THE BRITISH PARLIAMENT, PASSED 30th JULY, 1835.**

And be it further enacted, That if any person shall either on shipboard or on shore, harbour or entertain a seaman who shall have signed an agreement to proceed on a voyage, to parts beyond the seas, and shall have deserted, or abandoned himself without leave from his ship, knowing or having reason to believe him to be a deserter or to be absent without leave, every person so offending shall for every such seaman so harboured or
ARMY AND NAVY CHRONICLE.

Sected forfeit and pay the sum of ten pounds; and that no debt exceeding in amount five shillings incurred by any seaman after he shall have signed any such agreement as aforesaid shall be recoverable until the voyage agreed for shall have concluded; nor shall it be lawful for any keeper of a public house or of a lodging house for seamen, to withhold or detain, any chest, bed, or bedding, clothes, tools, or other effects of any seaman for any pretended debt alleged to have been contracted by any such seaman; and in case any such chest, bed, bedding, clothes, tools, or other effects as aforesaid shall be withheld or detained contrary to this Act, it shall be lawful for any Justice of the Peace in any part of His Majesty's dominions, upon complaint upon oath by such seaman, or on his behalf, to inquire into the matter, and if he shall see right, by warrant under his hand and seal, to cause any such property or effects so withheld or detained contrary to this Act, to be seized and delivered over to the seaman.

From the Historical Keepsake.

Gen. Wolfe's Song.—On the night of the 11th of September, Wolfe, after completing his first survey of the scene of the action, fully developed his plans. After supper, his spirits, which had somewhat sunken under the press of the summer evening, and the melancholy poetry of Gray, rallied, and he dwelt with much animation on the brilliant opportunity before them of achieving a striking and highly important victory. It is possible that some of his companions were less sanguine of success, and were less excited than Wolfe, who having made up his mind as to the course to be pursued, would not allow himself to indulge in a single misgiving as to its success. No man has seen him so full of animation. He talked earnestly, told innumerable anecdotes—

"Of hair-breadth 'scapes; the imminent deadly breach;' seemed to regard the perilous undertaking of the morning with certain confidence, and closed the night by singing the celebrated song, now absurdly called the "Military Song," which universally believed to have been written by Wolfe himself, and it develops so remarkably the characteristics of his mind, as to leave, we think, but little doubt of its authorship. There is his daring, his abandon to an inevitable destiny, and, above all, the dash of melancholy, the anari aiulid, which mingled with his anticipations of glory, was felt even in the happy songs the men sang to music by no humbler a composer than Handel, with whom, as we have already seen, Wolfe was intimate.

"How stands the glass around? For shame! ye take no care my boys; How stands the glass around? Let mirth and wine abound. The trumpets sound, The colors flying are, my boys, To fight, kill, or wound: Content with our hard fare, my boys, On the cold ground.

"Why, soldiers, why, Should we be melancholy, boys? Why, soldiers, why, Those who must die? What, sight?—Fie! Drink on, drown fear, be jolly boys; 'Tis he, you, or I, Cold, hot, wet, or dry, We're always bound to follow, boys; And scorn to fly. 'Tis but in vain. (I mean not to upbraid you, boys) 'Tis but in vain For soldiers to complain; Should next campaign Send us to Him that made you, boys, We're free from pain; But should we remain, A bottle and kind landlady Ever at hand;"

Boarding a Vessel.—A friend who has just returned from New York, gives us the following narrative of the mode in which the news collector of the Courier and Enquirer boards vessels arriving off that port. On Sunday, their news schooner Eclipse boarded the Ajax, from Liverpool, the Hannibal, from London, and several square rigged vessels. The gale was so severe and the cold so intense, that Admiral Lovering having availed himself of a slight lull in the storm, to reach the Ajax, could only return to his vessel, mounted on an Indian Rubber horse. One of these animals was fortunately on board the Ajax, and was on this occasion inflated; Admiral Lovering was put on his back, dropped over her stern into the water, and from thence was picked up by his yawl.—Phil. U. S. Gaz.

The Trial Rocks was seen last year (1833) from the Dutch ship Jacobus, on her way from Europe to Java. They were first seen very near in the night, when the ship was hauled off and hove to until day-light; they were then seen again and passed. The captain of that ship gives the longitude by the Chronometer, 107, 55, E. of Greenwich, and 34, S. in the present weather towards Java Head, it was found that the Chronometer was 18 miles too far to the Eastward; allowing this error, would give the longitude 107, 35, East. This is too far East to be in the way of ships which are in the proper track for Java Head, but dangerous to those which are bound through some of the passages east of Java.—Salem Register.

From the Jacksonville Courier, Feb. 25.

Capt. Jackson of the Revenue Cutter Jefferson, had been ordered from the St. Johns, to cruise among the Keys near New River, for the protection of that part of the territory. Capt. Jackson, though a short time among us, by his kind offices and gentlemanly deportment, gained the good will and esteem of all who shared his acquaintance. His arrival among us first gave the inhabitants of the River a feeling of greater security.

The officers and crew of the Revenue Cutter Gallatin, commanded by Capt. Joseph Gold, have won the commendation and good wishes of all who have had an opportunity of witnessing their tact and perseverance, to protect the numerous vessels, at or near New Castle, from the floating ice, and also assisting them while coming to, during the late severe weather. Such exertions are worthy all praise. There are now upwards of thirty vessels at New Castle.—Phila. Herald.

DOMESTIC INTELLIGENCE.

SEMINOLE CAMPAIGN.

Official reports were received at the Adjutant General's Office, on Monday, from Major General Scott, stating that the force which marched from Tampa Bay, under Maj. Gen. Gaines, while reconnoitering on the Withicoochee, near Gen. Clinch's battle ground, was met by a considerable number of hostile Indians, on the 25th of February and a slight skirmish took place, which resulted in the loss of two Louisiana volunteers killed, and ten regulars and volunteers wounded. Lieutenant Fardon, of the U. S. dragoons, was among the wounded.

While making preparations to cross the Withicoochee, on the 29th ult. a spirited attack was made on General Gaines' camp by the Indians, who were repulsed with very considerable loss. The General states that the officers concur with him in opinion that the enemy's force amounted to not less than 1500.

Of General Gaines' command (supposed to consist of ten or eleven hundred men) there was, on the 29th, one sergeant of the regular army killed, and one officer (Lieut. Dunnah, 2d artillery) and four privates wounded.
ed. Of the volunteers, there were one officer, and twenty-five privates wounded.

We find in the southern papers the following order, issued by Major General Scott.

HEADQUARTERS—ARMY OF FLORIDA.

Picolata, Feb. 22d, 1836.

ORDERS No.1.

Major Gen. Scott, having arrived at Florida, assumes the general direction of the war against the hostile Seminole Indians.

The Staff-Officers attached to General Head Quarters, at present are Capt. Canfield, (Topographical Engineer;) Lieut. Chambers (Chief of the Commissariat;) and Lieuts. Van Buren, Temple, Johnston, Aides-de-Camp.

All orders and instructions, conveyed by either of these for the inspection, and whether orally or in writing will be duly obeyed.

The right and left wings of the army, or the troops on the West and East side of the St. Johns river will be continued under the respective orders of Brigadier Generals Clinch and Eustis, and the forces which are to operate from Tampa Bay, under Col. Lindsay, will, when the case of force, constitute the left wing. The right will be of great importance by the reinforcement of both regulars and volunteers.

The three immediate commanders of the right, left and centre of the army, respectively, will generally receive orders direct from General Head Quarters, but of course, every junior will obey the senior, according to the rules of war, and the usages of the service, whether the parties belong to the militia, or to the militia and regular army.

As for the first time, patriotic volunteers from South Carolina, Georgia, Alabama, Louisiana and Florida, are to come into the same line, with a portion of the regular army, it is confidently hoped that a beneficial emulation, without unkindness or prejudice, may animate the different forces. All are equally Americans, actuated by the same determination—to subdue treacherous and a common foe.

But valor and patriotism alone, are not sufficient for that end. Some tactical instruction and an exact obedience to commands, are also necessary. Instruction can only be acquired by opportunity and labor. A firm resolution to obey, accomplishes the other great requisite at once. Let the resolution be taken by all who have nobly turned out to avenge their butchered countrymen.

But again—to parade, to march, to mount guard and to fight, are not the only duties of war. To handle and preserve the supplies of the army, and to construct camp and other field defences, are equally required of every good soldier. A corps of servants, for these purposes, would be too large and too miscellaneous. It would double the army, and render one half too mean, and the other too delicate, for the glory of a well contested field. Fatigue parties must, therefore, when wanted, be furnished by all the corps in their turn, and proportionally.

WINFIELD SCOTT.

From the Globe.

The following official statement, received at the Adjutant General’s Office, gives an interesting account of the reconnaissance of the battle ground, where the gallant Dade, with his little command, met its melancholy fate, in the action with the Indians, on the 28th of December last. We understand that Major General Gaines arrived at Fort King, from Tampa Bay, with his command, on the 22d of February.

WESTERN DEPARTMENT.

Fort King, Florida, Feb. 22, 1836.

GENERAL: Agreeably to your directions, I observed the battle ground six or seven miles north of the Outhlacocoochee river, where Major Dade and his command were destroyed by the Seminole Indians on the 29th of December last, and have the honor to submit the following report:

The force under your command which arrived at this post to-day from Tampa Bay, encamped on the 19th inst, on the ground occupied by Major Dade on the night of the 27th of December. He and his party were destroyed on the morning of the 28th of December, about four miles in advance of that position. He was advancing to this post, and was attacked from the north, so that on the 29th inst, we came upon the rear of his battle ground about 9 o’clock in the morning. Our advanced guard had passed the ground without halting, and when we came on his latter he came upon one of the most appalling scenes that can be imagined. We first saw some broken and scattered boxes; then a cart, the two oxen of which were lying dead, as if they had fallen asleep, their yokes still on them; a little to the right one or two horses were seen. We then came to a small enclosure, made by felling trees in such a manner as to form a triangular breastwork for defense. Within the triangle, along the north and west faces of it were about thirty bodies, mostly mere skeletons, although much of the clothing was left upon them. These were lying almost every one of them, in precisely the same position they had occupied during the fight—their heads next to the logs over which they had delivered their fire, and their bodies stretched with striking regularity parallel to each other. They had evidently been shot dead at their posts, and the Indians had not disturbed them, except by taking the scalps of most of them. Passing this little breastwork, we found other bodies along the road, and by the side of the road, generally behind trees which had been resorted to for coverers from the enemy’s fire. Advancing about two hundred yards further, we found a cluster of bodies in the middle of the road. These were evidently the advanced guard, in the rear of which was the body of Major Dade, and to the right, that of Captain Fraser.

These were all doubtless shot down by the first fire of the Indians, except, perhaps, Captain Fraser, who must, however, have fallen very early in the fight. Those in the road and by the trees, fell during the first attack. It was during a cessation of the fire that the little band still remaining, about thirty in number, threw up the triangular breastwork, which, from the haste with which it was constructed, was necessarily defective, and could not protect the men in the second attack. We had with us many of the personal friends of the officers of Major Dade’s command, and it is gratifying to know that every officer was identified by undoubted evidence. They were buried, and the cannon, a six-pounder, that the Indians had thrown into a swamp, was recovered and placed vertically at the head of the grave, where it is to be hoped will long remain. The bodies of the non-commissioned officers and privates, in their graves, were buried in two graves, and it was found that every man was identified. The third command was composed of eight officers and one hundred and two non-commissioned officers and privates. The bodies of eight officers and ninety-eight men were interred, four men having escaped: three of whom reached Tampa Bay: the fourth was killed the day after the battle.

It may be observed that the attack was not made from a hammock, but in a thickly wood country; the Indians being concealed by palmetto and grass, which has since been burned.

The two companies were Captain Fraser’s of the 8th and Captain Gardiner’s of the 2d artillery. The officers were Major Dade, of the 4th infantry, Captains Fraser and Gardiner; second, Captains Basinger, brevet second Lieutenants R Henderson, Mudge and Keais, of the artillery, and Doctor J. S. Gallin.

I have the honor to be, with the highest respect, your obedient servant,

E. A. HITCHCOCK,

Captain 1st infantry, Act. Insp’r General.

Major General EDMUND P. GAINES,

Commanding Western Department.

Fort King, Florida.

Extract of a letter from an officer at Fort Drum, to the Quartermaster General.

"General Gaines, with about 1000 men, consisting of
four companies of the 2d artillery, seven companies of the infantry, about five hundred and fifty volunteers from Louisiana, and about seventy friendly Indians, arrived at Fort King on the 22d. The troops left Tampa Bay on the 13th. On their way they buried the bodies of those killed at the battle of the Ocklitechoco on the 28th December. (Major Dade's command) they found all the bodies. They saw no hostile Indians on the way, and very few signs of them."

We have heard that when Gen. Gaines reached this place, on his way from New Orleans to Tampa Bay, he ordered orders to repair to the Mexican frontier, to which point, it seems, the sixth Regiment of Infantry has been ordered. On this fact being made known to the troops and volunteers, the latter manifested much dissatisfaction, and insisted, that as they had volunteered to go under the command of Gen. Gaines, he should accompany them. Under these circumstances, he determined to do so. Whether the present object of Gen. Gaines be a junction with Gen. Clinch, we have no means of knowing. One thing certain is, that the present is the only propitious moment for operating effectively against the Indians. By the time the army of Gen. Scott is in the field, the whole peninsula will be inundated. The rainy season generally commences about the first of March, and for a month afterwards, an army will have abundant occupation in contend ing against the elements. If they can keep their heads above water among the everglades, they will do well. Can they do this? These facts are better than General Gaines. It is believed, therefore, that it is his design to push forward in pursuit of the Indians as far as prudence will allow, before the rainy season commences.—Penobscot Gazette, Feb. 27.

A letter dated on board the Brandywine frigate, at Callao Bay, Oct. 25th, states, that the road from that place to Lima was much infested with robbers; they had the previous week robbed two of the officers of the Deiphon of their horses, and part of the clothing from their baggage. Mr. Harrisson, the captain's clerk, narrowly escaped being killed. He was robbed of all the money he had with him, and in attempting to defend himself received so bad a wound in his hand, that it was feared amputation would be necessary. Salavery was absent from Lima, in the interior, with his troops. He had determined to demolish the Castles at Callao, and had already dismounted all the guns, and sold them for other brands. About 150 pieces, of all sizes, and some of them the handsomest ever seen, had been shipped to Europe. The object of Salavery in destroying the castles, was to prevent their falling into the hands of an enemy, who would at any time, with that fortress, cause a new revolution.

**NAVY DEPARTMENT.**

The U. S. ship Vincennes, commanded by master commander John H. Aulick, was at Otaheite, September 19, 1855, where she arrived on the 8th of that month, from Nevaehava, one of the Washington groupes of islands in the Pacific ocean.

Nothing worthy of note had occurred since they parted from the Brandywine, Commodore Wadsworth, in July last at Callao:

Had taken 12 American seamen on board at Otaheite, principally left there by whalers, and expected some more before sailing:

Resolved to sail the next day for the Friendly and Fepie groups, touching at some of the intermediate islands, next to the Pelew islands, and from thence to China, where they expected to arrive by the 1st January 1856.

All on board were in good health.

**GREAT EASTERN RAIL ROAD.**—Col. Long, the engineer appointed to survey the various routes proposed for a railroad some point on the coast of Maine to Quebec, has presented his report, in which he states that he has been over the whole distance by three separate routes, and ascertained the cost and distance of each to be as follows:—

- From Portland to Quebec, 277 miles—cost of construction $6,339,671.
- From Wiscasset to Quebec, 246 miles—cost $5,410,629.
- From Belfast to Quebec, 237 miles—cost $4,906,151.

Thus it appears that the latter is the shortest and least expensive; and being such, it is recommended by Col. Long as entitled to the preference.

**WASHINGTON CITY**; THURSDAY, MARCH 17, 1856.

To Correspondents.—"Blakely," "Justitia," "W_______," and the article, signed "Vistor," are deferred until next week for want of room.

We have received a communication, without signature supposed to be from the author of Subaltern or O. P. Q. It is under consideration.

Major General Macomb, accompanied by his aide-de-camp Maj. S. Cooper, left Washington on Sunday last for Florida, intending to proceed by land as far as Charleston, S. C., and take steamboat thence to Picolata. There has been a difference, with respect to rank, existing many years between Generals Gaines and Scott, and an apprehension that their meeting might lead to some collision on points of etiquette or right, has probably been the cause of ordering Gen. Macomb to the scene of operations.

The military posts in Florida, excepting Fort Marion, at St. Augustine, are within the district commanded by Gen. Gaines, who perhaps conceives that he is acting within the limits of the command assigned to him.

Gen. Scott was sent to Florida, with special instructions from the War Department, one portion of which was that he was not to regard the imaginary boundary line between the eastern and western departments, in his operations against the Seminoles. The Western Department comprises all west of a line drawn from the southernmost points of East Florida to the North West extremity of Lake Superior; taking in the whole of Tennessee and Kentucky; and the Eastern Department all East of such line, including Fort Miamisago.

Information has been received at the Department of State from the agent who was sent out in the U. S. sloop of war Peacock, to exchange the ratifications of the treaty concluded with Muscat. Also, that the Peacock was for a short time exposed to great danger on the coast of Arabia, from which, however, she happily escaped, after throwing overboard a part of her armament and stores. The Sultan of Muscat, upon learning her situation, promptly despatched a sloop of war of his own to her assistance, and sent a guard of several hundred men to the shore for the protection of the crew in case they should land. The whole conduct of this Prince upon the occasion is represented to have been of the most liberal and magnanimous character.

First Lieut. Stephen West Moore has been appointed Adjutant of the 7th regiment U. S. Infantry, vice First Lieut. Dixon S. Miles, resigned in expectation of promotion to a Captaincy, vice Captain J. L. Dawson, resigned.
Severals of the officers, lately attached to the U. S. ship Delaware, arrived in Washington on Saturday, in the steamer Chesapeake from Norfolk.

We copied an article into the Chronicle last week, on the authority of an Albany paper, stating that the safety of the U. S. ship Delaware was endangered off Cape de Gatt by the accidental explosion of some powder on board. We intended to have expressed some doubt of the truth of the statement, and the improbability of the imputed carelessness, but in the multiplicity of other business it was forgotten.

We perceive that the statement has been officially contradicted in the Globe, as will be seen by the paragraph annexed.

U. S. SHIP OF THE LINE DELAWARE.—Erroneous statements having been circulated in reference to an occurrence on board the U. S. ship of the line Delaware, off Cape de Gatt, on her return home, it is deemed proper to submit the following summary of the facts.

At the time mentioned, a report was made to the commander of the squadron on board that the fore magazine of the ship was on fire. The crew were immediately beat to quarters, the magazine passages examined, and being found full of dense suffocating smoke, orders were given to let water into the magazine, which was however very soon countermanded, on finding there was no appearance of fire. After the smoke had slowly passed away, it was ascertained to have been occasioned by snuffing a lamp out of the lantern, (contrary to the regulations of the ship,) and which fell upon gunpowder, and caused an explosion, and the smoke alluded to. Every effort was made to ascertain how gunpowder should have got there, but without success; and it can only be conjectured that some of the abandoned characters on board of whom there were a few, had been guilty of the act.

No person was killed as stated, nor was any one injured, except the man attending the light, who was slightly burned.—Globe.

ARRIVALS AT WASHINGTON.

EDITOR’S CORRESPONDENCE.

U. S. SHIP WARREN, PENSACOLA, 27th February, 1836.

My Dear Sir,—The Constellation, St. Louis, and this ship, still lie off the Navy Yard, having been here two weeks this morning. We came in on the 13th, and soon afterwards discovered the other two vessels outside.—The St. Louis anchored near us the same day, but the frigate remained off till the following, and was towed in by a steamboat. The Vandalia was at Tampa Bay at the last accounts, and all the marines of the squadron, except ours, are on shore there for the protection of the place.

We were last week ordered to prepare for a cruise, and expected to see Key West before this; but the result of a survey (ordered by Com. Dallas) on board will defer our departure a long while. The ship is found to need great repairs, and I presume I am justified in saying that never was a vessel sent to sea in such bad condition as we were. It will probably keep us here six weeks to put her in order for her meditated cruise of four months, and you will believe us fortunate to get off by the expiration of that time even. She requires new channels, to be caulked fore and aft, and to have all her sails repaired, among other requisites so numerous that it seems impossible to particularize. The Navy Yard is absolutely filled with men at work for us.

I assure you that all the allusions contained in Mr. Wise’s late speech to the Warren, are correct to the letter, and perhaps, had he waited till now, he might have enlarged in his rebuke. I say not whose fault it is, but certainly all are not blameless for the state in which we were sent out.

The Constellation and St. Louis will remain here for the present, I believe. The former, it is said, is very much in want of repairs also. The crews of all the vessels are perfectly well, and no changes have been made in the officers since the last anecdotes. If any are anticipated, they will not be made for some time, I imagine. Very many of the midshipmen expect to return to their examination this spring, and are becoming impatient to do so. No order has yet been received in reference thereto.

COMMUNICATIONS.

NEW INFANTRY TACTICS.

No. VII.

The following is the conclusion of the Report on the new French Tactics.

"TITLE V, XII.—ORDER IN ECHELON.

"Preserving the general principles of the Ordnance, we have thought it useless to fix the distance between"
chessons, because this absolutely depends on circumstances, and the object proposed by the general-in-chief is the Ordinance, that distance is habitually one hundred paces. A line which is too close or divided, is likely to conceive that chessons, formed by brigade or battalion with only a distance of a hundred paces between them, would, in fact, all be engaged at the same time.

"We have thought that, in the march by chessons, the battalions may be placed in columns with their lefts in a full line; chessons thus disposed may march with as much regularity as if the battalions were deployed; this order presents yet greater resources, for, if maneuvered by cavalry, even the battalions which compose an echelon by brigade or by division, may form in echelons between themselves, and each battalion separately.

"In the formation of oblique echelons, the Ordinance prescribes that they be put in march without taking the lateral intervals between echelons, and indicates no means for re-forming the line. In this projet, those emissions have been corrected. The echelons, at the moment of formation, take their intervals, in order not to be obliged to execute this movement when the line is re-formed—that is to say, when under the fire of the enemy.

"Art. 12. To retreat by alternate battalions.

"In the Ordinance, the positions which the two lines successively occupy are determined only by the number of paces which they ought to march to the rear, so that, frequently, and where there is much room for the choice of ground, it may be desirable to combine various positions. To remedy this inconvenience, the Commission has prescribed that, at each retrograde movement, the general-in-chief shall, according to the ground and his views, determine the position to be occupied by each retiring line.

"Art. 13. Passage of lines.

"In the passage of lines, in retreat, by the Ordinance, as the first line approaches the second, the colonels of the latter cause the second platoon of each company to double behind its first, which being executed, the battalions of the first line face to the left in marching, and each company, wheeling by file to the right, passes through the interval left in the corresponding company by the doubling of its second platoon. In the battalions of the second line the second platoons form up into line as the first line has passed, and the companies of the latter march by the flank until arrived at the point where they are to be halted and reformed into line.

"The passage of lines, advancing (to the front) is executed by the Ordinance according to the same principles. The colonels of the second line, on approaching the first, cause their platoons to double, in marching, which being executed, the battalions of the first line face to the right, and each company, wheeling by file to the right, passes the second line as in the former case. The battalions of the second line, as soon as those of the first have passed, call up their second platoons into line, marching.

"The way of safety in this manoeuvre may be easily comprehended; for not only are the two lines broken into fragments, at the same time, and the colonels without immediate control over their battalions at the most critical moment, but the battalions of the second line are in great danger of being carried away by those of the first, and frequently it is sufficient for this purpose that two companies present themselves together to pass through the same interval, and this often happened whilst this manoeuvre was yet in use. That which the commission has substituted, and which has long been employed in the army, is taken from the Regimen and is: when the command is given in echelon which renders its execution more easy and certain. It is executed as follows:

"In the passage of lines in retreat, each battalion of the second line isployed into double column, closed in mass, and the line thus formed, takes the position it ought to occupy, after the retreat of the first, if not already in such position. Each battalion is so placed that its centre finds itself opposite to the middle of one of the intervals of the corresponding battalion in the first line.

"The second line being thus established, the first retires; each battalion directs itself (in line) on the interval in its rear, and the companies which find themselves masked by the battalions of the second line, execute the passage of obstacles.

"Each battalion of the second line, as soon as it has been passed by the first line, deploys itself without waiting for any other battalion.

"The first line continues to march in retreat, until it arrives at the position indicated by the general-in-chief, and then takes the formation he has ordered.

"The passage of lines, advancing, are executed according to the same rules.

"The second line, as soon as formed, in the manner indicated above, puts itself in march. The battalions take the guide in the centre, direct themselves on the middle of the intervals of the corresponding battalions in the first line, pass to its front, and continue to advance till arrived at the position where they ought to be established.

"The second line, being nearly up with the first, the colonels of the latter cause their outer companies, which mask the second line, to double in close order behind the contiguous companies, and cause them to return into line as soon as the battalions of the second line have successively passed to the front.

"This manoeuvre is both much simpler and safer than that of the Ordinance. The battalions, remaining collected pending the whole movement, the colonels can better give them such disposition as circumstances demand; and the new line, presented to the enemy, being formed into double column, closed in mass, may be deployed with the utmost promptness and commencement firing whilst executing the movement.

"The double squares against cavalry, of the Ordinance, have long been disused in the field, because they presented too great a mark to the enemy's artillery whilst half their fire was uselessly suppressed; for, the second line, being unable to fire or to employ the bayonet, added nothing to the strength of the first.

"The squares of several battalions (which we prescribe) are formed according to the same principles of those composed of a single battalion each; but never more than three battalions at the most are united in the same square; because the side fronts would be too much weakened. In general, squares of two battalions are the best.

"Squares of more than one battalion each, have, in their interior, a reserve—destined to sustain the fronts the most hotly attacked, to fill up any gap that may be made, and to furnish the skirmishers it may be necessary to detach. Whether the preparatory column have the right or left in front, the reserve it always composed of the side divisions, in order these, being habituated to the particular dispositions of the reserve, may not commit errors. In a square of three battalions, the reserve is composed of the last division of the first and the last division of the second battalion. In a square of two battalions, the last division of the first forms the reserve.

"The field officers, according to rank, command the fronts, giving the preference to the side fronts.

"To form a column into square.

"When a column, by division, at full distance, has to form square, it closes to company-distance on any division that may be preferred, but of choice, it ought generally to be, on the first or last of one of the battalions.

"A column, closed in mass, takes company-distance and then continues the march. When the column is divided, the reverse-divisions are not considered, and the column closes or takes distances as if they were not present. To this end, each reserve division closes in mass on the one immediately preceding, and in order to unmask the guides of which follows, it breaks to the rear three files from the right and left. When the square is formed, each reserve division is
The explanations of the plates are more complete than those of the Ordinance: they contain an exact analysis of the manoeuvres represented by the plates.

Such are the outlying details of the labor, mainly executed by one much distinguished in war, and deep in the meditations of the closet. The minor details of the revision are filled up with exactness and success, so as to render it, in every respect, worthy of the approval of Soult—himself, unquestionably, at this day, the first standard of good tactics.

The changes noticed, all founded on the experience of war and renewed trials in camps of instruction, are, as we have now seen, both numerous and important—besides those smaller ameliorations, which the Report passes over in silence, but which contribute greatly to the perfection of the System.

All these changes or improvements are embodied in our new Tactics, and it is these—or as many of them as Indolence has discovered—that certain critics, among us, have condemned as the rash interpolations of an ignorant American pen! The signatures of such writers need not be again mentioned; but their criticisms strongly recall an anecdote of the tragedy of Orestes, adapted to the French stage, by Voltaire, from an immortal bard of Athens. The author, or adapter, had just fallen under the displeasure of Louis XV, and the courtiers set up against him the always feeble, and now worn out, Crebillon. The faction resolved, whatever its merits, to Orestes, they determined to be done; and, at its first presentation, they seized upon almost every sentiment and line for the purpose. It was impossible for Voltaire, a spectator, to suppress his indignation. At every hiss of malignant ignorance, he exclaimed, from his corner: Barbarians! that is from Sophocles.

HINDMAN.

THE NAVY.

Mr. Editor, In No. 9 (March 8) of the Army and Navy Chronicle, a writer, under the signature of "an inexperienced correspondent," undertakes to review a piece which recently appeared in the U. S. Telegraph, over the name of "Perry," and your new correspondent, in his first breath, exclaims as Hamlet did to the ghost—Angels and ministers of grace defend us!

With this thrilling quotation I trembled for "Perry," noting down the fact that your "inexperienced correspondent" would at one fell swoop demolish him, and consign him and his remarks to everlasting oblivion. But what is the fact? How has your correspondent answered Perry's allegations? Bear with me awhile, and I will tell you.

Passing all that is said about the stimulus of pay, &c., as of too little note to occupy my time or your space, I will at once proceed to examine what is said in favor of Admirals.

Your "inexperienced correspondent," after a quotation from "Perry," asks the following question: And can no better reason be given? In answer to which, he says: In foreign parts we must maintain a superior in rank to our highest grades, commanding forces much inferior to our own; and our officers: beholding men in other navies, more highly rewarded for less services. Now, indeed, here are reasons for you! Our officers: beholding the nations of the old world bestowing high rank, honors, and titles of nobility on their subjects, and forcing this plain democratic republic must do the same.

If this argument be sound, and the principle be carried out, where will you stop? Certainly not with the simple title of Admiral, because that grade is far below the apex of rank in the navies of Europe. We must, therefore, have all the grades of Admirals, of Generals of Marine, Admirals of the Fleet, and Lord High Admiral, &c. &c. &c., or else, if one of our plain Admirals happened to go into an English port, his mightiness's feeling's might be ruffled by beholding a foreign officer of still higher rank! Your "inexperienced correspondent," then, falls into rashness about cooperation, laurels, fame, history, &c., and...
ARMY AND NAVY CHRONICLE.

The policy of our government is, and always has been, and ever will be, to keep out of alliances with foreign powers, and especially with those of the old world; but should circumstances ever occur, which would involve the United States in a war, it would be well preserved with one grade of officers as another. At any rate, the introduction of Admirals into our navy would not change our relative position at all; for the nations of Europe would only have to send one of their many senior Admirals abroad, who would of course rank any Admiral established by law, between the rank of Rear Admiral and the rank of Vice Admiral of the fleet, and command would still be against us. Neither is it necessary, when combined sea forces act together, that the ships of one nation shall be commanded by other than their own officers.

Your "inexperienced correspondent" ought to look a little nearer home, and see how matters stand here. We have assimilated rank established by law, between our military and naval officers; yet it is expressly provided that nothing therein shall entitle an officer of one service to command in the other.

Nevertheless we saw during the late war many instances of the land and naval forces of the U. S. fighting side by side, and doing the state good service too, although no General of the army could command the navy, nor could any Commodore control the army. Just so would it be, in case of co-operation with foreign ships. The United States will never maintain fleets and squadrons, to fight the battles of other nations; and the history of the sea shows that the policy of time to come, be able to provide stout ships and patriotic captains enough to maintain her rights on the ocean, let aggression come from whence it may, provided her energies and the enterprise of her officers are not paralyzed by Navy Boards and superannuated Administrations.

But your "inexperienced correspondent" would fail to lead us to believe the high and mighty rank of Admiral is to be won in battle; that it is to be the reward of chivalry and of well earned and long tried merit. If indeed he really does think so, he is not only an "inexperienced correspondent," but equally unacquainted with the rules of promotion and of naval matters generally. He has appealed to the navies of Europe to prove, that we ought to have Admirals; then, of course he is willing, or at least ought to be so, to let their rules govern in promoting to that grade. The general principle which governs in the navies of the old world is, I believe, that the rank of Admiral is not one man below that of Post Captain, and in the English navy: but, when the Post is attained, then promotion is by inheritance, and no more overreaching takes place. If a Post Captain in the English navy lives long enough, he is certain of being an Admiral, though not before he is sixty years of age, notwithstanding many are posted before they are twenty-four.

Now what effect would the creation of Admirals have on the American navy? Let the following facts answer your question: the first six Captains on the list are verging on to seventy years of age; the next four, are all 62 years old; another may be expected to die at about 35 to 60 years of age. Now let twenty Admirals be created: they will of course be taken from the head of the list, and with equal certainty will they be placed in all high commands, such as squadrons, naval yards, naval stations, and commissioners of the navy and they, and they alone, would control the whole naval operations, even unto the minutest ramifications. This state of things might be tolerable, to be sure, for a few years to come, as that in which we exist at present under the Navy Board, which is bad enough we all know. But what would be the state of the navy, some ten or fifteen years hence? What governed and controlled by a peremptory superannuation of Admirals, none of whom could be less than seventy years old! There is no Captain on the list under 45 years of age; few masters commandant much, if any, younger; many, many, of the Lieutenants have passed the middle age allotted to men, and must reach the age of fifty or more, before they will be captains, and at three score years and ten, they may be Admirals!

Now I admit that some men, and even some of the senior captains of the navy, retain their physical and mental powers, at 60 or 65; nevertheless, where there is one that does not drop in, there are 10 others.

It must also be admitted, as a general rule, that such are the hardships through which the young mariner passes his apprenticeship, a seaman at 50 is older in constitution than a landsman at 60 or even 65.

It is not my purpose to follow "an inexperienced correspondent" through all the vagaries of the imagination about one grade of officers being braver than another; or about officers being "so much braver than privates," &c. All the world knows better than that, and all the world knows too that a cowardly captain will never make a brave Admiral. History is replete with instances of brave men and officers, who distinguished themselves in subordinates stations, and have afterwards when exalted to higher rank been found wanting in courage.

Now with regard to rank conferring respect, every body knows that too; that in so far as relates to the bestowing of military honors, which I presume is what he, "who just begins to wield his pen," means. I would ask in seriousness, what honors would one of our Admirals be entitled to, which, as a commodore, he does not receive?

But one, I fancy: a commodore wears a triangular insignia at the maintopgallant-mast head, and an Admiral wears a rectangular one, and is styled a flag officer. Let the sight of the Navy direct our Captains commanding squadrons to salute our Commodore Jack (a square blue flag, with white stars on it) for the blue swallow-tail pendant, and the mighty work of equality will be as effectually established as it would be, or could be, by creating Admirals; for the Admirals of European powers would always out-rank our Admirals; and with regard to our home service the navy loses nothing there; for, according to the established assimilated rank of army and navy officers, all captains of the navy holding commissions of ten years date, rank with Brigadier Generals; all of 15 years date rank with Major Generals, &c.—so that we have at this day sixteen Captains of the navy who, on all occasions, of contact or concert, whether at home or abroad, would rank with Major Generals, and six who would rank with Brigadier Generals. As a Major General, in all the states of Europe, ranks with a Vice Admiral, and a Brigadier General with a Rear Admiral, it may be said we have now sixteen Vice Admirals, and six Rear Admirals and five Brigadier Generals in the U. S. States; for in fact we have, to all intents and purposes, so far as the public weal requires them, though not perhaps in that form desired by insatiable ambition.

Hence it is manifest that the public interest no more requires the new grade of Admiral to be added to the navy, than it does the new grade of nobility on all the diplomatic agents, who represent the United States at the different courts of Europe.

Brevity is said to be the soul of wit; so it is of argument, and you will perhaps say, Mr. Editor, that it ought to be of my dull prosing. But really your "inexperienced correspondent" has made such a hodgepodge of his subject, and intruded himself behind such a mass of subterfuge and disingenuous inuendoes, that, at the risk of incurring justly the charge of prolixity, I must intrude a little further on your patience. Leaving many points for "Perry," (who is doubtless fully equal to the task) himself, I will only write a few more of his many paragraphs, penned evidently with a view to deceive rather than to enlighten the public.

Your correspondent says: "If it be true (as asserted—

"While the Commodore was on a visit to Mr. King, the American Missionary, Colocotroni, the famous Greek Chief, and several other distinguished officers called upon him—a compliment they have not paid to the officers of other nations, (alleging that they would not receive them, who aided them in their war; but they revere the great Republic.)—See Army and Navy Chronicle, No. 9, page 133."
by Perry) that our vessels cannot carry provisions and water, we have reason to congratulate ourselves that our hearty tars can make long voyages without them; for some of our new vessels have been round the world without carrying these articles, or any provision but "chips and a distant station." To circumnavigate the globe implies a great voyage, requiring many months, as is the fact, to perform it; and if a ship could make such a voyage without replenishing her store of provisions, then indeed might it be adverted to as conclusive evidence of her capacity for carrying a long voyage. When we consider that these very ships referred to by your correspondent as having sailed around the world, stopped at many ports in their course, and often replenished their stores, your correspondent's reference leaves "Perry's" assertions exactly where they stood—uncontradicted and unvaried.

Just so, too, with regard to the ship's speed. Why did not the "inexperienced correspondent" name the ships of our navy, which so "outstrip" all foreign ships with which they sailed? For the simple reason that he would have been obliged to have written—Constitution—United States—Franklin—Peacock, &c., when in his heart he would have wished to have named the Columbia—Natchez—Warren—Experiment, &c.; the first named being old ships and fleet sailors, and the latter new, built under the direction of the Navy Commissioners, and are mere tubs on the ocean.

Equally disingenuous is the allusion to ships keeping on the Major. Our captains would be dolts indeed, if they were to run any risks in navigating their ships in time of peace, when the service they perform is little more than short pleasure excursions, sailing from port to port, always choosing their time for making their passages, and never compelled to approach the land except under the most favorable circumstances. Under such circumstances, it would be strange indeed if a hasty stack were to drift on shore. But, let the tug of war come, and then, but not till then, will the innovations of the Navy Board upon our fine old models be fairly tested.

The cannon too. "Though in foreign ports, salutes are always fired and shooting at a target is frequent, we have not heard of a gun's bursting in any of our ships since the war." Here I must imitate "an inexperienced correspondent," and exclaim, like him, "Angels and ministers of grace defend us!"

The cannon of the navy do not burst in firing salutes; not even with reduced cartridges without shot or wads!! No; they go "bang" and "crash" but not with a roar. They are reduced targets two or three times a target!! Now, Mr. Editor, this is a grave subject, and although your correspondent may be inexperienced in writing for publication, he is no novice in naval affairs. I know him well. I have him "in my mind's eye," as clearly as if I had seen him pen the article and affix his proper name to it; and he knows as well I, or any other person, in or out of the navy, that salute and target firing affords no test of the strength of cannon. He knows, also, that for years prior to the late war, our ships fired salutes and practised target firing too; the latter to an extent greatly beyond what is now done by the regulations, drawn up by the Board; and that no guns were burst thereby. He further knows that when war did take place, three of those very cannon, which had been often fired in salutes and at targets, did burst in battle, killing and wounding 73 noble tars, being 13 more than we lost by the enemy's shot in the three actions we had with a Guerrier, a Macedonian, and a Java! Your "inexperienced correspondent" knows too, that the venerable President of the Navy Board, to whom he alludes as having had a leg broken by the bursting of a cannon during the war, has no confidence in many of the guns now retained in the Navy, and especially has he none in the new-fangled medium guns introduced into the service while he was employed on foreign command in 1825. Your "inexperienced correspondent" knows too, or ought to know, that "he hath not seen the vision, neither shall he enter into the distant station." It has often been said of late, that the officers of the navy are divested among themselves, and discardant in their professional views. I admit the charge to be too true, on most subjects; but I believe there is one upon which there is no difference of opinion—with the exception of one, or at most, two Captains—all agree that the ordnance (that is the cannon) of the navy is most defective.

CANDOR.

* We know not to whom the writer of this article alludes; but as it is evidently to one in high station, we feel bound to say that he is under a misapprehension. An "inexperienced correspondent" holds a subordinate station—Ed. A. & N. C.

DESCRIPTION OF A FLOATING DRY-DOCK, AND A METHOD OF PUMPING IT OUT.

INVENTED BY COM. JAMES BARRON, U. S. NAVY.

This Dock is constructed of logs of any kind of timber, from one to two feet square, and in the following manner. The outer tier is laid crosswise, and on them is laid the stretchers (five in number), and on those stretchers are laid the blocks to receive the keel of the ship; and in this manner the bottom of this dock may be increased in thickness and strength, to answer the purpose of docking a ship of any size. The wood bolts are to be of large size, and as near together as may be required for all the purposes of strength.

The sides of this dock are also formed of logs of any suitable thickness, from one foot to 18 inches, and in the manner now described. The outer tier of logs is laid horizontally, and rises up perpendicular; the tier is laid four or five feet within the outer tier, at the bottom of the dock, and the upper parts of it approach the upper part of the outer tier, within a foot or 18 inches; the inner tier forming an obtuse angle with the bottom of the dock, and an acute one, with the outer side of the dock, presenting the figure of a triangle, and having uprights of wood between them, from each other—say about every eight or ten feet; these posts are to be let into the bottom logs four or five inches to secure their heels, and the logwork also connected with each other by dovetail cobwork. Thus the sides of this dock are made sufficiently strong to resist any pressure that can be brought to bear upon it.

Those two double sides of this dock answer the double good purpose of strength and buoyancy, as the vacancy between them must never be allowed to fill with water when a ship is to be docked—for if they were, there would be no certainty of the dock rising as desired; but if a sufficient portion of them is clear of the water, then the dock must, and will, rise as calculated on to do; for the capacity of those spaces is of such dimensions, as to allow them to lift any weight that can be required, and of course preserve the stability of the dock when the main chamber is full of water.

The bottom of this dock is formed somewhat different from its two sides, the inner tier of logs not being quite so far from the outer tier at the bottom of the dock, as they are at the sides; but sufficiently so, to form an angle of security and leave a space large enough for all the purposes requiring buoyancy in that part of the dock.

The after part of this dock, or gate end, is formed as here described; the sides of the dock are to project beyond the gates when opened far enough to allow the centre post of the gates to rest a few feet within those projected ends; and at those points of the sides of the dock there will be strong upright posts well supported from the sides of the dock, to receive the shocks of the
ship when entering the dock, and protect the gates from injury, and also to give the necessary buoyancy to that part of it.

From this formation of the dock, it will readily be seen, that it can be caulked and repaired for many years, in the water, without taking it on the shore at all, as the caulking on the inside will be as effective 'as that done on the shore.

When the ship is in her place, and the water sufficiently pumped out to allow her keel to rest on the blocks, she will be supported by shores from the bottom of the dock, to which they are secured by hinge bolts, and to the sides of the ship by cleats nailed over their upper ends, and also by shores from the side trunks of the dock against the sides of the ship, and from any other part of the dock that the condition of the ship may require.

The gates are to be formed in the common way, presenting an arch by their junction in the centre of the dock, to resist the pressure of the water, and to be supported at their centres, and also from other points by similar shores to those that are intended to support the ship in her place; they are also to be made tight by nailing a beam along the lower part of the gates so as to cover the seam that they form with their sills, and up the side of the gate that is last shut, this being to be let into grooves in the dock, and allow it to lap over the seams when the gates are shut; and to assist the sides of the dock to bear the strain that this pressure of the water will occasion to them, there is to be a beam in two parts, a little within the gates, which will come together in the centre of the dock, and be secured by bolts passing through them, and their ends will be secured to the sides of the dock between two stout knees, where a strong bolt will pass through their ends; and when the ship is passing into the dock, those beams will be canted up until she passes, and then they will assume their useful stations, and receive additional bolts for their necessary; there will also be a similar beam outside the gates.

The next matter of importance that has engaged my attention in the invention and construction of this plan of a floating dry dock, is the method of pumping it out, so as to free it from water; and to answer this end, I propose the following novel idea:

In the fore end of the dock let there be two boxes, each of them nearly equal in length to one half of the width of the dock, and to extend ten or more feet aft, according to the size of the dock; let the outsidés of those boxes bevel, so as to fit the outer part of the inside of the dock, and their inner ends form with the dock, by being bevelled off. This form of those boxes will allow them to be raised by their side or outer ends to a considerable height before their inner ends will come in contact with each other; for as those boxes are to rest on an axle constructed within their inner lower corner, they are only to be lifted by their side, or outer ends, and consequently only one half of their weight is to be raised.

This axle is so formed as to answer the purpose of discharging the boxes of the water which they contain, when elevated, and as follows: the forward part of the axle is to pass out through the fore part of the dock, and to be fixed in a strong support of the dock, or any position metal, the male thread of a screw five or six inches wide; and the dock to have in its side a corresponding female screw to receive it; or a leather hose, well secured to the axle and to the outside part of the dock, may answer the same purpose, and be more economical.

This axle is then, say live or more inches in diameter, bored through its outer end with an auger, eight inches diameter, to nearly the centre of the box, and a sufficient number of holes of two or three inches bored through the axle into this large canal, to allow it to be filled with the water from the box as fast as it can run out; when the box is elevated, and thus discharges the water from returning into the box, a valve is to be fitted on the outer end of this axle, and thus the water and will be drawn off from this dock by a much smaller force than was ever done by any other means. The box is filled with water through a valve in its bottom as it descends, which closes as it ascends. I would also propose, and advise, one of those boxes to be fitted with a siphon, which will in the commencement of freeing the dock from the water be rather more expeditious in its operation than the caulk ing box; but as the water falls in the dock, and the siphon is more convenient; this siphon may be square at its lower ends, and have sliding valves to close or shut it as occasion may require; they are to be moved by a square rod cog-toothed, and a pinion and crank at its upper end. There must also be a good valve board pump in each of the side trunks of the dock, when required, but they need not be larger than to require the labor of one man each; and by having a scupper leading from the main chamber of the dock to those trunks, they can be drained of all the water. The stretchers may be cut off at the fore end of the dock, so as to allow those boxes to be lowered close down to the bottom of the dock.

The purchase for raising those boxes should be two three-fold blocks, the fall of which is to lead to a capstan, or common crab, about two feet in diameter, the bars of which may be from ten to twelve feet long. By this means one man is made equal to from 60 to 72, and he can have a weight of from 3,000 to 3,800 pounds six feet high in one man, and in need of an addition of 300 pounds, say 7200; for it is well known that a man can so exert himself during that short space of time as to produce that degree of labor, and also to continue it alternately at short intervals for one or two hours. This admitted, it is clear that a Dock for all merchant purposes can be made, and two men be pumped out in one hour. Those boxes, if made of oak plank an inch and a half thick, will, when entirely out of the water, weigh about 2500 lbs.; consequently one man can raise the box and and from 800 to 1000 pounds of water besides; but as the water will escape as fast as the box can be raised, this labor will be principally confined to the lifting of the box.

But it must be remembered, that this weight of 2500 pounds is confined to the siphon box alone, as half the weight of the caulk ing box will rest on its axle. The result therefore of lifting the latter box is two to one in weight, both of box and water; water wheel account may be preferred; but where there is a sufficiency of power, the siphon box will be the most expeditions.

What I claim, as my invention, is the construction and arrangement of the different parts of this Dock, in the building it of logs, and the method of pumping it out, and as above described, and also the practical means of connecting the whole mass together, by large round bolts than can be used in vessels of the ordinary construction.

When the siphon box is used, there must be a framework around it, but particularly at its corners, to keep it in its place and to support it. I contend that there is no more necessity for a stone dock than there is for a stone ship,—that is, so far as capability, stability, and strength are required in the construction and use of those structures. If this position can be maintained, and I invite examination, why should the revenue, appropriated for the increase of a navy, which we are so much in need of, be so spent? It may be urged that durability is an important consideration; but I cannot see why the present generation, who have not the means of present defence, should be taxed to provide for futurity. Those who come after us have already prepared for them the plans which, if preserved and preserved in, will grow with them, and place them in a situation to bid defiance to the world combined in arms against them; but if they should be as improvident as we evidently are disposed to be, their mighty means may also be reduced to inefficiency.

A dock built on the plan here proposed, large enough for a gun ship can be completed for use, for less than $100,000; for a frigate of the first class, for less than $275,000; and for a sloop of war, for less than 50,000.—Why, then, expend on the largest of those stone docks from 700,000 to 1,000,000 dollars? What can justify
ARMY AND NAVY CHRONICLE.

this tremendous expenditure of money, so much needed in other branches of the service? Probably, destructibiliti
will be urged as a proper objection to wooden docks; but if they are built as here recommended, there will be but little difficulty in removing such objections.

Let one of these docks for a 74 gun ship be built of white oak, from the lower part of the frame down to the ordi
frame if well seasoned and above that with live oak; and but little doubt can be entertained of its lasting for a con
siderable number of years, without requiring any repa
ries of importance, and when it does, they can be ma
ried in the water, even to coppering of it, by the use of the "Brodie Box," invented by an ingenious man, who
is called "the poor Parson." Now, therefore, suppose three of these docks to cost each $100,000; that would be 300,000 of the 700,000
or the 1,000,000$.

Put the remainder, over and above the cost of the three docks, at 6 per cent. interest, and the accumulat
ning capital will be ample sufficient to re
pair, rebuild, and perpetuate these docks as long as those of granite will stand. Thus it is as clear as the sun at noon-day, that for the amount which is now proposed to be expended in the erection of one stone dock, we can have three; and if the appropriations for the Navy are to be thus disposed of, when shall we see what was rec
commended for us yesterday, and that we might after our course is carried too far? Skilled officers cannot be made in a short time; and without squadrons to cruise in regular order, they cannot be made at all.

They may, however, be qualified to fight a single ship; but if our enemies do not choose to meet us in that way, what then? Why we must look on at a respectful dis
ance, and see the commerce of our country sacrificed.

A skilled tactician, in command of a well disciplined fleet, would be able to beat double his number, if of a different description.

I have heard some objections started to the stability of this dock. It has been asked, will it not heel so much as to interfere with its intended use?—I answer—
no, it cannot; its extraordinary breadth will ensure its stability. But if it could and did heel, what would be the conse
quence? The ship would float—the dock be pumped out again—and that would be the utmost extent of an almost impossible event.

But such a vessel as this dock would constitute could be so pressed on either side as to fill, but few structures
on the earth would be left standing. We hear too often of the destruction of cities by earthquakes, as we do of the upsetting of ships in harbors.

The pumping out of this dock for a 74 gun ship, can be done by 50 men in four hours, when the ship is in it, and in a proportionately less time for smaller docks. The inventor pledges his veracity to prove all the state
ments which he has made, respecting this dock, and does it with estimates of the cost before him, made by an able
practical, naval architect, in all of which he is supported by the opinions of practical men.

H.—Stay on the valve, to prevent it from canting over the back way.

I.—Hollow valued axle, out of which the water will pass when the box is lifted (as it is to be by a capstan and tackle.)

J.—Box to be discharged by a syphon, when lifted per
pendicularly by a tackle and capstan.

K.—Syphon of copper is the box J. These boxes are to be either 10, 12, or 15 feet square, or oblong.

L.—Platform to walk round the Dock on.

M.—Second position of the box E when cant into dis
charge the water.

N.—Arch rect to attach the tackle to, which is to raise the water boxes.

O.—One of the gates shut, the other being opened within in the Dock; and they are hung a little more than half their weight within it, which assures them from any injury by the entrance of the ship, and the extension of the sides of the Dock supplies the necessary buoyancy at its after end.

P.—Canting beam, to ensure the gates. It is to be kee
peace by means of the bolts Q, which (when it is to be raised for the admission of the vessel) are to be removed, and it is then cant up be
tween the knees R, this to be remarked, that there are to be two of these beams, one to be within and the other without the gates.

E2.—Section of the canting box and axis; showing the valve and outlet for the discharged water.

S.—An opening bored into the axis, intended to receive the contents by the boxes T, and to flow out by the valve U.

ARMY.

March 14.—Lt. J. Mackay, 2d Art'y, relieved from duty in the Engineer department.

RESIGNATIONS.

C. F. M. Noland, 1st Lieut. Dragoons, 1 March.

A. M. Les, 2d Lieut. do 31 May.

J. H. Martindale, Brevet 2d Lt. do 10 March.

NAVY.

Master Commandant Joseph Smoot has been ordered to the Navy Yard at Washington, vice Captain John Gallegher, promoted and relieved.

The U. S. frigate Potomac, from Cadiz, and Constitution, from Smyrna, sailed from Gibraltar 4th Feb.

The U. S. ship Ontario, for St. Catharine's, was at Santos, 1st January.

APPOINTMENTS BY THE PRESIDENT.

By and with the advice and consent of the Senate:

THOMAS HOLDEN STREVLOW to be a Captain in the Navy from the 22d of January, 1835.

SAMUEL L. BREERE and BENJAMIN PAGE, Jr. to be Mas
ters Commandant in the Navy from the 22d December, 1835.

MURPHIN COULTER to be a Surgeon in the Navy from the 22d December, 1835.

ALEXANDER J. WEDDELL to be an Assistant Surgeon in the Navy from the 22d December, 1835.

DEATH.

On the 7th Feb. on the Seneca Reservation, in Pennsyl
vania, the celebrated Chief. GAB-YAN-WAH-CAH, or Complanter, aged about 100 years.

This noble Indian, at an early period of the Revolu
tionary War, took an active part on the side of the Ameri

cans in their struggle. He has ever since manifested the utmost friendship for the whites. When solicited by Washington to send some of his young men to Philadelphia, for the purpose of being educated, he sent at the head of a band, his son, Henry O'Hall, an evidence of a strong
mind overcoming deep-rooted and long existing prejudices.

He, with his associate, Red Jacket, was, for many years, the counsellor and protector of the interests of his nation; and while he and his four sources of information are too lim
ited to furnish the particulars more fully of the eventful life of this "Nature's Nobleman."—Buffalo Journal.
IN SENATE.

TUESDAY, FEBRUARY 29.

Mr. Southard presented the petition of Charles G. Wood for a guardian for the time he was suspended from duty; which was referred to the Committee on Naval Affairs.

Mr. Kent presented the petition of the representatives of the late Lieutenants John and Truman of the revolutionary army; the petition of the representatives of the late Lieutenants Goldsborough and Green, of the revolutionary army; and the petition of the widow and son of the late Luke Merriman, a soldier of the revolutionary army, severally praying for a half pay and bounty land; which were referred to the Committee on Revolutionary Claims.

Mr. Swett presented the following resolution, which was referred to the Senate:

Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of constructing a canal at St. Louis, Missouri, into an arsenal of construction.

WEDNESDAY, FEBRUARY 29.

Mr. Wall, from the Committee on Military Affairs, reported the bill for the payment of militia and volunteer corps called into the service of the United States, reported the same with several amendments, which were read and concurred in, and by general consent the bill was then considered as in Committee of the Whole.

Mr. Davis submitted the following resolution, which was considered and agreed to:

Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of providing for the payment of militia and volunteer corps called into the service of the United States, reported the same with several amendments, which were read and concurred in, and by general consent the bill was then considered as in Committee of the Whole.

Mr. Porto submitted the following resolution, which was considered and agreed to:

Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of providing for the payment of militia and volunteer corps called into the service of the United States, reported the same with several amendments, which were read and concurred in, and by general consent the bill was then considered as in Committee of the Whole.

Mr. Porter submitted the following resolution, which was considered and agreed to:

Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of providing for the payment of militia and volunteer corps called into the service of the United States, reported the same with several amendments, which were read and concurred in, and by general consent the bill was then considered as in Committee of the Whole.

Mr. Davis submitted the following resolution, which was considered and agreed to:

Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of providing for the payment of militia and volunteer corps called into the service of the United States, reported the same with several amendments, which were read and concurred in, and by general consent the bill was then considered as in Committee of the Whole.

Mr. Davis submitted the following resolution, which was considered and agreed to:

Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of providing for the payment of militia and volunteer corps called into the service of the United States, reported the same with several amendments, which were read and concurred in, and by general consent the bill was then considered as in Committee of the Whole.

Mr. Davis submitted the following resolution, which was considered and agreed to:

Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of providing for the payment of militia and volunteer corps called into the service of the United States, reported the same with several amendments, which were read and concurred in, and by general consent the bill was then considered as in Committee of the Whole.
called into service before its passage, and who are directed to be paid, shall embrace those only ordered into service by the commanding General, and the authorities of States and of the Territory of Florida, under authority from the War Department, for repressing the hostilities of the Flor- 
dia Indians."

Mr. HAWES then offered the following amendment: "And be it further enacted, That the officers to be provided for in this act, shall not exceed the number of officers attached to companies or regiments in the infantry service of the United States." Mr. R. M. JOHNSON, White of Florida, and WHIT- 
LESEY objected to this amendment.

Mr. HAWES then modified his amendment by the follow- 

Practiced, it shall not be in violation of the laws of the States or Territories, from which such troops may be called.

Mr. R. M. JOHNSON objected to the whole proposition of the gentleman from Kentucky, (Mr. Hawes,) as he was confident that the authorities of the States and Territories, from which the troops would be drawn, would make provision for the number of officers to be sent, and that they would not send more than were actually required.

Mr. HAWES said his amendment provided that the officers to be paid agreeably to the laws of the States and Territories from which they were drawn. He was for having more fighting men, and fewer officers.

Mr. WHITLESEY did not believe that House to be the one place where patriotism was the object. He believed the States and Territories would make ample provision to secure the United States from any danger of paying more officers than were necessary.

Mr. HAWES thought good gentlemen would allow the question to be taken, as it was highly important that the bill should be passed with the least possible delay. Mr. WHITE, of Florida, hoped the gentleman from Ken- 

cky (Mr. Hawes) would withdraw his amendment. He was satisfied that there would not be more officers than the laws of the States and Territories called for.

Mr. HAWES' amendment was then disagreed to.

On motion of Mr. R. M. JOHNSON, the committee rose and reported the bill to the House.

The amendments were then concurred in by the House, and the bill ordered to be engrossed and read a third time to-day.

FRIDAY, FEBRUARY 19.

Mr. PARKER, from the Committee on Naval Affairs, reported a bill for the relief of Spencer C. Gist; which was read twice and committed.

WEDNESDAY, FEBRUARY 24.

Mr. R. M. JOHNSON, from the Committee on Military Affairs, reported the following bills, which were read twice and committed:

A bill to establish an arsenal of construction in the State of North Carolina;

A bill for the erection of a national armory on the western waters.

TUESDAY, MARCH 1.

On motion of Mr. HAMER, Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of establishing an arsenal of depot and repair for the public arms, at some suitable point in the State of Ohio.

On motion of Mr. JOHNSON, of Louisiana, Resolved, That the Committee on Commerce be instruct- ed to inquire into the expediency of making an appropri- 
tation for an extension of the Georgetown Canal, at the mouth of the bayou St. John, in the State of Louisi- 
a.

On motion of Mr. GARLAND, of Louisiana, Resolved, That the Committee on Naval Affairs be in- structed to inquire into the expediency of adopting some measure for testing the utility of a discovery made by Col. Charles Morgan, of the parish of Point Couppee, Louisiana, for preserving dry rot in timber, for which he has ob- tained a patent.

On motion of Mr. GARLAND, of Louisiana, Resolved, That the account of Lieut. Washington Seawell against the United States, and the documents in support of the same, be referred to the Committee of Claims with instructions to inquire into the ex- 

pediency of paying the same.

On motion of Mr. JONES, of Michigan, Resolved, That the Committee on Military Affairs be in- structed to inquire into the expediency of making appro- priation for the improvement of the crossing at the ferry on the river Wisconsin, on the military road between Prairie du Chien and Fort Winnebago, either by a bridge across said river, or otherwise as may appear most expen- dite. And that the said committee also inquire into the expediency of providing for the construction of a military road from Milwaukee on Lake Michigan to the Mississippi river, in the Territory of Michigan. Also, for the construction of military roads from Fort De- 
Soto, through DeSoto and Du Bois counties, to Cass- 
vie and to Fort Chien. The gentleman from Michigan made a speech from the Blue Mound, to the nearest navigable point on the Mis-
issippi river, by the most eligible route, from Cassville, to intersect the military road, leading from Prairie du Chien to Fort Winnebago, and from Cassville to Galena, on the most eligible routes.

WEDNESDAY, MARCH 2.

NAVAL APPROPRIATION BILL.

On motion of Mr. CAMBERLING, the House then resolv- ed itself into a Committee of the Whole on the state of the navy, on his amendment, and resumed the con- 
sideration of the bill making appropriations for the naval service for the year 1836.

The question pending was the motion of Mr. BELL to 

remove the item for the improvement and necessary repairs of the navy yard at Portsmouth, New Hampshire, one half, viz: from $87,000 to $33,500.

Mr. THOMPSON, of South Carolina, addressed the house, and before he concluded, gave way to Mr. WHITE, of those motions of the committee rose, report- ed progress, and asked leave to sit again.

THURSDAY, MARCH 3.

Mr. CAMBERLING, from the Committee of Ways and Means, reported the bill, with an amendment, for transfer a part of the appropriation for suppressing In- 
dian hostilities in Florida, to the credit of subsistence, which was read twice and ordered to be engrossed, and 

read a third time; and subsequently the bill was passed.

Mr. JOHNSON of Kentucky, from the Committee on Military Affairs, reported the following bills; which were read twice and committed:

A bill to fix the pay of the officers of the national armories; and a bill to provide for the better protection of the western frontier.

Mr. JARVIS, from the Committee on Naval Affairs, made an adverse report on the bill from the Senate, for the relief of Captain Augustus A. Nicholson.

Mr. JARVIS, from the same committee, reported a bill making appropriations for removing the bar at the mouth of Pensacola harbor, and for constructing an hydraulic dock, or an inclined plane, at Pensacola; which was read twice and committed.

Mr. JARVIS, from the same committee, reported the follow- ing resolution, which, by consent, was considered and agreed to: Resolved, That the Secretary of the Navy be directed to cause a course of experiments to be instituted, for the propose of determining the efficiency and testing the safety of the medium or light gun for naval service, and compare their effect with the guns for which they were proposed to be substituted.

Mr. GARLAND, from the Committee on Naval Affairs, reported the following resolutions, for the relief of Dudley Walker, which was read twice and committed.

Mr. WHITTELEY, from the Committee on Claims re- ported a bill granting half pay to the widows and orphans, where their husbands and fathers have died or shall here- after die in the military service of the United States, in certain cases; read twice and committed.

NAVAL SERVICE BILL.

On motion of Mr. CAMBERLING, the House then resolved itself into a Committee of the Whole on the state of the Union, Mr. MILLS in the Chair, and resumed the consid- eration of the bill making appropriations for the naval service for the year 1836.

The question pending was the motion of Mr. BELL to re- duce the item for the improvement and necessary repairs of the navy yard at Portsmouth, New Hampshire, one half, viz: from $87,000, to $33,500.

Mr. THOMPSON, of South Carolina, resumed his remarks begun yesterday, and concluded with the proviso that Mr. EVANS obtained the floor, but gave way to Mr. CAMBERLING, on whose motion the committee took up and considered the bill making appropriations for pay- ment of revolutionary and other pensions for the year 1836.

FRIDAY, MARCH 5.

Mr. HANNegan rose and remarked that he had seen with regret a settled determination on the part of the ma-

oriety of the House to resist any attempt to expose the
ARMY AND NAVY CHRONICLE.

THE MILITARY ACADEMY AT WEST POINT. He warned the house that they could not consider the truth, and that if the army was not provided with proper equipment, the State should be made aware of the condition.

Mr. H. then called to order, both by the chair and by the Clerk.

The motion to suspend the rules was the last of the resolutions which were then ordered to be reported.

The report of the Select Committee appointed during the last Congress to investigate the affairs of the West Point Military Academy, was ordered to be printed.

Mr. H. again rose, and was again called to order. He said it was easy to touch a string to any order, but he desired to have the years and nays; which motion being seconded was ordered to be taken up.

The yeas and nays were accordingly ordered.

Mr. Brown begged leave to make an inquiry of the Chair.

The Clerk informed the gentleman that the question was not debatable.

Mr. Brown said he did not desire to discuss the question; he only wished to know whether the report of the select committee, to which the resolution referred, had ever been received on the floor of the House.

The Clerk replied that he could not answer the question.

It was a report made by a committee of the last Congress.

Mr. Whitfield inquired if the motion was intended to be taken up on Monday, or on Tuesday, or on Wednesday, or on Thursday.

Mr. Hancock explained that his motion contemplated only an application to the morning hour.

The yeas and nays was then taken, and decided as follows:

yeas 135, nays 52.

The House refused to suspend the rules, two-thirds not voting in the affirmative.

MARCH 7.

Mr. Carter submitted the following resolution, which, under the rule, lies over one day:

Resolved, That the Secretary of War be requested to communicate to this House, such information as may be in his possession, relative to the appointment of additional ordnance officers for the army, and the location or sites of such iron vessels at such places as they may be needed.

Resolved, That the report of the Select Committee appointed during the last Congress to investigate the affairs of the West Point Military Academy, be withdrawn from the table, and that ten thousand copies thereof be printed.

Mr. H. asked for the yeas and nays on his motion to suspend, which the House refused to order, and the motion was negatived without a count.

THURSDAY, MARCH 10, 1836.

SEMINOLE HOSTILITIES.

Mr. R. M. Johnson asked the consent to go into Committee of the Whole on the state of the Union, for the purpose of considering certain amendments of the Senate, in a bill from the House entitled "An Act for the payment of volunteers and militia corps in the service of the United States." The bill was read the second time.

Mr. Johnson briefly explained that the amendments in question provided for the appointment of additional paymasters of the army, a measure proposed in a bill already approved by the Military Committee of the House.

Mr. Cambray appealed to the gentlemen from Kentucky to withdraw the motion for the present, as he wished to make a report from the Committee of Ways and Means, on another subject.

Mr. Johnson assented, and Mr. C. asked the consent of the House to make the report indicated by him.

Mr. Brown wished to amend the motion, so as to enable standing committees of the House to report generally.

The Clerk said it was not then in order to make that motion.

Mr. Cambray then asked the consent of the House, to a resolution that was an additional appropriation of $300,000 for repaying the hostilities of the Indians in Florida, which was imperiously required from the fact, that the funds already appropriated were exhausted, and drafts were constantly coming in, which could not be met.

Mr. Bond objected, and

Mr. C. also moved to suspend the rules, which was supposed to direct a count; and

The amendment of the Committee of Ways and Means, reported a bill making a further appropriation for the repayment of Indian hostilities in Florida; which was read a first time and committed.

Mr. R. V. Johnson then moved that the House resolve itself into Committee of the Whole on the state of the Union, not for the purpose of considering the amendments from the Senate to the bill providing for the payment of volunteers and militia corps in the service of the United States, &c., and also the bill on the table.

Objection being made,

Mr. Cambray moved a suspension of the rules, which was agreed to, and the motion of Mr. Johnson being also concurred in.

The House accordingly went into committee, Mr. Mason of Virginia in the Chair, on the following bills.

The amendments of the Senate to the bill from the House, had been urged upon Congress the absolute necessity for an increase in the number of paymasters of the army.

Upon adopting the latter amendment, Mr. Underwood called for a count.

Mr. R. M. Johnson urged the necessity of adopting the amendment, as required by the public service.

After a few remarks from Messrs. Denison, Cambray, Ward, R. M. Johnson, and Williams, of N. C.

The question then was taken up, and there appeared—yeas 59, nays 0: no quorum voting.

Mr. Adams moved that the committee rise and report that the Senate to the House.

The yeas and nays was then taken up, and the amendment was concurred in—yeas 72, nays 0.

Mr. Cave Johnson said it appeared that this Florida war was to be made a pretext for the appointment of three additional permanent paymasters.

Mr. Johnson of Kentucky, rose to explain. It was not on account of the war in Florida that this amendment had been made. For the last two years the Paymaster General had urged upon Congress the absolute necessity for an increase in the number of paymasters.

Mr. C. Johnson moved to amend the amendment by providing that the three additional paymasters should hold the offices for only one year.

The amendment of Mr. Cave Johnson was then agreed to without a count.

Mr. McKay said a few words in explanation of the amendment, which was merely to change the tenure of office from one year.

The amendment of the Senate, as amended, was then non-concurred in.

Mr. Williams of Ky., then moved a reconsideration of the vote of the committee concerning the first amendment of the Senate, providing for the appointment of three additional paymasters, which was agreed to, and the amendment of the Senate was non-concurred in.

A further amendment to provide for the appointment and pay of the clerks, was then non-concurred in; and that part of the title of the bill setting forth the provision for the additional paymasters, was then stricken out, and the bill was laid on the table.

On motion of Mr. Cambray, the committee took up and considered the bill making further appropriations for the repression of Indian hostilities in Florida.

The committee adopted the report, and the two foregoing bills were reported to the House.

The House concurred in the report of the Committee of the Whole on the last bill, and it was ordered to be engrossed and read the third time to-morrow.

The amendments to the Senate bill providing for the payment of volunteers and militia corps in the service of the United States, agreed to in Committee of the Whole, were concurred in by the House; and the House also concurred with the Committee of the Whole in their disagreement to the other amendments of the Senate. 
FRIDAY, March 11.

The following bill from the Senate was read twice and committed:

A bill making appropriations for deepening the bar, and for the construction of a dry dock at Pensacola.

The House proceeded to consider the resolutions of the Legislature of the State of New York, on the subject of the organisation of the militia, presented on a former day by Mr. Gillet, who moved to refer them to the Committee on the Militia, with the following instructions:

1st. That the committee of both houses be instructed to report on the resolutions of so altering the laws relating to the militia as to provide:

2d. That all free white, able-bodied male citizens of the United States, between twenty-one and forty-five years of age, may be enrolled as such.

3d. That of the persons so enrolled, all who are under twenty-seven years of age, shall once in each year, be called out, for a period not less than six days, and remain under arms during that period, with the view of improvement in military discipline, and martial exercise, and such persons to be minute men, and first called upon in case of insurrection, or invasion.

4th. That the Governor, or who are so called out, and remain under arms, shall receive a reasonable compensation for their time.

5th. That the Government of the United States shall furnish at proper depots, for the militia, all such arms, as are called out, all necessary tents, arms, and accoutrements.

6th. That there shall be deposited at the proper points on the frontiers and seacoast, all necessary and proper arms, including brass cannon, and accoutrements, and ammunition, to be issued to the militia when called into actual service, in defense of the country.

Mr. Gillet expressed the hope that the House would consider the resolutions, presented by Mr. Gillet, to be adopted, and expressed his firm conviction that the House would adopt the resolutions, presented by Mr. Gillet, with the view of improving the militia, in a manner calculated to promote the peace and security of the nation.

Mr. Glasscock, as chairman of the committee on Militia Affairs, stated that all the facts sought to be inquired into and embraced in the instructions intended to be given to that committee, were already before that committee.

Mr. Glasscock stated that the whole subject was already before the House, and that the committee, on收到 the instructions, would proceed to deliberate on the subject, and that the House would adopt the resolutions, presented by Mr. Gillet, with the view of improving the militia, in a manner calculated to promote the peace and security of the nation.

Mr. Glasscock introduced the amendment at this time in order that the committee, before reporting the bill, might be in possession of the views of others in relation to the subject. He was of opinion that the militia ought to be paid. The Government found ways and means to pay every body else who performed any duty with the single exception of the militia. They compelled the militia to perform services for three or four days in the year, subject to fines and imprisonment for neglect of duty, and for all nothing.

Mr. Lincoln opposed the amendment at some length, and was in favor of the instructions of the gentleman from New York. He thought that the entire opposition to the resolutions of paying the militia, as it would tend to degrade the character of the free-born citizen of this country, and assimilate him to the mercenary tools of despotic tyrants. He designated the proposition as in effect making the militia the means of lowering the value of the revenue. Mr. L. abstained from the discussion of the subject, and the question was ordered to the committee.

Mr. H. introduced the amendment at this time in order that the committee, before reporting the bill, might be in possession of the views of others in relation to the subject. He was of opinion that the militia ought to be paid. The Government found ways and means to pay every body else who performed any duty with the single exception of the militia. They compelled the militia to perform services for three or four days in the year, subject to fines and imprisonment for neglect of duty, and for all nothing.

Mr. Evans moved the following amendment, to come in as an additional instruction to the committee on the Militia:

And that the Committee on Militia be instructed to inquire into the expediency of paying the militia of the United States, when called out for military exercise, inspection, and review, as now organized.

Mr. H. explained that he introduced the amendment at this time in order that the committee, before reporting the bill, might be in possession of the views of others in relation to the subject. He was of opinion that the militia ought to be paid. The Government found ways and means to pay every body else who performed any duty with the single exception of the militia. They compelled the militia to perform services for three or four days in the year, subject to fines and imprisonment for neglect of duty, and for all nothing.

NAVAL SERVICE BILL.

On motion of Mr. Glasscock, the House passed the bill to the Committee on Roads and Canals.

Hon. M. Van Buren, President of the Senate.

TUESDAY, March 15.

REPORT OF THE SECRETARY OF WAR.

With statement showing the effective force of the Army, and the pay and emoluments of each grade, in compliance with a resolution of the Senate.

War Department, February 29, 1856.

SIR: I have the honor to transmit a report of the Adjutant General, showing the effective force of the Army, and a statement exhibiting the pay and emoluments of each grade.

Very respectfully,

Your most obedient servant,

LEW. CASS.

Hon. M. Van Buren, President of the Senate.
Adjutant General’s Office,
Washington, Feb. 18, 1836.

Sir: In conformity with your instructions, I herewith respectfully submit a statement exhibiting the "efficient force" of the army, in such form as, it is supposed, will best meet the objects of the Senate’s resolution of the 15th instant, which, it is understood, has reference to the number of troops provided by the peace establishment for the protection of the frontiers, and to garrison the forts. Accordingly, the statement includes—

The regiment of dragoons
715 men

The four regiments of artillery
1,988

The seven regiments of infantry
5,599

Total rank and file, including non-commissioned officers
6,301

Add the complement of commissioned officers
457

Aggregate of dragoons, artillery, and infantry
6,758

From this number (6,301) of men, deduct 550, being the estimated number of recruits now required to fill the rank and file of the army, as, also, 487, reported sick, and the remainder, 5,264, would constitute the actual available force to garrison the 82 regular permanent works which, according to the plan of construction, require 5,288 cannon for their armament, and for the protection of the northern, western, and southern frontiers; i.e., from Houlton, Maine, along the boundary line, north, via the lakes, over to the Mississippi, as far north as Fort Snelling, near the falls of St. Anthony; thence, south, to Fort Leavenworth, situated 450 miles above the mouth of the Missouri; thence, south, 1,200 miles, to New Orleans; and to Fort Towsen, 630 miles, up the Red river, near the Texian line.

If it be desired to see the number of general and staff officers, the number of officers of the medical, pay, and purchasing departments, the number of engineers, topographical engineers, and officers of the ordnance, I respectfully cite the official documents accompanying the President’s message to Congress, page 56, table A, of document No 1, and also the Army Register, page 50.

Respectfully submitted.

R. JONES,
Adjutant General.

The Hon. Lewis Cass,
Secretary of War.

Remarks.

1. In order to furnish more specifically the information called for by the Senate’s resolution of the 16th instant, respecting the "efficient force" of the army, it may be proper to state that, of the 457 officers of dragoons, artillery, and infantry, provided by law, on the 1st of January, about 40 were reported as detached from their respective regiments; of whom 77 were employed in the Ordnance and Engineer departments, at the Military Academy, and on Topographical duty, 18 were on special service, and 23 on recruiting service.

2. From the number of the rank and file provided by law, the following deductions should be made, when considering the "efficient force" of the army, to wit:

The number of men reported sick
487

The vacancies, or the estimated number of recruits required to fill the ranks
550

1,037

To this amount, (1,037,) the actual "efficient force" is less than the establishment; which leaves the rank and file of the army, at this time, for actual service, not to exceed 5,264.

R. JONES,
Adjutant General.

February 18, 1836.

**NOTES:**

Additional remarks are provided, but are not fully transcribed in the image. The text details the pay and emoluments of each grade within the military, including various positions such as Surgeons, Professors, and Officers, with specific allowances and duties. The average cost of quarters and fuel is also noted, showing the financial aspects of living in these roles. The document is a comprehensive guide to the financial aspects of military service in the late 19th century.

ARMY AND NAVY CHRONICLE.

WASHINGTON CITY; THURSDAY; MARCH 24, 1866.

To Correspondents.—"An inexperienced Correspondent," in reply to "Candor," is received, but deferred for want of room.

"Washington the brave," shall appear next week.

Henry J. Fox, Esq.: arrived at the seat of Government on Sunday evening, 18th inst.; in the Railroad line from Baltimore, and was presented to the President, by the Secretary of State, on the 16th inst.: as His Britannic Majesty's Envoy Extraordinarily and Minister Plenipotentiary to the United States.

We have inserted in another column, as much of the latest intelligence from Florida as we could possibly find room for; the particulars would entirely fill our paper.

Army Medical Board.—A board, consisting of Surgeon Zina Pitcher, Assistant Surgeons J. P. Russell and H. S. Hawkins, will assemble at Baltimore this day for the examination of candidates for appointment in the medical staff of the army.

Should Dr. Hawkins not reach Baltimore in time, Assistant Surgeon T. Henderson will supply his place. We observe that Dr. Hawkins arrived at Charleston, S.C., on the 12th inst. in the steamboat J. D. Mongin from Savannah.

We could not supply all our subscribers last week with the drawing of Com. Barron's floating Dry Dock; those who were omitted then will be supplied this week.

We insert below portions of the communication, alluded to in our last, as being from the pen of Subaltern or O. P. Q., and under consideration.

For the Army and Navy Chronicle.

[Communicated.]

The Chronicle of the 4th Feb'y contains a long article, in which the editor opposes his correspondent "Subaltern," and the arguments which he had brought in support of the Army memorial now before Congress.

He [the editor] charges Subaltern with a sentence, which, standing alone, might bear the editor's interpretation; but he is not to credit him with the peremptory, kind and complimentary language, with which he addresses the army. This was repeated by Subaltern in the Chronicle of the 4th Feb'y, and was consequently before the editor when he wrote. I need not recite it here. It shows the true scope and meaning of Subaltern's article. The argument then turns upon the rules of construction. Whether or no, it is fair reasoning to detach a sentence from the general body of a writing, and when so isolated, draw from it a meaning which the context neither suggests nor admits. The equitable rule of interpretation is, to take the whole, with all its parts, and construe it according to its plain apparent meaning; not to seek for hidden and unnatural constructions. Try the article of Subaltern by this test, and he is acquitted of your charge.

The editor proceeds to abuse himself with some very pleasant raillery upon mathematical theory as opposed to practical results. But the error is not in the "calculation" mentioned, but in the editor's practical misinterpretation of mathematical language. There are mathematical as well as legal fictions; which when properly defined, convey nothing false; though manifestly absurd, according to the plain construction of persons; unrehearsed in scientific technicalities. Of this nature is the analytical theorem of the meeting of parallel lines at infinity. It is the subtle and elegant refinements of reasoning in this department of mathematical research, which form to the votaries of that science, the exceeding and ecstatical delight of its study. It is the fairy land of mathematics.

The reasoning of Subaltern contains to be sure, none of the abstruse principles I am speaking of. But the brevity of the mathematical, and the apparent mistaken emphasis and interlacing of his argument mislead the Chronicle. Subaltern never meant to extend the lives of Army Colonels to the unconsiderable period of 160 years. (The fate forbid; already have their shams been too long idle.) On the contrary he is as satisfied of the "certainty of death" as the landlord's wife in Joaquin Angelus. An examination, to which the editor of the Chronicle has subjected the form of his argument, and in respect of the particular herein mentioned, (the death of a Colonel, or what is more in point, the demise of the Coloneley,) Subaltern will never be found to indulge in any impius murmurs at the dispensations of good Providence. The principle which is the basis of Subaltern's calculation is not novel. It is established in political economy, in insurance offices, and in all calculations of casualities. When plainly stated, it is, that the amount of population and other things being equal, the number of casualities are proportionate to duration of time. The fair deduction from Subaltern's reasoning, in the credit of general principle, is this; that to each and every Lieutenant, the chances of his reaching a Colonole are to his chances of not reaching that rank, as the ordinary period of life is to 160 years. I am not disposed, Mr. Editor, to weary you with a profound and dull essay on the calculus of probabilities; but, save this, I am unwilling of Subaltern's impius remarks. Nor can any exception, in fairness, be taken to his method of making the comparison between the rates of promotion in army and navy,—viz,—by taking the promotions in both as stated in their official Registers, published by authority. On this point, the Chronicle disputes Subaltern's data, on the credit of a record carefully kept by a naval officer. (2) The argument here is narrowed down to a question of facts. The Chronicle cannot object that the army and the public should incline to official authority, rather than rely on the anonymous statement of a private record. At all events, let them correct the errors of their register, before we surrender the facts of our argument.

But, let us "suppose for the sake of argument," that, upon the facts, Subaltern was in error. This only fortifies his argument. It shows the promotion in the navy to be more rapid than he supposed; and consequently that the rate of promotion in the navy exceeds that in the army in a greater degree than Subaltern had asserted. (3)

As the communication bore no signature, and was not in the handwriting of Subaltern, although professedly coming from him, we were in doubt to which of the two correspondents to attribute it.

Upon a second perusal, we had determined to decline its insertion; but a subsequent communication from O. P. Q. (between whom and Subaltern there seems to be a mutual understanding) having authorised us to suppress any parts that we did not consider material, we have changed our purpose. We will give the writers the benefit of the explanations they offer, merely adding a few words, by way of explanation too, where we think they have misapprehended our meaning.

(1) This per contra seems very much like knocking a man down, and then begging his pardon by saying, 'I hope, Sir, I did not hurt you.'

(2) The statement of the number of officers in the navy in 1854, who were midshipmen in 1893, was taken from the record of an officer; but the statement of promotions between 1885 and 1888 was taken from the official registers printed by order of the Navy Department.
ARMY AND NAVY CHRONICLE.

We have a complete series of these, from 1814 to the present year; but we had few Army Registers to refer to. The error of Subaltern consisted in taking as the basis of his calculation, those officers in the Navy in 1835, who had been promoted since 1826, and omitting all who had died or left the service during the same period, but who should have been included in the calculation; which made the difference of 90. The Navy Registers do not give, as the Army Registers do, the casualties from year to year. Not having a file of Army Registers to refer to, we could not ascertain whether or not Subaltern had adopted the same rule, in his calculation of the chances of promotion in the army, but presumed that he had.

(3.) True, provided the same error were not committed as in the instance of promotions in the Navy; if otherwise, the result may be found to be different.

Censure of O. P. Q. upon "Notes by the Editor" in the Chronicle No. 60.

(Nota 5.) O. P. Q. did not mean to impugn the editorial independence of the Chronicle—would have been pushing the privileges of a correspondent to an unwarrantable licence. He merely availed himself of a public opportunity to criticise the "Order"; the points of resemblance between it and the article in the Chronicle were noticed by way of introduction, and to account for the digression the two happened to be present to the writer's mind. These circumstances occasioned the expression of an opinion on his article. At the present time (the) supposed insinuation would be most glaringly absurd. That attention, which the war of Florida casts direct from the theatre, could hardly be directed to the management of a paper. The pleasing amusements of society and the labour of dramatic composition are sufficiently engrossing; as the Army is aware. O. P. Q. never meant to make the charge of a "sinister influence." The petulant charge of "malice," was, on the part of the editor, a very natural expression of irritation under the supposed insinuation; but new, hardly calls for any defence from O. P. Q. There must be some motive for the animosity evinced by the malice. As a personal feeling, various, can exist between those known to each other only as writers in the same newspaper.

(Nota 2.) The Chronicle says, "if a naval officer were aware of the fact that O. P. Q. had thrown the apple of discord, &c. The reverse is the fact. No article has appeared in the Chronicle of which the same might not be said as justly. The editor does not assert it, nor, doubtless, did he intend to assert it. But he states it hypothetically, which is not fair, not pleasing. It is that of which we complain. To the remaining part of this note, and to what is said to "Subaltern and O. P. Q. about anonymous authorship, and the cluster of masked batteries, a reply from neither is necessary or becoming. The foundation of the sarcasm can, at any time, be removed.

We have a word or two to say, in reply to the foregoing.

The connection of the army order and the editorial article by O. P. Q. appeared to us susceptive of no other interpretation, than that both were designed by O. P. Q. to be viewed as emanating from the same hand; and that the head which produced the one, had also produced or counseled, advised and suggested the other. This interpretation was strengthened by the fact that the communication of O. P. Q. was anonymous. Subaltern was known to us.

It had been one of the most injurious prejudices against his works, which the editor was obliged to combat and overthrow—that all communications for the Military and Naval Magazine were submitted to a censorship at Washington, and that the authors of all were or would be made known at Head Quarters. Having succeeded, as he flattered himself, with dispelling the illusion, he could not but feel indignant when there was an apparent intention to revive the charge, which prompted him to use the forcible expression of malicious. C. P. Q. having disavowed all intention of making the charge of a sinister influence, we are bound in justice to retract the charge of malice.

CRUISE OF THE ST. LOUIS.

The following letter, from an officer on board the St. Louis, although not of very recent date, will be found quite interesting.

"U. S. Ship St. Louis,
Porto Cabello, Nov. 30, 1855.

"We have once more put to sea on a cruise among the West India Islands. On Friday, the 23rd Oct., we got underway from Pensaola, and on the 27th arrived off Havana, the largest city in the West Indies. When within twenty miles of the harbor we overhauled (i.e., caught up with) H. B. M. frigate Thunderer—she under all canvas, but we without topgallant sails. On the impulse of the moment our captain tucked ship and stood off, and in half an hour came up with the frigate again; finding (to use a Kentucky phrase) she could not hold a candle to us, we passed her, and hove to off Havana, then sent a boat in, purchased fruit, filled away, and stood for the island of St. Barts, one of the Virgin group, where we arrived on the 17th Nov. The delay was caused (as our sailors say) by sailing on Friday, for we encountered nothing but head winds, and were compelled to beat nearly all the way.

"We did not anchor at St. Barts, for after firing a gun, and hoisting the jack, a gentleman came on board with the news of Commodore Dallas' having left there some days before in the frigate Constellation, accompanied by the Vandalia. He also brought orders for us to follow the Commodore. We then immediately crowded all sail in chase.

"I was rejoiced that we did not stop at St. Barts, for it is but a mere rock, being the private property of Bernadotte, King of Sweden. We learned there that the King of France had been assassinated, and that it was probable one of the Bonaparte family would succeed him.

"From St. Barts we stood for the lovely island of Santa Cruz, belonging to the Crown of Denmark. We reached there on the 15th. When within five miles of the city of Fredericksstadt, we distinguished the Constellation at anchor in the harbor, fired a salute of 18 guns, and sailed around the frigate; the shore was thronged with spectators. The frigate's band then struck up "Hail Columbia," amid the deafening cheers of those on shore. We came to anchor beautifully; not a mistake occurring in taking in sail or any thing else.

"On the 19th a grand ball was given by the Commodore on board of his vessel, and upwards of 800 persons were present. Of course all the St. Louis' officers were invited. It was a matter of great importance to us where I should procure that part of a uniform of which I was not possessed. However, I at length borrowed..."
every thing requisite—of one I got a chapeau de bras—of another a quizzing glass,—gold chain, &c. Indeed I was remarkably well rigged out, with sword, full dress coat, and other articles belonging to our companions.

At 7 in the evening, we left our ship and stepped aboard the frigate; the band, composed of 30 performers, struck up our national air and played it very sweetly. The quarter deck presented a most magnificent appearance; all the guns were run forward, and their places occupied by sofas, which were crowded with ladies, beautiful ones too I assure you. Overhead were flags of every nation, neatly sewed together, so as to form a temporary awning. Around the hatches, masts, capstans, &c. were muskets, bayonets, swords, battle-axes, cutlasses, and boarding pikes, highly polished,lesh handsomely together with red, white and blue ribbons, forming chandeliers. In the centre of each of the most conspicuous chandeliers was a Danish and American flag, attached to each other by a wreath of artificial flowers. On the deck were sketched appropriate emblems, showing the amity existing between Denmark and the United States. But I will not be too minute, and will end this description as hastily as possible.

The ladies (God bless 'em) were lovely, and waltzed to perfection. I never before, except at St. Jago de Cuba, saw so many glittering uniforms; that of Gov. Vonschoten, to whom I was introduced, surpassed all, he having all his orders of nobility about his person. Commodore Dallas' was next in beauty, being gold embroidery from head to foot. All the inhabitants speak English. An American officer needs no introduction to a Danish lady, our uniforms being considered sufficient. At the ball, I conversed and waltzed with many, to whom I had never spoken before. I had the pleasure of escorting two pretty girls to the supper table, and waiting on them; indeed one of them became so interesting that I could scarcely leave her, even after I had seen her home.

"Enough cannot be said in praise of the Danes; they love Americans like brothers, and the hospitality with which they always treat us entitles them to the enviable reputation they have acquired.

"The officers of the Constellation are a genuine set of fellows: two of them, however, are in a ticklish predicament. The morning on which we arrived at Santa Cruz, Midshipmen May and Baldwin fought a duel. Baldwin's pistol did not go off—May's did, and wounded E. in the side, some say mortally.

"On the 20th we left Frederickstadt, and reached La Guayra on the 24th. When within ten miles of La Guayra, we observed Commodore Beluchi's squadron, of the Venezuelan navy, cruising off the coast, and intercepting all vessels trading between Porto Cabello and La Guayra. We left the latter place on the evening of the 24th and came to anchor near Porto Cabello on the 26th, 70 miles distant. Porto Cabello is nearly in a state of starvation and almost deserted, except the forts. When on shore, I walked through the city, and out in the suburbs. When half through, the place had the appearance of two distinct towns; the interior of the city having been entirely destroyed by cannon shot six weeks prior to our arrival. In the roofs of dwellings were to be seen holes where balls had penetrated, and which were then lying in quantities over the ground. We visited a Cathedral; the doors were open, and every thing was more or less mutilated. In a back room, I saw a large wax image of Christ, a marble one of Mary, and one of their patron saints. In the hands of the Virgin were some fresh flowers, put there I suppose by some of the superstitious inhabitants. Around the altar I counted forty odd skulls, thought to be those of nuns, priests, &c.

"There are five men of war now in the harbor—one English, two American—one Dutch, and one French. I dined on board the latter on the 26th and met a gentlemanly set of officers."

COMMUNICATIONS.

POLITICAL ECONOMY—THE ARMY, No II. Having once intruded a few crude and undigested remarks under the above head, in a former number of the Army and Navy Chronicle, I know not what apology may be necessary when I again present others of the same kind, for I am considering the few individuals who may deem them of sufficient importance for serious attention. Entirely satisfied as I am, that our present military system, is too firmly established in the true policy of the government; and too firmly engrained in the body of our national welfare (if I may thus speak)—forming as it does an essential component, and by no means an insignificant component, of our defence—and as a great instrument to maintain the peace and happiness of the people—in high and deserved favour with the majority of the nation—any words or arguments on this point would appear altogether superfluous, not to say ridiculous. In my former communication on the subject of the army, I endeavoured to point out the necessity of its proper increase, in regard to numerical strength; urging as reasons for such a step, the present Seminole War; together with considerations of true policy, mercy, and a just regard for the lives and rights of persons engaged in defending a portion of our common land against the merciless warfare of an incensed, determined, and desperate enemy. En passant I would advert to the efforts, praiseworthy and honorable efforts of individuals, not only in service but in other occupations—to obtain what has been so long and so justly desired, to wit: an increase of pay. The gallant, and soldier-like editor of the New-York Mirror, in a late number of his Biblical journal, has presented a very fair view of the case, although he has not supported his position with as solid a proof as that which might have been brought forward. I have observed too, in other journals of the day, articles of different natures, the general tenor of each being directly in favour of the agitated question. In the Chronicle, devoted to subjects of this nature, and open for the reception of matters relating to our national defence, many writers have presented the subject of "Army Pay"; and although rather a delicate affair for the published remarks of gentlemen in the service, the demand, and the proofs have been urged with a proper and becoming spirit. It is not my object to speak of this question at the present time since the whole subject will probably be brought forward in the Halls of Congress during the present session by the honorable chairman of the "committee on Military Affairs,"—who has shown himself more than one occasion, a soldier, statesman, and a friend to the army. If the subject increase, I have no doubt that the most ample provision will be made for the maintenance of the army on a respectable footing in time to come. That such provision should be made, and without unnecessary delay, the most unbelieving may be assured by an examination into the facts of the case. If doubt exists, examine the facts.

My object as before stated is not to urge an increase of the pay of those engaged in the military service of the country, but an immediate increase of the number. As a friend to the army and the honor, welfare and dign-
why a "Standing Army" is preferable to militia are, as
before stated, as follows: "We have made such
considerable progress in commerce, manufactures and the
arts, and its products have consequently become various and
abundant, it would be an immense inconvenience, if every
citizen were liable to be dragged from a productive em-
ployment, which has become necessary to society, for the
purpose of national defence. Citizens are for the most part,
so much accustomed to the sweets of social existence, so little
grounded by necessity towards the conception and achieve-
ment of great enterprises, and feel so little of the enthusi-
asm of emulation and 'esprit de corps,' that they com-
monly prefer a pecuniary sacrifice, to the toil, comfort,
and possibly of life. Excepting the cases, in which the en-
thusiasm of a whole people for national existence, so adva-
antage has uniformly been on the side of discipline and
professional soldiers." If we have an army, why not
such an one as the true interests of the country de-
mand? W—

THE NAVY.

Mr. Editor.—A few remarks are called for by the
letter of your correspondent dated aboard the Warren.
What he says respecting his present commander may
be all very well, as we have no doubt he thinks he has
been unjustly assailed; but we cannot approve of the
assertion that the commander under whom he acted was
universally condemned. We are not sure the officer al-
lowed to was at all censurable in the estimation of many
officers on board other vessels. Our correspondent
offered in reputation during his last cruise, and even to
this day, for acts committed twenty years ago. Few
men either in or out of the navy, unless they are very
dull, remain long stationary; they are growing either
better or worse, and like soldiers, they should all be re-
viewed daily and most rigidly inspected. The officers
of our navy are often sustained or depressed by the re-
Portations to which they are no longer entitled, and we are
clear for placing them in the balance to-day in pref-
erence to taking them for what they were worth yester-
day.

What your correspondent says respecting the qualities
of the Warren is a matter of deep concern. Such a ship
cannot add to the utility of a navy where every cruiser
should be of the swiftest description, to fly from a super-
or to capture interiors and equals; nor would a dull
sailer be profitable even in the merchant service, it being
now admitted that there is no economy in employing
ships, as expressed, of deep draft. Better ships are
always unsafe. Who can read the beautiful compliments
paid to the American schooners in the "Adven-
tures of a younger son" without being struck with the
contrast of such description and those now encumbering
our navy.

But there is one part of your correspondent's commu-
nication of much greater import than the models of ships:
that is respecting concealed reports. This we con-
ceive to be the very essence of tyranny. Laws are
en-
acted to punish all offences, and the officers are consti-
tuted both judge and jury; the forms of administering
the laws are merely formal and should be open to the
world; and is this course to be abandoned? are the acts of Congress to be thus virtually annulled by
the establishment of a secret inquisition? Is there a
captain in the navy who would lodge secret information
in the prejudice of one under him? Is there one who
would not burn with indignation if called upon to act
the part of a traitor?

BLAKELY.

HOSPITAL STEWARDS.

Mr. Editor.—Why is it, that in all your discussions
about Army and Navy Pay, nothing is said in reference to
the compensation of Hospital Stewards? There is not
an individual in the army so miserably paid as a
Hospital Steward, an individual whose services are too
oranges and highly responsible. He is in the immediate
supervision of the ward rooms and of the sick: he is responsible to the Surgeon for the neatness and good order of
ARMY AND NAVY CHRONICLE.

the Hospital, puts up all the medicines prescribed, administers it with his own hand to the sick, is responsible for the public property under his charge, and has much writing and calculating to do. In every station is a constant commis-
mance—he is scarcely ever at liberty to leave his post. He is such and, in truth, as the Assistant Surgeons are nearly all doing the duty of full Surgeons, the Hospital Stewards are to a certain extent, doing the duties of mates.

If an Assistant or Post Surgeon has an operation to perform, is not the Hospital Steward hourly assisted in the duties belonging to his station, receives but ten and a half dollars per month, whilst Ordly Sergeants receive thirteen dollars! This is not fair play. A Steward enlisted to do the duties belonging to his station, and that he may fully do those duties to the best advantage, he should continue in his place for a long time. The Sergeant is in service for only three years, and in all probability has a trade to depend upon after his time is out, if he be disposed to exercise it he can do so. The Hospital Steward on the other hand is for the most part exclusively dependent on the kind of knowledge adapted to his peculiar duties for a subsistence. The Sergeant may be promoted—the Steward cannot be. I again repeat, that not an individual in the service is as badly paid for the duties he performs as a Hospital Steward; and I think that common justice and the best interests of the public service require an amelioration of his condition.

JUSTITIA.

P. S. It is true that a Hospital Steward only enlists for three years; but it is also true that it requires a much longer time for him to be expert in his office than for a Sergeant to become acquainted with the routine of military duty. It is of the first importance that the Steward should re-enlist; but it is of not so much consequence as to the Sergeant, as a good Sergeant can be made in a much shorter time than a good Steward.

Mr. Editor:—Viewing the Army and Navy Chronicle as the medium of science and intelligence to your subscribers, I would call your attention to the enclosed extract, as a paper worthy of record, and request for its place in your paper.

A SUBSCRIBER.

THE DUEL AT SMYRNA.

We invite attention to the following extract of a letter from an officer in the Navy. The conduct of Commodore Elliott cannot but excite the indignation of every friend to humanity. Under the circumstances, it was brutal and unmansly in the extreme. He could not have treated feebly an officer who had fought with them.

Mr. Barton, who refused to mess with him, and the rest of the mess followed his example. This together with other insults, left Mr. B. no other resource but to call him out, when, after receiving two fires, his pistol missing fire both times, he had his leg fractured by the second shot. I am happy to add, that Mr. Barton’s conduct on the field, evinced that coolness and determination which always emanate from a good cause; and every person acquainted with the circumstances are of the opinion of myself, that the course he pursued could not be avoided, and the officer who attacked, deemed it necessary for him to be taken on board the Constitution, to have the ball extracted, rather than to the schooner. He was accordingly carried on board, and the ball extracted with no difficulty. During this time, Commodore Elliott was absent from the ship, and as soon as he returned the thing was of course reported by the first Lieutenant. You cannot judge of our surprise, to hear the order given that Mr. Barton should be immediately taken on board the Shark; this order being issued without knowing what the consequence might be. Dr. Boyd, the surgeon of the Shark, learned of the matter upon him, and protested in the strongest terms against the inhuman order; but he would not be heard by the Commodore, who said he must go, and he would take the responsibility. He was, therefore, hoisted over the side, and sent back to the schooner. You can imagine what his sufferings must have been, having been the object of-opium, and such inhuman treatment. Through Dr. Boyd’s intercession, he was removed on shore yesterday, where he will receive all the attention and care which he requires in his present condition.—Philadelphia Inquirer.

SELECTED POETRY.

From the Boston Courier.

THE SAILORS’ FRIEND.

On reading Mrs. Sarah J. Hale’s Report of the Seamen’s Aid Society, January 9th, 1856.

The Sailor’s best friend!—It is woman—dear woman—
She pities the errors she cannot approve,
But prises his daring, which seems super-human,
His dashing spirit—his manly, sailor-like manner.
His patience in bearing fatigue and privation,
When dangers, or famine, or agonies press him,
Ellicott from woman an answer sent—
“O! pity the Sailor! God, bless him! God, bless him.”

And Heaven will smile on his gallant behavior;
For the true-hearted sailor of Old Galilee,
Were called from their vessels, to follow the Savoir,
Whose words were the truth—and the truth made them free.
He preached to their decks, and he walked on their waters,
He stills the rough tempest that rose to distress them;
He healed every pain of their wives and their daughters—
He still loves the sailors—God, bless them!—God, bless them!

And woman—dear woman—with ardent devotion,
Stills the Savoir’s voice—holds his arm in his breast,
Who, like the disciples, now plough the rough ocean,
For His is the power to bless and to save.
She comforts the wife, and her babe on its pillow,
Forbidding that Poverty’s box may come near her;
She whispers of Hope, and the Tar to the billow,
She pities the Sailor!—God, bless her!—God, bless her!

From the Knickerbocker.

THE HOMEWARD BOUND.

‘Home of our hearts! our father’s home!’
Land of the brave and free!
The sail is flapping o’er the foam,
That bears me on to thee.’

I. The breeze that smothered with the sun
Awakes, and ocean’s breast
Bounds to the breath which breaketh on
The beauty of its rest.
Our gallant craft, whose snowy wings
Late unexpanded hung,
Over the might water swiftly springs,
Through rolling blocks, the cordage rings.
The arching wave, its pearl-shower flings—
The winds have found a tongue!

II. Away! away! in tangled wreaths
The rock-weed dazed, and the surf,
And every swell that rounded as seethes,
Grows greener as we fly.
Half! graceless garlands of the deep,
Endless waves of green wave:
Long has it been our lot to sweep
The vast unchequered blue;
To search where cloudless skies expand
In torrid climes afar,
Unblest by group of friendly hand,
Or voice of love, so soft and bland;
But hark! that shout!—What sees’t thou?”
That land is home!—Harron!

New York, Jan. 16, 1846.
ARMY AND NAVY CHRONICLE.

POOR JACK.
Who cares for Jack?—Not one, not one;
Each has his selfish care,
But for the friendless Sailor, none.
Kind word or thought can spare,
Who cares that still alone is his
The ocean's dreary way?
By night, saucy rest, and toil,
And bitterness by day?
Who cares for Jack?—He has no friend
To soothe his weary wo;
In tears his heart is his
On which those tears may flow.
Who cares when pallid sickness bends
On him its angry frown?
Or when from the ship's planks he sinks.
A thousand fathoms down?
Who cares for Jack—his voyage done?
—The wager landlord cares,
And to the utmost farthing strips
The victim of his cares;
Yes, there are spoils along the deeps,
And once his haunts of old,
But the dry land has more than these—
—The hopeless wrack of souls.

HALLO! HALLO! THE FLAG IS UP.
'Tis nailed unto the mast;
Thank God! the sailor's battered bulk
Is near the mast.
HALLO! HALLO! A friendly port—
From cruel land-arts bare;
Now Conrad! bear a band and look;
The Sailor's Home's for thee!
There shall thou meet with noble hearts—
A willing mess will share;
And none to mock thy true attempt
To seek thy God in prayer.
Who cares for Jack?—and who will not?
When he have past away;
His soul with ransomed souls may shine,
A gem as bright as they.

DOMESTIC INTELLIGENCE.
LATEST FROM FLORIDA.
The schr. George & Mary, Capt. Willey, arrived at this port on Saturday, in 40 hours from St. Johns, E. F.
We are indebted to Capt. Willey for the Jackson-ville Courant of the 10th inst., from which we have coped the interesting intelligence from the seat of war given below.
Capt. W. informs us that the steam boat Florida arrived at Jacksonville late on Thursday afternoon, from Picolata, but brought no news in addition to what is given below

LATE NEWS FROM GENERAL GAINES.
The intelligence from the Withaacoche continues to be of great interest and importance. Soon after our last publication, we learned that Gen. Gaines continued fighting the Indians. After the battle of the first day Gen. G. found 80 Indians killed. He had 2 of his men killed and several wounded. On the third day the Indians crossed the Withaacoche to attack him. He having taken only eight days' provisions, and being thus closely pressed, sent for reinforcements, provisions and ammu- nation. Gen. Clinch, being under the orders of Gen. Scott, and having received no order to send the provisions for the army, sent corn from his own plantation, and Mr. B. M. Delf sent forth with upwards of 80 head of cattle.

The following statement of the officers and soldiers, who marched from Tampa Bay with Gen. Gaines, and the particulars of their march, furnished by Lieut. T. Paige, who was one of the number, is possessed of interest at this moment. It furnishes new incidents relating to the tragic massacre of Major Dade and his companions. We sincerely wish success to Gen. Gaines, who was the first to pass the bloody vale and to honor with funeral rites and a burial, those who were the suffering actors in that most unexpected and mournful tragedy. It will be the first engagement in which our forces have not suffered a defeat. We hope a glorious victory awaits them.

General Gaines' Army composed as follows:—Officers,
Lt. Col. Twigg, Commanding Brigade.
Capt. Shannon, Quarter Master.
Capt. Hitchcock, Lieut. McCull, Staff.
Major Belton, commanding Artillery, four companies, one hundred and seventy soldiers. Officers, Majors Belton, Mountford and Zinander, Lieutenants Grayson, Linnard, Adams, Duncan, Stockton, Henderson, Allen, and Morgan; Major Staff, Drs. Heiskell, Leavenworth, Cuyler and Reynolds.

THE WAR IN FLORIDA.—An impression has been very general in the quarter from recent accounts received from Florida that a hostile feeling exists between Gen. Scott and Gen. Gaines, and some letter writers have gone so far as to state, that the former was determined not to afford assistance to the latter to extricate him from the perilous situation in which he was placed, previous to the receipt of our last advices from the banks of the Withaacochee.
An officer of the army, who arrived here on Saturday, in the steamer John D. Mingins, assures us that there is not a shadow of foundation for these erroneous impressions. On the contrary, at the moment of his leaving Picolata, (6th inst.) there was not a man in the army of Florida, who felt more anxiously for the safety and success of Gen. Gaines and his brave associates, than did Gen. Scott himself; and it was believed, at the moment of his departure that Gen. S., who had then concentrated, at that point, about 2000 men, would dismount as many of them as practicable, and for the want of better means of transportation, load the bでおな with ammunition and provisoins, and make a forced march to succor the detachment under General Gaines.
On the 8th inst. 70 wagons left Picolata, laden with provisions, for Fort King—but we learn from passengers arrived yesterday in the George & Mary, that after proceeding about 20 miles on their way, an express was despatched to order them back, and they had returned. The Steamier Samarre was passed in the St. Johns river, on her way from Savannah to Picolata, with provisions.

CHARLESTON COURIER.

We understand that the name of the unfortunate individual killed on board the Elivan, (noticed in this paper a few days since,) was RUMIN, Surgeon in Company B, U. S. Army. We also learn that another, named LIMCH, attached to Company D, was drowned in St. Mary's River, from on board said boat.—Savannah Republican.

MILITARY MOVEMENT.—The 6th Regt. U. S. Infan- try left Jefferson Barracks on Monday 28th ult., in transports, for Fort Jesup, La. The following is a list of the officers—
Major B. Riley, commanding the Regiment.
Staff—Surgeon Finlay and asst. Surgeon Hughes (medical staff); Lieut. G. H. Crossman, acting quartermaster; Lieut. Brooke, adjutant; Lieut. Bevier, act. comm. subsistence.
Lieuts. Campbell, De Forest, Brent, St. Louis Repub.
DR. JOHN S. GATLIN.

At a meeting held at the Court House in Kinston, on the 13th ult., according to previous notice, for the purpose of noticing the death of our late townsmen, Doctor John S. Gatlin, who fell a martyr in defense of his country, at Withlacoochee, East Florida, on the 20th Dec. ult. in a contest with the Indians, Frederick A. Morell, Esq., was called to the Chair, and Doctor W. Holland, appointed Secretary.

The Chairman then arose and addressed the meeting in a very appropriate manner—read the official report of this fatal campaign, and eulogized the subject of this meeting for his determined bravery on that occasion.

On motion, the Chair nominated Doctor Reuben Knox, Mortimer Bright, Barlow Way, and Watson Wilcox, Esquires, a committee, to prepare resolutions expressive of the sense of this meeting; who, after retiring a short time, presented the following, which were unanimously adopted:

Resolved, That this meeting has received the melancholy intelligence of the death of our late esteemed friend and fellow-citizen, Doctor John S. Gatlin, with feelings of sincere regret and unalloyed sorrow.

Resolved, That while we deplore the loss of the friend, the gentleman and scholar, in Doctor Gatlin, we derive consolation from the reflection, that he fell a martyr in his country’s cause, and that he now reposeth on the field of honor, surrounded by his brave associates and compatriots.

Resolved, That as a token of respect for the memory of the deceased, we will wear crapes on the left arm for thirty days.

Resolved, That a copy of the foregoing resolution be handed to the Chairman to the aged and respected parents of the deceased, and that he be instructed to assure them, that this meeting feebly sympathizes with them in the afflicting dispensation with which they have been visited.

By motion of Lewis C. Desmond, Esq., Resolved, That the Editors of the Raleigh and Newbern papers be requested to give the proceedings of this meeting an insertion in their respective papers.

F. A. MORELL, Chairman.

W. HOLLAND, Secretary.

Kinston, N.C. 13th February, 1836.

* According to the official report, Doctor Gatlin, who appears to have been one of the last who was massacred, placed himself behind a temporary breast-work, with two double barrel guns, and remarked that ‘‘he had four barrels for them.’’

COMPLIMENTS TO VICTORY AND MERIT.—In the House of Delegates of Virginia, on Monday 7th inst.

On motion of Mr. Carter, a resolution was unanimously adopted, requesting the Governor to prepare, with suitable devices, and present a Sword to the son of Licut. Col. George Armistead, late of the U. S. Army.

On motion of Mr. Murdough, a similar resolution was adopted, requiring a Sword to be presented to Captain E. A. F. Valletter, of the U. S. Navy.

NAVAL AFFAIRS.

THE DELAWARE AND THE POTOMAC.—In publishing some time since, an extract of a letter from a Midshipman on board of the U. S. Frigate Potomac, under date of last 4th July, in honor of the day, a typographical error occurred, which it is deemed important that we should correct. The letter writer stated that the shot passed the bows of the flag ship Delaware, and added, as we now learn, ‘‘that he was from half to three quarters of a mile ahead of the Delaware, the two vessels being two miles apart. The typographer, strangely interpolated a word, which was not in the original, and made the clause read thus,—the shot passed through the bows of the flag ship Delaware, &c.’’ which it seems, the National Intelligencer understood literally, mistaking too the alleged distance of the ball from the bow of the Delaware, for the relative distance of the two vessels. The shot was drawn from each gun immediately previous to the time of the salute, and the accident was attributable to the act of a second shot having been put in error. Author, under the mistaken impression and report of one of the quarter gunners that he had heard the shot fail from it the sea, during a previous heavy gale. The Potomac was at Cadiz on the 25th January last.—Charleston, S. C. Courant, March 12.

From two to three hundred of the sailors recently discharged from the U. S. ship Delaware, attended to the grave yesterday afternoon the remains of a messmate who died on Thursday. While passing along Gage Street, after the funeral, one of their number was taken suddenly ill, and in a few minutes was a lifeless corpse.—Baltimore American, March 19.

U. S. FRIGATE CONSTITUTION,

Gibraltar Bay, Feb. 1st, 1836.

To the Editor of the New England Gazette:

Sir—This ship arrived here on the 25th ult. 28 days from Smyrna, communicating off Malta, and notwithstanding we have not a person on the list, are refuted pruice liberty as being from one of the seats of the Plague. We left Mahon on the 1st last November, and Smyrna on the 17th of last month, Smyrna on the 20th, and Smyrna on the 5th ultimo, remaining at that place only seven weeks. For want of time I am unable to give you even a brief sketch of our interesting cruise, as we get under weigh in an hour or two for Tangier and Cadiz. The following are the sea officers on board the Constitution.

Captains—J. D. Elliott.

Fleet Surgeon—Thomas J. Boyd.

Purser—J. N. Hamilton.

Assistant Surgeons—V. Godon, and R. Woodworth.

Sailing Master—Henry Driscoll.

Passed Midshipmen—Steedman, Muse, Revere, Cooke, Lewis, Middleton, Hunter.

CHANGES.

Lieu. Wm. Boerum, late 1st Lieut. of this ship, has been promoted to command the Salute, in place of Lieut. Ridgeway, who was recently invested with the pleasure of the Navy Department. Lieutenant Promote, 25th April, 1835. Lieutenant R. T. Drayton to be 2nd Master,epsided to Lieutenant, P. Drayton 2nd Master. Midshipman Barten was left in Smyrna, having been wounded in a duel, and unable to leave the shore. Principals and seconds are arrested, and will be so until the pleasure of the Navy Department is known. The practice is odious, no doubt, but one of which the Navy cannot dispense. It is the only necessary evil we cannot throw aside. Crews and officers enjoy unusual health.

A. S. P. Captain the Potomac is at Cadiz, John Adams at Malaga, and Shark daily expected with our letters and papers from Mahon. Until we entered this port, not a line had been received from the United States, since our leaving, and now but one or two have been gratified with the reception of such welcome messages from home. The recent news from Washington, and this disappointment is among them. None, however, can compare with that which now presents itself—"That we are without the least hope of war," and must review in these piping times of peace, the same motovinous scenes of every day life, through which we have passed, many of us, since our knowledge.

Yours, &c.
ry, the U.S. frigate Constitution, Com. Elliott, in company with the U.S. ship Potomac, spoke him while laying by back of the Rock of Gibraltar, and sent his boat on board with several packages for President Jackson requesting that the Constitution was 25 days from Sannyrana, bound for Tanger, the Moors having made some disturbance. The whole U. States squadron were expected in a few days to join them at Tanger. The purport of the disturbances did not ascertain. Left the Straits on the 5th of February, in company with the Constitution and Potomac, and saw them enter the harbor of Tanger at 7 A. M.

Extract of a letter from an officer of the U.S. ship Peacock, dated

Bombay, Nov. 10, 1835.

On the 23d October, the U.S. ship Peacock arrived at this place, after a passage of 14 days from Muscat, and found here the U.S. schooner Enterprise, last from Zanzibar. It was found necessary to take the ship immediately to dock, where she underwent the requisite repairs, and will be refitted in a few days for sea. It is expected that the Enterprise will go into dock to-morrow; it being ascertained that her copper needs some vitriol repair. Both vessels, it is thought, will be ready to proceed on their cruise by the 20th.

The officers and crew of the Peacock, notwithstanding all their hardships in a burning climate, have enjoyed unusual good health, and at this time are all well.

[...]

[...]

Extract of a letter received by John Doyle, Chief Clerk of the Navy Department, dated on board the United States steamboat, "American," Bombay, Aug. 12, 1835. Published to correct erroneous statements, which represent the ship as having been totally lost.

My Dear Sir: We have at length arrived at this place, and I avail myself of the departure to-morrow of the steamboat for Egypt, via the Red Sea, to drop you a line by way of England.

We left Zanzibar on the 8th of September, steering our course to the Arabian Sea for Muscat, in the entrance of the Persian Gulf. On the night of Sunday, the 21st, a fresh breeze blowing from the south west, the ship having standing sails set, and ploughing her way at the rate of eight miles per hour, suddenly struck on a bed of coral rocks. It would hardly be possible to describe the surprise which ensued. Those who were below, in bed, came immediately on deck—not to include the cause of this sudden shock, for the repeated thumps, at every rise and depression of this sea, too plainly spoke it; but the only questions asked and reiterated from all sides were, "what rocks can these be?" All, however, were satisfied as to our dismal situation; breakers were foaming round; the rocks alongside were within two and a half fathoms of the surface, and the ship lay "hard and fast." All sail had been at once taken in, and the necessary orders were given for getting out the pumps, which were promptly obeyed. Provisions, and various other articles, were taken on board, and the water, excepting a few hundred gallons, was started in the hold and pumped out, in order to lighten the ship: she remained, however, immovable, at times striking hard. Anchors and kedges were sent out; but the crew boiled in vain at the capstan. A boat had been sent out to sound about, when to the deepest water 4 fathoms a considerable distance was found to be three and a half and four fathoms, about two hundred yards south-west of the ship. The yards, topsmasts, &c., were lowered, in order to ease the ship; and though every thing was done which prudence could suggest in such a situation, all seemed without effect. It was not possible to form any accurate opinion as to the nature of the spot where we were. Some supposed we might have run up on some isolated rock in the ocean, not laid down on the charts; others thought we might be on the coast of Arabia Felix, swept from our true course by a mighty current. Nothing, however, was done, except to remain and await patiently for daylight, in the hope of seeing land, which as yet could in no direction be discovered. The anxiety of this interval may, perhaps, be readily imagined. The dawn discovered to our view a low, sandy island, about a mile distant, which seemed totally destitute of vegetation, or any signs of being inhabited. No other land was visible around. It was supposed that this small island might be that of Maziere, on the coast of Arabia Felix, but that it must be very erroneously laid down on the charts, or that an extraordinary current, or defective chronometers had led us far from our proper course.

The most unceasing efforts were made during the day to haul the ship off. It was resolved to lighten her by every possible means, even to the cutting away of the masts, should this at last be found necessary. Several tons weight of shot, with cables and every article that could be readily removed, were thrown over; a raft was constructed along the side, which was afterwards stowed. But the utmost efforts to remove the ship from the spot, where she seemed jammed among the rocks, sometimes striking heavily, proved unavailing, and the leak which had commenced, was hourly increasing. On Tuesday morning, a boat was despatched to Muscat, distant between 2 and 3 hours, with orders of eating assistance. Edmund Roberts, Esq., accompanied midshipman W. R. Taylor with eight men in the boat, which took on board six or eight days' provisions and water, quadrant, chart, &c. In the meantime, the natives of the coast discovering our distressed situation, gathered round us in their large dhow, &c., pulled our round and annoyed our boats, when out on duty. A few well directed shot from a nine, however, intimidated, and kept them thereafter at some distance, where they were content to remain and watch the ravages of the elements upon us. Happily, after sixty-one hours of unremitted toil and anxiety, and laboring over eleven of our guns, we succeeded on Wednesday afternoon, in hauling her off the rocks into a depth, where, thus lightened, she floated, and immediately setting sail, beat her off the shore, with a fine stiff breeze, through a shallow and dangerous passage among the rocks. Standing 16 or 30 miles, in about two hours, she just left bearing north west, we discovered also to our surprise, high land, bearing east, and now ascertained, for the first time, that we were behind the island of Maziere, i.e. in the passage between it and the main land. This channel abounds in rocks and reefs, and has been the scene of numberless disasters in ancient and modern times. The following day, Thursday, we beat out the...
ARMY AND NAVY CHRONICLE.

south end of this passage, and doubling the southern extremity of Mazaire, which is a hilly and extensive island, stood on our course for Muscat.

On Monday, the 22d, we fell in with the Sultan's squadron of war ships, bound for Mazaire, to our assistance, and having Mr. Taylor on board, who had arrived safely with the fleet, on the afternoon of the Saturday following the Tuesday on which they left us. On the 29th, we anchored in the harbor of Muscat, the Sultan in company.

Much praise and gratitude are due to the Sultan for his extraordinary kindness and the very prompt assistance which he hath bestowed on us on this occasion. — On hearing from Mr. Roberts the nature of our misfortune, he immediately ordered the use of one of his frigates to carry our officers and crew of the Peace to the United States, if necessary; and to Mr. R. another, in which to prosecute his voyage, and to accomplish the objects of his mission. Fortunately, however, we were saved from the extreme necessity of throwing ourselves thus far on his generosity. Our ship having been in dock here, (from which she came out yesterday,) has had all her copper renewed, a new false keel fitted, and all the other requisite repairs, with no doubt now renders her perfectly competent to continue the cruise.

The Enterprise (with which vessel we parted before doubling Cape Good Hope, and found her in this port on our arrival here) also goes into dock this day, having rubbed up her copper on a reef at Zanzibar, at which place she arrived four days after we left there.

At Muscat, the Sultan gave to the Commodore and his officers a splendid dinner at the palace, served up entirely in the oriental style. He has caused frequent presents of fresh meat and vegetables to be sent to the ship; and at Zanzibar, a valuable port of his dominions, the ship was entirely supplied, by his order, free of charge, during the time she remained there.

It is supposed we shall sail from this place about the 29th. The crew has been very healthy. There is nothing of the cholera at present in Bombay.

ARMY.

RESIGNATIONS.
1st Lieut. L. P. Lepot, Dragoons, 31 March.
1st Lieut. Timothy Paige, 4th Infy. 16 March.

CHANGES IN THE 4TH ARTILLERY.
Lieut. M. C. Ewing assigned to Company A, vice Long, resigned.
2d Lieut. R. H. Archer to Company I, vice Ewing, promoted.

NAVY.

The frigate Brandy wine was at Calcut 16th January.

The frigate Potomac was at Gibraltar 14th Feb. She is arrived at Tangier and Lisbon.

Jan. 14.—Lieut. Ralph Vorhies appointed to the command of the Receiving Ship at New York, vice Mix, appointed to the Commissary Store of War.
Mar. 15.—Master Commandant D. Geissinger ordered to the command of the Rendezvous at Boston, vice Stevens, promoted and relieved.

The following officers have been ordered to the duty assigned to their respective names, since the Navy Register was published:

BOStoN.
Assistant Surgeon Geo. Clymer, do.
Passed Mid. John A. Russ, do.
Passed Mid. D. McDougal, do.
Passed Mid. Dominick Leach, Jr., do.
Passed Mid. M. S. Fish, do.
Passed Mid. Henry Wall, do.
Passed Mid. Joseph Moorehead, do.
Passed Mid. Richard Bach, do.
Passed Mid. N. G. Bay, do.

PHilADELPHIA.

Navy Yard.
Lieut. William M. Gledy, do.

DEATHS.

At Blairsville, on the 29th ult., THOMAS S. BLOUGER, formerly of the U. S. Navy, in the 43d year of his age.

At Port Jervis, Lou., on the 4th ult. ROWSELL, son of Lieut. Geo. Wright, adjutant 3d Infy. U. S. A., aged one year and nine months.

In Baltimore, on the 6th inst., Lieutenant RICHARD POWELL, of the Revenue Cutter Service, son of the REV. WILLIAM POWELL, Union Hill, West Farm, State of New York.

On the 9th inst., at Procttom, near Martinsburg, Va., the residence of her granddaughter, ELLEN AUGUSTA, daughter of Colonel SAMUEL MILLER, of the U. S. Marine Corps, in the 39th year of her age, after a protracted and interesting illness, which she bore with unexampled fortitude and resignation.

REVOLUTIONARY SOLDIERS AND PATRIOTS.

In New York, March 2d, Mr. WILLIAM BUSSING, aged 81 years.

In Rotterdam, N. Y., February 18th, GABRIEL VEEDER, Captain in the Revolutionary War, aged 56.

In Cumberland, Md., February 14th, Mr. EDWARD MILLER, aged 82.

At Westminster, Mass., Capt. JOHN FRENCH, aged 90.

In Eyaginville, N. C. 26th ult., Mr. JOHN S. STEEL.

In Boston, Mass., Mr. RUFUS BURNS, 92.

In Reading, Mass., Mr. BENJAMIN PEARCE, 90.
EAST FLORIDA.

The route blazed crosses the streams which have been enumerated, at points where they are fordable, or where they present facilities for ferries or bridges; and ferries will be only necessary on the Tomoka, St. Sebastian, St. Lucie, Middle and New rivers.

A more eastern route so as to edge the western base of the second chain of sand hills, which have been noticed, would present the best ground for a road, and many of the difficulties on the route marked, from ponds, flats, &c., requiring causewaying, might be avoided. But in this case greater labor would have to be encountered in removing an impenetrable growth of scrub, from St. Sebastian and St. Lucie, the one about 25 and the other 80 yds. wide, and in cutting or clearing the banks for ferries, nearer their mouths widen into rivers of a half and a mile in extent. These difficulties, however, would not weigh in consideration with the superior character of the ground otherwise obtained, if the country was such as to encourage a hope of the frequency of hunting or the presence of numerous offendees, sufficient to render the ordinary time in encouraging the families, whose energies may be directed to other than agricultural objects. The resources of this southern district of Florida are limited to ranges for stock of cattle, to wrecking, and the fisheries; objects in themselves opposed to a dense population, and only inviting to that which is the demand of adventurers, who only regard the lands to roads, and would prefer in their neighbourhhood communications making use of those water channels provided by nature. These channels are in the chain of inlets and lakes which have been noticed as extending, with but partial interruptions, the whole length of the coast from St. Augustine to Cape Florida. Thus the waters of the Matanzas flowing into St. Augustine harbor, and those of the Mosquito, or Halifax, approach within eight miles of each other; while the southern extremity of the latter is separated from those of Indian river by a narrow isthmus of less than one mile in width. Indian river in the high waters is connected by a natural canal with a large lake south, wide, which may be considered an extension of Indian river, a distance of but nine miles, a safe inland communication along the eastern coast of Florida from St. Augustine south, for upwards of 200 miles, may be secured to the country—the benefits of which may be extended north as far as Charleston, S. C., by another canal of about ten miles in extent, which may be made to communicate through the Rio Seco and Middle, with New river, discharging into the Atlantic only twenty miles north of Cape Florida. But by only opening the communication by a canal through a low level surface requiring no locks, between the Matanzas and Moschetto or Halifax, and the latter inlet and Indian river, a distance of but nine miles, a safe inland communication along the eastern coast of Florida from St. Augustine south, for upwards of 200 miles, may be secured to the country—the benefits of which may be extended north as far as Charleston, S. C., by another canal of about ten miles in extent, which may be made to communicate through the Rio Seco and Middle, with New river, discharging into the Atlantic only twenty miles north of Cape Florida.
try, with a geographical sketch, estimate of probable costs of construction of roads, &c.

DESCRIPTION.

From Solano's ferry, west of St. Augustine, by the route of the Old King's road to Tomoka, forty-four and half miles. For the first 25 miles, generally flat pine lands, intersected by three creeks, Moultrie, Three Rivers, and Mile; the banks about twenty feet high. The land from swamps on both sides intersected by small branches about 200, and the third about 70 yards wide. Within the same distance, 5 old causeways, the whole not exceeding 250 yards in extent, will require repairing. The last nine and half miles to Tomoka, saw black jack, sorrel and sand hogs, to ridges of flat lands, and spotted with small ponds, and intersected by nine small creeks, running to the east, and from 15 to 25 feet wide, all easily bridged. Tomoka river about 45 yards wide, and favorable for a ferry; high bluffs on the south and marsh on the north bank, with an old causeway about 200 yards wide and easily repaired.

From Tomoka to Spruce Creek, 15 m. 32 c.—crossing near the Tomoka, a small branch tributary to the same. Level pine lands interspersed with saw palmetto flats and low wet grassy plains, with scattering growth of dwarf pine trees, occasionally spotted with cypress ponds and swamps. The greater part of this distance will require causing swamps.

From Spruce Creek to Indian River, 38 m. 76 c. Spruce Creek, including the cabbage tree and hammock margins, which are subject to overflow, and will require causing, is about 200 yards wide. The first ten miles long, wet, pine, saw palmetto flats, interspersed with cypress ponds and grassy plains, converted from their loveliness after heavy rains into ponds. For the next six miles cypress swamps and saw grass ponds, diversified occasionally with saw palmetto and bay bush flats. These are the sources of Indian river, and unavoidable as extending west and communicating with the sea, the sandhills and tributaries of the St. Johns river. The last seven miles pine and saw palmetto plains, singularly spotted with saw and flag grass ponds, and occasionally diversified with sea sand hills, and pine land swells, with an undergrowth of broom grass; their superior elevation only detected by their comparative dryness. The greater part of this distance will require causing and the labor of rendering practicable for wheel carriages a road through the cypress swamps, heads of Indian river, will be considerable.

Ridge of Indian river 23 m 40 c. For one half of this distance, high ridged, diversified with sea sand undulations, intersected by independent with ponds. The last half, level pine lands, comparatively dry, spotted as usual with ponds. To Elbow Creek 15 m 40 c.; to Crane Creek 9 m 40 c.; to Turkey Creek 11 m 10 c.; to St. Sebastians 8 m 20 c.; to St. Lucie 81 m 55 c.; the whole distance 76 m 5 c.; generally pine lands, diversified with occasional swell of saw palmetto lands, and interspersed with grassy flats, spotted with cypress and bay ponds. A large portion of this distance will require causing; the base, however, being sand, a solid foundation for a road may be obtained. Elbow, Crane, and Turkey Creeks, are narrow, from 15 to 20 feet wide, where crossed, and secondly on one side of the river, with great facility be bridged. The St. Sebastians and St. Lucie are deep, with perpendicular banks; the sites, however, are favorable for ferries, the former about 25 and the latter 80 yards wide. From St. Lucie to Jupiter river 30 m 50 c. The country similar in general character to that just described; the soil gradually increasing in height and magnitude, and the dry land sand as you descend south, crossing in the distance four small streams easily bridged, tributaries to a southern branch of the St. Lucie. Jupiter river about 85 yards wide, subject apparently to great freshets, but may be bridged.

From Jupiter river to sea beach 8 m 20 c., crossing the canal or communication between the lakes south and Jupiter inlet north. A grassy channel about 70 yards wide, with a rapid current from the lake, subject to overflows when the lake is full, though generally fordable; with firm sandy bottom in the first mile flat pine lands, comparatively dry; the last, sea sand undulations.

On Beach—to Rio Seco 55 m 15 c.; Middle river 5 m 30 c.; mouth of New river 13 m 45 c.; west point of Bear Cut, opposite Cape Florida, (being about these three miles wide) 20 m 45 c. The whole distance 74 m 48 c.

The beach at low tide spacious and firm, with the ocean on the east, and sand hills and chain of fresh water ponds or lakes on the west, sufficiently convenient to furnish to the traveller an abundant supply of water.

The climate is more agreeable than that of the northern latitudes, but are generally covered with grass, and occasionally crowned with a thick overshadowing growth of the sea or Mangrove grape. From being exposed generally to a wind blowing uniformly from the same quarter, regularity has been given to their figure; instead of the sea sand undulations, common to the north, and the dazzling light from the convex and concave inequalities of their surface, these ridges present the appearance of artificial parapets, with their regular scarp and berms, all seemingly sodded with the skill of an Engineer. The Rio Seco has been closed by a sand bar which has formed across its mouth, and a sand bar, forming across the New river, has already diminished the depth of water at its entrance, to less than four feet. Middle river will more than probably suffer the fate of the Rio Seco, Jupiter, &c., and this decrease in the number of the outlets to the lakes, necessary for their drainage, will make their waters, if not already done, by a sand bar, forming across the channel of New river, may alone counteract the operations of the sea on its entrance.

Should it be deemed advisable to open the road for the present only to Smyrna, the route of the road marked will have to be abandoned at the Tomoka ferry, and the Old King's road followed, or a more eastern route selected to avoid the difficulties of crossing the Indian river with the Halifax. The facilities however of crossing this creek, from its width and margins of marsh, are diminished on approaching its mouth. On the Old King's road there is the remains of a causeway which may be repaired without much labor. The superior advantages of middle river as a route, and the difficulties of any greater difficulties which may be encountered from crossing the creek still nearer its mouth, if the road be opened to Smyrna, it may be continued at a very inconsiderable expense, should it be deemed important, along the high ridge of the South Halifax round to the Haulover and Indian river; thus avoiding the bad cypress swamps near the heads of this stream. The great width of Indian river at the Haulover and for many miles above, presenting more the appearance of an inland sea, is the only objection to the selection of this direction for a road to Cape Florida. In other respects, for that distance, the country is much the same, being nearly surveyed and marked, crossing Indian river at this point, however, the road would be continued from thence on the survey which has been made. The objects of the commission were more to ascertain the practicability and probable cost of a highway between St. Augustine and Cape Florida, however, the proper mark every aberration from a direct line which might be necessary to avoid obstacles and for the selection of the best ground. This operation would have required a more minute examination of the whole country than was practicable with the exploring party, and the unskilled labors of men which interrupted their early movements; it can be better performed by the roads keeping always in advance and on the flanks of the Ja-
may convert Cape Florida and the coast into a southern nursery for seamen.

The object, therefore, of opening a communication to the southern extremity of Florida, whether by the inland passage noticed in this communication, or by the channel, which has been so much recommended for the lower lands where the water only had been able to check the luxuriant growth of these southern latitudes.

From the detail now furnished, an opinion may be formed as to the cost, practicability and advantages of a road from St. Augustine to Cape Florida, agreed upon at an examination which has been made under an act of Congress. Whatever differences of opinion may be entertained on the subject as to the whole extent, none will exist as to the great necessity of opening immediately the high way south, as far as New Smyrna. The route of the king's road may be selected, which will require little more expense than for the repairs of the old causeways and bridges over the smaller branches and creeks.

It is true, however, as much as practicable the benefits of this communication, and to open a passage for emigrants to the Atlantic, as well as western coast of Florida, the population of which is a policy of national importance, Colonel G. was inclined to the opinion of commencing operations at the St. Mary's river, so that the road may branch from Georgia, west to the Bay of Florida, as has been sanctioned by appropriation, and east along the Atlantic border to the extent which may be approved.

The immediate operation as far as New Smyrna will be necessarily connected with any subsequent extension of the communication to the Cape, which the government of the U.S. may think advisable, and will cost, as estimated, 11,000 dollars divided thus:

- From St. Mary's to St. Augustine, $5,000
- St. Augustine to Tomoka, $4,000
- Tomoka to Smyrna, $2,000

$11,000

The communication to Cape Florida may be extended hereafter either by opening and improving the inland passageway by the lakes and streams which have been described, or by the road which has been surveyed. For the accommodation of any population, which may be induced to settle south of the Mosquito the inland communication would be preferable; and Colonel G. is inclined individually to the opinion, that it would prove so for all military defense against an enemy, which events may be necessary. A road, sufficiently practicable for rapid military movements, and for the necessary unimpeded transportation of heavy ordnance, baggage wagons, &c., south of Smyrna, could not be constructed at a cost greatly exceeding the estimate which has been furnished, with a continued annual revenue to support it in a proper state of repair.

The population on the route will probably never be sufficient to contribute to this important object; while the inducements to individuals to keep up the necessary services will scarcely ever be adequate.

This communication contains, however, only the hasty observations and speculations of an individual on a country made under many unfavourable circumstances. However just may be his inferences from the existing facts of things, as to the uncertainty of the immediate establishment of a population south of the Mosquito, it is not improbable that the improvement in the science of agriculture, now attracting general attention and the known utility of some native productions with the successful introduction of fruits, tropical and European, adapted to the deficiency of a light sandy soil, and the inexhaustible reservoirs of valuable productions for cattle, and the sea branch annually furnishing more than the demand at ordinary times, there is reason to hope that people will settle on the banks of fish, fruit, stock, and various industries, and that their agriculture, cotton, and tobacco, will be tolerably confined to the deep

About the same period, or perhaps a little previous, Major Isaac Clark, of the 6th Infantry, was directed to survey and mark a road from Hillsborough Bay to Charlotte Harbor. His report shows the many difficulties which he had to encounter in performing this duty, and presents at the same time a description of that portion of the territory.

In February, 1825, Major Clark reported that he had claimed and marked the road through to Charlotte Harbor, distance one hundred and twenty seven miles. He had to run up Charlotte river some distance before he could cross his horses; he left the Harbor, run up sixty miles before he could find a place sufficiently low to make a site for a fort. He frequented the beaches two or three times with some press swamps, but always found banks from ten to fifteen feet high, and rocky lime stone; he crossed about three miles below the junction of the two branches. Finding the country very swampy and wet, he run out twelve miles from the river, but found it still worse; his horses and men were very sick. After their middles, he was forced to turn back and follow the river down to the Harbor, wading and swimming creeks and swamps the whole distance. On his arriving on the south side of the Harbor, he found the beach for several miles back from the Harbor impassable for horses; he took one of his men and waded through swamps and bayous from three to four feet in depth, for three hours, before he could reach any point in the Harbor where he could ascertain whether a vessel which he expected, had come in. He at length reached the point opposite the island on which there was a Spanish fort; succeeded in getting them to him with a Note; visited the island, found the vessel had not come in; his supplies being exhausted, no game in the country, no settlements south, either Indians or whites, where supplies could be obtained, several of his men very lame from wading through swamps, creeks and ponds on the route; days and nights, his horses, which he had become very feeble, he procured from the Indians by treaty and threats one hundred pounds of hard biscuit, (very bad) some salt fish and a small hog, and from an Indian he obtained some dried venison, in all about four days rations for the party. Major Clark could obtain no information of the country south; every one declared they knew nothing of the country; some Indians had been through during the dry season, but represented it as entirely impracticable to go through with horses.

Finding he had but five days' provisions, and it was very uncertain whether the vessel would find her way into the Harbor, he embarked his men and horses, which were Spaniards and run up the river about five miles, and floated his horses and mules over, where the river was about one and a half miles in width; returned to Hillsborough Bay in eight days, men on half rations; one of his horses broke down near Charlotte river, where he was compelled to leave him.

Neither Hillsborough nor Charlotte Harbor were then laid down on any chart; he found Signor A's map very incorrect.

The country from Hillsborough to the northeast branch of Manatee river, eighteen and a half miles, is generally low and wet; some rolling pine lands. If it is intended to make a good carriage road, many places will require causeways. The river at ordinary times is about fifteen yards in width, banks high, can be bridged; distance from this branch to the main river three quarters of a mile; this stream is sixty yards in width, banks high, can be bridged eight and a half miles from the main branch of the Manatee. Major Clark crossed the

**ARMY AND NAVY CHRONICLE.**
south branch, a deep stream about twenty yards in width, the banks low; the country between the two streams low and wet, innumerable small creeks, ponds and cypress swamps. Forty two miles up this stream is Tolochkochpe, or Peace river, a deep, rapid stream, about sixty yards in width; banks low and inundated during the rainy season; a ferry must be established at this river. The country between the south branch of the Manatee and this stream is generally very swampy. Innumerable cypress swamps; many of them impassable with horses; about ten miles of the distance is dry pine land, some black jack, and occasionally some live oak. After leaving this river the country changes; there is very little timber except dwarf pine and cypress swamps; ten miles from the river, they reached the big swamp, called Wagon road by the Indians. It is properly a swamp, but is a forest by the Indians. There is no practical way of crossing this swamp, miles except on two small creeks, one near the centre, the other near the south east side; this prairie is very wet, and in many places difficult for horses to get through.

From Charlotte Harbor, a distance of thirty-four miles, it may be considered one continued swamp, country very low and wet, a thin growth of dwarf pine and cypress, the soil the whole distance through white sand. The country the whole extent of the Harbor for some distance back impassable for horses, low mangrove shores, innumerable bayous and swamps.

There was that part of the Keys that are in the Harbor, established on the Keys near the entrance, in all forty three Spaniards, and several Indians; they lived in huts, constructed of the palmetto, similar to the Indians, appeared to be industrious and attended to their fishery alone.

DOMESTIC INTELLIGENCE.

From the Globe, March 19.

Some misapprehension appearing to prevail concerning the relative situation of Gen. Scott and Gen. Gaines, in our columns, we think it advisable to inform our readers.

There are two military Departments, the eastern and the western. These are divided by a line drawn from the southern point of Florida, to the northwest extremity of Lake Superior. By inspecting the map, it will be seen that this line passes through the centre of the vast operations in Florida, leaving, however, much the larger portion, in fact almost all of East Florida, in the eastern department, commanded by General Scott.

These departments are constituted for the convenience of the army, and it is obvious that their boundaries ought not to interfere with operations in the field. Otherwise our commanders and armies must be changed, whenever an enemy moves out of one department into another. Campaigns must be carried on without reference to artificial lines.

General Scott was at the seat of Government when information was received of the battles with the Seminoles, and as the crisis demanded immediate action, as he was upon the spot, and could receive immediately the orders of the Government; and as General Gaines's services were required elsewhere, General Scott was ordered to Florida to direct the campaign. Circumstances about this time led to the necessity of placing an additional force upon our western front from as well with relation to possible duties growing out of the neutral position of the Government as to a stipulation in the treaty with Mexico, which requires the United States to restrain the Indians living within their territories, from the commission of hostilities in Mexico. The sixth regiment was therefore ordered to the frontier from Jefferson barracks, and the state of things demanding the presence of an officer of rank and discretion, General Gaines was directed to take the personal command in special instructions for his government, Gaines was directed at this time, left his head quarters at Memphis, and repaired to New Orleans, where ascertaining the lamentable condition of things in Florida, he ordered a portion of the regular troops to join the militia, which was collected there; and taking the command, he proceeded on the route to Florida. At pace he received a despatch from the Adjutant General, communicating to him information of the orders which were about to issue, and directing him to await their reception at New Orleans. The same despatch also enclosed a copy of the order No. 7, which placed General Scott in command of the operations in Florida, and to whom most of the instructions from the Secretary of War to that officer, as required him to carry on the campaign, without regard to tinemapped boundaries.

As General Gaines, however, previously to leaving New Orleans, had pledged himself to the volunteers to continue with them, and as he had also written to General Scott of his intention of going to the Gulf, he held it his duty to proceed, and so reported to the Adjutant General.

It is under these circumstances that both General Scott and General Gaines are now in Florida.

From the Globe, March 21.

We are desired to correct an error into which we were inadvertently led, in our remarks of Saturday, concerning the situation of Generals Scott and Gaines in Florida. It appears that "order" No. 7, dated January 21st, from the Adjutant General's office, which directed the operations in Florida, was not received by General Gaines in Pensacola, though the letter of the Adjutant General of the 22d of the same month, announcing this order and disposition, reached him at that place. The order itself was probably omitted by mistake. We have been furnished with an extract from this letter:

"I am instructed to inform you, however, that the state of affairs west of the Mississippi may soon require your attention, if not your presence, in that quarter; accordingly you will be pleased to await further orders in New Orleans."

I herewith respectfully inclose order No. 7, by which you will see that Major General Scott has been ordered to Florida. The turn which affairs have recently taken in that quarter, has required considerable drafts on the neighboring States for a volunteer and militia force as well as an increase of the regular force drawn from the above.

"As the operations against the Seminoles will oblige Major General Scott to cross the line of his command, authority is given him to that effect, by instructions from the Secretary of War.

The instructions which General Gaines was informed in the above extract would be given to the Governor of the Seminole duties when issued, the letter from the Governor of the Seminole, were issued on the next day; namely, January 23.

Extract of a letter from the Secretary of war to General Scott, dated January 21, 1836, and enclosed to General Gaines in the above letter from the Adjutant General, which was received at Pensacola, and its receipt acknowledged by General Gaines in his letter of February 6, 1836:

"The line dividing your own department from that of General Gaines, is at present an imaginary one, and would probably, if run, actually pass through the scene of hostilities. You will pursue your operations there, without regard to any such imaginary line."

Despatches were received at the Adjutant General's Office on Saturday evening from Major General Scott, from which the following are extracts:

"HEADQUARTERS.

Between Picola and Gary's Ferry.

MARCH 9, 1836.

I have just set out for Fort Drake, via Gary's Ferry, on Black creek, with two companies of regulars, and intending to take with me from the latter place a small battalion of mounted Georgians, (hereafter mentioned.) under the command of Major Douglas. Lieutenant Colonel Bankhead is at the head of the first de-
GEN. SCOTT, U. S. A.,

Commanding in Florida.

N. B. The amount of Gen. Gaines's last express to Gen. Clinch, dated 3d inst., was merely copies of his previous letters, with a note stating that the Indians were still around him, but little or no fighting had taken place since his last communication.

Correspondence of the Darien Gen., Telegraph. [From the Editor.]

FORT DRANE, (E. P.) FEB. 27.—We arrived at this place about an hour after sunset last evening. I gathered a very affecting piece of information from Mr. Archibald Bullock, a brother of the respected, Editor of the Georgian, whom I met at Fort King, and who is a member of the New-Orleans Grecys. It was this. The army under General Gaines had been cut off from all communication with the seat of war, and the vessel on which the roll of the efficient officer of Major Dade's company took place. It was an error to think that this galvanic band was taken by surprise. The very position in which they were placed, showed that they were formed in regular battle order. The fact was they were overpowerd by numbers. The scene of action bore evident marks that every American man on the ground had done his duty. A breastwork, about three feet high, was found to contain the remains of such as were able to hide the storm until the final shower of destruction took place. Here was recognised the bones of the lamented Basinger. Some of the officers, and one of the three whose death with life, knew his body by a small quantity of the hair that once bestowed his noble forehead. It will be a consolation to his friends to know that the horrid savage took no scalp from his head. Indeed abundant evidence existed to show that the Indians left the field precipitately. A great quantity of ornamental jewelry, pins, bracelets, and gold watches, were found on the officers, and upwards of $800 in paper, and gold and silver was taken from their pockets. The savage bent on plunder, would not have left these articles, if he did not fear a speedy retribution for his murders.

Major Dade was the first man killed, and Lieut. Basinger the last of the officers, and it was written by General Scott, that Basinger's last words were—"Come boys, let us all our lives as dearly as possible;" the next volley laid him low with his commander. The vultures made fearful ravages on their mortal remains; but let us draw a veil over this part of the narrative. Gen. Gaines had them all decently interred; but surely American gratitude will not stop here. Let a lasting monument be erected to perpetuate the names of the highest and the lowest soldier who fell on the spot, performing a sacred duty to his country. Let it be at once a monument of American chivalry, and an eternal mark of Indian turpitude.

The Louisiana volunteers sustained great misery from the want of provisions. Many of them were glad to give $2 for half a biscuit. It is to be hoped that they will be more plentifully supplied in future.

FLORIDA.

We refer our readers to the communication of our esteemed correspondent, Virginia, which appears to-day. The writer is a good authority for the facts which he gives, perfectly connecting them with the Indian affair, as well as with the theater which the Seminoles have chosen for their depredations, having resided there.

Gentlemen.—The Seminoles and Creeks, you perceive,
are waging a most ruthless war in Florida. I say the Seminoles and Creeks, for I am confident they are in conjunction. Last summer two or more Creeks were reported to Thompson, their agent, who immediately sent runners to apprehend and bring them to the agency. The runners, however, were too late. The Creeks had stolen a day or two, and had returned home. Some weeks after this, a letter was received at Fort King from Fort Mitchell, stating that several Seminoles had depopularized among the Creeks; and I think added further, that they seemed to be acting as a deputation. These facts, together with the late suspicious circumstances, I think strong proofs of the concerted action of the two nations.

They have thus far been carrying things with a bold and resolute hand. Every thing, wherever they have been unchallenged, has fallen like the devastating fury. Whether they will be brought to unconditional submission, as some suppose, by the setting in of summer, I think very questionable. The spirit of victory among our troops is indeed very strong; and, in any other country than Florida, I believe the Seminoles would be forced to an immediate surrender. But Florida, with its many advantages for Indian warfare, and its many disadvantages for the operations of our troops, I fear will make the total subjugation of the Seminole, a work of more time and effort than persons generally suppose. There are strong reasons both with its military and its moral liabilities, will limit the offensive operations of our troops to the end of May. The dense h hammocks, scarcely penetrable by those who know their thoroughfares; forming secure retreats to the Indians, but almost insuperable obstacles to our troops; the unexplored state of the southern part of the territory, making the operations of our troops to be encountered doubtful, and therefore the provision against them uncertain; the great abundance of the Indian's aliment, the coconut root, and the case with which it may be gathered by the women; the great difficulty of provisioning our troops, particularly in the southern part of Florida. When all these things shall be considered, I can scarcely believe the subjugation of the Seminole headed as they are by their warlike and resolute chiefs, Jumper and Oconeela, will be the business of but a month or two. I have no doubt, when the Indians find they cannot withstand the troops sent against them, they will retreat to their fastnesses in the south; and, if they once descend the coast, their retreat will be checked in the rear by the Seminole, that will follow them. The southern part of Florida, is as yet an unexplored country; but, so far as a reconnaissance has gone, it is believed to be one unbroken extent of water, morass, and thick hammock. You will perceive, then, this is no ordinary country to operate in. To add to this, the retreat will be checked by the Seminole, in case of the failure of their operations being in the southern part of Florida, can be provisioned, will be, to have vessels coasting on either side, whose movements will correspond with the movements of the troops, and from which a constant supply of provisions can be had. The inconveniences among the Seminoles have been put out of the execution by the Government of some of the incident measures preparatory to their removal west, agreeably to the treaty, I think, of 1832. This treaty, I believe, was made by a delegation of chiefs, who were authorized by the tribe to go west and inspect the country intended for the removal; and, if satisfied thereby, they found it a suitable one, to conclude the treaty stipulating their migration. The treaty contemplated their removal in three bodies, the whole to have been removed by the end of last year. The Indians, however, soon after the ratification of the treaty, discovered a disposition to make a show of compliance; and in the spring of the present year, the war has been engaged in such conciliatory measures as it thought would best conduce to its voluntary fulfilment. It is much to be regretted now, that the Seminoles were not forced once to fulfill their engagements. Such, I believe, is the case which should always be pursued towards the Indians. They are a base and malignant people, and are not to be trusted. They are susceptible to neither reason nor beneficent impressions; and waste time in attempting to produce them, is not only to give them confidence in their powers of resistance, but gradually to instill into them the idea of open hostility.

That General Clinch has done everything in his power to remove the Seminoles, I do believe. Never was there one more capable for that business; and I am prone to believe, had he been accorded to the letter, in really accomplishing an end so essential for an army at war in Florida. The Seminole, at this time, would either have been in quiescence, or, on their way to the west. I have heard from various and respectable sources, that he made two requisitions for about 1000 regular troops, and that in both instances, they were compiled with but in part. The small forces of two hundred men, sent to him last winter, met with the same result, only terminating his demands to the Seminoles. There seems to be a disposition on the part of some persons, to blame Clinch for his conduct of the Seminole business; but I hope the public, before they decide, will await the publication of all the official correspondence, and then, that they will be so free of bias, as to cast their censure wherever it may be deserved, without respect to persons.

About the middle of April, last year, a council was held at Fort King, when the Government, in insisting upon the removal of the Indians, again presented the treaty for their signatures. About one-half of the chiefs and principal persons present signed it; for excuse for his not signing it, that he was anxious to do so, but that his subordinate situation to his immediate chief, Olatemeko, who disapproved of the treaty, rendered it impossible. Some weeks subsequent to this, Oconeela called upon the Indian Agent upon business connected with the treaty, and informed him that he was under the impression of the effects of liquor, and, in his remarks betrayed the greatest excitement. He told the Agent, among other things, that the white men must be off; that the land was theirs, and they would have it. His excitement increasing, and his gesticulations becoming more and more violent, the Agent sent word to the commanding officer, reporting the state of affairs as transpiring. The commanding officer directed the guard to apprehend him and conduct him to the guard-house. As soon as Oconeela saw the guard, with their bayonets charged, approaching him he sprang upon his feet, gave the war whoop, and it was said, swore his revenge. The next day he told the Agent he had been seized by the whites; that they treated him in the most barbarous manner, that he got drunk; and that if he would release him, he would not sign the treaty himself, but would persuade the Miccosoukies also to sign. Of course, this, of itself, was of no avail; but the chiefs of the Miccosoukies voluntarily offering to sign the treaty, provided Oconeela was released, and the Miccosoukies complied with their engagements.

The first indication after this, of a spirit of resistance by the Seminole, was the murder of Dalton, the mail carrier between Tampa and Fort King. This, though it created strong suspicions, gave no positive assurance of the general hostility of the Miccosoukies. The first demonstration of this kind, was the murder of Charley Omatale, the most steadfast supporter of the treaty, by Oconeela and his dependents. Omatale, at the time of his death, was with his daughters, on his return from Fort King. On the succeeding day, he intended to return to the town of Government, and it was doubtless an attempt to nip the fulfillment of the treaty in the bud, that Oconeela shot him down. I am told that this occurred to the officers of the garrison, after the intelligence of Omatale's death, that Oconeela's Tenetestee, (Lieutenant, as he calls him) Tom, had been in the general council with the principal chiefs, and that it is said to his usual habit he was grave and thoughtful. He also was taken to shake hands. It occurred to them also, that he must have agitated when Omatale was near him; and about an hour later, he had his eyes keenly fixed upon him. All of course was an after thought; but I have no hesitating to say that Omatale's last words were, "He was in my bosom;" or, in other words, he was suspected of dishonesty; and what's much to be lamented, the greater proof
ARMY AND NAVY CHRONICLE.

199

of the friendly Indians, believing our forces too small to protect them, were constrained to go over to the enemy.

Chassey Omatish was one of those who went to examine the land fixed upon for them by our Government. He was always a firm advocate for emigration—he spoke a little English, and this faculty, with his amiable manners and countenance, made him an object of interest to all who saw him. He was about 30 years of age, and about 5 feet, 11 inches high—his frame was large and muscular. In Council, he discovered more foresight and common sense than any other of the Chiefs. He has left two or three very interesting daughters, to mourn his loss; and, now, whilst I fancy they are in mourning, securing the inheritance, I am thinking of them following their becoming father into garrison, and then think that that kind and beloved father is now no more, I feel inclined with them to drop a tear to his memory.

Oceola is an upset in the nation; but one who has obtained his present high elevation, by his energy and his talents. He was, at one time, in the employ of the garrison at Fort King, to inflict the penalties of the Indian law upon all those of his nation, who were found outside of their boundary. For a while, it is said, he proved both vigilant and efficient; but, then, he became more and more relaxed in his castigations; was full of declamations for impunity to the aggressors; and finally went to the Seminoles, as one of their agents. Though not in the family, he purchased a beautiful rifle for him; and there is but little doubt, if Thompson gave it to him, that that was the rifle Oceola used, when he added his bullet to the fifteen which passed through his benefactor.

Oceola is a wonderfully shrewd man, as his politic conduct towards General Thompson will show. Thompson, it would seem, proved a dupe in his beneficence to Oceola. I have been told that he had such a regard for the Chief, that when he went to Savannah, he invited his family, he purchased a beautiful rifle for him; and there is but little doubt, if Thompson gave it to him, that that was the rifle Oceola used, when he added his bullet to the fifteen which passed through his benefactor.

Oceola is a wonderful shrewd man, as his politic conduct towards General Thompson will show. Thompson, it would seem, proved a dupe in his beneficence to Oceola. I have been told that he had such a regard for the Chief, that when he went to Savannah, he invited his family, he purchased a beautiful rifle for him; and there is but little doubt, if Thompson gave it to him, that that was the rifle Oceola used, when he added his bullet to the fifteen which passed through his benefactor.

It is to be hoped, now, the people will see the necessity, if not of an increase, at least of the establishment of a standing army. Our statesmen were more regardless than they are, of ephemeral popularity—more determined on prospective good; these sudden drains upon the Treasury, and heart-rending scenes, would not be known. But no—it seems to be our destiny never to perceive evils till we can feel them. Is it ever to be so?

VIATOR.

II.

An officer of the Georgia volunteers who marched to Fort King with Gen. Clinch, writes as follows:

To give some idea of the scarcity at Fort King I will mention that $3 was paid for one biscuit, $1 per gill for liquor—$20 per gallon was offered for liquor and would have been given readily. I think in one instance $100 was offered for one gallon. Money was of no use, gruel earned its place, and one man would be seen in line two hours and then into that window; ever assuming that peculiar air of curiosity, discernible only in the Indian. Becoming more and more impatient of his exclusion from the com- fusion, he suddenly stalked across the stoop, jerked out his knife, and flourished it around his head with the most marvellous velocity. Never have I seen a more striking figure than he presented at that time. Of a fine rigid frame—his costume as appropriate as it was striking, gave grace as well as dignity to his attitudes. On his head was a turban, garnished with two long dangling feathers—his hair, of glossy blackness, fell in thin sheaves of the most variety of expression when unruffled; but now exhibiting a mixture of haste and unconquerable resolution. Coupled these characteristics with his sturdy stride, his significant shake of his head, and his uplifted knife, clenching and flourishing with savage ferocity his knife, and you will form some conception of him as he then appeared to be.

Ocotee is not the chief of the Seminoles, as some suppose. He is, as I have before said, a subordinate under the Miccosukees. The nominal Chief of the Seminoles is Mecanope, though Jumper, who is exceptionally intelligent, and I suspect the most influential chief in the nation, has always taken the lead in Council. Ocotee always, I should think, more active than the better General; Jumper being now about 85 years old.

Gen. MACOM was left Norfolk on Friday afternoon 18th inst. in the Steam Packet South Carolina, Capt. Rollins, for Charleston, on his way to the seat of War in Florida.

LITTLE ROCK, Feb. 22, 1836.

LIEUT. DEAS and Capt. RANDALL, U. S. Army, and BEATTIE, Agent for the contractor, returned to this place last week from removing a party of emigrating Creek Indians, with whom they passed this place for the west on the 8th ult., and are still remaining here, waiting for a passage down the river.

THE INDIANS.—The Chicago American of February 27th, has the following paragraph in relation to the Indians on the western frontier:

"Rumors says the Indians on our frontier are discomfit ed, and that those who were removed west of the Mississippi are returning. If such be the case, we may have another Black Hawk affair. The number of warriors in the country is wholly unprepared for resistance, and cases of Indian troubles commence hostilities.
From the Chicago American, March 5.

We stated, last week, that rumors were current "that the Indians on our frontier were discontented, and that those who were removed west of the Mississippi were returning. We are gratified in being able to state that--though such rumors were prevalent, they were without foundation, as will be seen by the following note from Captain Russel, Indian Agent:

Mr. Davis: I wish merely to inform you that not a word of truth is in the rumor, as stated in your last paper relative to the Indians on our frontier being discontented. There is no such feeling existing among them; and frequent visits which we have received from their head Chief, now with the party that emigrated last fall, they are contented and were pleased with their location, and have no desire to return.

All the Indians on our frontier will, it is understood, be removed early this spring.--Ibid.

Condition of Passed Midshipman Barton, wounded in the Smyrna duel.

Dear Sir:--I promised Passed Midshipman Barton to inform you, by the first opportunity, of his condition. We left him at Smyrna, on the 9th inst., doing well in every respect. The ball wound had healed; the counterorking which was made for the extraction of the ball was still discharging. The only obstacle to a speedy recovery, was a fragment of the Tibia, which was excised, but not sufficiently detached to be removed by incision. This fragment had been put in its place at the first dressing, and it was the opinion of Dr. Boyd, the Mediterranean Fleet Surgeon, who attended him, that it would have united, as did the other, had not Mr. Barton been subjected to two removals. The ball traversed the Tibia in its upper third, fracturing it transversely, and splintering it longitudinally, and lodged posteriorly to it, in the gastrocnemii. The entrance of the ball being on the front, could not give vent to the discharge; and therefore Dr. Boyd cut down to the ball, removed it, and dressed the incision, as to heal in the first intention, if nature should consolidate the bone, without producing any suppuration in the soft parts, or to serve as an outlet against any accumulation that might form in the inflammatory state. The sloughs were then removed. A few days ago, Dr. Boyd informed us that the Tibia had consolidated, with the exception of the above mentioned fragment. The Surgeon under whose charge he was left by Dr. Boyd, when the Constitution sailed, perceived the necessity of removing it by incision, as soon as a slight sore throat which Mr. Barton labored under, subsided. After the tonsils were abated, Barton received from Com. Elliott, Dr. Boyd could not find if in his heart or his judgment, to urge his going on board the Constitution, and he (Dr. B.) insisted on his not being sent to the Shark. To leave him at Smyrna was his own request.

Large bone of the leg.

The conduct of Com. Elliott, in ordering these cases regarding removals, is before the country, and we trust the Navy Department.

Naval.

The U. S. schooner Georgia, Lieut. Gen. CHAS. BOAS, BEAUMON, destined for the West India station, came out of the dry dock at Gosport, a few days since, and will probably drop down to the mouth of the river to the Naval Hospital at-morning, which she will sail next week for her station. Her commander, anxious have on hand as many stores and provisions as possible.

The sloop of war Falmouth, came out of dock same day and we learn that the Fairfield has gone into dock for repairs.-Norfolk Beacon, March 23.

Commodore Patterson has entered upon the duties of Commandant of the Navy Yard in this city. Captain Gallagher, who recently had charge of this post, retires, we understand, for the present to his residence near Wilmington, Del.-Washington Globe.

From the Pensacola Gazette, March 12.

The frigate Constellation and the sloop of war St. Louis, came up from the Navy Yard on Wednesday last. The sloop under the command of Commodore Turner, was in the yard only a few days. Her present destination is Key West, at which place she will remain some time. It is very unfortunate, that at this moment the government cannot command the services of a few armed vessels, of a light draught of water, to cruise among the islands, bays and inlets of the peninsula. It was understood some time ago, that the Revenue Cutters had been prepared under the direction of Com. Dallas for this purpose. This appears now, not to be the case; indeed, it is questionable whether they are suitable craft for such a service. They are generally sharp, and draw too much water, still, however, they might be employed to great advantage, in cutting off all intercourse between the Indians and the fishermen of the West Indies, as well as in transporting troops from point to point along the peninsula.

H. B. M. schr. Pike, Lieut. Brooking, bound from Port Royal to Montego Bay, on the night of the 8th inst., struck on the Pelican Reef, supposing herself to be farther southward. By the exertions of the officers, ably seconded by the ablest gentlemen of the crew, the whole of the crew were saved, although the vessel herself is a total wreck.

Passengers arrived.

New York, March 28.—Per steamer Wm. Gibbons, from Charleston, Lt. C. Graham, of the Army.

To Mariners.

E. I. Monsson of 1836.—Notice of the probable discomfiture of the Light at Point Palmyras, during the S. W. Monsson of 1836.—The encroachment of the Sea on the Island of Myvurum, (commonly called Point Palmyras) rendering it highly probable that the Light cannot be continued during the next S. W. Monsoon. Notice is hereby given, that should discontinuance take place, the Senior Pilot at the station will burn a Blue Light, and immediately after fire a Rocket, every half hour during the night, commencing at 7 P.M. and ending at 6 A.M.

2. The vessel on board of which such Senior Pilot may be, will be instructed to take up a position the point bearing W., by N. distant 18 miles, and in 18 or 20 fathoms water, and to keep in that position during the night, as near as practicable.

3. The vessel on board of which the next turn pilot may be, will be directed to burn a maroon every half hour, i.e., one quarter of an hour after the burning of the blue light and firing of the rocket, and vessels wanting a pilot are required to make for the vessels so burning the maroon, if they can do so without inconvenience, by reference to the notice issued from this office, under date 1st July last.

4. The simultaneously firing a rocket, with the burning of a blue light, is ordered to distinguish the pilot's station off the point, from the existing light vessel, at the entrance of the eastern channel; it is intended that the close approach of the same vessel to the pilot's station will hold the steersman of the vessel, on keeping the light, under the state of the Island, when a definite notice will be issued.

By order of the Marine Board.

Chas. B. Greenlaw, Secretary.

Fort William, (Calcutta, the 20th Oct. 1836.)
WASHINGTON THE BRAVE.

The war whoop thro' the forest rings
And strikes the startled deer,
And bounding o'er the mighty deep,
Brittainia's sons appear,—
But who is he of that port?
Who draws the shining gibe
The lightning's flash is in his eye—
'Tis Washington the brave!

Beside him Justice trims her scale,
And Freedom's songs arise,
Fresh laurels bloom upon his brow,
And Fame before him flies,
Oh mighty chief, around thy head
Shall Victory's banner wave,
And future millions bless the name
Of Washington the brave—

In silent sadness weeping lay,
Columbias daughters low,
Their tresses bound with mantle gray,
Their cheeks were pale with woe.
Oh! mighty heaven protect they cried,
All those we cannot leave,
Their prayers were heard,—and all rejoin,
In Washington the brave.—

From foreign climes, another chief,
To aid us in our strife,
His person risked, his fortune spent,
And left his home—his wife;
His generous soul with ardour glow'd
On our Liberty's hope,
And good Lafayette's name will live,
With Washington the brave.—

LINES

On the death of Bowes who was Lieutenant Gen. Waight.

Weep not for him whose fell the tomb,
In life's happy morning hast hid from your eyes,
In sin he threw a blight o'er the spirit's bright bloom,
On earth he professed that was born for the skies.

Death shad the air, fantastic sorrow had stained it,
'Twas frozen in all the pure light of its course,
And last sleeps till the sunshine of Heaven has unmanned it.
To water the Eden where first was its source.

Mourn, mourn not for him, nor longer bewail,
Your youngest and loveliest, lost to you now,
In life's early laurel he had time to grow pale,
O'er the wrinkles of sorrow were seen on his brow.

Old years was his moment, rise spirits, for flying
From this gloomy world, while its gloom was known
And the wild accents he hoped so sweetly in dying,
Were sealed in Heaven by lips like his own.

Weep not for him! in his spring time he flew
To the land where the wings of the soul are unfurled;
And now, this a star, beyond our earth's cold shroud,
Lauderbraely down on the sleep of this world.

WASHINGTON CITY;

THURSDAY MARCH 31, 1836.

To Correspondents.—We have another communication from Subaltern himself, and not wishing to continue the discussion farther, we have delivered it to the gentleman authorised to receive the previous one.

"Decatur"—"Waist Belts"—"and "E."—shall appear next week. "Tompson," and "J. S." are in type.

SEMINOLE CAMPAIGN.

By the southern mail of Tuesday evening, advices were received from the seat of war. The following letter from an officer of the Army to another officer in this city, is as authentic and full as any account that we have seen.

"Garey's Ferry, Black Creek,
16th March, 1836.

"Major Lear, 4th Infantry, arrived here last evening from Fort Drum, on his way to Baton Rouge. He accompanied Major Gen. Gaines from Tampa to Fort King, and returned with him to Withlacoochee. He gave me the following information. Gen. Gaines approached the Withlacoochee on the afternoon of the 27th ult.; soon after his arrival, the Indians, perceiving that he did not attempt to cross the river, opened a fire from the opposite bank, which they kept up during the night. The next morning, about 8 o'clock, every thing being as still as death on the opposite bank, a field piece was fired from the little entrenched camp that the troops had thrown up, (by way of inviting Osceola to the combat,) and immediately a thousand yells were uttered on all sides, the Indians having crossed the river and surrounded the entrenchment, at least three faces of it—the fourth resting on the river, which is some forty or fifty yards broad. The firing continued for eight days, not to speak of a lively 'sprinkling' by night. The besieging party, consisting of about 200 warriors, was regularly relieved, night and day, and the firing was particularly lively when the drums beat for guard-mounting within the entrenchment. It was supposed a thousand warriors had crossed the river to attack the camp, and judging by the firing and yells, a large number remained on the other side.

"Lieu. Izard was wounded in the head on the second day, and died on the 8th inst. Only four men were killed, and about fifty wounded, during the eight days fighting.

"The Indians, finding that they were gaining nothing by the siege, and doubtless aware of the approach of Gen. Clinch, sent a negro to learn if a flag would be respected. Being so informed, Osceola, with his body guard of some two hundred, approached the camp to meet those sent out by Gen. Gaines. He said he would fight no more; he was tired of fighting; but he was unwilling to leave Florida; he wished to have the country south of the Withlacoochee! This, of course, was refused. However, articles of agreement were drawn up, and nearly all of them had been read and assented to, by the Indians or Osceola, when the advance guard of Gen. Clinch unexpectedly approached, and fired (before they could be warned) upon the Indians. The Indians beat themselves against the hammocks as quickly as they could; and did not return the fire. This, of course, broke up the conference."
ARMY AND NAVY CHRONICLE.

"Gen. Gaines waited several days to hear from the Indians; but nothing further was done. The troops returned to Fort Drane for subsistence, having eaten horse flesh for some days. Gen. Gaines has left for New Orleans, via Tallahassee. Gen. Scott is in command at Fort Drane, and is to be on the bank of the Withlacoochee on the 25th inst., where are to be Oseola and the main body of the Indians, for peace or for war;"

"Since Gen. Scott's arrival at Fort Drane, an express has been sent to the services of 500 Creek Indians, that have volunteered their services. This shows that little confidence is reposed in Oseola's professions of peace."

Major Kirby, with two companies of U. S. Troops, arrived at Williams (14 miles below Camp McCrae) on the 8th inst. in the steamboat Dolphin.

THE NEW INFANTRY TACTICS.--The communication of "Hindman," in this day's paper, concludes the series of articles in defence of the new system of Infantry Tactics, and in reply to "Clairfait," and other writers.

As Clairfait has been particularly alluded to by Hindman, it will naturally be expected that he should in turn have something to say for himself; but if ouranimises are correct, (and we have nothing but surmise to guide us in the case,) the author of Clairfait is no longer among the living.

If we should be, in error, however, Clairfait will in due time answer for himself.

PROMOTION IN THE NAVY.

Lieutenant Thomas Paine, to be Master Commandant, and take rank from 3d March, 1835, next after E. B. Babbitt.

Captain John B. Nicolson, of the U. S. Navy, has presented to the corporation of Richmond, his native city, portraits of Columbus and Americus Vespucius, copied from original paintings at Naples.

THE LATE BREVET MAJOR N. CLARKE.

At a meeting of the officers of the United States Army stationed at Fort Howard, and convened at that post on the 27th of February, 1836, in consequence of the death of their highly esteemed and meritorious officer, the late Brevet Major Nathan Clarke, of the 5th Infantry, Brevet Brigadier General G. M. Brooke was called to the chair, and 2d Lieutenant I. Lynde appointed Secretary.

On motion, it was resolved, that the Chairman appoint a Committee to prepare Resolutions expressive of the feelings of the meeting.

The following members were appointed the Committee:

Surgeon R. S. Satterlee, U. S. A.
Capt. Martin Scott, 5th Infantry,
1st Lieutenant William Alexander, 5th Infantry, and
2d Lieutenant William Chapman, 5th Infantry.

The Committee presented the following Resolutions, which were unanimously adopted:

Resolved, That the members of this meeting sincerely lament the recent and lamentable event, and heartily associate with the officers and Brevet Major N. Clarke, of the 5th regiment of U. S. Infantry, in all the unutterable relations of husbandly father, and friend, and to his unsullied character as a gentleman and soldier, we cherish the highest respects for his memory.

Resolved, That we tender to his afflicted family our warmest feelings of sympathy, in the state of bereavement, in which they are placed by this affecting event.

Resolved, That as a mark of respect for the memory of the deceased, the members of this meeting will, and that they recommend to the officers of the 5th Infantry and those whose bade is loom- ing for thirty days.

Resolved, That the General Commanding be requested to forward a copy of these proceedings to the afflicted mother and Major Clarke; also, to the Secretary of this meeting this one, for publication in the Army and Navy Chronicle.

GEO. M. BROOKE, Br. Brigadier General.
R. S. SATTERLEE, Surgeon, U. S. A.
M. SCOTT, Capt. 5th Regt. Inf.
W. ALEXANDER, 1st Lieut. 5th Regt. Inf.
S. CLAIR DENNY, 1st Lieut. 5th Regt. Inf.
R. E. CLARY, 2d Lieut. 5th Regt. Inf.
R. E. CLARY, 2d Lieut. 5th Regt. Inf.
C. C. SIBLEY, 2d Lieut. 5th Regt. Inf.
C. C. DAVEISS, 2d Lieut. 5th Regt. Inf.
W. CHAPLIN, 2d Lieut. & Asst. 5th Regt. Inf.
B. B. MARCY, 2d Lieut. 5th Regt. Inf.
W. M. D. MCKISSACK, 2d Lieut. 5th Regt. Inf.
R. A. WAINWRIGHT, 2d Lieut. 5th Regt. Inf.
I. LYNDEN, 2d Lieut. 5th Regt. Inf.

At a meeting of the officers stationed at Fort Wimpawanca, convened in consequence of the death of Brevet Major Clarke, the following resolutions were unanimously adopted:

Resolved, That we deeply lament and deplore the loss of one of our most esteemed and officer, Brevet Major N. Clarke.

Resolved, That we do mourn, sincerely sympathize with his distinguished family in their irreparable loss.

Resolved, That in his death society has lost one of its best and most esteemed friends, his brother officers one of their warmest friends, and the service a valuable and efficient officer.

Resolved, That a copy of the foregoing resolutions be handed to his bereaved widow, and that the same be furnished to the Editors of the Army and Navy Chronicle, and to N. Y. Courier and Enquirer.

J. GREEN, Major 5th Inf. Commanding Post.
R. FOOT, Surgeon U. S. A.
G. LOW, Capt. 5th Inf.
A. JOHNSTON, Lieut. 5th Inf.
A. S. HOE, Lieut. 5th Inf.
E. M. LACY, Lieut. 5th Inf.
J. T. COLLINSWORTH, Lieut. 5th Inf.
M. VAN CLEVE, Lieut. 5th Inf.
J. H. WHIPPLE, Lieut. 5th Inf.

At a meeting of the undersigned, officers of the United States army, convened at Fort Denorts, Ill., on the 2d of March, 1836, Brevet Maj. D. Wilcox, 6th Infantry, was called to the chair, and Brevet 2d Lt. A. H. Tappan appointed Secretary; whereupon the following named gentlemen were appointed by the chair to draft resolutions expressive of the feelings of the meeting on the melancholy intelligence of the death of Captain and Brevet Major Clarke, 6th Infantry U. S. Army:

The following resolutions having been reported by the Committee, were unanimously adopted:

Resolved, That in the death of Brevet Major Clarke, 6th Infantry U. S. Army, we condeol with the widow and family in their distressing and irreparable bereavement, and that we heartily sympathize with the gallant soldier and faithful servant, the public service has lost.

Resolved, That as a mark of respect to the memory of the deceased, we will wear the usual badge of mourning for thirty days.

Resolved, That the proceedings of this meeting be communicated to the widow of the late Brevet Major Clarke, and that a copy be furnished to the Head. Quarterly of the Army and Navy Chronicle, and one for publication in the Army and Navy Chronicle.

D. WILCOX, Brevet Major 5th Infantry.
J. B. F. RUSSELL, Capt. 5th Infantry.
J. HUNTER, Capt. 6th Infantry.
L. STOWE, Capt. 6th Infantry.
R. W. ALEXANDER, 2d Lt. 6th Infantry and Sec.
ARRIVALS AT WASHINGTON.
Mr. 24—Lt. J. J. Abercombie, 1st Inf. Fuller’s.
Major H. W. Tichenor, Engrs. Mrs. M’aulde’s
Lt. J. F. Dine, do, Mrs. Pittman’s

COMMUNICATIONS.

NEW INFANTRY TACTICS.

No. VII.

I shall now advert to several miscellaneous objections to this work which have not been met by the Reviewer, or the Elements, thereon, and then discuss the subject of commands.

In some cases (say Clairfait) important fundamental exercises are omitted which are subsequently referred to as though they had been learned.” A. and J. Garnett, No. 12.

No specific objections is given. The bold assertion is made, that the system is defective, not to catch the ignorant but the idle; for, among the latter who have read this “same learned Theban,” even with the Tactics at hand, probably not one will ever take the trouble to detect, much less expose the gross misrepresentation.

The speech of the Reviewer, it may, perhaps, be paraphrased, in paragraph No 739, in which a half-face is directed; and he may then allege that this movement has not been previously made a specific head of instruction. True; because the greater including the first, when revolts had once been taught to face forty-five degrees of the circle, as in No. 109, no particular instruction was needed to enable them to face twenty-two and a half—every movement of the feet, in the two cases, being the same. No. 739, then, can furnish no refuge to the critic, and, in another reason: this paragraph makes no allusion to any other.

The explanation given above shows why the half-face is considered as a specific head of instruction either in the old or the new French books, or in ours of 1816. It was a useless interpolation upon the system of 1825 from the British Tactics, and, made, as I believe, on the motion of General Scott.

Precisely the same remark is applicable to the balance step, the side step, and the step short; and these omissions again cannot furnish the critic no subterfuge, for neither step is any where “referred to” in the Tactics of 1825.

The omission to insert in the School of the Soldier, the mention of “l’armes port,” or port arms, although it is appended for returning soldiers, is another capital of Clairfait.

The history of this exercise is the same with that of half-face, balance step, &c.

In our book of 1825, it is prescribed, No. 466, that “when a battalion or line is to charge bayonet, the whole are, in the first instance, to port arms, and advance at a firm, quick pace [that is, at the rate of two steps in every movement]; but in the next perfect order,” &c. What! perfect order, marching at that rate, and each man with both arms—pistol in front? I can imagine nothing but rolling, plunging, and closing upon the center; for, if we have not, to take one elbow out of the ranks, in order to support arms, diminishes the breadth of each in the other man’s shot, so that, when one is used out at g’s, port, must double, that diminution in other words, the face of a battalion of 600 file would be diminished about seventy per cent. Consequently, on coming to a halt, to a carry, or a charge, the battalion would be additional fast to open out from the centre thirty-five per cent., which would be all right, &c. What a mortal disadvantage this would be, and hence arms port has been banished from the body of our new Tactics to its apposite, and there limited to the fifteenth of December.

The same critic speaks of the three-rank formation where the whole body of the one line is to be charged, of which the first is sacrifice. A squad, on the march, &c. What, for instance, 1800? the first had to be sacrificed, and why not the second ranks also? Besides, what calculations and movements, it is true, details for three ranks are first given, followed by all that is peculiar to the other depth; but this course is evidently adopted as a mere labor-saving contrivance—because the greater including the less, but few additional words were needed to give the little that was particular to the smaller depth.

Two ranks then, with the single exception of some of the squares against cavalry, are as much the basis of the system as three; and this (in his third number) is admitted by Clairfait; for he complains of the book as “a System of two distinct bases!” But then, let it be remarked, that the whole force of this critic’s condemnation, in the first instance, rests on having believed that the book has a theoretical basis. This may be thought a display of ambidexterity clever enough; but what shall we say of its morality?

In the Military and Naval Magazine for October 1885, there is a very sensible article (a translation) from the Spectateur Militaire, by Captain Pibusseau, in favor of two ranks to the entire battalion. He speaks with great gravity, and the book has a very practical basis. This may be thought a display of ambidexterity clever enough; but what shall we say of its morality?

In future, each of our battalions, in the red or blue colors, shall have but one color bearer. The critic is emphatically condemned—because, with two, if a color be taken, there would still be one left to the battalion. But after this “innovation,” made by the enemy, what would become (to continue the quotation from Clairfait’s) of “the fine arrangement” of passing a sergeant between two columns? Truly, if the critic cannot better defend the eagle and stars of his country than he reasons, it would be utterly unsafe to put him at the head of a battalion even with a single stand. No doubt it would be a similar distrust that the British battalions in Canada, in 1814, never took with them a color into battle, whilst the American banner proudly waved in every breeze and in every field.

The color-bearer has no more difficulty in marching in line, according to the new book, than the centre sergeant had under the old. In both cases, the liability to stumble, to alter the pace, and to deviate from the direction, is about the same; for, in windy weather, the color being furled and cased, and its lance supported by a leather strop at the hip, it is as easily borne as a musket.

On the other hand, it is highly important that the centre individual, who is advanced to give the step and direction to the whole battalion, should be conspicuously marked—at least by the lance, though the color be furled; and this object is attained by the French books and ours of 1836.

The swaremness of two colors, per battalion, may be thus historically deduced:—Before the war of 1812, as each of our regiments, though of but ten companies, composed of two half-battalions, formed the government, there were two national and one regimental, to every regiment, in order that each battalion might have one. When, afterwards, the ten companies came to be considered as a single battalion, and each being actually in possession of a pair of colors, a difficulty arose as to the manner of their disposition; and every body considered it advisable to use both. Under the French system of tactics, this was not a matter to be easily arranged. General Scott, in 1814, devised the expedient of placing a sergeant between the two colors, and of charging the sergeant with giving the step and direction. Hence the provisions on this subject in our books of 1814 and 1826.
to the fiction very mentioned in that paragraph. It may be observed, first, that the paragraph is literally translated from the French, and secondly, that it is exactly what was required in that place. But as this adder-critic, as we have before seen, deems all, but playing, incompatible with a state of peace—farther to amuse him— for this sport to have the engine hoot with his own petulance—vexed will he hearken to the exclamations of Constance in King John: "No peace! peace is to me a war!"

We have, from the same source, a complaint against the singularly odd words, scattered throughout the system. This literary censure is echoed by several other writers. Perhaps it is hazarded by the principal or his followers. Guided by what has been picked up in conversation, I will endeavour to give a list of those supposed neologisms.

Abrasett, averb. Side by side; in such a position that the breasts may bear against the same line.—Johnson.

This word is objected to as purely nautical. Yet York, himself, mortally wounded, says to a dying friend:

Tarry, dear cousin Suffolk! My soul shall thine keep company to heaven;
Tarry, sweet soul, for mine; then fly abastre. 

Henry V. 4. 3 Sc. 1.

This is much used in the Tactics in the sense here given. The lieutenants and major are charged with the supervision of the guides. The latter, according to the general rule, No. 1161, endeavor, of themselves, to find their exact positions. The field officer does not unnecessarily interfere; and when he sees a guide in the true position, he may assist him, by calling out—steady, stand, &c. or the guide feels assured that he is right, from the silence of the field officer who is overlooking him.

The use of abastre and to assure, not only gives accuracy to the details of the new Tactics, but has saved a word and emphasis and repetition.

Headmost, adjectival, is also much used in the book, and like abastre has been ignorantly objected to as wholly a marine term.

And when the Brig of Turk was won,

The headmost horseman rode alone.

Line of the Lake.

Kerchief, n. s. is once used (without the prefix hand, pocket, or neck) in the suggested signals for light-infantry. And so it is written in the affecting episode of Eliza, overlooking the battle of Minden, and anxious for the fate of her husband:

Part by hand the one lipping her boy she led;
And one fair girl, amid the loud alarm,
Slept on her kerchief; creased by her arm.

Botanic Garden, Part II.

Parallelly, adverb. To the adjective parallel, there is no adverb given in Johnson or Walker, and hence the use of parallelly in the Tactics is much ridiculed. Yet this adverb was legitimate before the time of Johnson, and is still in good use. It is found in Todd's additions, in Webster, and also in the great Dictionary by Richardson, now in a course of publication in London and New York.

And (symmetry) is plants consist in chafing, and branches parallelly answering one another.—Sta. T. Moore.

The boay. matter of the toth consists of a number of layers which are disposed parallelly.—Outline of Anatomy.

The foregoing words then are not to be charged against the new Tactics as neologisms. The case which follows is, however, of that character.

To play, v. a. (playing, played, played.) This verb is not to be found in any English Dictionary of the popular tongue, but it is in both French and English military dictionaries, and simply means the remise of—

To deploy, v. a. To display; to unfold; to spread out.—Todd's Johnson.

This verb is not in Johnson or Walker, but it is in Webster; Richardson, and our Tactics of 1825.

To play then, means, to bend; to fold; to close.

Both to deploy and to display are used in the book of 1825; and in the Tactics of 1825, deploy, perhaps, would have been exclusively employed, but that: there was no corresponding word to denote the bringing of the forelimbs of the horse by playing. For we cannot say play a line, when we wish it to form column, although we might say display as applicable to passing from column into line. Now to play and do play express these opposite movements, and are natural contrasts to each other. Hence play seems to have been generally used for this service; and to keep the necessity of some. such definite term to distinguish the action of folding, from that of breaking a line into column, (another technic) see new Tactics Nos. 1289—9; Pages 188—4 (Vol. 2); Nos. 2184—17.

According to. Julius Cæsar,—who was very precise in the use of the words as these of "blows"—chasselled in his treatise on strategy, "to avoid every unusual word as a rock;" and Dean Swift, in the Tuller, (No. 530) designates the right to "the traders in history, politics, and belles lettres" some such words as: "preliminariæ, paralias, circumvolution, battalia etc." If he adds—whence they are, if they attack us too frequently in our Cole-Ronson, we shall certainly put them to flight, and cut off their rear. But the Dean—admirer—Cæsar would have allowed the exception—admits the right of coinage in these who handle particular sciences, as divinity, law, physics and the like. Horace is clear in his warrant to that effect:

Si forte necesse est
Indicia monstrare recensitum abdita rerum.

If you write of things strate or new,
Some of your own invention may be used,
So the saldian and discreetly done.—Ronson.

In the book of 1825 both deploy and display are used for the same object, as we shall presently see.

The prepositions of our language have always been very distinctively employed, and several of them are necessarily used in a technical sense in every System of Tactics. Thus we have to form line to and on a flank, to denote two movements quite unlike each other, and which could not well be otherwise designated. These prepositions, however, being employed in the same sense in our books of 1755, 1756, 1763, and several of them in particular defence in this place; but the last book has by the head and on the head (or rear) of the column to denote the different modes of taking distances in columns; and by the front, and by the flank, to denote two different directions of march. By and on, in these latter cases, have been objected to as gallicisms.

By. In the same direction with.—Johnson.

They are also straited and furrowed by the length.—Gray.

Accordingly, to open out a column, by the head, is to extend it by a movement, in the same direction with the head, and to march by the front, or by the flank, is to march in the same direction with the front or the flank. Indeed, on reflection, by the front and by the flank, are to be understood, in book of 1825, 23 and 35, that they require a particular defence in this place; but the last book has by the head and on the head (or rear) of the column to denote the different modes of taking distances in columns; and by the front, and by the flank, to denote two different directions of march. By and on, in these latter cases, have been objected to as gallicisms.

But it is time to pass from phrases, to commands, in
ARMY AND NAVY CHRONICLE.

which "are things" and in respect to which ignorance and miscalculations have been most clamorous.

2. Words of command are introduced in one part, to which we add at the conclusion of the coupled analogy, where each analogy offers a parallelism of means of such intricate length that, &c. "Clarifiés, No. 1.

1. In the first an allusion is given is in the critic's critical number, in which he says: "We have already determined upon the assiduously, to the caution, or the right flank; and we may here add that this is only used in the Schools of the Soldiers, and the second sentence, all that is the difficulty is difficult to conceive its utility.

Here is an assertion in the face of that. See (School of the Gilt Nic) Nov. 1875—6, 1884, 1886, 1410; Instruction for Diplomates, passim, and numerous places in the British and the Line. The rule, in Titus IV. and V. is to be in the front, in the same direction, by the flank is always given as a caution; but, if, after marching, the march is to be diagonal, in order to enter the column, that caution is omitted, and such is likewise the habit of the old and the new French books.

The caution,—in the right flank, J. A. is suppressed, by right, to be used in the new American Tactics. Nothing more could more clearly show that these textbooks have learned nothing, and, therefore, have nothing to teach, and, as a matter of fact, what innovations may be made for this as odious caution is to be found in our book of 1875—Nov. 374, 1612, 1522, 1836, 1996, and many others.

In Nov. 1844—5, of the new Tactics, a company, for example, being in march by the front, it is made to face to the right or left several times in succession, so as to be marched in every direction—that is, with the original right or left flank leading, or the original front or rear rank leading, and, in every case, by these commands:

1. March, by the left (or right) flank; 2. March.

This was overlooked by the critic till he came to the only place where the principle is applied, (No. 1875) School of the Battalion, and here he enters a "solemn protest against so great a violation of common usage and common sense!"—Clariffs, No. 4.

Every body of troops has a front, a rear, a right and a left flank. These terms are not fixed or invariable; they are merely relative, and depend, in every case, upon the direction in which the troops are faced at the moment. Face a company, for example, to what was its right flank: its late right is now its left flank, its left flank now its right, and its front and rear, become its left and right flanks. (See No. 369.) Is there anything more consonant to "common usage and common sense?" But the principle is only laid down in the School of the Company as an element of instruction for future use in large bodies. Thus, with ten battalions, each is but a unit in respect to the army, as a company is a unit in respect to its battalion, and each battalion, when in close column, presents a parallelism of four sides or fronts of nearly the same dimensions. To each of these sides the battalion in column may be faced, as to a flank, and then marched as a single company. Hence the principle in question. See Evolutions of the Line, or Nov. 1844—5, &c.

The inordinate length of the commands. Commands may be too short as well as too long. If they do not fully indicate the movement to be executed, and do not contradictually distinguish that movement from every other, they fall under the first objection; if they contain words beyond that measure, they are too long. Again, as printed in the book, and as made in practice, there are many cases to the contrary. All such words, or the combining words, are, of course, to be omitted in delivery.

In every case there are cautionary commands to indicate the precise movement intended, and commands (or combinations) of execution. (Clariffs, 3, 2—5.)

1. March, short: the former. From necessity, of some length. Take the following issues (and there are but three others of equal length) in the School of the Battalion: 1. Close columns, by division; 2. On the right, in line, columns; 3. Battalion, right—face; 4. Quick—march. The French commands, for the same movement, are:—1. Colonoue se retir par division; 2. Sur la premiere division, la droite en tete, en colonne; 3. Bataillon—A DROITE; 4. Pas accélérées—marche. And in both books, the commands of caution, or explanation, are in italics, and terms of execution in capitals.

Here No. 1. gives warning that a close column (not one at half or full distance) is to be formed, and that the front, is to be of two companies, and not of one. No. 2. further indicates, that the movement is to be made on the first (it might be on any other) division, with the right, (not left) in front. and, into column, is added, further to impress upon the mind the nature of the action to be executed. No. 3. begins with battalion, to fix the attention, followed by right (not left) and face, the intermediate command of execution. The final word of execution then follows, preceded by quick, to denote the rate of march. The only word in the whole series that could be omitted is the article the in the second command; but what would be the value of this petty elision?

Now, let it be remembered, that the commands of a series are not spluttered out at a breath, like so many buck-shot from a pump, but are to be taken, according to the rule of the book, Nos. 82—5; that a pause is to be made at the end of the second command, because many things are to be done before the third is given; and here again another pause for a like purpose before the final word of execution. These pauses, for preparatory movements, render the repetition of the word squad, common, useless in the battalion necessary in the third command, in order to recall the attention to what follows; and it is to this repetition that the small critics, with the ignorance of spinsters, particularly object.

An indiscriminate mixture of different commands for similar evolutions, and of similar commands, for different evolutions.—Clariffs, No. 3.

I do not perceive any specification in support of this charge. None can be given; for it is absolutely without foundation.

We find the two commands in place—rest, and rest, by the former of which, the alignment is preserved by keeping the left heel in its place: and by the latter, an instant resting occurs, so far as is consistent with remaining in the position. We observe that the French commands on account of their too great similarity!—Ibid.

Yet this same critic, in his second number had objected to the word face, in the command front—face, as useless, although the word front, singly, is the command for bringing the eyes back to the front after dressing to the right or left! Now, without the addition of the word face, to distinguish the movement of the whole person, from the mere turning of the neck and eyes, much confusion would frequently happen. For the utility of the distinction between the two commands, see, among many other places, No. 1103.

We look in vain for that beautiful harmony, that admirable simplicity, [&c.] which constitute the chief excellence of the present system [of 1835].—Clariffs, No. 1.

Now I have pointed out in every number that I have written on this subject, errors, anomalies, and discrepancies, that system is in itself, unequal. In the old book, we have, page 198, these commands:—

1. Deploy on second grand division; 2. Column, outwards—face; 3. March; and at page 230, same System, we have, for a similar movement:—4. Deploy columns; 2. Battalions, outwards—face; 3. Quick—march.

These are four variations:—1. Deploy for &c.; 2. A grand division is given as the basis of the movement in one case, and not in the other; 3. Battalion is substituted (the preferable word) for column; 4. Quick march for march.
The command of guides cover in file, which occurs in paragraph 964, carries upon its fate both novelty and nonsense: since it is not only strange in itself, but destroys every thing like the usual meaning attached to the word file. Our army of to-day has always been the same, and if the man who composes a file, should not only be ranged one behind the other, but should also be immediately contiguous, and never be farther from each other than the position they would occupy within a camp.—Colliot, No. 2, pt. 2.

Confusing! and yet, as with ranks opened, four spaces apart! This truly is "both novelty and nonsense." And if men four spaces apart may be said to be in file, why not, although at the distance of ten, twenty, or forty? The word file literally means a thread, a line, and is figuratively applied to soldiers when they stand one behind the other, in a line. Contiguity, or touch, does not enter into the idea.

In our book of 1825, identically the same command (guides on the line) is given for two different purposes or cases; whereas, the Tactics of 1835 (following out the principle of not using the same command for dissimilar objects) has guides cover in file and guides on the line. See Nos. 984—8. And so the French book: Guides à ces chefs de file, and guides sur la ligne.

To our book of 1815, as also to that of 1825, there is a long table of errata attached, and in respect to the second, a circular was issued from the Adjutant General's Office directing the change of porri-arms to arms-port.—The circular of 1831 contains more than five material errors, a part, only, of which are silently corrected in the edition of the following year. Three errors may be pointed out in our new Tactics. These, no doubt, on the proper application, will be corrected by a circular from the Adjutant General's Office—with a view to the copies already distributed and in reserve, in which any further improvement, it will be easier for the publisher to make the corrections, as it is understood the work has been stereotyped.

The first of these errors is under the head of to stack arms; the second, in No. 1255, where company is printed for column; the third, in No. 3071, where "in front of the sixth," ought to read except the sixth. It is believed that neither of these errors is to be found in the impression of the work given by the printer to the House of Representatives.

HINDMAN.

THE NAVY.

"Perry" is a happy man in having so gallant a friend as "Candor" to step forward, and like a knight of old, extend his shield to cover the defenceless, draw his sword to protect the weak, and — then fight manfully on his own hook. But alas! the days of chivalry are gone, and it is possible that Perry and Candor, like Junius and Philo Junius, are one and the same person.

Candor appends this sentence to a quotation from your poor inexperienced correspondent:—He says, "Our officers behold the nations of the old world, bestowing high rank, honors and titles of nobility, and forsooth this plain democratic republic must do the same!" Candor would insinuate that I had written in favor of titles of nobility.

Oh sin! oh shame! that Candor should insinuate what it would blush to assert.

In fact I only wrote what occurred to me at the time, as proving the expediency of creating a higher grade in the navy, and said nothing about titles of nobility, which appeared to be most strongly advocated by Candor with admirals and honors. Though titles of nobility have been made unconstitutional, I cannot perceive that either of the others has been forbidden to our plain democratic republics. In granting swords and medals, our government has conferred the highest honors, and it is the rank of admiral which the navy desires. Is the title what will lead us to the simplicity and promptness of the French navy? The Constitution declares that "the President shall be commander-in-chief of the army and navy of the United States." Now I cannot imagine how a rank inferior to that of the commander-in-chief can be so high and mighty as to be unpopular, while that of the commodore-in-chief is republican. In other words, if the greater rank be democratic, it cannot be objected to the inferior, that its altitude is monarchical.

The battle of Salamis declares that the title of admiral was not incompatible with the welfare of the democratic states of ancient Greece, though the power conferred by the rank was much greater in former days than it is even given now.

Modern European republics have found it their interest to have the rank as well as title of admiral; and surely the young Hercules need not tremble, where the power is held as perfectly secure; he need not hesitate where they step boldly.

France, in her wildest days of liberty and equality, when she waged against titles "war to the knife, and the knife to the hilt," never thought of abolishing the rank of admiral; and for my life I cannot imagine why our government should be less democratic than her kaiser or bootswain's mate; all three are equally used in monarchies and republics.

I should not have used so many words in attempting to prove what appears so plain, but I see not in its annals and heard it asserted, that in the very form of our government, there is something inconsistent with the title of admiral:

Candor says that a case of co-operation, such as I had supposed, could "never happen"; "that the policy of our government is and always has been to keep out of alliances with foreign powers, and especially with those of the old world; but should circumstances ever occur which make such co-operation essential, it would be as well preserved with one grade of officers as another.

Candor has forgotten how earnestly we sought an alliance with France during the revolution; and he who has forgotten our past policy, can scarcely predict what it may be in the future.

It is impossible to say when circumstances beyond our control may again render that desirable, which in a former war was found highly advantageous.

During the revolution, the commander of the French forces obeyed the orders of Gen. Washington; thus the deplorable co-operation was secured between the two armies, and thus was the end for which the war was undertaken; so gloriously attained.

But how lamentably different was the conduct of the French fleet, from that of their land brethren. The French Admiral was lukewarm; sometimes ignorant, rant of the measures proper to be pursued; and when there was but one side to the coin.

Had we possessed admirals then, to assume at sea, the position which the father of his country held on land, the wrongs of our country would have been avenged; our government would have communicated knowledge, and the bravery which shone so brightly in our captians, would have ensured success to our admirals. The French fleet, directed by an American Admiral, would have co-operated zealously with our army, or by itself have snatched the trident from British hands. We had captains then in our navy as we have now; but the French Admiral would have laughed to scorn the presence of an American captain to command his force, and had he been commander in chief.

It may be pretended that it was the smallness of our navy, not the deficiency of rank, which the French despised; but do we not find that Washington's rank was equally obeyed, whether he was advancing on the British army, or hurrying to retreat; whether his troops were few or many; whether patriotism had swelled his numbers, or calamity had thinned them?"

Had the general officers of the American army been killed, would the French Count have allowed an American colonel to command his forces; or would he have taken the direction of affairs in his own hands, until Congress had appointed some general, in chief? Absolutely not! And even if a rank had been given to our admiral, it would not have incited us to the thought that in a future war such a rank would be a temptation to the British, who were also prepared for the same kind of a contest. The command was given him in the name of judging the future but by the past.

Candor admits that our commodores perform the duty of admirals. To perform the duty, they must have the power, and the power must be different in rank; why not grant it?
The qualification required for judges and admirals are not quite as might at first be supposed. Wisdom is the chief requisite of either, and the mind that is sufficiently vigorous to master the subtleties of the law, can scarcely be too weak to administer the plainer duties of an admiral.

Bodily vigor is less necessary for an admiral than a landsman would imagine; his duty consists in commanding efforts to other departments of the service, and not in the field. He is, however, to keep his mind sharp, and ready to act on hisIGINATION when called upon, if necessity requires it.

Admirals would be superseded when they were unable to perform efficiently what they had been selected to accomplish.

Captains were sufficient to command our ships in the revolutionary war, but now we require admirals for our line of battle ships. Captains can very well fight a frigate, but let us have admirals to direct our fleets. To do its best of my recollection, with the exception of the United States, the experience of every nation which has participated in the war, has shown the necessity of having an officer in command whose duties are to direct its movements; and, "I have but one lamp by which my feet are guided, and that is the lamp of experience."

Our navy has now said, give us admirals; if they be not granted, the service will have reason to exclaim, in the words of the poet,

"I have touch'd the highest point of all my greatness, And from that fullness of my glory, I haste now to my setting."

When I consider the importance of a higher grade in the navy, I must confess that I am totally unable to place it in the strongest light.

The trial by battle has been abolished, and should Congress make my enemies false, my deductions erroneous, or my arguments weak, he will only prove that a strong cause may have a weak champion; he will only get the better of one who really is.

PROCEDINGS OF CONGRESS, IN RELATION TO THE ARMY AND NAVY.

WEDNESDAY, March 16, 1838.

In the Senate, the bill for the employment of Mr. Bell was mentioned as a matter of importance. The Senate referred it to the Committee on Military Affairs, and requested its report on the resolution of the subject of a survey of the United States.

In the House, the bill for the appointment of Mr. Bell as the head of the naval service was referred to the Committee on the Navy.

The House of Representatives met, and the resolution for the appointment of Mr. Bell as the head of the naval service was referred to the Committee on the Navy.

The Naval Service Bill.

On motion of Mr. Camble, the House, pursuant to the special order of the 16th January, then resolved itself into a Committee of the Whole on the bill, and a Committee for the consideration of the bill making appropriations for the naval service for the year 1836.

The question pending was the motion of Mr. Bell, to take up, and consider a resolution hereof offered by him, for the appointment of a select committee to examine and report the situation of the West Point Academy.

Objection being made, Mr. Hawes moved to suspend the rule for that day, in order to dispose of his resolution, which was negatived.

NAVAL SERVICE BILL.

On motion of Mr. Camble, the House, pursuant to the special order of the 16th January, then resolved itself into a Committee of the Whole on the bill, and a Committee for the consideration of the bill making appropriations for the naval service for the year 1836.

The question pending was the motion of Mr. Bell to strike out the following item from the bill:

"For improvements and necessary repairs of the navy yard at Portsmouth, New Hampshire, sixty-seven thousand dollars."

Mr. B. having withdrawn his previous motion, to reduce the said item one-half, and substituted the following:

Mr. Bell, who was entitled to the floor, rose and addressed the House at length but without concluding, gave way to Mr. B. on the motion of Mr. B., was referred to the Committee of the Whole and reported progress; and then, on motion of Mr. W., the House adjourned.

The Chair laid before the House, the report of the Secretary of War, transmitting a report from the Topographical Bureau, of the survey of a railroad from Pensacola to Columbus, Georgia, which was laid on the table and ordered to be printed.

Mr. Hawes made an ineffectual effort to take up and consider the resolution in relation to the West Point Academy.

The House adjourned.

FRIDAY, March 18.

Mr. Hawes made a motion to take up and consider the resolution in relation to the West Point Academy.

Mr. Hawes, after the Committee of the Whole, transmitted the following resolution; which, by consent, was considered and agreed to:

"Resolved, That the Secretary of War be instructed to lay before Congress, in a separate act, the report of the Survey of the railroad from Pensacola to Columbus, Georgia, which was laid on the table and ordered to be printed."

On motion of Mr. Camble, the House adjourned.
MARIEEBS.

DEATHS.

At Fort Winnebago, M. T., on the 15th inst., Breve Major NATHAN CLARK, of the 6th regiment U. S. Infantry.

In Philadelphia, on the 23d inst. WILLIAM MCMURTRY, Esq. Purser U. S. navy, aged 42.

On the 1st inst, at 12 o'clock at night, at his residence The Village, near Georgetown, D. C., after a short illness, JOHN ADLUM, Esq., in the 77th year of his age.

Major Adlum was a soldier of the Revolution, a Major in the Provisional Army, during the administration of the late Adams, and afterwards in the Brigade General in the Militia of Pennsylvania, of which State he was a native. An intimate knowledge of the deceased, for about thirty and forty years, enables the writer to declare that, in his opinion, he was one of the best and kindest men that was behind his time. A widow and two amiable daughters remain to lament the loss of the best of husbands, and the most kind and affectionate of parents.

W. At Greensville, N. Y., on the 31st instant, of dropsy is the heart, AARON HALL, Esq. in his 77th year. Having served, while very young, under the immediate command of Washington, in the acquisition of our independence, he has lived for more than half a century to enjoy the blessings of peace, and to be a father of a happy family, the fruits of his labors, and a monument of the virtue and patriotism of the yeasomen of a by-gone age.

ARMY.

March 29—Lieut. D. P. Whiting, 7th Infy. relieved from temporary duty in the Ordnance department, and ordered to temporary duty on Recruiting service, at Newport, Ky.; March 31—Lieut. N. J. Eaton, 6th Infy. relieved from temporary duty in the office of the Com. Gen. of Subsistence, and ordered to St. Louis, Mo., for duty in the Subsistence Department.

A detachment of 45 recruits left the depot at Newport, under charge of Major A. R. Thompson, for the 6th Infantry. At Louisville he was joined by Capt. J. Rogers, of the 6th Infantry, with a few recruits, on their way to join their regiment.

A detachment of 45 remains left the same depot on the 21st inst. under charge of Lieut. T. Cuts, for Boston Rouge.

NAVY.

List of Officers ordered to the Schooner Grampus.

Charles Brooman, Lieutenant Commanding.
Lieutenants, John Cassin, Joseph Stalling, Neil B. Howson, Frederick Chastain, John W. Cowan.
Passed Assistant Surgeon, Geo. W. Evans.
Wm. Seager, Acting Gunner.
Passed Asst. Surgeon S. Sharp, relieved from duty at the Hospital, New York; and Assistant Surgeon, M. Delaney ordered to supply his place.

Captain Benjamin ASH, Secretary of War, ordered to take passage in the Schooner Grampus, for duty at the illegible Constellation, vice Asst. Surgeon W. W. Delaney.

Said John Adams, at Tottawa 8th Feb. for Kingston, all well.

A draft of U. S. sailors sailed from Baltimore on Monday, 21st inst. for New York, in the schooner Helen, under charge of Mr. Clinton and Mr. McNamee of the Navy.
REVOLUTIONARY REMINISCENCES.

STONY POINT.

The scenery of the Hudson river bears nature's grandest impress. The land that formed an universe of worlds has thrown together along the banks of this noble stream, a weird medley of rocks and rapids. The Pallisades, as they are called, commence on the upper margin of the Hudson, just above the Weehaw or Weehawken, and extend about twelve miles up the river. They are bold, abrupt demonstrations of might and majesty, moulded by the waters whose power is not bounded by time or circumstance. Twenty cannons of a thousand pounds might cast their irresistible vengeance against this natural barrier, which frowns over the broad bright stream at an elevation of from sixty to one hundred and fifty feet, and the parapet would laugh in scorn at the power of battle.

After the Pallisades terminate, a country of hills and vales succeed, that at first is pleasing in its picturesqueness, and seems to promise a wilder development of nature's grandeur. But the ever present hankerings for the existence of the rocks and rapids, and the latter invested with dimples on the cheek of beauty. Occasionally, however, nature has projected into the stream one of her bold fronts, a miniature formation of the "hills of fear," which cast their sombre shadow over the landscape, and the sunrises and sunsets on the upper face of these projections is Stony Point. It stands out in bold relief from the rural scenery just below, and challenges the attention of the passenger who has been relieved from the sublimity of the basaltic rocks of the Pallisades to prepare for a wilder development of nature's crafstology. Here, and by more than one extent of Western prospect, are seen regulars, cow boys, Virginia horse, and continentals, Whigs and Tories, appeared and disappeared like the actors of a wild and bloody tragedy. On the left Stony Point is allied to associations of military achievements and unfading renown; while farther up, Arnold's treason, Andre's capture and unlikely although merited fate, twine round the memorable rocks of West Point.

Stony Point is about forty miles above New York; ten or fourteen below West Point. It is a rounded, grassy hill, of small extent, jutting into the stream and commanded, by a low point which is partially overflowed by tide water. It was fortified in the revolutionary war, and occupied by a small force, and might have been considered as a remote outpost to the strong fortress of West Point. It was captured by the British in the year 1779, and strongly repaired and garrisoned by the British soldiers, commanded by the brave Lient. Col. Johnson.

A few days before the 13th of July, in the same year, a tall commanding personage, mounted on a strong charger, was seen on the eminence above Stony Point. He had a gun in his hand, and appeared to study the dispositions of the forces with an intensity of interest. Johnson, who was returning the gaze of the horseman with his spyglass, turned to one of his staff and remarked that the apparition on the hill portended no good. Rumors were afloat in the encampments that the same tall figure had been observed on the hill of Stony Point the day before, like a horseman painted in the sky. A cow boy said that this figure was the启发 of Washington, and that it was never seen just before a battle or a thunderstorm. But these idle rumors were not believed by the camp, and when Washington, from observation made with his own eyes, was concerting a soldier's plan for its success.

On the night of the 16th of July, by the twining light of the stars that broke over and through the clouds, two columns of soldiers might have been seen under the bow of the eminence in the rear of the fort. They were stern men, the silent thoughtful men of New England. The eagle-eyed Wayne was at their head, and his heart beat like that of a lion. The regiments of Febiger and Meigs, with the youthful Major Hull's detachment at the right column; Butler's regiment, with the two companies of lately Major Mahone's left. The van of the right was formed of one hundred and sixty volunteers, at whose head stood the brave Fleury; one hundred volunteers under Stewart composed the van on the left; and still further advanced, the noblest post of all, stood two "forlorn hopes" of twenty men each—-one commanded by Lient. Gibbon, and the other by Lient. Knox. Wayne stepped from man to man through the vanguard—saw them take their flints from their pieces, and fix the death bayonet. At twenty minutes past eleven, the two columns moved to the bloody work. As they went to the left and to the right to make their attack on opposite sides.

The inhabitants on the eastern side of the river heard a sharp crashing as the forlorn hope of either side broke into the double row of abattis; the muskets of the sentinels flashedflashed in the darkness, and in a moment the fortress vomited out its fire. Then, down gloomy, still unwavering, columns moved on, and the two vanguards met in the centre of the works. The British made an instant surrender to avoid the extermination which awaited the deployment of the columns upon the encampments. Sixty-three British soldiers lay dead at their guns; five hundred and forty-three were made prisoners; and the spoils were two standards, two flags, fifteen pieces of ordnance, and other materials of war. Of the sons of New England, ninety-eight were killed or wounded. Of Lient. Gibbon's forlorn hope, seventeen were no more. Of Lient. Knox's about the same number were slain.

These spots, where the life-blood of the free has been poured out like water, where the traces of the revolutionary ditch and mound still remain, are altars sanctified to the bloody shriek of the lion, by a loud curse that will burst over those departed patriots. The bold bluff of Stony Point is classic ground. Hither, in future time, shall the post and the sentimental come to pay their tribute of affection and honor where—-"Our fathers kneel In prayer, and battled for a world."

BATTLE OF LEXINGTON!

The following interesting letter was communicated to the American Historical Society of Military and Naval events:-

Narrative of Daniel McCurdy, a private in Captain Fuller's Company of Minute Cales, of Charlestown, Massachusetts, taken from his verbal statement, September 26, 1845.

A SCENE OF THE CRADLE OF LIBERTY.

On the evening of the 18th of April, 1775, at ten o'clock, being at Charlestown, we received intelligence that 1400 of the regulars had landed at Leechmore's Point, about one mile and a half from Boston, and crossed the fields, without music, to the head of the Nottaway and Methuen [sic], where they were discovered. At the time we received the intelligence, they were supposed to be six miles on their route, and five miles from Lexington.

We had three companies of militia at Charlestown; the firsts under Captain Harris, a militia company
ARMY AND NAVY CHRONICLE.

Our Charleston boys seized seven hundred tools and nine pieces of cannon and the wagons, and before sundown transported them to Cambridge to the H. Q. of the American army.

For Poulson's American Daily Advertiser. SKETCH—FIRST TROOP.

For Poulson's American Daily Advertiser. SKETCH—FIRST TROOP. — Mr. Poulson: — The following just encomium on the First Troop of Philadelphia City Cavalry, was independently written by an ornamented and versatile pen, in the person of Capt. Morris, of Pennsylvania, at the late celebration of the birthday of Washington, by the Philo-American Society of Georgetown, D. C. — The document is necessary to an accurate sketch of the services of the Troop during the Revolutionary War, as not all received in the capital, where the Troop was stationed, or in the field. They composed themselves of the best patriots of the city, and, as the brief notice which follows, fell into the hands of a friend, who well remembers the merits of the Troop, and by whom they are forwarded to you for preservation, or publication.

Permit me here, my friends and fellow students, to pause for a moment, to pay a passing tribute of well-earned praise to a small band of Revolutionary Patriots of my native city, who were the associates friends and companions in arms of the illustrious Chief, in the perilous campaigns of 1776 and 1777 — whose valor and patriotism were faithfully, affectionately and individually attached to his person, as well as animated by his principles — who, during the whole progress of the war, merited and enjoyed his approbation, were discharged at its termination, and ever afterwards in peace retained, his friendship. The Troop, as late fallen into my hands, and my heart expands with the thought of resting some laurels on their tombs.

To: The Philadelphia Troop of Light Horse, under the command of Capt. Morris, having performed their duty, and discharged for the present. I take this opportunity of returning my sincere thanks to the City of Philadelphia, and the citizens of Pennsylvania, for the many essential services which they have bestowed upon the city and to the person of the Chief of the First Troop. They have been of the utmost value, and several times shown a spirit of bravery that will be remembered by us, and will ever be grateful for ever remembered by us.

Given, at my house, at Morristown, this 23rd January, 1777. GEO. WASHINGTON.
The Revolutionary War, the pure patriotism in which General Washington, survived Bod, ani mated its successors, until it was at last, which it is now, commanded, and is composed, in officers and men, of the same chivalric spirit of the fathers of families, and of the chosen sons of Philadelphia, St. Paul's, the brave, and the devoted defenders of their country, of the city of New York, and of her ladies, for in that city, may be pointed out, if not the first, in New York, and in the hands of the statesmen of Washington, which it is now, that the spirit with parent lustre among the ranks is the banner of the First Troop of Philadelphia City Cavalry.

In relation to the Army, in Senate,

MONDAY, March 28, 1826.

Mr. Baldwin, from the Committee on Military Affairs, reported a bill to increase the military establishment of the United States, which was ordered and a second reading deferred.

TUESDAY, March 29.

The Secretary of War announced a communication from the War Department, relative to the Topographical Bureau, and a bill to increase the Topographical Bureau, and to the joint committee on the State of the Marine, which was referred to the joint committee on the State of the Marine.

On motion of Mr. Baldwin, the bill was ordered to be read a second time.

WEDNESDAY, March 30.

Mr. Baldwin presented the following resolution, which was read and referred to the committee on the State of the Marine:

That the Secretary of War be requested to lay before the Senate the report of the Topographical Bureau, and the State of the Marine.

Mr. Davis submitted the following resolution, which was read and referred to the committee on the State of the Marine:

That the Secretary of the Treasury be requested to lay before the Senate the amount of money expended for the relief of sick and disabled soldiers, with a statement of the amount, and the amount paid by the last names of the officers on the Mississippi and Ohio, to the collector at New Orleans.

The resolution was agreed to.

Mr. Davis presented the following resolution, which was read and referred to the committee on the State of the Marine:

That the Secretary of the War Department be requested to lay before the Senate the report of the Topographical Bureau, and the State of the Marine.

The resolution was agreed to.

The following bill was read:

A bill to provide for opening a canal from Pearl to Leavenworth on the right bank of the river Missouri, for the State of Missouri, to Fort Gibson, on the Arkansas river. A bill making an appropriation for the purchase of lands to use in the army, navy, &c., an invention of the State of New York.

CONGRESSIONAL DOCUMENTS.

REPORTS OF COMMITTEES.

HOUSE OF REPRESENTATIVES.

DREDGE DOCK AT PENSACOLA.

Mr. Jarvis, from the Committee on Naval Affairs, reported the following report:

The Committee on Naval Affairs, instructed by resolution of the House to inquire into the expenditure of the Navy, in the construction of a dry dock in Pensacola, Florida, and of supplying the same with materials, and in the repair of Captain Chase, of the Engineer Department, so as to admit vessels of war of the largest class, for the purpose of comparing the dock at Pensacola with the dock at Gibraltar, and that the bar at the mouth of Pensacola bay, being an important naval depot, and as a moderate expense, to be dispensed with by Captain Dallas of the navy, and Captain Chase of the United States engineer officer, in the event of the Secretary of the Navy, communicated to the President of the Republic, by the President at the opening of the session of 1835, appears by these reports, that these vessels are not at the bar of Pensacola, and that the expense of making a dry dock is dispensed with by the President in the year 1835, and that the expense of making a dry dock is dispensed with by the President in the year 1835.

The expense is estimated by Captain Dallas at $146,600, and by Captain Chase at
ARMY AND NAVY CHRONICLE.

The expense of excavating six feet is estimated by Captain Chase to be, exclusive of the vessel itself, $31,600.

Add three feet, recommended by Captain Dallas, $40,845.

But Captain Dallas considers that Captain Chase has understated the cost of the vessel to be employed from two to four thousand dollars, and that the average is $3,000.

Add cost of superstructure to this, $125,035.

The whole expense would therefore be, $160,535.

But Captain Dallas also has his fears that an engine, of which the cost would not exceed $10,000, would not be of sufficient power; because the bar is so firm and compact that, in an attempt to examine it at the distance of four feet below the surface, the auger was twisted off, although the depth was an inch and a half in diameter. It would not, therefore, be prudent to estimate the expense at less than $150,000 or $160,000.

Captain Chase recommends the employment of two machines, and estimates the cost for the first year at $63,690.

But, as this estimate is too low, it is considered expedient by the committee to add 20 per cent., and they, therefore, recommend an appropriation of $76,000, on which, they trust, will be found sufficient to make the expenditure of at least that amount.

It is believed that vessels of a draught of water adapted to the depth of water on the bar, might be repaired with greater economy by the use of an inclined plane, or the railway, or of a hydraulic dock, both of which are in use in the operation in the merchant yards at New York. The cost of the former would be $77,682, according to the estimate of Colonel Baldwin, which may be found in the Executive Documents of the first session of the twenty-first Congress, volume 4, document No. 101. It was not deemed expedient by Mr. Branch, who was at that time Secretary of the Navy, to make the work to be executed, in consequence of the great difference in the expense attendant upon its construction. It is not considered, however, by the committee that difficulties which may be overcome, and a construction which may be completed for less than $80,000, ought to prevent the adoption of a more economical and less expensive method.

The cost of a hydraulic dock, according to the best information, would be $125,000. The Pea Island survey of war was taken upon a dock of this description at an unfavorable time, the weather being extremely cold, and the cost was $490. It would probably have cost twice as much, and the cost was $125,000. Several hundred vessels have been taken upon the Pea Island, and it is stated that this has been done without damage. The vessels are always more or less injured by straining.

The committee have therefore come to the determination of recommending the construction of a marine railway, or of a hydraulic dock, leaving it discretionary with the Executive to adopt whichever may be deemed most expedient, upon a more accurate and careful examination than it would be in the power of the committee to give; and for this purpose, as well as for attempting to remove the bar, they report a bill.

REPAIR AND EXTEND ARSENAL—CHARLESTON.

Mr. R. M. Johnson, from the Committee on Military Affairs, made the following report:

The Committee on Military Affairs, to which was referred a bill for repairing and strengthening into the establishment of establishing an arsenal of coast defense at the vicinity of Charleston, South Carolina, respectfully report:

That they have considered the same, and finding that the arsenal in Charleston is in a state essentially requiring repairs, they are of opinion that provision should be made to put it in proper order, in lieu of establishing an arsenal of construction. They are also of opinion that the existing establishment should be somewhat extended, and made a little more uniform. They belong to the United States, and that such workshops should be attached to it as may be necessary to keep the arms in order, and to construct gun carriages for some of the southern stations. Your Committee recommend to the Secretary of War, department, showing the necessity and propriety of this measure, and to accomplish the object recommended, that they ask leave respectfully to report by bill.

Letter from the Secretary of War to the Hon. H. L. Pinckney, upon the subject of establishing an arsenal of construction at Charleston, South Carolina.

WAR DEPARTMENT, January 20, 1836.

Sr.:—I have the honor to transmit herewith a report from the Colonel of Ordinance, in order your letter of the 21st ultimo, and to express my concurrence in the views therein presented.

Very respectfully, your most obedient servant,

LEW. CASS.

Hon. H. L. PINCKNEY,
House of Representatives.

ORDINANCE OFFICE,
Washington, January 20, 1836.

Sr.—In reply to the inquiries contained in the letter of the Hon. H. L. Pinckney, dated 21st ultimo, referred to this office, I have the honor to state, that by the ordinances regulations, adopted by the President of the United States in the 1st of May, 1833, the cost of construction was limited to six, four of which are now established, viz: one at Fort Monroe, Virginia, one at Pittsburgh, Pennsylvania, one at Watervliet, New York, and one in the city.

As arsenals of construction are expensive, it is not thought expedient unnecessarily to increase them, and doubts are entertained whether, under existing circumstances, a third arsenal of Charleston is a proper location for an establishment. There is a depot for arms in Charleston belonging to the United States, which, however, is on too limited a scale. I would therefore respectfully recommend that an appropriation be asked for, either to add to this depot, or to provide such other site in the vicinity of the city as may be found, on examination, most expedient. An arsenal on a moderate scale ought to be provided there, and such workshops could be attached to it as might be necessary to repair and keep in order the arms, and to construct gun carriages for some of the southern stations. Mr. Pinckney's letter is herewith returned.

I have the honor to be, very respectfully, sir,
Your obedient servant,
G. BOMFORD,
Colonel of Ordinance.

Hon. LEWIS CASS,
Secretary of War.

BILLS REPORTED.

IN SENATE—March 21, 1836.

Mr. SOUTHARD, from the Committee on Military Affairs, reported the following bill; which was read, and passed to a second reading.

A BILL

To provide for an exploring expedition.

Be it enacted by the Senate and House of Representatives of the U. States of America, assembled, That an exploring expedition to the Pacific ocean shall be made, and the same is hereby, authorized and directed, and the President of the United States be, and he is hereby authorized to prepare an expedition for that purpose, a vessel of war, and to purchase or provide such other spriger vessels as may be necessary and proper to rendezvous, and for all the expenses incident thereto, the sum of $20,000, and the sum of $20,000 is hereby appropriated, out of any money in the Treasury, otherwise appropriated.

SEC. 2. And be it further enacted, That the sum of $10,000 is hereby appropriated, out of such money in the Treasury, otherwise appropriated.
ARMY AND NAVY CHRONICLE.

House of Representatives, February 16, 1836.

OFFICERS OF THE ARMY IN THE MILITARY BUREAUX.

Mr. Johnson, of Kentucky, chairman of the Committee on Military Affairs, made the following report:

The Committee on Military Affairs, to which was referred the memorial of Captain Thomas Hunt, and other officers of the army on duty in the military bureaux of the War Department, beg leave to present the following report:

"The allowance in reference to which the officers of the army on duty in the military bureaux have presented their complaint amounts to five dollars per diem, or five cents per dollar, on the 10th of August, 1815, by a regulation of the War Department, then under the administration of Mr. Calhoun, and which regulation is in the following words:

"Officers detailed to perform duties in the office of the Chief Engineer, Quartermaster General, Adjutant and Inspector General, or the Chief of the Ordnance, will be allowed, while performing such duties, at the rate of $2.50 per diem; in addition to their usual pay and emoluments.

"The Quarter Master General will allow officers so detailed, fuel and quarters, agreeably to their respective ranks.

And subsequently, the allowance was extended to other military bureaux, either by regulation or special decisions of the head of the War Department.

The Committee are disposed to continue the allowance until the passage of the act of March 2d, 1835, entitled "An act making additional appropriations for the Delaware breakwater, and for certain harbors, and removing certain obstructions to navigation of certain rivers," which provides for an appropriation of one thousand eight hundred and thirty-five, "the proceeds to which is as follows: "Provided, That no officer of the army shall receive any per cent., or additional pay, compensation, or description, on account of the disbursing any public money appropriated by law during the present session, for fortifications, construction of Arsenal, purchase of public supplies, other than money appropriated by law, or for any other service or duty whatever, unless authorized by law," in consequence of which the payment of the allowance was suspended, or, in other words, was rescinded.

It may be proper to state why a necessity has existed, and does exist, for the employment of officers of the army in the offices of the staff departments of the army. Those chiefs of staff departments of the army, are as commonly called, have great and important military and administrative duties to perform. The money accountability of their departments is very great, and they are required to keep its true state on the most precise and proper administration of their respective departments, so as to secure a strict and rigid responsibility, in reference to receipts, expenditures, statements, and all things else necessary for the proper administration of their respective departments. A perfect knowledge of details is indispensably necessary.

The military part of their duties is of so much importance, and of such public utility, that, with the extent of territory which the United States embrace, and the various and multifarious duties upon their time and attention, it is surprising to your committee that they are enabled to perform all that their positions seem to require of them. Another circumstance is well worthy of your attention, viz: The members of Congress, either individually or collectively, in their legislative capacity, request information from the War Department, or in order that, in many points, legislation, if necessary, can be directed to the Department of War, and the members of Congress are directed to report, in their respective sphere, to the head of the Department, and in so doing, much research, industry, labor, and talent, are requisite to afford us the information desired. It is most observable, that no information is furnished by them, but by us, we are answered promptly and satisfactorily, in all cases, so far as they have the means.

Your committee are satisfied of the absolute necessity of having additional officers in the military bureaux, and their assistants in the duties of their respective official positions; the only highest importance to the service, combine in it, a knowledge of the casual and occasional duties of officers in the bureaux, and to the movement of troops, and the transit of military supplies, this surveyor of the War Department, who is not only in the War Department, and the various and multifarious duties upon their time and attention, it is surprising to your committee that they are enabled to perform all that their positions seem to require of them. Another circumstance is well worthy of your attention, viz: The members of Congress, either individually or collectively, in their legislative capacity, request information from the War Department, or in order that, in many points, legislation, if necessary, can be directed to the Department of War, and the members of Congress are directed to report, in their respective sphere, to the head of the Department, and in so doing, much research, industry, labor, and talent, are requisite to afford us the information desired. It is most observable, that no information is furnished by them, but by us, we are answered promptly and satisfactorily, in all cases, so far as they have the means.

Your committee are satisfied of the absolute necessity of having additional officers in the military bureaux, and their assistants in the duties of their respective official positions; the only highest importance to the service, combine in it, a knowledge of the casual and occasional duties of officers in the bureaux, and to the movement of troops, and the transit of military supplies, this surveyor of the War Department, who is not only in the
ARMY AND NAVY CHRONICLE.

A BILL directing the Secretary of War to report immediately on the several measures of internal improvement which shall have been recommended by the Secretary of the Treasury, and that any and all such measures as may be recommended by the several States and the District of Columbia, should be immediately summarized and reported to Congress, within the first week of each session of Congress, is now before the Senate and House of Representatives. This is a list of several works of internal improvement, embracing those of roads, canals, rivers, and harbors, which have been conducted and are now in a state of operation in the several States of the United States during the year ending on the thirtieth day of September next preceding such session, and with the following information relating to each work, and the amount of the money already appropriated for the same, and the amount required to complete it. The amount that has been appropriated in each year by Congress for the several works in the progress of the same, the amount required to complete the same, and the amount spent on the several works, and the year in which the expenditure was made, with the compensation therefore; the amount of the unexpended appropriations on the thirtieth day of September, in each year, specifying the portion thereof remaining in the hands of agents; the estimated cost of completing such work, and of such extensions or variations of the same which may be recommended by the several States and the District of Columbia, and the amounts expected to be required; and the appropriation requested for the several succeeding years, together with other information respecting the history and progress of the work, shall be calculated in the several Congresses, and act most, understandingly upon the subject.

THE INDIAN WAR.

From the Savannah papers of the 24th we learn that, by steam packet from the St. John's, which arrived on the preceding evening, came passengers Col. TWIGG of the 4th regiment infantry, Maj. MOUNTFORD, of the 2d regiment artillery, and Major LEAR, of the 4th infantry, who were brought to New Orleans from the Louisiana frontier. These officers left Fort Drake on the 19th. Gen. SCOTT still there, with the forces under his command. The whole army was in fine health and spirits, in excellent discipline, and would be prepared to leave Fort Drake on or about the 29th for the banks of the Wyaluxcohee, Gen. Gaine's battalions, Col. J. R. L. N. (the General's), Gen. EUSTIS and Col. LINDSAY, with their immediate companions, were to unite. Gen. EUSTIS having moved on the 19th from Volusia, and Col. LINDSAY being on his way from Tampa.

If the Indians do not comply with the terms of the Treaty, it is Gen. Scott's intention to make them do so peaceably, if they will, or forcibly, if necessary. The Florida Indians, not in the field, are generally returning to their homes in the vicinity of Micinopoy and elsewhere, respecting which, as they have been assured, that the Indians will comply with their agreement with General Gaines.

Osceola, Juniper, Albei Hajo (Crazy Alligator) all Indians, with Abram (Principal Adviser of Micinopoy) and César, Indian negroes, were present at the interview on the part of the Indians; and the officers who, at the request of the former, went to meet them were Capt. Hitchcock, of the 1st regiment infantry, Capt. BOWES, of the 1st regiment artillery, Capt. Markes, of the Louisiana volunteers, and Adjutant Barlow, of the same regiment. The Indians have resigned all claims to the country east of the Mississippi.

In consequence of some misunderstanding between Col. Twiggs and the Commanding General respecting Brevet rank in the 2d regiment, Col. T. J. P. L. D. L. R. C. of the 2d regiment artillery, Col. T. J. P. L. D. L. R. C. of the 2d regiment infantry, and Adjutant Barlow, of the same regiment, the Indian himself, the former being near the camp, and the latter blew his whistle so distinctly that the General seemed to act accordingly.

The General deeply regrets the fall of Lient. J. F. Press, of the Dragoons, acting major, and in command of the advance guard, at the head of his corps, and, though mortally wounded, was able to return to camp.
ARMY AND NAVY CHRONICLE.

had the heroic unconcern of mind to order, "keep your positions, men, and lie close," 2d Lieut. Duncan, 2d Artillery, was slightly wounded. Capt. Saunders, commanding, friendly Indians, were severely wounded. Captain Armstrong, of the U. S. Transport Schooner Motto, was slightly wounded. The two last named officers were in the advance, where their services had been most useful during the march. This officer, and twenty-three N. C. officers, soldiers of other companies of the brigade, erinized their gallantry and bravery, by their good conduct, as well as by their honorable wounds. The General rejoiced that he never commanded a finer corps of men, and that he was allowed to do honor to any service.

The officers of the Medical Department merit the approval of the Government, for the attentive and skilful manner in which their duties were discharged.

 Killed—Lt. L. F. Izard, Dragoons.
 Sergt. F. Dunn, 2d Artillery.
 Pvt. C. Brooks, 2d Artillery.
 Pvt. H. Butler, do. do.

Wounded—Officers, non-Commissioned Officers, and Privates:

2d Artillery, 8
4th Infantry, 8
La. Volunteers, 30
Total wounded, 46

By command of Major General Gaines:

BATTLE OF THE OUTHIAÇOOCHÉ. — We have been reported to give an insertion to the following. Gen. Gaines' official report was published in the Georgia of the 1st ult.

Extract of Gen. Gaines' letter to Col. Mills, correcting the printed copy of his report.

"This little band, aided by Col. Warren, Lieut. Cave Mills, Major Cooper, Lieut. Yeoman, Capt. Phillips, and twenty-seven volunteers, however, met the attack of a strong enemy of nearly three times their number, strongly supported by the Spartan militiamen, and covered by a rapid advance of the forces with honor.

List of officers and men who were actually engaged, and who supported the regular troops at the battle of Outhiaçooche, December 31, 1835.

4th Regiment—Duvall and Nassau.

Regiment—Alabama and Mississippi.

Privates A. Money, James Bryant.

1st Brigade, 7th Regiment—Leon.

Privates, names not known: 1 Indian named Billy, 1 African, Georgia, March 19.

March 15—The steam boat "Oakland," arrived on Wednesday, freighted with provisions for the army, and other stores, in charge of Capt. Harding, of the U. S. army, who had been ordered to arrive and equip the regiment of mounted infantry, under command of Capt. Thomas, at Vernon. Captain Leake, on the 14th, had dispersed on the 14th, by order of the adjutant-general, Gov. Clay.

It is due to the brave volunteers who so gallantly offered their services to the country on this occasion that the failure of the companies that par-
WASHINGTON CITY:
THURSDAY, APRIL 7, 1866.

Strange as it may appear, although we are upon the spot where Congress holds its daily sessions, it is only during the past week that we have been able to procure a file of public documents.

We propose to republish those which are of sufficient interest and not too long: and shall present a short abstract of such as are of a private nature.

It is more as a work of record and reference on professional matters, than as a medium of news, that the proceedings of Congress are published in the Chronicle. The daily papers, and the numerous correspondents at Washington, will always anticipate a weekly publication in the news of the day.

EXAMINATION OF MIDSHIPMEN.—A Board of Naval Officers has been ordered to assemble at Baltimore, on Monday the 16th day of May ensuing, for the examination of all midshipmen, whose warrant bear date prior to the 1st January, 1861.

This Board will be composed of Commodore James Biddle, as President; and Captains H. E. Ballard, J. S. Nicolson, A. Claxton, and L. Kearny, members.

The mathematical examiners are Professors E. C. Ward, and P. J. Rodrigues.

COAST SURVEY.—The direction of the Coast Survey has been transferred to the Treasury Department, to which it was in the first instance confided. It remains under the superintendence of Mr. Haste.

Lieut. T. R. Godfrey is under orders for duty on the survey, as commander of the U. S. Schooner Jersey, and the following Passed Midshipmen have been ordered to assist him—Alberto Griffith, Geo. N. Hawkins, Franklin Clinton, Geo. J. Wyche, Levin Handy, B. F. Sh Indust., John Rodgers, Octavius, Fairfax, John L. Ring, and Richard W. Meads.

LOUISVILLE, CINCINNATI AND CHARLESTON RAIL ROAD.—The South Carolina Board of Survey held a meeting at Columbia on the 28th ult. The Commissioners, viz. Gen. Hayne, Chairman; Col. Blandile, Gen. Thos. S. Jones, Hon. P. Noble, Dr. Thos. Smith, and Chas. Edmondston, Esq. were all present. Col. James Gardine was unanimously appointed Chief Engineer, and is to be assisted by the following officers, ordered on this duty by the Secretary of War, viz.: Capt. W. G. Williams, Lieuts. T. F. Dryton, E. B. White, and J. G. Reed, of the U. S. Army, and Mr. Featherstonhaugh, a Civil Engineer, in the service of the Government; in addition to whom, the board will endeavor to secure the services of Col. Brisbane, Capt. Huger, and Lieut. Cockle, of the Army. The Commissioners, after making all necessary arrangements for the prosecution of the surveys, adjourned to assemble again at Fort Read, on the 20th June, there to meet their Engineers, and prepare a report for the Knoxville Convention on the ensuing 4th July. Prior to the adjournment, Col. Blandile laid before the Board, a valuable mass of information. The Chairman of the Board has written an address, inviting the people of South Carolina to appoint delegates to the Knoxville Convention.

Colonel Brisbane, a graduate of the U. S. Military Academy, and Lieut. Colcock has lately resigned his commission in the army.

A school has been established on board the U. S. Irisigate Constellation, for the instruction of a portion of the boys in reading and writing; it is called the Byran School, in compliment to the first lieutenant of that ship, under whose auspices the experiment was made. There are between twenty and thirty boys belonging to this school, which is under the direction of one of the sailors, as a schoolmaster, selected from the crew for his capacity and good conduct. These boys, who were unable to write when they went on board the Constellation, have been so successfully instructed by their sailor teacher, that they have been enabled, to write letters to their parents, a gratifying evidence of the care and attention bestowed upon them.

Such an example is worthy of imitation on board every vessel of war.

We are requested to state that officers of the Army and Navy, who visit Baltimore, will always find free admission at the Exchange News and Reading Room, on Gay street.

The following is a copy of the bill reported in the Senate on Monday, 28 March, for increasing the Army:

A BILL to increase the present military establishment of the United States.

Sec. 1. Be it enacted, &c., That in addition to the present military establishment of the United States, there shall be one regiment of artillery and two regiments of infantry; Provided, That it shall be competent for the President at any time to direct that one of the regiments of infantry shall do duty as riflemen, and the other as light infantry, and the necessary measures for carrying this act into effect shall be taken under the direction of the President.

Sec. 2. And be it further enacted, That the laws regulating the present military establishment shall extend to the additional force herein authorised to be raised, so far as the same are applicable and not inconsistent with the provisions of this act.

Sec. 3. And be it further enacted, That each regiment of artillery and infantry in the service of the United States shall henceforth consist of eight companies: and each company of artillery shall consist of one captain, two first lieutenants, and one second lieutenant; one sergeant major, one quartermaster sergeant, three sergeants, six corporals, three fifers, two musicians, and eight privates. And in addition to the present regimental staff, there shall be two adjutants to each regiment, who shall be warrant officers to be appointed under the direction of the President, with the ratification of the Senate and House of Representatives. And each regiment shall also be two chief musicians to each regiment of artillery.

The above bill appears to us to be very loosely drawn up, and defective in some essential points. It does not direct that the officers of the new regiments shall be appointed by selection, or otherwise, from those now in the army; but as a matter of course leaves it optional with the President to appoint them from the army, or from private citizens. Nor does it point out what disposition shall be made of the supernumerary second lieutenants at present attached to the regiments of artillery, whether they shall be discharged, or distributed among the other regiments.
ARMY AND NAVY CHRONICLE.

The Milledgeville, Geo. Federal Union, says:—Gen. Scott has authorized Gen. Woodward and Majors Watson and Flournoy, to receive into service for the Seminole campaign, five hundred Creek Indians. To this end the U.S. agents are required to co-operate with those officers.

General Macomber and Suite, attended by General Hamilton and two of his aids, visited the Forts in Charleston Harbor on the morning of the 24th ult., on which occasion salutes were fired by Castle Pinckney and Fort Moultrie.

The next day a general order was published in the newspapers, expressing the satisfaction of the General.

HEAD QuARTERS OF THE ARMY. CHARLESTON, S.C. March 28. GENERAL ORDER.

The Major General Commanding in Chief, was highly satisfied by his visit yesterday to Castle Pinckney and Fort Moultrie. He could not but admire the fortifications being made of the officers and men composing the volunteer companies which garrison those posts, and the condition in which General Macomber found them to charge. He is aware of the sacrifices which these patriotic gentlemen are making in obeying the call for their services, and he tenders his acknowledgment for the prompt and efficient manner in which it has been so far fulfilled. The circumstances however under which they were called into the service, have materially changed, the General conceives it a duty which he owes to the Government as well as to the troops, not to acquire their services beyond the present tour, when they will be permitted to return to their respective homes.

The principal officer of the Quarter Master's Department stationed in this harbor, will make the necessary arrangements for relieving the troops and securing the public property.

The General returns his thanks to Brigadier General Hamilton, for the facilities afforded him in making the inspections above referred to.

By order of Alexander Macomber, Major General Commanding in Chief.

S. COOPER, Aid de Camp and Adj't. Adj't. Gen'l.

General Macomber and Suite left Charleston on the 20th, for Piccata, via Savannah and St. Mary's: arrived at Savannah on the 27th, and was to leave on the 28th, the steamboat Dolphin. General Hamilton accompanied him as far as Savannah.

DOUBLE COCKS FOR GUNS.—In the National Intelligencer of the 22d ult., appeared a short notice of an invention of a double flint cock for guns, by Lieut. U. P. Levy, of the U.S. Navy.

The Double Flint Cock, for muskets or other fire-arms, exhibited yesterday in the rotunda of the Capitol, is an invention by Mr. U. P. Levy, of Monticello, Va.; the object of which, he states, is not so much to increase the load on the part of the gunner, as to increase the accuracy of the shot, by obviating the possibility of a blank fire when the gun is used. By the ordinary flint lock, it is impossible to prevent this, but when the double cock is used, a blank fire can only take place when both flints are broken. This is effected by turning the thumb-screw in the center of the pan; a few revolutions raising the pan slightly, brings the rear flint in front and re-springing it is then in battle order. By this simple invention, the soldier that a new flint in fifteen seconds.

In the same paper of the 25th, a writer undertakes to dispute the originality of Lieut. Levy's invention, and to show that a similar one was introduced into the British service by Sir Howard Douglas.

WASHINGTON, March 23, 1836.

Gentlemen:—In your paper of yesterday's date is a communication informing the Public that the double flint cock, exhibited at the Washington Convention, was the invention of Mr. U. P. Levy, of Monticello, which is not the case. Without for a moment intending to minimize Mr. Levy's invention, I must say that there is abundant evidence on record to show that, though he may be the inventor of the cock in question, he is by no means the original inventor. The double flint cock is the invention of Sir Howard Douglas, Bart., K. G., A. C. B., Director of the British Army. It was, with other improvements, submitted to the Board of Ordnance as early as the year 1818, and adopted for the Royal Navy, and Sir Howard Douglas, and particularly that officer, was recommended by Lieutenant Colonel Dickson, royal horse artillery.

The invention was decided upon, after experiment, and not to be sold for any reason. The soldier coming to the position of "support arms," without having a suitable cock, and destruction to his clothing. It was applied by the inventor to naval ordnance, for which it answered very well, and was supposed to find the adaptability of the lock, as used with naval ordnance. It is taken from a patent that work above referred to.

Conscious of your disposition to give honor where due, is the insertion of this communication in your paper, requested, with the signification of "fair play," whose object is supposed to be accomplished by the publication of the above.—Editors Nat. Int.

This statement has brought forth Lieut. Levy, under his own name in the Intelligencer and Globe, who claims to have made the invention in 1828, prior to the introduction of Sir H. D.'s plan, of which from his own position he could have had no knowledge whatever.

WASHINGTON, March 29, 1836.

Gentlemen:—I do not complain of the communication that appeared in the National Intelligencer of a few days back, under the head of 'Justitia,' which was written by a very proper in the writer, to volunteer his services to enlighten the public, if he supposed that I was about to appropriate to myself the credit that belonged to Sir Howard Douglas. He would have been very much mistaken, for I was advised with me upon the subject, as I think I could have saved him the trouble of writing his communication, by telling him that I was the original inventor of the double cock, which is at present in the possession of the British army. Inasmuch as he has brought the matter before the public, in deference to that tribunal, I am constrained to give a brief history of said invention, and to make a more marked indication of myself, wishing to wear the laurels that should adorn the brow of another.

The invention was attached to our Mediterranean squadron in 1817, when I satisfied myself that the object with which it was accompanied my attention was attainable, of having two jaws to the cock, in order that there might be a flint in reserve, in case of accident, besides my own return passage in the frigate United States, that I assures me that the American lead and model of the cock now existing. I presented it at the Ordnance Department in this city, on my first visit to it, reaching the Senate in which I was in 1819, as the records of that Department can attest.

By reference to Sir Howard Douglas' 'Treatise on Naval Gunnery,' it will be perceived, that although he submitted a diagram to the Lords Commissioners of the Admiralty in 1817, it was retained among their archives until the 25th of November, 1819, when he was furnished with the manuscript, and received their permission to publish it; and of course that the date of the invention must be 1819, if not sooner. Now, then, was I to know anything of the invention of Sir Howard Douglas? I had not the pleasure of an acquaintance with Sir Howard. Lord Viscount Melbourne was the only person I ever had the honor of meeting; and even supposing that I had, it is not to be presumed that they would have communicated a matter which the board of Admiralty had under advisement, to an officer of the navy of a foreign Government, which the service of the country had been so recently engaged in war. The only similarity between the two inventions, is, that both of them have two flints; but their construction is entirely different. The latter being a mere addition to the cock, and the former involving the invention of a new principle, no one acquainted with the history of the two inventions, could suspect me of trespassing upon the invention of Sir Howard, as made was submitted to our Ordnance Department, as the evidence of the fact that my invention was presented to the Ordnance Department, as the evidence of the fact that my invention was presented to the United States.

I would observe, that Sir Alexander Dickson's letter to Sir Howard, is particularly applicable to my invention, as it was originally designed for ordnance. I had, however, never heard of that letter until I saw it in the appendix to
ARRIVALS AT WASHINGTON.

NEW YORK, March 29—per steam packet Columbia, from Charleston, Major B. A. Boynton, of the Army.

Captain A. Claxton, of the Navy, lady and son, arrived at Charleston on the 23d ult. in the steamboat Wm. Seabrook, from Savannah, and sailed on the 24th in the steam packet South Carolina, for Norfolk, where she arrived on the 28th.

COMMUNICATIONS.

THE NAVY.

Mr. Editor:—As you have been so kind as to publish the various plans of your several correspondents for a Naval Peace Establishment, neither of which appearing altogether proportioned to the demands upon the country for the necessary protection of our fellow citizens and an immense amount of property exposed, as we may say, almost without guard both on our coast and abroad—I have thought it might not be superfluous to offer, for the consideration, the following as a substitute for what has been heretofore presented, believing, as I think may be demonstrated, that nothing short of the plan I am about to suggest, can ever embrace all the duties that must necessarily be required of our naval service, in order to give that protection to the persons and property of our citizens, abounding in every clime and every sea, which reason and justice, as well as our own immediate interest demands, or secure to us that just respect and freedom from outrage, which many of us well know from long experience nothing but a practical knowledge of our own strength, by a proper display of the strong arm of force, can ever efficiently command. We have been administered by Washington, confessedly by all, the father of our country, "to be prepared in peace inorder to prevent war." With this object in view, as well as that of affording a reasonable protection to American citizens and American commerce, visiting every land and every ocean, the following plan or system is humbly submitted for a more extended consideration.

NAVAL PEACE ESTABLISHMENT.

| STATIONS |
|----------|-------------------|
|          | Mediterranean, including the Grecian, Archipelago, Coasts of Portugal, Morocco, Canary, Madeira, and Western Islands, East Indies, Including Malay, Philippine, and Sandwich Islands, Japan, and Red Sea, Pacific Ocean, its extensive coast, and various islands, Brazil, including river La Plata, Cape de Verd Islands, neighboring coast of Africa and the equator, West Indies and Gulf of Mexico, |
|          | HOME STATIONS |
|          | Dock Yards—Afloat for partial reliefs—emergencies—Coast Service—and training officers and crews, |
|          | Boston, Dock Yard, 1 |
|          | New York, Dock Yard, 2 |
|          | Philophia, Dock Yard, 1 |
|          | Norfolk, Dock Yard, 1 |
|          | Washington, D.C. Dock Yard, 1 |
|          | Board of Navy Commissioners, or Burkeys, which should also constitute a Board of Examiners for the Midshipmen, and always to be held at Washington, |
|          | inspectors of Ordnance, and proving ammunition, |
|          | One Schooner afloat. |

In this scheme, it will be perceived the rank of Admiral is contemplated. Argument to point out the propriety or inexpediency of this rank is deemed superfluous. No professional man of fair experience will deny it. Having thus gone through the principal range of what may be pronounced indispensably necessary to us, as an independent nation, desires that an American should be respected as a freeman throughout the world, for a naval peace establishment, by summing up the whole of the preceding it will be perceived that according to this estimate, we shall require for our foreign service, always on actual duty, 8 Ships of the Line, 14 Frigates, 22 Sloops of War, 12 Schooners; 6 Admirals, 20 Captains, 27 Commanders, 12 Lieut. Commandants. But to relieve these offices (without making an allowance for the sick and disabled) it will be necessary to have double their number, which renders necessary for the foreign service alone, 12 Admirals, 40 Captains, 54 Commanders, 24 Lieut. Commandants. To which must be added the number of vessels and officers necessary for our home service, &c. which gives us actually requisite for both active service, 8 Ships of the Line, 14 Frigates, 22 Sloops of War, 19 Schooners, 16 Admirals, 83 Captains, 68 Commanders, 31 Lieut. Commandants. The Admirals, for the better discipline amongst themselves should be divided,
ARMY AND NAVY CHRONICLCE

[Page 219]

Of these 16 Admirals it is proposed to create 6 Admirals, 6 as "Vice Admirals", and 4 as Rear Admirals. The Lieut. Commanders will be eligible for the office of Rear Admirals. In commerce we employ about 105,000 seamen, who bring millions into our public Treasury; who have been mainly instrumental in paying off the national debt, and it is for this reason abundantly justifiable to the feelings of one, who is discarded by his own family, and that same feeling has a great tendency to induce re-employment.

I have been in the army within the last year or two, and have been interested in the construction of a new vessel, the benefit of superannuated soldiers. However proper the design may be, I think it much more important that the superannuated should be erected, for the benefit of the old and superannuated enlisted men; but that it should be an independent, and not under the supervision of the War Department, when it would be so organized and controlled, as to promise a degree of permanence and efficiency, which could not be expected of an institution based upon a voluntary subscription and annual grants. The Secretary of War, in his Annual Report of 1884, recommended the application of the money arising from the taxes levied upon the soldiers for the erection and support of an Asylum for old soldiers.

As that fund is, in some degree, intended for charitable purposes, it would not be employed in a better way than that proposed by the Secretary; but that sum, of itself, would not be sufficient, for the erection and support of an establishment of the kind in question, and I would therefore suggest the following course. Let Congress appropriate the amount of money for the benefit of old soldiers, to be disbursed by the President, in such manner, as the President, or Secretary of War, might direct. As the President, or Secretary of War, might direct. The best plan, agreeably to my opinion, for the commencement, would be as follows:

Our government have a number of arsenals distributed over the country, at each one of which a number of common laborers are kept and maintained; most of them are citizens under hire of the government, and the labor performed by them, with the exception of the mechanical arts, is such as can be performed by the description of men before mentioned. Many of them, although unable to perform the laborious and active duties of the field, are capable of performing the duty which would be required of them at an arsenal. In fact, old soldiers, are better calculated to perform the common duty about an establishment of that kind than citizens, because, from the nature of their duty in the army, they have been educated to the hardships of a field service, and are worthy of such indulgence; giving each of them the operation per day, with such quantity of cheap clothing, as would be necessary, for their health and comfort, and allow them (for a time) a small sum of money for the purpose of purchasing bedding, &c. Let them, therefore, be distributed to the arsenals, where they would be kept so long as they were able to perform labor, after which they should be removed to the asylum, and there be supported, at the expense of the government.

In this way, the expense of the government would be increased but very little, if any; the country would be cleared of a portion of their superannuated population; and the good and efficient soldiers of the army would more readily re-enlist under such an arrangement. As they would be knowing that they would be provided for, in old age, public expense.

A similar indulgence, in that proposed, for enlisted men, might be extended to such old and superannuated officers of the army, as might find it necessary. In the course of time, from advanced age and poverty, such officers would be as much in want of the means of living, as any of those who might be removed from the field service. There are now, in the military service, some officers of very advanced age, who have served their country. They have served their country. They are not entitled to a pension, and faithfully, during the whole period of the field service, and being often deprived of the means of living, most of them, it is my humble opinion, are entitled to the pension of the army, which is not more than a sufficient provision for their support in their declining years.

There are now, in the military service, some officers of very advanced age, who have served their country. They have served their country. They are not entitled to a pension, and faithfully, during the whole period of the field service, and being often deprived of the means of living, most of them, it is my humble opinion, are entitled to the pension of the army, which is not more than a sufficient provision for their support in their declining years.
EXAMINATION OF MIDSHIPMEN.

Mr. Editor:—The enclosed letter cut out of the Richmond Whig of the 24th ult. induces me to undertake that, which for a long time I have thought I would do, viz: offer to the Navy, through your columns, a few remarks upon the subject of examining Midshipmen. It is my belief that the last Board, and even those attempted to be cast on the last Board of Examiners by a "Father" are without sufficient taste, and that the parts allotted to, and supposed to exist in favor of officers' sons, are rather the consequences of defective regulations than the result of favoritism in the Examiners.

To the Honorable M. DICKERSON, Secretary of the Navy.

BOARD OF EXAMINATION FOR MIDSHIPMEN.

It is of much importance that the President of the Board of Examination of Midshipmen, of 1836, should be an officer of talents, discretion, and the best qualities that adorn the naval profession, and that he should have an indelible distinction in the art of protecting care for those who are to receive a passport for their qualifications, to be made Lieutenants. He should be an officer who would encourage a Midshipman by a helpful hand, rather than embarrass him by coarse behavior and frivolous questions not pertaining to medical science.

An officer eminently qualified for this trust is Commodore Jacob Jones. His gallant, good-natured character, and his recollection of the fact, that much practical knowledge is to be gained after the midshipman receives his signature, makes it imperative you should be solicited to appoint him President of this Board of Examination, by those that have seen his conduct of candidates of other families hereby respectfully solicited by

A FATHER.

N. B. The five first on the list of Midshipmen of '29 with one exception, and he of the Navy Commissioners' Office are sons of our officers or relations of Past Captains. To be any way related to these "Magnates," is a "Pewt's Right" for genius.

If, in a "Father," will reflect for a moment he must be convinced that, all other circumstances equal, officers' sons have a decided advantage over other midshipmen, from the fact of a Captain being able personally to instruct his son, when under his own eye, while at home or at sea; and from his general acquaintance with his brother officers he knows best where to send him to learn his profession. Officers too can, and frequently do, obtain advantageous orders and transfers for their sons, while other midshipmen are obliged to remain on shore, often unemployed. If it then appears that Navy Commissioners and Officers' sons should pass a good examination? Is a system of examination fair or just that gives the choicest few such decided advantages over the many noble youths of this widely extended land of the free, and home of the brave?

Juan May, No! Then, sir, the remedy for this growing evil is plain enough, but it is not to be found in the election of a President, or Board of Examiners. Fix the system of examination for Midshipmen on a sound basis, one that will satisfy all educational science and seafaringmen; if you please, as high as the minds of youth, with all due diligence and application, is capable of acquiring in five years; all who come up to that mark must be passed; and having passed, they ought in all fairness to retain the same relative position on the Register, which they held before examination; for if the dread of rejection and final disfranchisement is not sufficient incentives to study, surely the less consequence involved in the lottery of numbers cannot be more stimulating. Whereas, on the other hand, great injustice may be done by posting one below another, whose chief merit perhaps is derived entirely from influence.

To one who has the interest of his country at heart, it is a painful sight to see how rapidly the native American seaman must be exterminated through the influence of officers, and their place being supplied by foreigners. Not only are our packet ships, the best school in the world for perfecting the sailor in all the minutiae of his profession, very nearly wholly manned by foreigners, but they are fast filling our whaling ships, and thus rendering very little not only the experience but the memory of seamen, which has heretofore been its boast and pride. We say "worse than nothing," for in case of a war with England for instance, the capture of a ship with such a crew (and how few of our traders or packets are other than so manned), not only would make a poor show of our nation of so many men, but these very men who have been perfected in their profession in our marine would be turned against us and doubly add to the strength of the enemy.

England, by a system of wise regulations, has created a superabundance of seamen, a large portion of which are of better ships, food and wages, than any entering on board our vessels by supplying all demand in America for persons of their profession render it unnecessary for our merchants to create a body of native seamen, by employing boys as apprentices in their ships. In fact merchant captains, even in our largest sea-port, are not acquainted with our Midshipmen, who at the end of the term take a novice to sea; and so rarely is it done, that we have known persons of high respectability use all their influence in vain, to procure a situation for a son on ship-board. Was it not for the few seamen still made in our midshipmen, who at the end of the term, our whole commercial marine would long since have been entirely foreign, we were compelled to assert, wholly in the charge of foreigners, and the black cock the only representative of America on board each ship. When England is at peace we act as a drain and nursey for her surplus seamen, who may in case of war be recalled to leisure and used even against ourselves for although many might remain with us, the best would leave, for none but the worthless, who never could be taught, to take an interest in our flag, would be found in arms against their country. We hear of mutinies constantly occurring at sea! To what may they be due? To the fact that even the officers and men have no character to support in, and no ties to bind them to America; and who, so that they but escape the penalties of the law, are perfectly satisfied. We believe that there are laws in existence to regulate the employment of midshipmen on packet ships, but we feel that they are defective and must long since have been subverted, and are never enforced. Time cannot curtail an evil springing from such fruitful sources, and unless Congress takes the matter properly in hand, and compel each ship to carry a certain number of boys as part of an establishment, that the American marine may exist, in all probability live to see the day when American seamen will be spoken of as a body of men who have passed away.

TOATION.
INTERESTING INCIDENT.

There is in the exercise of justice and integrity, of generosity and the amiable sympathies of man, that which, whilst it ministered to the individual, is productive of the highest good to society. The most unassuming virtues, commands the respect and esteem of all. But there is a peculiar pleasure in witnessing the manifestations of these virtues in the opposite extremes of society, wealth or high official stations on the one hand, and obscure penury on the other. It is a pleasing fact that neither extreme is of itself a prolific source to the cultivation of just and magnanimous sentiments. Affluence and power too often cherish, degrade the man and the lively sensibility of our nature, engender a cold selfishness and at the same
time infatuate their possessor with an imaginary independence which tends to render him indifferent to the interests and happiness of others.

Poverty, on the other hand, interposes in the pathway of mental and moral improvement too many obstacles to allow us to look for distinguished virtues among those who are dragged down by the weight of an unrelenting oppression. In the following short narrative, I present you the striking instance of the sentiments and conduct I have commented, showing that they are sometimes to be seen illustrating both conditions. Amid the abounding selfishness and heartless indifference to the interests of others which affect, to a great extent, the character of too many, there is, nevertheless, some who derive pleasure from the performance of benevolent and generous actions, and who delight to contemplate them in others. For the gratification of such, and to render the merited meed to the respective agents concerned, in the incident, and at the same time to exalt others to follow their laudable example, I request that you will give it a place in your valuable periodical.

In the year 1823, a scrap of paper, purporting to be "the last will and testament" of Thomas Haney, a soldier of the United States Army, was found in a bank strong, was forwarded from that place, a distance of more than 1,200 miles, to the appropriate accounting office at the seat of government, accompanied with evidence, that the deceased had left a sum of money which he had bequeathed to his aged father living, as he stated in his will, in "the town of Drogheda," and on the 4th of January, 1825, it was received in Drogheda. The money was placed in the hands of Major Thomas Biddle, a paymaster of the army; and the circumstances made known to Anthony St. John Baker, British Consul General, then residing at Washington, who was, at the same time apprised of the course of action which it was necessary to pursue to accomplish the selfish and pious wishes of the testator. Mr. Baker was told that a full description of the deceased soldier was on record in the office, and that in the event of any application for the legacy, it would be requisite to the Consul General to make a statement setting forth the age, size, complexion, trade, &c. of the soldier, that by comparing it with the record, his identity might be placed beyond doubt. In due course, the Consul General appeared at the office, and from Lord Gormanston, exhibited a description of the deceased, according to the most satisfactory manner with that on file, and also produced a power of attorney from the father to Lord G. and another from the latter to the Consul, authorizing him to receive the legacy. On receiving, the amount of the bequest, §104 27, the Consul General offered his warm acknowledgments for the trouble the government had taken in effect the will of an obscure individual, and at a subsequent period, submitted for perusal, a letter from Lord G. acknowledging the reception of the money and expressing the gratitude of the father, and his own admiration of the high sense of justice entertained by the officers of our government.

A CARD TO OLD IRONSIDES.

"Neptune" presents his respects to "Old Ironsides" and requests his attention to the annexed extracts from the United Service Journal for 1855, page 306.

After having said them, the writer will perhaps be of opinion that an ancient galley was somewhat larger than a modern man-of-war's launch.

The art of ship-building appears to have made much more rapid progress than that of navigation. The ancient ships of Tyre, given in the 27th chapter of Ezekiel affords strong evidence that the Tyrians had, made no small advances in this art; and it is reasonable to conclude that the naval and commercial operations in which the Tyrians and other similar nations were engaged, would be stimulated by the use of ships of this size. The Romans transported them to Egypt to Rome, and the vessels formed out of a single stone, of a length and size so enormous, that it is questionable whether they could have been put on board any modern

DIGITIZED BY GOOGLE
ship whatever. This fact shows that the Roman ships must have been large and strong, and that a considerable degree of skill must have been exhibited in their construction.

After this the description of one of the ancient ships:

"It had forty banks of oars, three hundred and twenty-oar, and sixty-eight feet in extreme breadth from the keel to the beam. It was furnished with four rudders, or steering oars, forty-five feet in length, and the longest of the oars by which it was propelled were in length and breadth at the extremity two rows of oars near the stem, and four rows of oars near the stern, each of the oars of which consisted of bows and blades of different proportions. The oars are not only propelled by the row of oarsmen but by the other oarsmen, so that the ship may be driven by the row of oarsmen or by any one part of the crew as occasion may require."

PRESENT TO THE NAVAL LYCEUM.

J. B. Bichanan, Esq., His Britannic Majesty's Consul at New York, has presented to the United States Naval Lyceum, in that city, a full length portrait of His Majesty King William the Fourth.

The following correspondence, on the subject, has been published in the New York papers, and is here inserted:

His Britannic Majesty's Consulate,

New York, March 1858.

Sir,—I have the honor to present a portrait of His Majesty King William the Fourth, to be placed in the United States Naval Lyceum, in which I have observed the portraits of some eminent naval characters. The attachment of His Majesty to the naval service, has led seamen, with their characteristic familiarity of expression, to designate, his Majesty, The Sailor King. The portrait, which contains, with great fidelity, the features of the royal personage, was designed and executed by a man who is well known to the people of this country, and who is equally known in foreign parts. It is a beautiful and spirited representation of the Sailor King, and I have the honor to present it to the United States Naval Lyceum, as a memorial of the respect which the seamen of this country have for his Majesty and the United States, based upon those kindred relations to which England can alone lay claim, and whichincreases, and is handed down to future generations, as the ardent prayer of the sailor.

Very respectfully,

JAMES BICHANAN,

To Commodore Charles G. Boggs, Esq., Asst. Secretary of the U.S. Navy, New York.

United States Navy Lyceum.

New York, March 26, 1858.

Sir,—I have the honor to acknowledge the receipt of your communication of the 24th instant, transmitting to the United States Naval Lyceum the portrait of his Majesty, King William the Fourth, which was received and presented on behalf of the Lyceum, and to acknowledge the courtesy of Mr. Bichanan, in being authorized to present you the portrait of the Sailor King, as a memorial of the respect which the seamen have for his Majesty and the United States, based upon those kindred relations to which England can alone lay claim, and which increase, and are handed down to future generations, as the ardent prayer of the sailor.

Very respectfully,

JAMES BICHANAN,

To Commodore Charles G. Boggs, Esq., Asst. Secretary of the U.S. Navy, New York.

United States Navy Lyceum.

New York, March 26, 1858.

Sir,—I have the honor to acknowledge the receipt of your communication of the 24th instant, transmitting to the United States Naval Lyceum the portrait of his Majesty, King William the Fourth, which was received and presented on behalf of the Lyceum, and to acknowledge the courtesy of Mr. Bichanan, in being authorized to present you the portrait of the Sailor King, as a memorial of the respect which the seamen have for his Majesty and the United States, based upon those kindred relations to which England can alone lay claim, and which increase, and are handed down to future generations, as the ardent prayer of the sailor.

Very respectfully,

JAMES BICHANAN,

To Commodore Charles G. Boggs, Esq., Asst. Secretary of the U.S. Navy, New York.
DOMESTIC INTELLIGENCE.

INDIAN TREATY.—A very interesting scene took place in the early part of the week at the Masonic Hall, in this city. This was the concluding of a treaty between the Indians and the United States, in relation to the settlement in Michigan. The Indians have ceded about twenty millions of acres, reserving about a thousand acres for themselves, in the northern part of Michigan, at Little Traverse, Chippewa, Grand Traverse, and Muskegon, and receive six hundred thousand dollars, payable in thirty years, and other valuable grants. After the ceremonies of smoking and singing, several speeches were made, in which some of the Indians indulged in a spirit of humor. They tell us how the people with hays, "one and one wished that the people with hays, would present each of the chiefs, about fifty-five in number, with one of those "conveniences with four legs which travel so fast," meaning a horse. All their requests of this description were granted; but one of them put a poser to the Commissioner. He asked that the people with hays ought to present each of the young men with a squaw. This question was referred to the edification of the ladies who were present.

The treaty is now before the Senate; when ratified it will be highly beneficial to all parties. The Indian territory was too large to be of any use to the tribes, and they are in a manner to be received. Under the care of Mr. Hamblin, an amiable and accomplished half-blood of the Ottawa tribe, their progress in civilization must be rapid. They are all desirous of being amalgamated and identified with our own people, and they will soon be so. They have existing settlements in the District,—Washington Mirror.

TAXES OF RESPECT.—We have been presented with a splendid sword-cane that has been presented to Col. Henderson, Commandant of the Marines, by the officers of his corps. The sword-cane is the original of the 7th Cyane, which has recently been broken up, at Philadelphia. It appears that Colonel H. commanded the Marine guard on board the frigate Constitution, with the gallant Stowell, when he captured H. M. G. Cyane and Lysander.—Globe.

DEATH OF LIEUTENANT IZARD.—It will be observed by our report of Florida news, that Lieutenant Izzard survived his wound but four days. He was a young, ambitious, and gallant officer, the son of a brave man who perished at Battle-Hill, Georgia. Some twelve months ago at the Military Academy, at West Point, previous to his joining the Florida troops, Izzard had been for sometime at the North, to re-establish his health, which had been shattered during the dragged expedition, when he was taken prisoner. The following officers will lament his loss as that of one who was an ornament to the service. While in this city, but a short time previous to his departure for Florida, his amiable and many deportment had secured him the estimation and esteem of all who enjoyed the pleasure of his acquaintance. He is missed in his department in the performance of his duty.—New York Times.

10 A discussion is going on in the Army and Navy Chronicle, as to the expediency of creating the grade of Admiral in the navy of the United States. A valid objection cannot be raised against the idea; but the reason why we confer the title, to correspond with the designation of a general, hard to goad in the navy. The thirty years which a man has in the navy is as useful as a captain in the army; and the captain is in command of a regiment of seven hundred men. But it would be unsatisfactory from the standpoint of discipline and practically unwise, unless the supplies of the different regiments were given in strict conformity; and this is done in the navy, where we have no generals. The system of grades is a part of our naval law, and should be fairly carried out.—Halbert's American
Appointment by the Governor and Council of Maryland.—George H. Steuart, late Brigadier General of the First Light Brigade, to be Major General of the First Light Division of Maryland Volunteers.

 Destruction of the Arsenal at Frankfort, Ky.—The Arsenal, containing the public arms, at Frankfort, Ky., was destroyed on the 26th ult. and the whole stock of the 12th ult.; and such was the head to which it had then arrived and the rapid progress of the flames, that the building with its whole contents was destroyed. Not a sword, musket, cartouch box or trapping was saved. The origin of the fire had not been ascertained, but it is said, however, that the hands had been engaged in cleaning the arms the day previous, and thence it is probable, resulted the accident.

When the arsenal blew up and all its arms were supposed to be destroyed, it was found on digging among the rubbish, that a brass field piece had remained uninjured. The history of this piece is interesting. It was in the first place, captured from Burgoyne at Saratoga, afterwards surrendered to the British, at Detroit, by Gen. Hull—retaken by the army under Gen. Harrison at the battle of the Thames, presented by Congress to Gov. Shelby, and by him to the State of Kentucky.

Wrecks.—It is unusual for us to announce so many wrecks as have recently occurred, in so short a time, unless after some great and disastrous gale. These, however, have happened in consequence of a severe current setting directly upon the Florida Reef. Its rapidity has been estimated at from three to three and a half miles per hour; and when vessels once get on the coral reef with this current, it is difficult if not impossible to get off without the assistance of lighters. The bold and enterprising men who follow wrecking on this coast, have within the last eight months saved a vast amount of property from total loss. Nor has there been, so far as we have heard or believe, a single instance of improper conduct relating to wrecked property among the crews of twenty wrecking vessels. The Hon. Judge Webb has several times scrutinized their conduct rigorously, and has paid them high compliments for their honorable deportment. It ought to be generally known, that these wrecking vessels carry a license from the Judge of the United States Court, which would be withheld or resumed if the Judge had good reasons to disapprove of their conduct. While glaring improprieties relative to wrecked property have occurred on the coasts of New York, New Jersey, and England, and we are gratified to hold up our despised and abused Islands as free from similar reproach.

Key West Inquirer, March 5.

Notice to Mariners.
Collector's Office,
Norfolk, 22d March, 1836.

From the 1st April next, no light will be displayed on the Wolf Trap Shoals until further notice, it being found necessary to remove the boat to undergo repairs.

Conway Whittle, Collector and Superintendent of Lights.

Army.

Resignations.
1st Lieut. Horace Bliss, 4th Arty, 10th June.
Captain J. M. W. McFadgin, 5th Infy, 28th May.
1st Lieut. R. W. Colecock, 3d Infy, 1st April.

Navy.

The U. S. Ship Ontario, Captain Saltier, was passed in the river La Plata, on the 28th Jan., from Monte Video, bound to Buenos Ayres—all well.

Frigate Constellation, Commodore Dallas, was still at Pensacola the 20th March.

Sloop Vandalia, Captain Webb, was at Tampa Bay the 22d February.

Schoolch Grampus, Lieutenant Commanding Boorman, was expected to sail for the West Indies, from Norfolk, on Sunday last.

The U. S. Sloop of War St. Louis, Captain Roseneau, bearing the broad pennant of Commodore Dallas, arrived off the S. W. Pass of the Mississippi on the 16th ult., with the intention of going up to New Orleans, but owing to the low stage of water on the Bar, was unable to get over; she returned to Pensacola on the 20th ult., bound on a cruise along the coast of Florida and Key West.

Sloop Vincennes, Captain Anleic, arrived at the Island of Otsebiche on the 5th September, 1835, last from Nootsebevah; was still at Otsebiche on the 19th September, to sail next day for the Friendly and Fijee groups; thence to the Fijee, and China.

The Mails.

For the Mediterranean will be made up at the Navy Department, as usual, on the 10th and 25th of each month, to be sent via New York.

For the Pacific the 6th of each month, to be forwarded by the packet, as usual, on the 10th, from New York, via Kingston, Jamaica.

Resignation.

Charles Sperry, Midshipman, 1st April.

Deaths.

In Philadelphia, on the 29th ult., after a short and painful illness, Adeléide Olivia, daughter of Lieut. F. A. Neville, of the U. S. Navy, aged four years and nine months.

Revolutionary Soldiers and Patriots.

In Albion, New York, Mr. James S. Clay, a hero of the revolution, aged 78. Mr. Clay was a volunteer in the army of the revolution—served at the battle of Lexington and Bunker Hill—was a ranger one year and a half under Major Whitemon—he then joined the standing army, and was at the battles of Monmouth, Brandywine, Valley Forge, and at the taking of Burgoyne. He was at West Point at the time of Arnold's treason, and in the unsuccessful attack on Quebec, under General Montgomery, and in several other actions of less importance. He was discharged at the close of the war, with the badge of honor for six years' faithful service, under the signature of the immortal Washington, which now lies in the hands of his son, with whom he lived and died, as a memento of the toil, sacrifice and devotion he freely offered on the altar of his country, and of the high honor which not only a Washington, but posterity, is under the laws of the heroes of the revolution, for their priceless services.

In Princeton, N. J. 16th ult., Josiah Ferguson, Esq. aged 90. He was a captain in the army of the revolution.

Near Spotswood, on the 4th ult., Frederick Bicken, aged 80.

In Livingston, Anthony King, Esq. In Tyrone, John McCullum, aged 90.

In Cambereberry Co. N. C., 17th ult. Mr. Kenneth Murchison, aged 88.

In Canandaigua, N. Y., Zebulon Mack, aged 81.

Henry M. Prevost, Stock and Exchange Broker, No. 47 South Third Street, Philadelphia.

As all kinds of Bank, Rail Road, Canal, Insurance, and other stocks, bought and sold on Commission.
WAR IN FLORIDA.

Fort Drane, Florida, March 11, 1836.

Sir: The following statement of fact in relation to the recent movement of troops from Louisiana, under the immediate command of Major General Gaines, you may rely upon, and if you think proper, may use for the information of the public.

General Gaines left his permanent head quarters, at Nashville, (Tennessee) on a tour of inspection, and arrived at Fort Drane on the 12th of January, for the first time, of a serious disturbance in Florida, and particularly of the melancholy massacre of Major Dade and his command, which occurred on the twenty-eighth of December. He immediately communicated with the Governor of Louisiana, and requested him to call upon, and hold in readiness a body of volunteers for service in subduing the Seminole Indians, and proceeded to Pensacola to solicit the co-operation of the naval force on that station. At Pensacola he found his wishes had been anticipated; Commodore Dallas and Bolton, and Captain Webb, having already directed their attention towards Tampa Bay; the vessels had left the Arsenal, and were assembling there to commence the operations which had been prepared for the suppression of the Chief of the Seminole nation, as this confederacy, "he turned aside to wipe away a tear." The General, contrary to his reasonable expectations, found no sufficient supply of stores of any kind. The next morning, the 23d, all the horses were sent to Fort Drane, 22 miles northeast, with a stock for a supply of provisions. The 24th brought us all that could be procured, and it was ascertained to be but seven days' rations, which, with two days' supply found at Fort King, made up all that could be looked for in that quarter. The General had then to decide upon his next movement. To remain at Fort Drane, or push out of the territory further north, might embarrass the operations of another officer then ascertained to be employed at Picolata in preparing force and supplies to penetrate the enemy's country. After much and mature deliberation, the General decided to move south again by the usual route of General Clinch, if the enemy should not be found, the General would, at all events, reach supplies at Tampa Bay. His movement would occupy, and perhaps concentrate the enemy, and tend greatly to give security to the frontier and enable families to return to their deserted homes, and in the mean time, through the favorable avocations, the force having arrived for the commencement of planting operations. Lastly, but not the least of the considerations, we might find and beat the enemy.

The General moved from Fort King on the 26th of February, and on the 27th we were on the banks of the Withlacoochee, at the place where General Clinch crossed the river the 21st December preceding. The troops had advanced from Tampa Bay, and to this time the same order of march has been preserved in three columns, a right, centre and left, respectively, about one hundred yards distance, forming a strong column; the baggage being in the rear of the centre column. In this order it followed that we struck the river at three points; the advanced guard, as the centre, being at the usual crossing place. The baggage and the rear had been ordered to halt, as the general only desired recovering the Withlacoochee. Up to this time no attack or annoyance had been offered us since we left Tampa Bay, but few of us expected it at the Withlacoochee. We were therefore, many of us, fully exposed while sounding and examining the river, and our exposure was matter of jocular remark, when, for the first time, on our left flank, a spirited fire was heard, accompanied by the enlivening war yell of the savage. The fight was continued about half an hour, the enemy being on the left bank of the river, when the General ordered the troops to encamp near the river. We lost one killed, and eight wounded. On the 28th we moved the river about two miles, where the banks were less covered with thickets, and the advance guard was here fired upon, and Lieutenant Izard of the U.S. Dragoons, mortally wounded. He fell, but, mentally recovering himself, commanded his men, "lights the positions and lie close," the most composure; but, to keep the command, very less remarkable than that of the lamented Lawrence. "Don't give up the ship." Lieutenant Izard, after five days of suffering, died on the 5th of March, and was buried on the banks of the Withlacoochee—herself a loss too great for the savage for ever to compensate.
The fight was continued on the 28th, with little or no information from about 9 o'clock until 1 P.M., when we encamped again. During this period the Indians kept up a continuous yell, except during an interval, when they retreated for a short time. We lost this day, beside Lieut. Izard, one killed, and Captain Sanders, commanding the friend of the Indians, wounded. Captain Armstrong, the Major, both volunteers, wounded, the latter slightly.

In the evening of this day an express was sent to Fort Drape to report to the officer commanding in that quarter, that the enemy had been found in force, and to recommend an immediate movement, crossing the river at this same distance above, and then falling down upon the enemy's rear, which it was hoped would terminate the war.

On the 29th, in the morning, the enemy was silent, but the experience of the General looked upon it as ominous, and he ordered one third of the command to remain at the breastworks, the remainder of the force being employed in preparing timber and canoes for crossing the river. About 9 o'clock our working parties were fired upon, and simultaneously a vigorous fire poured into camp from three sides, that nearest the river being the only one not assailed. The firing continued a little over two hours, during which we lost one man killed, three officers and thirty non-commission and privates wounded. The force of the enemy was estimated at twelve hundred or fifteen hundred. General Gaines was wounded by a small rifle ball, which passed through his lower lip, making a very slight wound, but knocking out several teeth. He was slightly wounded in the upper lip, which seemed much the most serious injury. This was a most startling incident to all as soon as known, but affected every body more than the gallant hero himself, who with the most heartcheering good humor observed, that it was extremely unkind for the enemy to take a looth from him which he valued so highly. Lieutenant Duncan, of the artillery, was slightly wounded, and Lieutenant E. Smith, of the Louisianians, was wounded no less than three times. The enemy at length retired in some haste, for, contrary to their custom, they left one of their dead, after dragging the body some distance, they took his rifle, but we found him well supplied with powder and about sixty bullets.

The enemy, contrary to expectation, having crossed the river, it was evidently unnecessary for the troops from Fort Drape to go higher up, and accordingly General Gaines sent another express that evening, suggesting the movement of a force, which we lost one man killed, three officers and thirty non-commission and privates wounded. As he had done by the previous express, a supply of six thousand rations of pork, flour, and sugar. The 29th, 30th and 5th days of March, the enemy fired in front of and upon our camp, which was secured by breastworks on which the enemy were protruding, and the command enjoyed themselves in conversation, and speculating upon probabilities as to whether supplies would reach us, while our sharp-shooters were amusing themselves in picking off the Indians from behind the trees.

As our provisions diminished, we began to inquire into the virtues of roots and the comparative excellence of horse meat. At a meeting of officers, all the corn was thrown into the public crib, and an issue of a pint made to the man, which had been exhausted. At length bread, corn and meat disappeared. Some of the men were two days without food. What was then the feeling in the camp? Let it be recorded to the honor of every man, and let none, from false modesty, hesitate to yield his feelings to the gratification of noble pride, when he recollects that not a whisper, nor a whisper of retreat circu-

The General's staff officer was ordered to return to them, and on the plains, the General directed the staff officer to go out to them, hear what they had to say. It was soon reported to the General, that the Indians did not wish to battle for the country, and that they wanted to retire to the Wathacoochee. The General's staff officer had with him two or three others from our camp at the talk. The Indians repeated much of what they had said in the morning; that they had lost many men by death and wounds, and were tired of the war and wanted peace. Not, as they called them, Micacop, was not with them; they wanted time to consult him. They therefore asked a cessation of the war. The staff officer, having been previously instructed by the General, told them that if they would engage to cease from all acts of hostility, retire south of the Wathacoochee, and attend a council when called upon by the United States commissioners, they should not for the present be molested. They answered, that for themselves they would, and did promise all that was required. At that moment a noise was heard from that portion of the Indians at distance, and they were seen running towards the river. It was easy to conjecture the cause. Immediately afterwards General Clinch, with 500 men and supplies, came gallantly on; and his advance guard of mounted men, seeing Indians, and not knowing the purpose of their being there, formed a line promptly to the left, and fired, but the freshness of their horses was such that they were beyond the reach of gun-shot, and were seen out of sight and over the river.

Then followed one of the most delightful festivities imaginable. General Clinch's force moved onward, and some of the Indians of the Wathacoochee, who was not with our friends indeed? The news of their surplus bread, &c., &c., until their haversacks were emptied, and our command feasted. General Clinch brought two days' supply of pork and bread, with sugar, besides about forty head of cattle, many of which were shot out that night.

On the 8th a negro man was killed over one of our parties who had a wife among the hostile, with whom a
ARMY AND NAVY CHRONICLE.

By his appearance among them in any way he might choose; to see and talk with them; to ascertain their situation and wishes. The 9th he did not return, and much doubt prevailed as to the position and disposition of the enemy. On this day, the 9th, General Gaines thought proper to deliver the command over to General Clinch. We all regretted, and yet were pleased with the change; regretted to lose the presence of a tried, experienced officer, whose deportment commanded respect, whose judgment insured confidence, and whose mild and amiable manners won the affectionate regard of everyone; but if a change was deemed a public duty, to whom could the command be assigned, who so much satisfaction to his troops, as to General Clinch, who came nobly to their aid, with all the despatch and all the assistance in his power, and whose manners were an index of his generous and heart-enobling qualities?

General Clinch, for reasons assigned in orders, directed a movement to this place, to commence on the 10th last, at 10 o'clock. In the midst of a heavy rain the march commenced, and the troops moved about seven miles and encamped. In the evening, the negro man who had been sent among the foe, came in, and to our great satisfaction confirmed, in the most precise manner, the truth and sincerity of all the Indians had professed. He went on to the nation led by the chief, and after fifteen or twenty miles up the river, and had dispersed over a space of some two miles or more, in several encampments. They gave the negro every assurance of a specific disposition on their part, stated that they had ordered their young men to be absent at war, and that they had seen our men fishing in the river and had abstained from firing upon them. They stated that thirty had been killed in the several battles on the Withlacoochee between the 27th of February and 5th of March. It must be observed that no terms have been offered the Indians, although a thousand men, was obliged to intertrench himself on the Ouitlahcochee, and was neither able to open the communication with his own depot at Tampa Bay, nor to keep open that with Fort King, how could he expect General Clinch, with less than half that force, even if the communication, and furnish protection for them by the route, where every brigade of wagons or pack horses required a military escort.

The fact is, there was no just grounds for the suggestion, if it was ever entertained, that supplies were found at Fort King more than sufficient for its garrison. Tampa Bay was the proper depot for General Clinch's division. When he left that post for Fort King, supplies were abundant; if he chose to leave them and allow the enemy to cut him off from them, he could have them before he reached Fort King. He was not the measure; but the responsibility, as well as the honor, is all his own. I must be excused from entering into

sent hence to Gary's Ferry for subsistence, the last
which may be expected on the 24th. Here they will
be attacked by the enemy, who may be expected to
Savannah, and for the troops from
New Orleans to recruit their strength. All these
objects, I have good reason to hope, will be accomplish-
ed by the 26th or 27th inst., although I have not had a
line from Colonel Lindsey later than his letter dated
Mobile, the 13th ult. In the mean time it is com-
fortable to know that the body of the enemy re-
 mains in the swamp or cove of the Withlacoochee, about
the junction of its three branches—say twenty-five miles
from this place. I send you a topographical sketch of that
vicinity, made by my Aid, Lieutenant Johnston, from
Gulfport, by permission of Gen. Corcoran, General of Floridas, whom
I have taken into the service of the United States, and
his minute knowledge of the
country and the hostile Indians, together with his gen-
eral military intelligence, will render him a valuable acqui-
sition. I also expect to derive
benefit from Colonel Coles, the President of the Territorial
Legislative Council, particularly if the war should be
carried into the lower part of the peninsula, with which
he is, perhaps, better acquainted than any other individu-
al in the Territory. He is with me, and is well dis-
posed to render himself generally useful.

No. 13 was supposed to be necessary, in order to be pro-
vided with the best kind of means to ferret out of the
swamps, and other hiding places, small parties of the
enemy, which may be expected to remain out, after the
great body of the nation shall be subdued. General
Woodward and Majors Watson and Fomourney, men-
 tioned in that order, are strongly recommended to me, as
suitable persons to direct the detachment of 500 Creek
warriors. I trust that this step on my part, may meet
the approbation of the War Department. It seemed to
me to be dictated by a correct sense of the
situation, and will probably, by abridging time, save many valuable lives from
the effects of the summer climate of the lower country.

"The order limiting the ration of bread or flour, is
the direct result of the want of sufficient means of transpor-
tation, and we shall probably be obliged to
ix. From the Mobile Chronicle, March 26.

Arrived, schooner Expert, Cozzen's, five days from
Tampa Bay, left on the 19th inst. The schooner came from
Panama under command of Col. Lindsay, marched for
Fort King on the 15th. Five men had died; and about
fifteen were left sick in the hospital. The schooners
Bage and Magdalena had arrived from New Orleans with
provisions. Major Sands with about 150 men remained
at Fort Brooks.

TAMPA BAY, March 20, 1838.

The United States Revenue Cutter Washington, Eze-
kiel Jones, commander, arrived at Fort Brooks (Tampa
Bay) on the 13th inst. bringing deepseatches from Gen.
Scott to Col. Lindsay, since which the Washington has
been reconnoitering the coast between the river With-
lacooche and the Savannah. The crew reported that the
crew of the Washington's crew, while on shore at the
river Manihattus, discovered an Indian encampment—
shortly after, a detachment of twenty-five men, headed
by Capt. Jones of the Washington, and Capt. Smith of the
U. S. ship Vandalia, landed and went in pursuit of
these Indians, who were in a large cora, but
they could not come up with them. The Washington has
now two boats out on an expedition to the Keys in and
about St. Joseph river, 40 miles from Tampa.

CALIFORNIA.

In our paper of 28th May, 1835, page 171, we gave an
extract from the London New Monthly Magazine, being
the substance of a communication read before the Royal
Geographical Society; and addressed to the Secretary
by Dr. Coulter, who had resided two years in Upper
California.

It is seldom that we have an opportunity to present a
description of this region by an American. The adven-
turous spirit of our countrymen would have penetrated
long since into the interior of what will at some future
day be a neighboring province, had the prospect of gain
held out sufficient allurements. Whenever a permanent
settlement is made upon the shores of the Oregon, we
may expect to learn more of a country which is repre-
sented as being beautiful, fertile and salubrious.

A gentleman who has recently visited California, has
furnished a few hasty observations, which we present to
our readers; they were committed to paper from memo-
ry, in the absence of notes, and we think will repay
a perusal.

California is situated in latitude 29° to 42° north, on the
Pacific Ocean. The part from 20° to 81° 10' is cal-
celled Lower California, the Peninsula between the Gulf
and the sea is about seven hundred miles in length, and vary-
ing in breadth from 30 to 120 miles. It is mountainous
and barren, except the valleys which are fertile in almost
all the tropical fruits; the olive, orange, pomegranate,
fig, and date grow abundantly, and to much perfection.

About seventy years ago, the Jesuits settled on this
peninsula; through their religious influence, and with-
out the assistance of military force, they effected a trea-
ty, and gained a hold on the affections of the Indians
hitherto unknown to any European power. In those desolate
valleys, where they collected the Indians about them and taught them their
religious views.

The Spanish Government became jealous of the growing
influence of the Jesuits in the North and South Amer-
ican Colonies, and passed a law of banishment against
them. The Indians took advantage of the dismissal of
their pastoral leaders, and fled to their wild brethren of the North (which is now called Upper California) leav-
ing a small remnant of their people behind. When I
was last in this region I do not believe there were more
than three hundred Indians in the peninsula, (who formerly had a population of fifty thousand,) and but
two of these missionary establishments occupied by
priests. The balance are in a state of ruin, except one.

This establishment which time as yet has not been able
to deface, in front is 210 feet, running back 56 feet,
built of hewn stone, 6 feet thick; the building through-
out is laid with flag stone; it is one story high, 16 feet
pitch, covered with a circular arch of stone two feet
thick. The place is called Saint Bojas, and was the resi-
dence of the President Jesuit of this region; but it is
now abandoned, not a human person living within
thirty miles; it is situated in a lovely valley, about
half way between the Gulf and the sea, the peninsula being
about 60 miles wide. Approaching south, you cross the
mountain of San Juan, the highest point of land on the
Western Coast of North America; here you have a view
of the Gulf of California, and the whole coast from the
mountain of San Gabriel, with its volcanic fires, and its
snowy white lavax on its base; the desolate and arid soil in the
neighborhood, together with the magnificent pile of the
mountain, is the most striking object that meets the eye in
deep bosom of the valley below, present to the eye the
most awful sublime view that man can behold.

After leaving the peninsula you come to Upper Cali-
ifornia, which extends from the head of the gulf, lat. 31°
FOREIGN MISCELLANY.

FRENCH STAFF.—The composition of the French Staff has been fixed on the subsequent footing: 10 battalions of two classes, the Active (Cadre d'Activité) and the Veteran (Cadre de Vétérain). The active class is to contain, in time of peace, 210 general officers, namely, 80 Lieutenants-generals, and 160 Major-generals; the officers of this class, whatever may be the length of their services, are to be transferred to the Veteran class, from the day on which Lieutenant-generals attain their 66th, and Major-generals their 63rd year.

The only exceptions to be, such lieutenant-generals as hold appointments conferring the rank of Commander-in-chief, and have filled such appointments. The year in time of war, officers of the Veteran class may be attached to two of the Active class, 1 Military Schools, and on the Service in the Reserve, on the Service and certain restricted to military service; in short, they may be employed upon any kind of service at home.

Hungarian Army.—A permanent military force, consisting of the Frontier Regiments, is constantly kept up. Besides this corps, Hungary has its Insurrectionary forces, which are called upon a royal rescript, on extraordinary occasions. In the year 1741, the kingdom raised at its own expense, as part of this "Insurrection," six additional Battalions of Infantry, amounting to 21,622 rank and file, without reckoning the noble Cavalry, the numbers of which the existence of the army is so necessary to the safety of the state. Besides these, in the time of the French Revolution, the "Insurrection" was repeatedly called out. The levies were made in 1797, to the extent of 17,809 cavalry, and 3,556 infantry; in 1809, to 10,778 cavalry, and 26,606 infantry; and in 1809, to 17,214 cavalry and 21,230 infantry. The number of the cavalry is now about 55,000, and of the infantry, 60,000, rank and file. In time of war, however, its strength is considerably augmented, in that case, the regular military forces raised in Hungary may be estimated at upwards of 100,000 men, including the supernumerary "Vaquita," or Regiments of Infantry.

Hungary is independent of the military resources, to which we have thus briefly referred, there are 10 Frontier Battalions, and a battalion of Cossacks, and 1 of Hussars, maintained by Transylvania. Their united strength is computed at 25,000 men, according to foreign statistics.

The Hungarian gendarmerie, comprising 5,000 men, and another 4,000 in time of war; the latter was at least their strength in the year 1775.

From these data it would appear that the whole military force of Hungary, inclusive of Transylvania, is composed of...
In Peace. In War.

200,000 Standing Militia...

200,000

Total

103,000

153,000

In time of war, there have, however, existed pressing
emergency exigencies, when the two coverts have altogether
reduced the army to 233,000 men.—Ibid.

CHAPLAIN OF THE RUSSIAN NAVY.—The first officers
in the Russian Navy, who received any thing like a scien-
tific education, were formed about the middle of the
seventeenth century, when Peter the Great, by the power of
his wisdom and good fortune, became the master of the
province of Cattaro, on the Adriatic.

When Peter the Great set out upon his tour to the
leading capitals of Europe, he addressed himself to the
Government of Republican Venice, and solicited them to
permit several young men belonging to the most distinc-
tive and cultivated families in Russia to take up their residence
in Venice; and study those branches of science which
might fit them to become skillful naval officers; at the
same time that they might one day be enabled to assist the
republic in contending against the Turk, who was then
the great disturber and enemy of the interests of Chris-
tianity. was menaced. The Venetian Senate, who
were not a little proud of the distinction thus conferred
upon them, not only fitted up a palace for the accommo-
dation of the young Russians, but appointed Marcus
Marinovich director of their studies. The talents and
virtue of the young men recommended them to the love
and confidence of his pupils, and the progress they made
under him greatly exceeded the expectations of their
Sovereign. In order to combine practice with theory,
the Senate, after a while, fitted out a small fleet for their
use, and placed it under the limited control of Marinov-
ich, who was put in charge of it; and their first trip was to
the place of his birth on the Gulf of Cattaro, where they went through their
first naval exercises in the narrow Straits between the
islands on that coast; this done, they passed down the
Adriatic, and visited the shores of the Mediterranean in
every direction. Upon their return to Venice, Martin-
ovich pronounced his pupils perfectly competent to enter
upon their professional duties, and was not only reward-
ed handsomely by the Senate, but participated largely in
the Cana's liberality. He died soon afterwards, viz. on
the 25th October, 1716, in the sixty-sixth year of his age.

When he was killed, he had a large picture paint-
ed, in which his own portrait and that of his pupils were
introduced. It is well executed, and represents him
sitting at a table in a black dress, with his head uncovered,
and a globe, a hydrographical chart, and a compass on
the table before him. The picture is painted with great
care and attention, and the expressions of his face are
so perfectly correct, that the most superficial observer
would not mistake it for a painting of the living or the
dead. From a letter of Count Fedor Von Karasek.

HOW TO FIND THE DEPTH.—Among other proofs of
the impracticability of the assertion that no waves rise
higher than forty feet above the ordinary level, the following vivid
description is given: "During the hurricane experi-
enced in the northward of Barbadoes by the squadron
under my command, in the late Admiral de Courcy, (on
July 29, 1805,) the Centaur went to sea in a heavy lather class," whilst flying aloft, had the small boat. (a gig,)|
which was hoisted up at the stern davits, washed away, as
well as the poop-letanier, by an enormous wave, which
was described many feet above the highest part of the
ship's deck. The ship alarmed the poop-deck of every thing! On the evening of the second
day, whilst the hull of our shattered and unwieldy ves-
sel lay rolling in the trough of the sea, the cry of one of
the look out men, of a ship coming down upon us,
made those who were holding on under the shelter of
the weather buil'r, spring from their cover to get a
peep of the scudding vessel. We jumped upon a car-
ronade, and with the greatest difficulty, held on; then
our eyes were fixed to the position where the stars of
the mid-heaven would have been sought for on a calm
and clear night! and indistinctly saw a dark object upon
the ridge of the towering wave, which was approaching
on the weather-quarter. The next minute, a large ship
(the St. George) shot dashing straight up at us; we were
powerfully ascending; and before the eye could be
well turned to leeward, she was almost out of sight.

The danger was imminent, but for the providential cir-
cumstance of the St. George's helmsman catching a mo-
mentary glimpse of the Centaur, under the foot of the
former's forecastle, she would have been disabled. One
spoke of the wheel to port saved us, and barely so, for the giant ninety-eight's proximity
was alarmingly close, in her desperate flight before the
furious tempest! If any dependence can be placed
upon our eye-sight in broad day-light—when much of
the heightened peril of the centaur, was lost even by
the glare of the moon—the iron which met the night—and from intent con-
templation, for some hours, of the successive seas as
these came rushing and doubling onwards, as it were, to
wipe away with one brush of their curling and foaming,
the glorious and inglorious works of man, which lay like
a helpless log upon the ocean, with the sea, and the
horizon line had been drawn from the apex of the
loftiest wave to the ship, it would have intersected the
mainmast about half way up from the deck; which,
making allowance for unavoidable error, would give
about fifty feet for the elevation of the wave."—Nautical
Magazine.

SUBMARINE REGISTER BAROMETER, to be used as an
ordinary deep sea lead.—An instrument, bearing this
name, has been made and successfully tried by Mr.
Payne, of the Adelaide-street Gallery of Practical Sci-
ence. The instrument is provided with which the range of
descents, and the fall of the mercurial column in ascents,
in the mountain barometer, is made to denote the heights
of hills or depths of valleys, is well known. Mr.
Payne proposes to measure depths at sea by a barometer, which
differs from the mountain barometer in many particulars.
The barometer is made of silver and wood, and has the
mercurial column in the form of a right cone, so that, when
close at the top, and filled with one atmosphere of at-
mospheric air of hydrogen gas. The pressure of the
water upon the surface of the mercury in the cistern, is
similar to the pressure of the atmosphere upon the sur-
f ace of the mercury in the common barometer; but the
water is prevented from coming into direct contact with the mer-
cury by a piece of fine membrane. The composition
of the air in the tube is registered by a float, similar in some
degree to that of a register thermometer. The glass
tube is registered in atmospheres and tenths of atmos-
pheres, and by tables of corrections for temperature and
saltness of water, and the depth to which the instrument
has sunk can be accurately ascertained in inches or
fathoms. The instrument which Mr. Payne has
already made, is graduated from 1 to 45 atmospheres, or
247 fathoms, by Mr. Gordon, according to the rule by
which he graduated the portable gas pressure gauges,
which have been found so accurate; and by such an
instrument the greatest depths may be accurately as-
certained.

CURRENT THROUGH THE STRAIT OF GIBRALTAR.—
A writer in the Nautical Magazine for September, ex-
spresses that currents constantly from the Atlantic to the Mediterranean through the Straits of
Gibraltar. The specific gravity of the waters of the
Mediterranean has been ascertained to be 1030; while
that of the Atlantic is but 1028. The depth between
Centur and Europa point is 4200 feet. A column of water
at the specific gravity of 1030, and of the height of
4200 feet, would balance one of the specific gravity of
DOMESTIC INTELLIGENCE.

STEAM NAVIGATION ON THE ATLANTIC.—We have at length succeeded in obtaining particulars of the project, so long entertained and so often adverted to in the English papers, of establishing a line of steam packets between the North American continent and Great Britain. The company is formed by the appointment of patrons and subscribers—the number of the first being eleven and of the latter one hundred and one. The capital is two millions of pounds sterling, in shares of fifty pounds each. The first patron is Lord Mulgrave, lord lieutenant of Ireland, and the Marquis of Lansdowne is another. The other nine are noblemen. The banks are the Bank of Ireland, the Provincial Bank of Ireland, Laidlay & Co. of London, the Northern and Central Bank of England, and Messrs. Atwood of Birmingham. A charter has been obtained from the Lord Lieutenant of Ireland, and has been transmitted to London for his Majesty's sign manual, which will be affixed as soon as the subscription shall have been, to a reasonable extent, filled up in two months between each other.

The most eligible port on the west coast of Ireland has been selected for a steam packet station viz: Blarney Bay, in the county of Galway, from whence it is proposed to carry a railroad in a direct line through Athlone to Dublin. The distance is only 110 miles, and the line of the country presents unusual facilities for the formation of a railroad, the country being level and containing abundance of materials necessary for the construction of the work. The average inclination throughout the whole line is 1 in 672, and is obtained without great embankments or deep cuttings, and will be entirely free from tunnels and bridges.

The directors announce that they have an offer of as much land as will suffice for twenty miles of the railroad, the ground requisite for wharves, docks and shores, 100 acres of building ground on the margin of Blarney Bay, for ever, at a peppercorn rent, and likewise the unanimous approval of the landowners along the line.

Proprietors of five shares will be entitled to a free passage in the company's vessels between Liverpool and Dublin, propietors of fifteen shares to a free passage on the railroad, proprietors of thirty shares to a free passage between London and Liverpool, and proprietors of ten shares will be entitled to a reduction of ten per cent on the current freights by the steam vessels, and the charge for the carriage of goods by the railroad.

Ten thousand shares have been reserved to special agreement for this country.

Applications for patent rights will be attended to by Messrs. Bennett, Carters, of Louisville, Kentucky, or by William Thomas, Esq., of the Steam Packet Dock, at St. Louis, Missouri. 4th April 1836.
COMPLIMENTS TO GENERAL GAINES.

From the Mobile Commercial Register, March 25.

At a meeting of the citizens of Mobile, convened at the Mayor's office, the 24th inst. Gen. Everitt, Mayor of the city, was elected President of the chair, and T. Sanford, as Secretary. The object of the meeting, as stated from the chair, was to take measures to pay a merited compliment to Gen. E. P. Gaines, of the U. S. army, for his gallantry in the late expedition to Florida.

The following resolutions were submitted to the meeting by T. L. Blount, Esq., and unanimously adopted:

Resolved, That we have heard with sentiments of lively gratification and pleasure, of the probable termination of the war in Florida, and the reduction of the Seminoles, by the courage and bravery of American citizens and soldiers.

Resolved, That great credit and praise is due to the firmness, prudence and military skill of Major General Edmund P. Gaines, in bringing the war to a speedy conclusion; and that we award to him and his brave officers and soldiers in arms, the meed of our approbation, and the applause of their countrymen.

Resolved, That a Committee be appointed to tender to Gen. Gaines the compliment of a public dinner, at such time as may suit his convenience, as a slight testimony of the high regard entertained by the citizens of Mobile, for his distinguished public services.

The following gentlemen were appointed said Committee:

F. S. Blount, Joseph Bates, Jr.,
George Walton, Wm. M. Garrow,
William Jones, Jr., Samuel A. Roberts,
T. Sanford, John Mayrant, J.
J. R. Blocker, S. V. Scluyer,
John Milton.

On motion, the Chairman was added to the committee.

Resolved, That the proceedings of this meeting be published in the papers of this city.

J. P. EVERTT, Chairman.

T. SANFORD, Secretary.

At a meeting of the Board of Mayor and Aldermen of the city of Mobile, held the 24th March, 1836, the following preamble and resolutions were introduced by Alderman Murray and unanimously adopted:

Resolved, That a Committee be appointed to tender to Gen. Edmund P. Gaines, as he is hereby authorized and requested to tender to Gen. Edmund P. Gaines the freedom of the City of Mobile, in such manner as he, the Mayor, may think best calculated to convey the feelings and sympathies of this Board and the community it represents.

Resolved, That the thanks of this community are hereby tendered to the officers and soldiers, both regulars and volunteers, who were under the command of, and so nobly and valorously sustained the commanding General in the Seminole campaign.

RECEPTION OF GEN. GAINES AT TALLAHASSEE.

Gen. Gaines was received with every mark of respect at Tallahassee on the 19th ult. The citizens held a public meeting, and a Committee was deputed to invite him to a public dinner. He was attended into town by a civil and military escort from Tallahassee, and was addressed by Gen. Call, and replied, says the Tallahassee Intelligencer, in the following terms "I am strongly incited by the grateful feelings which I entertained for the kind attention and cordiality with which his arrival among us had been greeted." That paper further remarks: "On being escorted into town a squad of our fine company, the Guards, joined in the procession; the ladies of the city came out to welcome him as he passed, by the waving of their handkerchiefs; and on entering the Capitol, Adjutant General Black again tendered to him an offering of thanks, to the following effect:

GENERAL.—On behalf of the citizens of Tallahassee, I tender you a cordial and hearty welcome, and assure you that it is not more on account of the distinguished character which you have so nobly won in your country's service, nor from the high sense in which we are consoled at our friends' absence, nor for the prompt efforts and personal sacrifices you have made to put a speedy termination to a savage warfare, which now desolates one portion of our territory, that has elicited from them this demonstration of feelings towards you. They express the wish that you may return in strength and vigor, full of respect and gratitude; and pray you to receive it in the spirit of kindness which has prompted the offering.

To which the General replied very feelingly and handsomely.

In the course of the evening the Committee selected for that purpose, waited upon the General, at the lodgings provided for him, and invited him to partake of a public dinner. This he declined doing, and upon reflection, we are pleased at it. We do not profess to know whether in embarking in our cause, he acted with or without his Excellency's approbation or tacit assent of the powers to whom he is accountable; and as little are we advised whether it was necessary to consult any other authority than his own judgment in so doing; but it may be that his services were about to be required elsewhere, and none could desire that his duty should be neglected. We subjoin a copy of his letter to the Committee, particularly calling the attention of our readers to his promise, which we hope all parties will remember—that he will visit us again.

Head Quarter, Western Department, TALLAHASSEE, March 20, 1836.

Gentlemen,—In acknowledging the favor of your kind and complimentary note of yesterday's date, I have to express the deep regret which I feel that the state of my engagements, added to the views verbally expressed to you last night, oblige me to deny myself at this time the pleasure of complying with the invitation with which, in behalf of the citizens of Tallahassee, you have honored me. Permit me, however, to assure you of a visit to this place as soon as my duties to the Westward, will permit, when I shall take great pleasure in meeting at the festive board, and in becoming better acquainted, personally, with those worthy citizens who have given me so cordial a reception, under circumstances which are calculated to render their kindness more grateful to me than I have any words to express.

With affectionate respect your friend,

EDMUND PENDLETON GAINES.

SEMINOLE WAR.

Every day brings the campaign nearer to a crisis, and it will either be terminated at a single blow, or if the Indians retreat into their fastnesses, they may protract it through the summer.

We subjoin the latest accounts received at the time of making up our paper; before the next is issued, we expect to hear of a decisive battle.

ST. AUGUSTINE, March 25.—Another rencontre with the Indians.—We learn by the arrival of the steam boat Santee, from Volusia at Picota, that all the troops had concentrated at Volusia on the 22d and had commenced crossing the St. Johns. Two companies had crossed and advanced a short distance from the river, and piled their arms. Three canoebies were posted over them, and the remainder of the companies were laying down when
they were fired upon, the three sentinels were killed, and two wounded. The Indian soldiers were fired upon, but they had time to rally. They soon rallied, however, and killed one Indian negro. The force which attacked them was not a very large one, and they disappeared before any further execution could be done. The killed and wounded belonged to Capt. Ashby's company of Col. Brisbane's Regiment of Foot Dragoons. A detachment of 200 mounted men had gone off south east from Volusia on the morning of the 22d to return in the evening. The troops are represented to be in fine spirits.

The plan of operations, we understand, to be as follows:—The left wing of the army, consisting of 1600 men under Gen. Eustis, was ordered to move by the Withlacoochee to reach that point by the 25th (to-day.) Gen. Clinch, with the right wing, 2000 from Fort Drane, and Col. Lindsay with the centre, 1000 men from Tampa Bay, to be there at the same time, and it is expected if the Indians have not that point, that a decisive engagement will take place, which will terminate the war.

From the St. Augustine Herald.

POSTSCRIPT.

SATURDAY, 26th March.—Important from Volusia.—The Steamer Santee arrived at Picolata last night from Volusia, by which we learn that the detachment of 200 mounted volunteers which had been sent out under Lieut. Col. Butler, had not returned or been heard of yesterday morning. On the 23d a detachment consisting of 27 volunteers, and 2 guides were sent in search of them, with orders to proceed as far as New Smyrna, and on their way, about 6 miles from Volusia, they fell in with a party of about 16 Indians, in an open pine barren about 2 miles from any timber or scrub. They attacked the Indians and killed one and wounded another, when the Lieutenant Commanding the detachment ordered a retreat for a reinforcement. We are informed that every man in the detachment behaved admirably, and the whole party of Indians might have been taken or cut up had it not been for the conduct of the officer. A detachment is ordered to try him immediately. Gen. Eustis has been detained at Volusia, waiting for the return of Col. Butler's detachment and a want of guides, and has thus been unable to comply with General's Scott's orders to meet him at the Withlacoochee on the 26th. Col. Butler had two good guides with him when he left Volusia.

General Eustis has sent to town for more guides.

Extract of a letter received by a gentleman of Savannah dated Volusia, March 27th, 1836.

"The left wing of the army of Florida, Brig. General Eustis, crossed the St. Johns yesterday, and marched this morning for the seat of war.

Col. Butler's command for whose safety so much anxiety has manifested has returned safe. Their detention was caused by bad roads. Six guides have arrived today from St. Augustine to accompany the command. The mounted men sent out in pursuit of Col. Butler, engaged a body of Indians, and but for the cowardice of the Lieutenant the whole force would have surrendered to them. The Indians were entirely run down by the horses when he made his men retreat. Three of the Indians were begging for mercy.

The whole number of troops here before the movement was fifteen hundred, including 750 horse."

HEADQUARTERS—Right Wing of the Army, in Florida at Fort Drane, February 27, 1836.

ORDER.

Captains Bryan and Floyd's companies of Florida volunteers will form the escort of the provost train to Picolata to-morrow morning. Captain Bryan will command. On arriving at Picolata, he will report to Major General Scott, (or the officer in command there) for further orders.

As the period for which their companies volunteered will expire in a few days, Brig. Gen. Clinch avails himself of this occasion to express his sense of the patriotic feeling which prompted them, at the call of their suffering neighbors in Florida, to abandon the comforts of a military life and the urgent demands of business to the sacrifice of their assistance. The sacrifices and services of their companies are duly appreciated, and the General is happy in having it in his power to add his testimony of their good conduct—their cheerful obedience to orders, and the promptness with which they have performed the duties assigned to them. He bids them adieu, with his warmest wishes for their speedy return to their families, and for their future prosperity.

By order of Brig. Gen. Clinch,

C. M. THRUSTON,

WASHINGTON CITY:

THURSDAY, April 14, 1836.

The Norfolk Beacon of Monday last states that the U.S. sloop Grampus, Lieut. Com. Boorman, bound to the West Indies, went to sea from Hampton Roads on Friday morning last, and after proceeding to the edge of the Gulf, sprung awak, which compelled her to return. She anchored in Hampton Roads on Saturday, and will come up first fair wind.

COAST SURVEY.—Lieut. Geo. S. Blake is ordered to the command of the U.S. Schr. Experiment, on the survey of the coast, and the following Passed Midshipmen, as assistants,—W. Lambert, O. Tod; Z. Holland; B. J. Moeller, A. L. Case, C. W. Morris, T. A. Budd, T. A. M. Craven.

Passed Midshipman T. A. Jenkins ordered to report to Mr. Hasler, as assistant on the coast survey; and Passed Midshipman Wm. H. Ball as assistant to Lieut. T. R. Gedney.

Merry-Go-Round, Sec. has been appointed Naval Storekeeper at the Navy Yard, Gosport, Va., etc. Gabriel Galt, deceased.

ARRIVALS AT WASHINGTON.

April 7.—Lt. F. H. Smith, 1st Artillery. Mrs. Beadle's.
9.—Capt. D. Hunter, Dragoons, Gadsby's.

LETTERS ADVERTISED.

Navy, April 1, 1836.

PALENS ARRIVED.

COMMUNICATIONS.

THE NEW INFANTRY TACTICS.

PHILÔ-CLAIRFAIT, in the absence of his friend CLAIRFAIT, to the Editor of the Army and Navy Chronicle.

If CLAIRFAIT has whiled away the entire spring and summer of the Army and Navy Chronicle, HINDMAN has taken up its columns during the whole autumn and winter; and we think we may safely put it to a question to the military community—Who has been employing his time more profitably to the public good? CLAIRFAIT has not been idle. As soon as CLAIRFAIT appeared, CLAIRFAIT seized and analyzed it; he compared it with the old system, which has met with the approval of almost every one, who is acquainted with its practice, and by these means showed conclusively, that little or no improvement had been made—or, rather, that no improvement had been sufficiently great to warrant an alteration; exposed several egregious blunders, that ought, at least, to have escaped a practised eye; but which, being kindly pointed out, should not have been persistently in, or have appeared in the edition prepared for the army. And now, let us enquire what luminous HINDMAN has effected? Forgotten of the truth that "it is not by saying much, that much is proven," he has sent forth a mass of trash, not unlike the work which is intended to defend—which is read by few, and we venture to say, approved of by none. Because the French Commission did so and so, and adopted such a manœuvre, does not mean that we are bound to follow the steps of individuals, which are evidently erroneous? Without proper examination, and without the shadow of practice, are we to adopt manœuvres, which circumstances forbid, and which cannot be supported by a single sound argument? Instead of answering the question we are putting to ourselves, on the subject of the graduate of the Military Academy, (particularly the elves of Worth) who are taught to inquire for the reasons of things, and to investigate before they adopt. Instead of taking the friendly suggestions of one who has made Infantry Tactics a study for some time, who has had daily practice, and who wished to show the public what the army, the translator, or HINDMAN, sneeringly calls CLAIRFAIT and YOUNG FOGGAM and Enquirer, particularly those of the latter, HINDMAN says the Commission did so—they reported in this manner, and forsooth it must be right. This is too dogmatic, and will not be conceded to, even in a military community. Neither the defence nor the system will escape the scrutiny of the graduates of Military Academy, (particularly the elves of Worth) who are taught to inquire for the reasons of things, and to investigate before they adopt. Instead of taking the friendly suggestions of one who has made Infantry Tactics a study for some time, who has had daily practice, and who wished to show the public what the army, the translator, or HINDMAN, sneeringly calls CLAIRFAIT and YOUNG FOGGAM and Enquirer, particularly those of the latter, HINDMAN says the Commission did so—they reported in this manner, and forsooth it must be right. This is too dogmatic, and will not be conceded to, even in a military community.

The defender of our book of 1835 commences in his pamphlet, (matter the same as appeared in the successive numbers of the Chronicle) by an unnecessary history of the Tactics from the period prior to the organization of the government, to the present time. And for what purpose? Every officer knows that little instruction and still less uniformity obtained in the army, before the system of 1827 was introduced, and instruction gives according to it, by the graduates of the academy. This we pass over, and come to the paragraph, in which the poor Macdonald is made ignorant of the French, and LaCroix of the English language. Admitting this to be so, their respective works cannot have failed to produce confusion in the military instruction; but by no means so extensive, as that whose compiler understood neither, as his interpreter, nor whose subject, unnecessary as it was, being too apparent to escape the merest tyro in English or French.

The subjoined boasting of the "glorious victories acquired by our arms in the memorable campaigns of 1815 and 1815", is unnecessary, and we premise it to the defence of the first sentence of the paragraph, which, as is above shown, is from the War Department.

Who initiated this, it must be submitted to a certain individual alone, or he would have nothing to do with it? We desire information.

Is it more certain that an officer at the "head of some thirty men," or even less, should display ignorance of the application of the principles of his art to a crisis of the first magnitude, such as the head of a brigade? The military academy, thank fortune, has determined otherwise. The censure of Oneandor, Vegetius, &c, or, even the concurrence of the military scrutinizing boards twice convened, cannot make this evident, any more than the efforts of HINDMAN can blot out the improved tactics which have been seen in action by an army dressed in the fascinating dresses of blue, red, and green.

A word about the mode of examination by the board, of high and intelligent officers. One of the members declared that he had not looked at the system—that he trusted to the reputation of the author. Good! and well done! by "load at will" of the "Defence."

In relation to the certainty and promptness of manoeuvres, we agree in every respect with HINDMAN. But, why has not this rule been followed out? Some of the "weaker brethren" perhaps, can answer this interrogatory.

It is said that "the objection in the United States to the discretionary third rank can only be referred to a want of experience." We beg leave to differ, and say that experience on the contrary, has shown us how vicious the three rank formation is. Why, allow us to ask, was it suspended by the War Department? Because, allow us to answer, the experiments of one of the very few observing officers of the board, proved how five effective fires were made by the second rank, and, that a still smaller number was made by the rear rank, to say nothing of the wounds inflicted by its men, on their comrades of the front. Did not NAPOLEON, on account of his hospitals abounding with such unhappy victims, institute enquiries to ascertain whether his men did not intentionally main themselves to avoid duty? Was not the result found to be, that the rear rank, not sufficiently careful in firing, did the damage? And if NAPOLEON's soldiers were not carefully drilled, whose are? It is really an idea which we have not yet heard, whence we got this information, the author is not cited, lest, in an after defence, HINDMAN should again harp upon "a seasoning slight of lubrication," as when he found that Napier, in his History of the Peninsula War, did not condemn the three rank formation.

We are, however, supported in our opinion, on this subject, by the hint of the idea is by no means crude, nor experience slight, and whose words perchance may have come under the eye of HINDMAN; we allude to the "Memoirs of Napoleon," from which is extracted the following:

"The fire of the third rank is allowed to be imperfect, and even hurtful to the first and second; the front rank is required to place one knee on the ground in firing by battalions, mainly at this moment, the third rank charges the muskets of the second. This order is bad; the infantry ought to be drawn up in two ranks only, because the musket allows of firing only in this order; it would be necessary for this weapon to be six feet long, and chargeable at the breach, to enable the third rank to fire with effect."

To the above may be added the well attested fact, that no man will fire a gun, charged by another, with the same confidence, as if he had done it himself and therefore the third rank should not be thus employed.

No. III. of the defence.

"In the new Tactics with a view to harmony, charge évolunté is translated load at will."

"For the word "enhance" which was not by the compiler of the book in view throughout the work, but as is hereafter fully shown, is unfortunately not the case. In another of the "defence" it will be seen, it is intimated that the words of command are to "fully, indicate the moveable the interpretation, unless differently explained in the paragraph, and what is written," is not long or short a time, as you choose reading my following paragraph. Therefore, in my conclusion, we..."
ARMY AND NAVY CHRONICLE.

236

nearly ever explain the movement, and moreover that such explanation is not necessary.

The possibility of "shaking arms" by the directions in the new Tactics has been made manifest. The only fault then to be found is, that the necessary correction was not made in the army edition.

The use of the "balance step" is so necessary for making good steady marchers, that it is still practised at the military academy, and at other posts; for ought we know, the new Tactics to the contrary notwithstanding.

The fact of having treated of the paragraphs of the "Defence" in regular succession, must account for the brokenness of this communication, which, with your consent, we propose to continue in a future number.

PHILO CLAIRFAIT.

"Subaltern" is not the author of the remarks in the Chronicle of the 24th March, defending his "mathematical calculations," nor does he understand why he should be so "professedly" considered, when there was "no signature, nor his hand writing." Subaltern does not know their author, but be he who he may he is welcome "to the rescue." Having carefully examined his upper developments, Subaltern discovers nothing remarkably indicative of destructiveness, and he would very much prefer that others than himself should give the moving rod to "Father Idiot," as he has called him. He is not anxious to undertake the thread of life, either with spears or sword; especially would he regret the loss of those who had "done the country good service," even if they reach the Methuselah age which his mathematical calculations, it is said, would lead to. He doubts not, these names, having characters to preserve, will do their duties, regardless of winks and nods of our poor mortals.

Subaltern makes this explanation lest the pleasantry of his unknown friend might possibly be misunderstood. It is very strange that "Subaltern" should not know who is the author of the remarks, which appeared in the Chronicle of the 24th ult. The private note to the editor, which accompanied those remarks, commences thus: "I send you, at the request of Mr. (your correspondent Subaltern) this piece for publication, which he desires you will be good enough to give the earliest possible insertion."

The communication was in the hand writing of O. P. Q., and being sent at the request of Subaltern, led us to make the remark that there seemed to be a mutual understanding between these two writers. — Editor.

LIGHT INFANTRY.

The following communication appeared a few days since in the Globe, and is republished at the request of the writer.

The recent disasters in Florida, not only show a want of force, but a great defect in the organization of our military establishment.

Both of these defects in time of war are beyond all question Light Infantry. The want of such a corps, well organized and disciplined, it will not be denied, was most seriously felt during our last war with Great Britain, and more especially in our late war with the Indians. In Europe, a country by no means so favorable as the United States for the employment of troops, they are considered indispensable in the organization of every army. Whether received in a compact, open or irregular order; they have always appeared equally conspicuous and useful in the field of battle.

An army is to invade an enemy's country, their activity and vigilance, place in front of the enemy, in an enemy, to protect it from the enterprise of the enemy; if the enterprise, they are in the rear to prevent assaults, and they are, if attacked, they are, if attacked, they are the outposts of the army, and if they are once to be passed, they are the first to take possession; if foreign or other supplies are to be obtained, they are the covering party; if reconnoitering is the object, or a convoy of a few men, they are peculiarly well calculated to effect the end; and in a general engagement, they are the first to commence the action, and conceal the movements of the line. If necessary, they can be united with the Infantry battalions; when having been accustomed to every danger, they are the more steady, and the first to arrive, and their companions to victory, fitted out in the open and extended order, and taught to avail themselves of every cover, whether of grass, trees, thickets, or hillocks, in order to conceal themselves and take advantage of the enemy, they are well calculated to operate successfully against savages. Such a corps, well organized, and instructed, would have been an invaluable auxiliary in conducting the recent operations in Florida.

In presenting this subject for consideration, it is with no expectation that a light infantry corps could be organized in time to render any aid in the operations now carried on in Florida. For this, I trust, the Indians in that quarter are subdued, and the war at an end. But in reference to the future, and to guard against scenes being enacted similar to those which have recently occurred in Florida, on the western and northern frontier, where we have a large body of Indians concentrated, it is necessary that we be prepared. I would not recommend the east side of the Mississippi, I would not recommend a light Infantry corps. Whether the army is increased or not, such a corps should be immediately organized. Indeed every infantry regiment stationed on the Indian frontier should be taught practically light infantry tactics, which should be the primary instructions. It embraces activity, vigilance, concealment, and stratagem, and consequently the only corps, perhaps, well calculated, to contend with Indians. The instructions of light infantry and riflemen are the same. The only difference is in the arms. One uses muskets, and the other rifles. Such a corps, or corps, would not be made up of 12-pounder brass howitzers, directed by artillerymen, and the dragons, with the present regiments of infantry, would, I have little doubt, give protection to the inhabitants residing on our Indian frontiers. Without, however, such a corps, or such instruction to the troops stationed to guard the Indian frontier, we may always look for disaster, disgrace and defeat, when contending against an enterprising and savage foe. The instruction and discipline as here contemplated are not very dissimilar to that practised by the Indians when skillfully commanded, as in the case of Pontiac, Tecumseh, Black Hawk, or Powell, whose warfare is one of activity, vigilance, concealment, stratagem, and surprise.

PROCEEDINGS OF CONGRESS.

IN RELATION TO THE ARMY, NAVY, &c.

IN SENATE.

Mr. Rice presented the petition of the heirs of the late Major Swan, Paymaster General of the United States Army, which was referred to the Committee on Claims.

TUESDAY, April 8.

The following bill from the House was read twice and referred:

A bill to renew the gold medal struck and presented to General Morgan, in honor of the battle of the Cowpens.

HOUSE OF REPRESENTATIVES.

Mr. Gillet, from the Committee on Commerce, reported the following resolution, which was agreed to:

Resolved. That the Secretary of War be directed to report to this House the state of the forces of the United States, with marks of internal improvement mentioned in the bill numbered 239 giving an account of the history of each, as reported to Congress; the amount appropriated and expended on each; the amount of public improvements practicable; and stating whether the original estimate has been, or is expected to be, completed or finished.
discriminating duties upon Dutch and Belgian vessels, and their cargoes, &c., which he believed would elicit no discussion.

Mr. CAMERLENGO objected, and
Mr. VANDERPOEL proceeded with the subject of the sur-
charge, if views at length the various schemes proposed for its distribution.

Mr. STORER obtained the floor.

Mr. W. rose, and moved that the Committee rise.

Mr. STORER had no objection to proceeding then, or to the question being taken on the amendment by the Commi-
tee at once, with the assurance that he should have the opportunity of addressing the House to-morrow.

Mr. BELL suggested, if it were consistent with the views of the Chairman of the Committee on Ways and Means, to give to-morrow the discussion of this bill. Mr. B. was
not disposed to throw any difficulties in the way of its pas-
sage, and he did not think there would be any farther delay to concur, as they generally agreed to speak on the topics that had been discussed, would have some other opportunity of doing so.

Mr. CAMERLENGO hoped the question would at once be taken on the amendment.

Mr. WHITE of Florida, appealed to Mr. Bell to withdraw his amendment to afford him (Mr. W.) an opportunity of offering the one of which he had given notice some weeks ago, for the consideration of the Committee, and renewed on the motion of the Committee rise.

Mr. JENKINS (Mr. Storer having given way) renewed the motion that the Committee rise.

Mr. BOON moved to amend the motion by adding the follow-
ing words: and read—Mr. Storer, House.

The motion was lost—aye, 49, noes 77.

Mr. STORER then proceeded to reply to the remarks of Mr. HAWES, of Monday last, on the subject of the Kentucky navigation bills.

After proceeding in his remarks until a few minutes after six, P. M., Mr. STORER gave way to Mr. LEWIS, who moved that the Committee rise.

Tellers being appointed, there appeared yea 26, nay 63.

No quorum voting, the Committee rose and reported that fact to the House.

Mr. W. moved an adjournment.

Mr. CAMERLENGO asked for the yeas and nays on the motion, which were ordered, and were, yeas 53, noes 80.

No quorum voting, Mr. CAMERLENGO suggested that a statement of the numbers, as several members had come in during the call for the yeas and nays.

Tellers being appointed, 121 members were uncertain to be within the bar, who, constituting a quorum, the House again went into committee.

Mr. STORER read his remarks in reply to Mr. HAWES, and concluded his remarks at half past 8 o'clock, P. M.

The amendment of Mr. BELL, to strike out $67,000 for the navy yard at Portsmouth, N. H., was then negatived without a division.

Mr. WHITE of Florida moved the following amendment:

For wharves and their appendages at the navy yard at Pensacola, as recommended by the Secretary of the Navy, on land and water, $67,000.

For powder magazine, seventeen thousand dollars.

For wall or enclosure of brick three yards high, and a half yard thick, as recommended by Commodore Dallas, twenty-five thousand dollars.

After some further remarks from Messrs. WHITE, WISE, JARVIS, and PARKER, the amendment was then rejected, tellers being appointed; yea 88, noes 63.

Mr. EARLE opposed the amendment, in the item of $67,000 for the navy yard at Portsmouth, N. H., to $4,000, re-
marking that the latter sum would leave a deficiency for the necessary repairs of that station.

The amendment was rejected without a count.

On motion of Mr. CAMERLENGO, the Committee rose and reported the bill and amendments to the House, and on motion of the same gentleman.

The House adjourned at half past 10 o'clock, P. M.

Thursday, April 7.

Mr. HARRISON, of Missouri, from the Committee on
the Public Lands, reported the following joint resolution:

A joint resolution of the Congress of the United States of America in Congress assembled, That the Secretary of War be, and he is hereby directed to be caused to be surveyed, by a surveyor of the Corps of Engineers, the land included by the

meanders of the Mississippi river, the Missouri, the St. Francis river, and that he report to Congress as soon as the same shall be done, the practicability of reclaiming the same, and of removing the obstructions from said rivers; the best mode of
NAVAL SERVICE BILL.

The House then took up the bill making appropriations for the navy, in favor of the United States for the year 1836, reported from the Committee of the Whole on the navy, and the thirty-six hundredth amendment, which were severally concurred in.

Mr. Winans of Florida, renewed the amendment offered by the Committee of the Whole, on the subject of the navy yard at Pensacola, and the construction of a dock, asking for its support, which was ordered.

Mr. Carlisle opposed the amendment, on the ground that it had not been referred to the regular standing committee, the Committee of Ways and Means, which was the ordinary course.

Mr. Spright understood the gentleman from Virginia, (Mr. Wise,) to state last night that the substance of this amendment was reported in another bill now before the Committee of the Whole.

Mr. Wise repeated in substance his explanation of last evening, that there was a bill embracing the same objects; not in the same words, "for building a wall," but for constructing a hydraulic dock, which, of course, included a wall. They were not separate objects, but belonged to each other.

Mr. Spright hoped then the gentleman from Florida would withdraw his amendment.

Mr. Janvier again explained that the items in the amendment not brought up from a Captain in the navy. The necessary estimates had not been made for this department, nor was there a recommendation for them from the Secretary of the Navy. The bill embraced all that was necessary for the present year.

Mr. Parkman regarded the provisions of the supplemental bill reported by the Committee on Naval Affairs, for removing the bar at Pensacola, $75,000 and for constructing a hydraulic dock, or inclined plane, $185,000 objects entirely different from those contemplated in the amendment of the gentleman from Florida. He also quoted the letter of the Secretary of the Navy of 12th February last, and briefly supported the amendment on the ground that the same had been referred to the committee and were as indispensable as they were approved of. He thought also that the House might act on the subject without waiting for the recommendations of the Department.

Mr. Garland of Louisiana supported the amendment.

Mr. Klapp also supported the amendment, and gave a statement of the amount of commerce on the Gulf of Mexico, both domestic and foreign, to show the importance of the proposed construction of the first grade being constructed and kept in shape.

Mr. Garland of Louisiana said that from the Clerd's table:

U. S. PRIVATE CONSTELLATION, 1 gun, Pensacola, February 6, 1836.

BECKSON: You ask my views as to the necessity of a purchase of Pensacola, and flatter me by supposing that an opinion expressed by me, would have weight in obtaining the consent of Congress, it is as well aware of the Federal interests in relation to this position as a naval depot on the most extensive scale. Pensacola is, in my opinion, the only point south of the coast of Virginia at which any attempt should be made to the same. Other points there certainly are, where our commerce and the trade may find temporary relief from stress of weather, or from enemy's attacks, which might be found; indeed are already known, viz: the Tortugas, for vessels of all classes, and Charleston, South Carolina, for sloops of all classes.

That a dry dock ought to be constructed at this point is, and has been my opinion, ever since I first became acquainted with the harbor of Pensacola; but in connexion with this necessary work to the refinement of vessels, the bar at Pensacola, must be taken into view, and it is my opinion, that the present system of spending the public purse, in comparison with the object to be obtained, would, in my opinion, enlarge and deepen it, that vessels having the greatest draught of water could not be admitted into Pensacola harbor. A hydraulic dock be constructed at once, for the repairs of frigates and sloops of war. This can be done and finished, while the other work is proceeding. The materials for repairs are at hand, and of the best kind; and when needed shall be required, they will be found without difficulty, provided they be assured of constant employment.

Yours very sincerely,

J. B. DALLAS.

Mr. Pearce of R. I., remarked, that the question was whether what was asked for was proper? The only valid objection that had been urged last night was, that no money this was already appropriated could be expected at Pensacola; the law of 1831, creating a navy yard there, would make it impossible to get any money the next year; it could not be had. They should inquire whether the proceedings works were required; and not only had no one urged an objection on that score, but the best practical evidence had been offered in their favor, by Commodore Dallas, by the Board of Naval Commissioners, by a former Secretary of the Navy, and by the present. He was in favor of the amendment; and if the amount appropriated should not be appropriated.

Mr. Riddle was disposed, as was the Committee of which he was a member, to give as much as was necessary to Pensacola, 'be himself, even to the amount of half a million and was disposed to appropriate as much as was expected. Another objection was in the vagueness of the amendment, for "harbors and appendages;" nor could it be had $185,000 dollars was to be laid out for wharves in all at once. The amendment was to be considered during the present session.

CONGRESSIONAL DOCUMENTS.

REPORTS OF COMMITTEES.

In Senate, January 21, 1836.

Mr. Southard, from the Committee on Naval Affairs, reported the following bill; which was read, and passed to a second reading:

A bill to regulate the pay of the officers of the United States navy retired corps.  

Passed the Senate, the Senate and House of Representatives of the United States of America, in Congress assembled. That from and after the passage of this act, the annual pay of the officers of the marine corps shall be, as follows:

That is to say; the pay of the colonel commandant, three thousand five hundred dollars.

Of the lieutenant colonel, three thousand dollars.

Of a major, two thousand five hundred dollars.

Of a captain, one thousand dollars.

Of a first lieutenant, one thousand five hundred dollars.

Of a second lieutenant, one thousand dollars.

SEC. 2. And be it further enacted, That when any of said officers shall not be under orders, or on duty, he shall receive only three-fourths of the pay allowed by the first section of this act.

SEC. 3. And be it further enacted, That the pay of the adjutant and paymaster, of said corps, and the paymaster of said marine corps, shall be five hundred dollars in addition to the pay which they may receive under and by virtue of the first section of this act.

That the Secretary of the Navy shall have authority, from time to time, to designate, by special appointment, such and so many of the officers of said corps as the public service may require, to rank in the line of said officers so designated, shall receive, while in the se-
ARMY AND NAVY CHRONICLE.

VALUATION DISCHARGE OF SAID DUTIES, A COMPENSATION THEREFOR, AT THE RATE OF TWO HUNDRED DOLLARS PER ANNUM.

SEC. 5. AND BE IT FURTHER ENACTED, THAT SUCH OFFICERS OF SAID CORPS AS SHALL PERFORM THE DUTIES OF A HIGHER GRADE FOR A LONGER TIME THAN THIRTY DAYS, SHALL BE COMPENSATED FOR SUCH DUTIES, RECEIVE THE PAY OF THE GRADE NEXT ABOVE THEIR OWN.

SEC. 6. AND BE IT FURTHER ENACTED, THAT ONE RATION PER DAY SHALL BE ALLOWED TO ALL OFFICERS OF SAID CORPS WHEN ATTACHED TO VESSELS FOR SERVICE AT SEA; AND TEN CENTS PER MILE FOR TRAVELING EXPENSES, WHEN UNDER ORDERS.

SEC. 7. AND BE IT FURTHER ENACTED, THAT THERE BE ALLOWED TO EACH OF THE FOLLOWING, ONE CLERK, WHOSE ANNUAL PAY SHALL BE NINE HUNDRED DOLLARS; TO THE QUARTERMASTER, ONE CLERK, WHOSE ANNUAL PAY SHALL BE ONE THOUSAND DOLLARS, AND ONE OTHER CLERK, WHOSE ANNUAL PAY SHALL BE NINE HUNDRED DOLLARS; TO THE PAYMASTER, ONE CLERK, WHOSE ANNUAL PAY SHALL BE NINE HUNDRED DOLLARS; AND TO THE PAYMASTER, ONE CLERK, WHOSE ANNUAL PAY SHALL BE NINE HUNDRED DOLLARS.

And be it further enacted, that the pay and allowances provided for in this act, shall be all the pay, compensation, allowance, and emolument, which the said officers shall be entitled to receive; and that all acts and parts of acts inconsistent with the provisions of this act, shall be and hereby are repealed.

DOCUMENTS

RELATING TO "BILL TO PROVIDE FOR THE CONSTRUCTION OF FLOATING STEAM-BATTERIES." IN SENATE, DECEMBER 26, 1835.

On motion of Mr. GOLDSBOROUGH, Resolved, That the Committee on Military Affairs be instructed to inquire into the number of numbers of batteries which are necessary for the defense of the Chesapeake and Delaware bays, and the harbor of New York, together with the estimate of the probable cost of the same; and to report the result to the Senate.

Respectfully submitted,
WALTER LOWRIE, Secretary.
By W. HOBSON, Clerk.

WAR DEPARTMENT, JANUARY 14, 1836.

SIR: I have the honor to enclose herewith a report from the Chief Engineer, in answer to the resolution of the Senate of the 23d ultimo, on the subject of floating steam batteries, transmitted by you, for the views of this Department.

I consider this species of force very important in our preparations for defense. The three bays of New York, Delaware, and Chesapeake, are those whose position, and other circumstances, seem principally to require these batteries; and the estimate made by the Engineer Department is founded upon the calculation and the number which would be required to place these large estuaries in a complete state of defense. But it is worthy of remark, that floating steam-batteries, however necessary in such cases of construction, would be useful, from the draught of water, all along the Southern coast, and might be detached there whenever circumstances required. These vessels, agreeably to the report here presented, are not intended for sea service, but are designed to operate with the permanent defenses. They may also be stationed at any of the inlets where the approach, an enemy may be apprehended; but their care and management should be committed to the army, as a part of the system of defense, having no relation, however, to the armed steam-vessels, which it may be found expedient to construct as a part of the system for naval operations.

Very respectfully,
Your most obedient servant,
LEW. CABS.

COMMITTEE ON MILITARY AFFAIRS, SENATE.

ENGINEER DEPARTMENT,
WASHINGTON, JANUARY 13, 1836.

SIR: In answer to the call of the Senate of the United States upon their Committee on Military Affairs, instructing them to inquire what number of floating steam batteries are necessary for the defense of the Chesapeake and Delaware bays, I have the honor to state, that under the present arrangement of the probable crew, which was reduced by the Chairman of said committee to the War Department, and by the Secretary of War, I have the honor to state, that the subject has been fully considered, and the conclusions arrived at are that five floating steam batteries, each of about 400 tons burden, might be sufficient to defend these important estuaries from a force of the invading fleet; and it is intended to take all necessary measures to have a single vessel of this description built for each of these estuaries, and to have them ready for service at a very early day.

GOVERNOR'S ISLAND, NEW YORK, DECEMBER 27, 1835.

SIR: The proceedings of the Senate of the 23d instant, which we have just received, contain a resolution offered by Mr. Goldsborough, instructing the Military Committee to inquire what number of floating steam-batteries would answer the purpose of the defense of the Chesapeake and Delaware bays and New York harbor; and what the expense of providing them would be. The reference of this subject to the Military Committee will, probably, in a call upon the Engineer department, as a branch of the Navy, to give the necessary information. Should that be the case, it may be satisfactory to you to have it in your power to state, that you can have steam-batteries built and fitted by the officers under your command, which may be promptly mounted upon the vessel that you have in the yard, or, if your yard be not in use on fire, and which would be cannon-proof for a long time, to the extent of almost perfect security to the ball of the vessel, to machinery, including the propelling wheel of wheels, to the tunnels of the wheels; and it would be a necessary part of the engine, properly designed, to permit the ball to be rolled out into the yard, or on the street, and to be prepared for mounting.

I think I could build such a vessel, of 100 tons burden, furnish her with a high pressure engine of 40 to 50 horse power, which would give her a speed of 10 miles an hour, with a cargo of ballast or store in her hold, and a residence of 30 miles on a voyage; which would be sufficient to defend the Chesapeake and Delaware bays and the New York harbor. And I do not think the expense of the vessel, machinery, and propelling power, would exceed $30,000, though, from want of all experience in naval architecture, this amount is not pretended to be correct.

I have the honor to be, sir,
your obedient servant,
C. GRATIOT, Chief Engineer.
Hon. LEWIS CABS, Secretary of War.
AN ACT to provide for the payment of volunteers and militia corps in the service of the United States:

Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That the officers, non-commissioned officers, musicians, artificers and privates, of volunteer and militia corps, who shall either in the United States, or at any time since the first day of November, in the year of our Lord one thousand eight hundred and thirty-five, or may hereafter be in the service of the United States, shall be entitled to and receive thirty days pay, rations, clothing, or money in lieu thereof, and for all furniture and equipage, with the same camp equipage, including knapsacks, as are, or may be provided by law for the officers, musicians, artificers and privates, of the infantry of the army of the United States.

Section 2. And be it further enacted, That the officers of all mounted companies who have been in, or may hereafter be in, the service of the United States, each shall be entitled to receive forage, or money in lieu thereof, for two horses, when they actually keep private servants, and for one horse when without private servants, and that forty cents per day be allowed for the use and risk of each horse, except horses killed in battle or dying of wounds sustained in battle. That each non-commissioned officer, musician, artificer and private, of all mounted companies, shall be entitled to receive forage in kind for one horse, with forty cents per day for the use and risk of each horse, except horses killed in battle, or dying of wounds received in battle, and twenty-five cents per day in lieu of forage and repairs, when the same shall be furnished by himself, and twice and a half cents per day for either, as the case may be.

Section 3. And be it further enacted, That the officers, non-commissioned officers, musicians, artificers and privates, shall be entitled to receive twenty days pay of every four months, or other allowances, for every twenty miles' travel from their places of residence to the place of general rendezvous, and from thence to their places of discharge back to their residences.

Section 4. And be it further enacted, That volunteer or militia, who have been or who may be received into the service of the United States, to suppress Indian depredations in Florida, shall be entitled to all the benefits which are conferred on persons wounded or otherwise disabled in the service of the United States.

Section 5. And be it further enacted, That when any non-commissioned officer, musician, artificer, or private, of said militia or volunteer corps, in the service of the United States, or returning to his place of residence, after being mustered out of service, or at any time in consequence of wounds received in service, and shall leave one or more than one child under the age of ten years, such widow, or if no such child or children, shall be entitled to receive half the monthly pay to which the deceased was entitled, at the time of the expiration of five years, and in case of the death or intermarriage of such widow before the expiration of five years, the half pay for the remainder of the time shall go to the child or children of said deceased.

That the Secretary of War shall adopt such forms of evidence in applications under this act, as the President of the United States may prescribe.

Section 6. And be it further enacted, That the volunteers and militia mentioned in the foregoing provisions of this act, called into service before its passage, and who were not disposed to be paid, shall embrace those only ordered by the commanding General or Governors of the Territory of Florida and of the Florida Indians, and the War Department for representing the hostilities of the Florida Indians.

ARMY AND NAVY CHRONICLE.

REVENUE CUTTER SERVICE.

In the name of Neptune, who has just arrived in the United States, having been taken in the way, being a sailor, a gentleman, the usual question: 'Did you leave home under any particular circumstances, or suffer any bereavement of any kind, family or otherwise?' The officer was struck with too much admiration at his magnanimity to answer, and took just care to make the circumstances duly known to the sailor's honor. So brave a man's name should have been recorded.

English Historian.
SPONTANEOUS NAVIGATION.—The New Bedford Gazette of Saturday relates the following remarkable instance of the force of habit among the whale ships belonging to that port, and their knowledge of their owners, and the habits of the sea. A day and a half since the good ship Falcon loaded with oil fresh from the whaling ground, arrived here, and beat her way up through the ice in the harbor as far as the bar, (about half a mile from the wharves,) where (like many other loaded vessels before she struck on the mud. Her situation being in no way dangerous, as she could easily pass over on the rise of the tide, the officers and crew were permitted, as is customary, to hasten to see their friends from whom they had been absent two long years; and a trustworthy ship-keeper, was put on board by the owners. As it was thought unnecessary to furl the canvas, and it remained spread to the breeze.

The supper-time of the ship-keeper having arrived after finding that three feet of water more was necessary to float the ship, he left her alone, came ashore, made arrangements with some half a dozen men to go off and assist him in getting her into the dock, and went to his supper. Directly afterward, it was discovered that the ship was coming toward the wharf of her owners. No one doubted that she was well manned and well managed. She came up regularly, until within a stone's throw of the head of the wharf, when the men on board of a sloop that lay there, thinking the ship was about to run in to them, cried out "Hi, Hi! you'll cut us in two." Nor was the order disobeyed; for at that moment a hawsar, dragging in the water from the bow of the ship, accidentally caught in the logs of the wharf and brought her to in grand style and without considerable damage. Here was a case of a ship loaded with oil coming half a mile with sails set at the rate of six knots, without a hand on board; and most unceremoniously fastening herself at the wharf of her owners. Such is a New Bedford whale ship. !!!!

ARMY.

Lieut. Geo. W. Morell, Engr. Corps, relieved from duty at Erie, Penn., as assistant to Lieut. T. S. Brown, and ordered to Newport, R. I. to report to Col. Totten.

Lieut. C. H. Bigelow, Engr.'s Corps, relieved from duty at Newport, and ordered to Boston, to report to Col. Tayer.

NAVY.

List of the names of the officers of the U. S. ship Potomac, now of the Mediterranean squadron.

Purser—G. R. Barry.

Passed Midshipmen—Joseph F. Green, Benjamin M. Dovx, Alexander M. Peterson.

Boy acting Midshipman—John V. Hixon.

List of officers attached to the U. S. ship John Adams, now of the Mediterranean squadron.

Master Commandant—S. H. Stringham.

Surgeon—B. B. Tinsel.

Purser—D. Mc. F. Thornton.

Passed Midshipmen—J. B. Marshand, James E. Brown, George A. Iden.

List of officers attached to the U. S. sloop Grampus, to sail in a few days from Norfolk, to join the West India Squadron.

Lieutenants—John Cassis, Joseph Stalling, Neill M. Howison, Frederick Chatterd, John W. Cox.

Sailling Master—Oliver S. Gillson.

Purser—Theodore M. Thoms.

Assistant Surgeon—George W. Evans.

Captain's Clerk—Philip P. Hunter.

Gunner—Daniel Kelly.

Purser's Steward—Joseph O'rla.

Passengers—A. J. Wedderburn, Asst. Surgeon, to join the Constellation; W. L. Parkinson, Midshipman, to join the Concord; John Burdine, Sail Maker, to join the St. Louis.

The U. S. sloop of war St. Louis, Master Commandant, L. Roushaw, and bearing the broad pendant of Commodore A. J. Dallas, arrived off the Balino a few days ago, but owing to the low stage of the bar on the bar, was unable to come over. It was the intention of the officer commanding the St. Louis, to pay a visit to our city. Commodore Dallas and his suite, consisting of Lieute. J. D. Ward, G. M. Beche, Doctors L. Osborne, and S. W. Ruff, Messrs. Miller, Strong, and Saunders, came up to town on Friday, and will remain until the return of the St. Louis, when we hope to have the gratification of seeing that fine vessel anchored in front of the city. It will be the first time the good people of New Orleans will have been visited by one of our vessels of war.—N. Orleans True American, March 31.

The U. S. sloop of war Concord was off the harbor of Havana 17th March, from Portsmouth, N. H. and sailed 19th; arrived at Key West on the 22d, and sailed on the 26th, for Tampa Bay and Pensacola.

DEATHS.

On the 2d inst. in Portsmouth, Va., GABRIEL GALT, Esq., for many years Navy Store-keeper at the Gosport Navy Yard. He had been confined for some weeks with a vesicule that finally terminated his existence, and was unconscious of his fate. His course through life had been characterized by noble and generous feelings, and his death will be regretted by all who knew his amiable qualities.—New London Beacon.

At West Point, N. Y., of scarlet fever, on the 29th ult. JULIA, aged 3 years and 6 months; and on the 1st inst. JOSEPH, aged 7 years and 4 months; children of Z., J. D. Kingsley, late of the U. S. Army.

JOHN SMITH,

[LATE OF WEST POINT,]

Returns his thanks to the Officers of the Army for their long and liberal patronage, and having commenced business at

No. 85 Maiden Lane,

NEW YORK,

Will be happy to receive their orders.

His place of business being changed, all outstanding debts are particularly requested to be settled.

April 14

April 7-18
PROCEEDINGS OF CONGRESS,
IN RELATION TO THE ARMY, NAVY, 
&c.

IN SENATE.
Mondav, April 11, 1836.

Mr. Davis presented the memorial of sundry pilots and masters of vessels lying at New Orleans, praying for an appropriation for the improvement of that harbor; which was referred to the Committee on Commerce.

Mr. Davis presented the petition of Leonard Stockton and others, representing that the private in the fourth regiment of United States artillery, under the provisions of an act of Congress, praying for the appointment of a chaplain to said regiment; referred to the Committee on Military Affairs.

Mr. Link submitted the following resolution, which lies on the table one day:

Resolved, That the Secretary of the Navy be requested to inform the Senate all the information in his possession relating to the Dry Tortugas; also his opinion of its fitness as a naval station to protect and defend our commerce passing the peninsula of East Florida.

TUESDAY, April 12.

Mr. Souther, from the Committee on Naval Affairs, reported a bill to organize the navy of the United States, which was read, and ordered to a second reading.

Mr. Buchanan presented the memorial of a number of merchants, traders and others, of the city of Philadelphia, praying for an appropriation to erect piers to protect vessels against the ice, and for the removal of the bar opposite Fort Mifflin, prayed during the revolutionary war; and also praying for an appropriation for the erection of light-houses at such points on the river or at sea as the navy may require; also a similar memorial signed by the President of all the marine insurers of the seaport towns of the United States; referred to the Committee on Commerce.

Mr. Witham presented the petition of certain inhabitants of Duxbury and Plymouth, Massachusetts, praying for an appropriation for the improvement of the harbor of those towns; referred to the Committee on Commerce.

THURSDAY, April 14.

The following bills from the House were severally read twice and referred to the appropriate committees:

A resolution referring the petition and paper of the heirs of Robert Fulton, deceased, to the Secretary of the Navy, to be referred to Congress.

A bill for the relief of Abraham Forbes, wspy in the late war;

A bill granting a pension to Col. Gideon Morgan, of the State of Tennessee.

HOUSE OF REPRESENTATIVES.

Thursday, April 7.

[continued.]

Mr. Jordon was opposed to the construction of a hydraulic dock, for, by the operation of salt-water upon timber in the south, it would be destroyed in two, or at most, in three years.

Mr. Read considered an hydraulic dock worth ten proportions for wharves, and one of the authorities referred to by the gentleman himself, (Commodore Dallas,) recommended its immediate construction. He could not assent to, nor be induced to act upon, the gentleman's argument of reciprocity. He was governed only by considerations of property, whether the proposed works were expedient, and then, if the amount of money proposed to be appropriated could be judiciously expended.

Mr. Cumberland hoped the House would at once come to a decision upon the question, that the committee would not be prejudiced by the fact of its non-examination by the Committee of Ways and Means.

Mr. Harber was willing to give a liberal vote, but they were not authorized by the House to appropriate so much money, for there was still difference of opinion existing as to whether the amendment was embraced in a separate bill or not. Moreover, nothing had been furnished the House to show the necessity of the proposed works, and considering that the whole sum of $100,000 could be well laid out or not. He should oppose the amendment now, whatever he might be disposed to do when the subject again came up, prior to which, he trusted some more information would be furnished.

Mr. Cumming advocated a liberal provision for Pensacola, and was in favor of the amendment.

Mr. Harber said, he had found it an error, and that the bill referred to did not embrace the objects of the amendment. He feared that the money could be advantageously expended; he should vote for the appropriation at the present time.

Mr. Jarvis gave an explanation.

Mr. Thompson and Mr. B. S. remarked that the appropriations would be just as necessary whether the experiment of deepening the bar succeeded or not, for, our ships were not all forty fours. He would mention one fact, however, that was, perhaps, little, if all known there, and it was this, that the bar at Pensacola was within one foot as deep as the bar at New York. He would go further, and state, on the highest authority of our navy, that the Brandy wino goes in and out of the bar without striking, and that it was an extremely rare occurrence for a vessel of a similar size to pass over the bar at New York without doing so. He might add, that the money proposed to be appropriated, a little over $200,000, would be well spent at Pensacola, and he repeated his former assertion, that the average price of labor was one-third less in the south than in the north. Labor could be procured on the spot to any amount, from 25 to 35 dollars per month, and well executed during the current year. He again recurred to his former charge of inequality of expenditure, and said he was prepared to prove all he had urged on that subject against all the specious and plausible arguments of the gentleman opposing the bill.

Mr. Peyton called the attention of the House to the report of Captain Chase of the U.S. Engineers corps, which stated the depth of water on the bar at Pensacola, to be from 33 1/2 to 24 feet, and that all ships of war, save the largest of the first rate, could sail in and out.

The question was then taken, and the amendment was agreed to—yeas 101, nays 26.

Mr. Pinckney moved, if it would be in order at that time to move as an amendment to this bill, the bill now before the House for the establishment of a navy yard at Charleston, South Carolina? The Chair replied that it would not.

Mr. Linn rose and remarked that inasmuch as five or six weeks had been spent in Committee of the Whole, on the motion of the gentleman from Tennessee, (Mr. Bell,) to strike out this bill, he had been waited to hear the gentleman's amendment renewed in the House, he would himself renew it, in order to test the sense of the House. He therefore moved to strike out the appropriation for improvements and repairs of the navy yard at Portsmouth, New Hampshire, $37,000, and asked for the yeas and nays; which were ordered.

Mr. Everett was opposed to striking out the whole appropriation, though the gentleman was in favor of its being amended in the way he proposed last night.

Mr. Bell said if he had the estimates before him, when he first made his motion, he should have confined his amendment to that part which was appropriated for the repair of works already erected.

The question was then taken, and the amendment was rejected—yeas 6, nays 165.

Mr. Everett then moved the amendment made by him in Committee of the Whole, to reduce the appropriation for the navy yard at Portsmouth, New Hampshire, from 67,000 to 4,000. Mr. E. said it was evident that this item was an administration measure, and in proof of this, he referred to an article, which appeared some time ago in the Globe, on the democracy of New Hampshire, and setting forth that the opposition to this appropriation was a consequence of the growing sense of the citizens of Portsmouth to the Bank of the United States.

Mr. Board wished to know whether the member from Vermont meant to say that he (Mr. B.) was at all influenced in his vote by the argument of the gentleman from Vermont.

Mr. Everett replied, certainly not; he had spoken only of the intention of the publication.

Mr. Bell then entered into an explanation of the reasons that had induced him to make the change, and stated that that intention was originally and now, to have made the very motion just made by the gentleman from Vermont. It was truly the motion he desired to make at first, but he
was not then in possession of the estimates. After some few words, Mr. R. asked for the yeas and nays on the amendment, which were ordered.

Mr. CUSHMAN entered into a brief review of the advantages of the naval station at Portsmouth, both for its natural advantages as a harbor, being open at all seasons of the year, and for the cheapness with which ships could be built there, being on an average 90 per cent. less than at Boston. Mr. LANE made a few remarks in reference to the course of the House, and in particular in making a motion that had occupied the attention of the House for several weeks, and addressing the House upon itself for four days in succession, and then retaining his seat when the vote was called refraining to answer his own question.

Mr. Bell said a few words in reply.

Mr. BOON inquired of the Chair whether it would be in order then to answer the arguments of gentlemen made in Connection?

The Chair said it would not.

Mr. Boon said, if it had, he wanted to make something of a party speech himself.

The question was then taken on the amendment, and it was rejected; yeas 44, nays 129.

Mr. Wise said, he rose to do what was perhaps very unnecessary to do, after the vote of the House upon the amendment of the gentleman from Florida, but he felt compelled by a sense of duty to offer another amendment. In the 34th line of the bill there was an appropriation of $64,000 for improvement and necessary repairs for the navy yard at Pensacola. Of that $64,000, as he understood the case, both last night and today, there was included $15,000 for wharves; but the House had, very much to his wonder and amazement, now appropriated $180,000 for wharves, besides the sum of $130,000, thereby striking out the $64,000. He trusted, at least, that this amendment would be agreed to, and he hoped also that some gentleman would more a reconsideration of the former vote. Mr. W. was as always willing to have work done on any length for it, but he was convinced that $180,000 for wharves would be a most injudicious expenditure.

Mr. GARLAND, of Louisiana, hoped no motion would be made to raise the 34th line.

Mr. Ripley said a few words in support of the original clause.

The amendment was then agreed to; yeas 90, nays 0.

The bill, as amended, was then ordered to be engrossed and read a third time this day.

Mr. CARTER moved a reconsideration of the vote on the amendment to the navy yard at Pensacola. He referred to the extraordinary haste manifested to hurry through this bill.

The Chair said the motion directly was not in order; but, inasmuch as it was the subject of the amendment by first moving to reconsider the vote by which the bill was ordered to be engrossed and read a third time this day.

Mr. Carter then made that motion.

Mr. Cartman, in his motion, spoke of the injustice of the motion, and he was at a loss to see the justice of the remark about hastily legislation, on a bill which had been some six weeks under discussion. He did hope that no further difficulties would be thrown in the way of the bill.

Mr. Carter had no intention of throwing any difficulties in the way, and he had come to the conclusion to withdraw the motion, before the gentleman from Indiana rose.

The motion was then taken, and the House adjourned, at 6 o'clock, P. M.

Mr. Robertson asked the consent of the House to offer the following resolutions, which were read for information:

3. Resolved, That a Select Committee be appointed to inquire what retrenchments, if any, can be made with safety to the public interests, in the expenses of the Departments of State, of War, and of the Navy; also, to inquire whether any abuses exist in soliciting or procuring clerkships or appointments in any of the departments or bureaus of the Government; and to report the names of the salaries annexed to such clerkships or appointments.

5. Resolved, That a Select Committee be appointed, whose duty it shall be to inquire and report to this House whether any, can be made with safety to the public interests, in the expenses of the Departments of Indian Affairs; whether any defects exist in the organization or regulations of the said departments, or in the management of its affairs; and if so, in what manner the same should be corrected or prevented.

6. Resolved, That each of the foregoing committees consist of six members, to be authorized to send for persons and papers, and to report by bill or otherwise.

Objection being made, Mr. MILLIGAN moved to suspend the rules in order to enable the House to pass the bill, and adjourn its re-This was ordered, and the House adjourned.

Saturday, April 9.

Mr. ROBERTSON rose and asked leave to make a brief statement to the House, connected with the subject of one of the resolutions submitted by him on Thursday last.

No objection being then made, MR. ROBERTSON proceeded.

Mr. Tubbros rose and was proceeding to make some remarks.

The Chair interposed and stated that there was no motion before the House.

Mr. Tubbros remarked that as the gentleman from Virginia had been permitted to make a statement, he desired to say a few words in reply. He objected to the gentleman’s motion.

Mr. ROBERTSON rose, but—

Mr. GILMER appealed to the gentleman to withdraw his motion then, to enable the committee to report; to which Mr. ROBERTSON assented.

Objection being made, Mr. ROBERTSON moved to suspend the rules, to enable him to offer the resolutions.

Mr. Allston of Kentucky, asked for the reading of the resolutions.

Mr. Whittier said, if there was not right under the rule, to ask for the reading of the resolutions, he objected to their being read.

The Chair said that the resolutions were not in possession of the House, and could only be read by unanimous consent.

Mr. R. Garland moved to suspend the rules for the purpose of having the resolutions read for information, and asked for the yeas and nays on his motion, which were ordered.

Mr. Wise suggested that the motion of his colleague could be so framed as to supersede the motion of the gentleman from Louisiana, (Mr. Garland,) namely, by reading the resolution, and moving to suspend the rule for the purpose of offering it.

Mr. Vanderpoel remarked that this being private bill day, he would move to lay the two motions to suspend the rules on the table.

Mr. Bingham inquired of the Chair whether, if the last motion prevailed, his resolutions would be spread upon the journal.

The Chair replied that if the resolutions had been read, they would have been entered upon the journal. As, however, they had not been read, they could not be entered upon the journal.

The question was then taken, and the motions to suspend the rules were laid upon the table—yeas 98, nays 75.

Monday, April 11.

On motion of Mr. Chambers of Pennsylvania, Resolved, That it be referred to the Committee on the Library to consider the expediency of reporting a bill providing for the engraving and publication of copies of the various important acts in a bound and printed form, in the United States before and since the Declaration of Independence, with an account of the events or occasion which said medals were designed to commemorate.

On motion of Mr. Tubbros, Resolved, That the Committee on Commerce be instructed to inquire into the expediency of establishing a marine hospital at Oswego, in the State of New York.

On motion of Mr. Coffin, Resolved, That the Committee on Commerce be instructed to inquire into the expediency of establishing suitable hospitals on a general system for the benefit of the naval service, to be furnished by the United States, whenever employed, whether on its interior waters or on the ocean.

On motion of Mr. W. K. Fuller, Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of authorizing the Secretary of War to furnish arms, ammunition, and subsistence for war, equal to the quantity lately destroyed by the burning of the arsenal in that State.
On motion of Mr. COOPER, Resolved, That the Committee on Claims be instructed to inquire into the justice of compensating Maj. Mark A. Cooper, for the loss of a horse at Picotalla, Florida, whilst he was engaged in mustering his battalion into the service of the United States; and that the committee shall take into the expediency of authorizing the Paymaster General to pay for all horses that are lost or die in the service of the country, as well as those that are killed in battle or die of wounds received in battle.

WEDNESDAY, April 13.

On motion of Mr. WHITTLERSEY, a joint resolution referring the petition and papers of the heirs of Robert Pelton, deceased, to the Secretary of the Navy; to report thereon to Congress, was taken up, read a third time and adopted.

Mr. REED, on leave, from the Select Committee to which the bill was referred, reported out amendment, the bill from the Senate for the benefit of Boyd Reilly, and the same was committed.

THURSDAY, April 14.

The SPEAKER laid before the House a letter from the Secretary of War, transmitting a report of the Chief Engineer, in answer to a resolution of the 2d instant, containing estimates of various works of internal improvements; which was laid on the table and ordered to be printed.

FRIDAY, April 15.

Mr. PEARCE of Rhode Island, from the Committee on Commerce, reported a bill making an appropriation for the erection of a marine hospital near Ocracoke inlet, in the State of North Carolina; which was read twice and committed.

On motion of Mr. INGHAM, Resolved, That the Committee on Commerce be instructed to inquire into the expediency of making an appropriation for erecting or providing a marine hospital in the State of Connecticut.

CONGRESSIONAL DOCUMENTS.

REPORTS OF COMMITTEES.

In Senate, April 12, 1836.

Mr. SOUTHDAY, from the Committee on Military Affairs, reported the following bill, which was read, and passed to a second reading.

A BILL
ORGANIZING THE NAVY OF THE UNITED STATES.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the officers of the navy of the United States, other than non-combatants, shall consist of the following grades, viz: admirals, vice admiral, rear admiral, commodore, captain, commander, first lieutenants, second lieutenants, lieutenants, and midshipmen; and of the following warrant officers, viz: master, second master, passed midshipman, bos'n's mate, gunner, midshipman, carpenter, sailmaker. And the ship's officers, before designated, and commanders and sailing masters, shall hereafter be called and known as commanders and masters; and warrant masters' mates shall be discontinued.

Be it enacted, That there shall not be appointed or commissioned in the several grades, a larger number of officers than one admiral, two vice admirals, four rear admirals, nine commodores, fifty-five captains, seventy-five commanders, two hundred and fifty lieutenants, one hundred and twenty second lieutenants, forty masters, twenty second masters, seventy-five passed midshipmen, three hundred midshipmen, and such number of bos'n's mates, gunners, carpenters, and sail-makers, as the public service may require. And of non-combatants, fifty surgeons, forty-five purser's mates, five chaplains, twenty-five passed assistant surgeons, fifty assistant surgeons.

Be it enacted, That the foregoing grades and number of non-combatants, shall rank and command in the order in which they are named in the first section of this act, and those of the same grade, according to the priority of the date of their commissions or appointments. And, when there shall be more than one person in any of the said grades, such number one to be considered the highest in rank.

Be it enacted, That all appointments to any of the grades enumerated in the first section of this act, shall be made from the next inferior grade, or when there shall be none, or not a sufficient number, in such next inferior grade, then from the next inferior grade, and so on, unless he shall have entered the service as midshipman; and that no midshipmen, captains, commanders, or lieutenants, shall not be considered entitled to promotion to the higher grades.

Be it enacted, That the assemblage rank of non-combatants and the relative rank of the officers of the navy and army of the United States shall be fixed by order of the President of the United States, which order shall be submitted to and approved by Congress, before it shall be of force.

On motion of Mr. LINS, Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of making an appropriation for the purpose of constructing a Military road from Cantonment "Des Moines" to Cantonment Leavenworth, thence to Fort Gibson; and that said committee shall call on the Secretary of War for information relating to this subject.

WALTER LOWRIE, Secretary.

WAR DEPARTMENT,
January 14, 1836.

Sir,—I have the honor to enclose a report of the Acting Governor of the General on the subject of the proposed road, referred to in your letter of the 30th ultimo, from Fort Des Moines to Fort Leavenworth, and thence to Fort Gibson. The line is not prepared to speak of the precise termination of such a communication on the Mississippi; whether it should be at Fort Des Moines, or at some point higher up the river, between there and Prairie du Chien; but I have no doubt, if the road from the western bank of the Mississippi to Fort Leavenworth, and thence to Fort Gibson, would be very advantageous to the United States. It need not be an expensive work. Sufficiently wide to bridge the streams, and cause the warships to use the shallower places, as to allow the free movement of troops, would be all that would be necessary. The stations of the dragoons are at the points of this proposed communication; and if it were opened, they could range along it with considerable facility. This is a species of force peculiarly dreaded by the Indians, and I think the protection of the country might be kept more secure in this manner than in any other manner. The road would, in fact, become a barrier, across which parties of hostile Indians would be very unwilling to pass, as they would be liable to be captured by a mounted party of dragoons. The road, passing along the western bank of the Sac and Foxes, who have shown their promiscuity to commence hostilities upon ourcitizens; and it is in contemplation to remove a considerable part of the inhabitants of the small communities in the vicinity of Lake Michigan, beyond the line of communication. Many of these Indians are restless and discontented, and can only be kept in peace by the display of force in their neighborhood. From these villages the road would pass west of the State of Missouri and the Territory of Arkansas, and through the lands assigned to the emigrating Indians. It will be essentially necessary that the United States should not only possess a
respective force in this quarter, but that they should have the means of transporting it freely along this line of communication. A large body of Indians will be thrown into this region. They will be in contact, on one side, with our troops and, on the other, with the wild and almost unacquainted tribes of that country. Common prudence requires that we should be prepared to meet any occurrences to which we may be exposed under these circumstances.

The resolution herewith returned.

Very respectfully, your most obedient servant,
Lew Cass,
Chairman Committee Military Affairs, Senate.

Quartermaster General's Office, Washington, January 8, 1836.

Sir:—In obedience to your instructions to report in reference to the troops to be stationed in the Senate of the United States of the 23d ultimo, which was referred to this office on the 31st, and which is in the following words: "Resolved, that the Committee on Military Affairs be instructed to report a resolution, urging upon the President the expediency of making provision for the purpose of constructing a military road from Cantamont to Leavenworth, thence to Fort Gibson, and that said committee call on the President in relation to the matter." I have the honor to state, that the records and files of this office contain no information which has a bearing on the subject, other than a communication dated St. Louis, December 16, 1834, from John Dougherty to Major J. B. Brant, Quartermaster General, United States Army, and that it was referred to the Quartermaster General on the 10th of January, 1835, extracts from which I submit herewith, as follows:

"The views and opinions of the writer of that communication are no doubt worthy of much consideration, from the fact of his long and familiar acquaintance with the regions of the West, manifesting, as they seem to me to do, much knowledge of the Indians and their habits, connected with which and their future welfare, as well as the mode and manner of defense against their inroads upon our white settlements, is the road contemplated by the resolution.

The lines of such a road, and from the frontier posts, by means of a cordon, or chain of posts, of more than a thousand miles in extent, would certainly add more to the welfare and security of the frontiers, than any other measure which could be devised. It would prevent the necessity of such frequent military posts, (stockades, such as the pioneers of the West made use of in times which tried the souls of men,) having points d'appel at proper distances and positions, along the whole line of the road, as the reservation from which daily, small mounted detachments, or parties, in such manner as to keep up a continual surveillance over the road, and by whom information could be transmitted from one post to another. The inhabitants of the country beyond the last line of defense, and by which all improper persons could be excluded from the territories set apart for the Indians, and the Indians be prevented from intruding within the limits of the United States by such a road, would be much more secure in the knowledge of the movements of the army, and good order would predominate over apprehension, disorder, violence, and bloodshed. Indeed, such a road, occupied in such a manner, would be an army of defense as well as one of offense and could be executed with ease, if compared with the immense advantages that would result to the nation, among which may be enumerated the great demand for, and consequent increase of the sales of the public domain, the great increase in the population of the country, the portion of the army in constant motion, giving equal protection to the whites and to the Indians.

An emergency render it necessary for bodies of troops to move from the western to the eastern frontier; and on the other, from Illinois, Michigan, and Missouri, to Arkansas and the upper part of Louisiana, or from these latter to the former, the road through the country of the west of the upper Mississippi, or from any portion of the other, such a road would afford great facilities of movement. In short, in case of a general war between the various Indian tribes, among themselves, or of a war between the whites and the warriors of any of them, or for any portion of the territory of other tribes, or of tribe against tribe; or should a foe from neighboring countries assail us on the west, southwest, or northwest, such a road would be of inestimable advantage. In every view which can be taken of the subject, the work which has been undertaken by the Government can succeed as it has, and placed it, in usefulness, not as a military road only, and as such it would be all important, but as a route of travel and communication between the several and various parts of our immense Western frontier. Having made these general remarks, I proceed to be more particular in regard to the immediate object of what I conceive to be your desire in requiring me a report.

1st, Cantamont, or Fort Des Moines, is situated on the Des Moines river, outlet, which empties into the Mississippi above the mouth of the Des Moines river with the Mississippi, about 180 miles, by water, from the mouth of the Missouri, and about 600 miles, by water, from Fort Leavenworth; it is estimated to be 8 by 100 miles or 200 miles from Fort Leavenworth. The distance from Fort Des Moines to the mouth of the Racoon, is about 150 miles, by land, and by water about 260, at which place, or some other point in that neighborhood, is it supposed that the Des Moines, being crossed by a road, a military post will probably be established, and from such point to Fort Leavenworth the distance is probably between 200 and 230 miles.

When the route is made through which the military road would pass from Fort Des Moines to Fort Leavenworth, the records of this office do not enable me to give any information. The presumption is, that so great obstacles exist to prevent its being constructed, that the new post, if established, on the Des Moines river, and thence to Fort Leavenworth, the distance upon which route would be probably, from 300 to 350 miles; and, direct to Fort Leavenworth, from 260 to 300 miles, respectively.

The first route would seem to be the most essential as a route of military communication, and as a means of a continuous connexion between the military posts; because, at some subsequent period, to disconnect the line to Fort Crawford, at Prairie du Chien, a distance of about 130 miles, which post will, perhaps, be connected in the course of a year with Forts Winnebago and Howard, by the military road, the route from Iowa to Chicago from Fort Crawford, a part of which has been reported finished. From Fort Crawford to Fort Leavenworth is about 900 miles, by water.

Ed. Fort Leavenworth is about 420 miles, by water, above the mouth of the Missouri, and it is from Fort Gibson, by the way of that river, the Mississippi, and the Arkansas, about 1,000 miles. The distance, by land, between the two posts, is about 200 miles.

The character of the country through which this portion of the road would pass, I have not the means to give any information. From the general impressions, I think I may say that it is rough and arid, that the difficulties, whatever they may be, could be easily overcome.

Fort Gibson is not connected with Fort Towson by any direct road, and believing that information on that subject would not be required, I beg to state, that the distance between them is about 130 miles, over a rather broken country, but not so much so, perhaps, as to prevent the making of a good road; and the distance from Fort Towson to Fort Smith on the eastern frontier of Louisiana, in the direction of the latter post, orders have been given for completing a road appropriated for the purpose.

All which is respectfully submitted; and the resolution is herewith returned.

I have the honor to be, sir, most respectfully,
Your obedient servant,
Thos. F. Hunt,
Major, and Acting Q. M. Gen.
To the Hon. Lewis Cass,
Secretary of War, Washington City.

A. Extracts from a communication from John Dougherty to Major J. B. Brant, Quartermaster United States Army, dated St. Louis, Missouri, January 18, 1836.

Quartermaster General's Office, January 8, 1836.

"Agreeably to promise, the day before you left, I will now proceed to give you some outlines of my views and opinions relative to Indian affairs and the defense of the frontiers.

"As you have been so long in the country, and are so well acquainted with these matters, I shall not enter so minutely into particulars as to the correctness of the suggestions I am about to make, but shall confine what I am about to say, to a general statement of the various points under consideration, and contrasted against those which I am about to give you.

When I consider how many lawless and unprincipled white men are in the country, during the last twenty-five years, hunting and prowling about Indian lands, with no regard whatever for our western borders, killing off the game, and not unfrequently killing the Indians themselves, and constantly dealing out spirituous liquors to them, I am really astonished that there
not been more difficulty and bloodshed, particularly in the white settlements. A party of white settlers, reaching from the upper Mississippi to Fort Gibson, a distance of nearly one thousand miles, with no other military protection than a few infantry stationed at Fort Leavenworth. This can only be accounted for by the superhuman exertions of the bear and buffalo hunters, who have supplied the Indians with both food and clothing; but, within a few years, the scene has changed, the game nearly exhausted, the Indians hungry and naked, already beginning to feel the limits of their intercourse with their hunters and whiskey dealers. Buffalo are almost the only animals of game remaining to supply the wants of those many thousand souls. The range of these animals is in the heart of the east, lying between our settlements and the Rocky mountains, homed in on the north by the British, and on the south by the Spanish Indians, traders, and settlements. The number of Indians who inhabit this belt has been constantly increasing, tribe after tribe, are crowding in from the Spanish and British territories, and from the United States; add to this the many hundreds of white traders, trappers, and outlaws, consisting of the chief Americans, British, and Spaniards, and we may readily conclude that the buffalo hunt will be a warm, but a short one. Very few of these numerous tribes are more advanced in the art of agriculture, than the hunters and buffalo traders; the buffalo are gone, how are they to subsist, if not by pillaging their bordering citizens? Active measures should be taken to prevent the too sudden extinction of the game, before the Indians are compelled to take the field for want of food. The sale will be thrown altogether on the Government for support, which it will certainly be obliged to give, or to destroy them. Hunters and trappers kill a great deal; and the traders, for the sake of the skins, kill many more than is necessary for their maintenance.

As the trade is now carried on, the Indians derive very little benefit from the skins they are enabled to take; and when they travel far from the settlements, the traders and whiskey smugglers soon get it for little or nothing in exchange. Whiskey vendors and drinkers immediately on the frontiers, produce nearly all the misery and bloodshed that is to be met with in these parts. The difficulties among the more remote tribes are brought about by our own hunters and traders. For the purpose of increasing their monopolizing career, and lessening the bad effects of these ignorant savages, the Government should do well to take the Indians under its own protection, treat them as untutored children, and not as wise, learned, and independent men; establish working and reading schools, give them farmers and mechanics, and encourage them to raise corn, beef, pork, and horses, for the supply of the frontier posts; furnish them with goods at cost and charges, in exchange for everything they may have to dispose of; pay off their debts with public money, or on its own hand, (their limits, too, should be curtailed); restrain their warring and hunting, and prevent all intercourse with military posts, except by the chiefs, when on special business, and so strict a rule has a cheap rate of effect on all Indians; and so soldier should be allowed to enter an Indian camp, except on duty. For the effectual protection and maintenance of peace and good order on the frontier, the following plan: Establish a line of military posts along or near the boundary between the settlements and Indians, beginning on the upper Mississippi and extending to Red river; build a compact and well-constructed second line of facilities, or two strong lines of infantry, with a third line of dragoons, at or near each of the following named places: At Des Moines rapids, on the Mississippi; at Racoon fork of the Des Moines; at the point where the west line from the boundary of the State of Illinois intersects the Mississippi river; at Fort Leavenworth; at Harmony mission; on the Ne o-cho, below the Osage agency; at Fort Gibson; at a point between the Arkansas and Red rivers, called Elk Horn; ground the plumb line by level and fine stone and timber can be had in great abundance for building at all these locations. The distance between these several posts would be from one hundred to one hundred and fifty miles: and from three to thirty miles from the settlements. Most of them would be on the banks of navigable streams, and some would be more than one hundred miles beyond steamboat navigation. Pork, beef, flour, and bread by the hundred should be by the frontier citizens.

Establish a citizen farmer at each post, with the privilege of raising stock for himself, and he would hesitate to furnish, yearly, the necessary quantity of corn, hay, and oats, for the dragoon horses, at a reduced price. Open a road leading from the post, to all the small creeks, and locate at each of the large rivers a good citizen, to keep up a ferry under proper restrictions; build stables at every post sufficient for one company and a half of dragoon horses; have the country constantly on the trot patrolling along the road by companies or smaller detachments, as may be required; when one detachment is going, let one be returning; their principal business would be to keep up every spy and every white man or Indian going out from, or coming into the settlements, and convey him to the nearest guard-house for punishment; Fort Leavenworth would be the proper place for head quarters; one or two superintendents of affairs on the road at some central point; establish a weekly mail coming in from both ends of the military road to head quarters, bringing information from all the posts of every thing that is going on; appoint four Indian agents; one on the upper Mississippi, one on the upper Missouri, one on the Arkansas, and one on Red river, and no more. More than one agent among Indians, of the same neighborhood, only serve to confuse and make matters worse, from their different views of the same subject. The superintendent and agent should have salaries sufficient to justify them in giving their whole attention to the affairs of the offices confided to their care.

The few additional dollars it would require to keep up the cordon of posts contemplated, would be a mere nothing compared with the immense benefit that would be derived to the new States; confidence and good order would be established on the frontiers, and emigration would rapidly increase.

After you have read the above, you should conclude that my fears in regard to the danger on the frontier are not too great, recur for an instant to the consideration which Black Hawk, with a few followers, spread over the States of Illinois and Missouri, and the Territory of Michigan. I do not think Government ought to break down its drag ons, and expend so much time and money in protecting the mountain trading and trapping, but turn every thing to the establishment of peace and tranquility on the border, and to mollify the condition of the Indian tribes more immediately in this situation.

The foregoing are true extracts.

THO. F. HUNT,
Major, and Acting Quartermaster General.

EXPEDITION TO THE SOUTH SEAS AND PACIFIC OCEAN.

We have been waiting several days to find space in our columns to say a word in reference to the above enterprise.

The practical views contained in the preceding column in support of the expedition to the South seas and Pacific Ocean will be, I trust, favorable to its success. It is the public interest to have the whole area of the Pacific explored. The principal labors of the expedition will be performed.

To say nothing of the vessels engaged in the various expeditions among the islands in the Pacific, the following will show what interests we have in the various branches of the whale fishery from different ports in the United States:

This immense fleet of 400 sail will average about 375 tons each—making one hundred and seventy-five thousand tons.
hundred tons—or one-tenth the tonnage of the United States.

The cost of these vessels is from twenty to sixty thou-
sand dollars each—or an average of say forty thousand dol-
ars—which requires an active capital of eighteens millions
four hundred dollars. And the importance of this trade to the vast interior, even extending to the “far West,” and South, is not so generally
understood as it should be. A single statement will set
this matter in a proper light. Every one of these vessels two
sets of seas is required.

Outfit:

Flour, 80,010 barrels; Pork and Beef, 72,120 barrels; 
Molasses, 9,870 tons; Coffee, 552,600 lbs.; Sugar, 200,
600 lbs.; Tea, 12,360 lbs.; Rice, 1,300 ticones; Duck,
46,460 pieces; Cordage, 8,960 tons; Iron hoops, 4,600 tons;
Copper, 552,000 sheets—vessels coppered every voyage;
Staves 10,000,000,000.

Wages, say, 1,000 dollars cost to each vessel—consist-
ing of harpoons, spades, cambooses, &c. &c.

Besides all these, large quantities of beans, corn, peas, 
potatoes, &c. are required which cannot be over looked.

The above number have been derived from data, which it
is believed may be relied on.

Of this interest the Committee on Naval Affairs in the
Senate, in the recent report recommending an Expedition,
hold:—

"The duty of Congress to extend, secure, and protect ev-
ery portion of our commerce, has long since ceased to be
matter for debate. This duty becomes more imperative, in
proportion to the value of any particular product, and the
interests and dependence to which it is subjected.

"No part of the commerce of this country is more im-
portant than that which is carried on in the Pacific ocean.
It is large in amount. Not less than 82,000,000 dollars of capi-
tal are invested in and actively employed by one branch of
the whale fishery alone; and in the whole trade there
is, directly and indirectly, involved not less than fifty to
seventy millions of property. In like manner, from 170 to
200,000 tons of oceangoing vessels, and from 9 to 12,000 of our
seamen, are employed, amounting to about one-twentieth of
the whole navigation of the Union. Its results are profitable.
It is, to a great extent, not a mere secondary commerce,
but an essential, by labor, by labor, from the ocean. The
fisheries alone produce, at this time, an annual income of
from five to six millions of dollars; and it is not possible to
look at Nantucket, New Bedford, Sagres, and many
and other districts upon our Northern coast, without the deep conviction that it is an employment alike beneficial to the moral, political, and commercial in-
terests of our fellow citizens.

"The commerce for which no substitute can be found;
eminent fitted to form precisely such men as the nation
requires for times of trial and struggle. The voy-
ages are long, every climate is encountered; every sea
calls for its peculiar perils: virtue and discipline, and
subordination enforced, which create a class of men unsur-
passed, if they are equalled, by any who have ever made
the ocean their dwelling place. They are adventurous and
perfection; and, in the words of a writer, ared by toil and danger—bold, watchful,
and skilful. The encroachment and protection of Gov-
ernment should be extended to any portion of our citizens,
these have claims to the protection of the nation.

In this view of the subject the Committee on Naval Af-
airs have directed their most anxious attention.

"The commerce of the Pacific may be greatly extended
in all its departments. Of the rapidity of its growth there
is abundant proof. The increase to the Department of
our Government, and the theatre for its enlargement is
most ample; but it requires aid and encouragement.

"No part of our commerce is so much exposed to hazard and
perils as that which extends to the Pacific. This is now well
known to the mariner, and the ocean more filled with dangers, than any other that our
seamen visit. There are hundreds of islands, reefs, and
shoals, unmarked upon any chart, and unknown to common navigation, which are yet to be
explored and exhibited to the world.

Many of those islands are inhabited by savages, who render
access to them dangerous, and whom it is the duty of the Government to protect and settler.

The history of the branch of our commerce has been
immeasurably. The committee refer to the
accompanying documents to illustrate some of the facts upon
these points; and they do not hesitate to believe that an extensive and satisfactory
success of the policy and necessity of the measure which they propose.

"The committee recommend an expenditure which shall
be entirely equal to the importance of the enterprise, and
afford the best security for success, and for those practical
results which shall be most honorable and useful. The
expedition should be naval in its character; a portion of
the means under the control of the Navy Department should be
applied to it; and it should be fitted out and conducted un-
der its auspices. The committee think it ought to con-

tain a part of the voyage only and be divided into:

exploration: one, of about one hundred tons, as a tender;
and a store or provision ship of competent dimensions; and
these accompanied by a sloop of war, to afford protection,
and secure peaceful and friendly relations with the in-
bhabitants of the islands. The smaller vessels may either be

...
TWENTY-EIGHT GUN SHIPS AND TEN GUN SHIPS.

The great exertions which both France and America are at present making in the formation of their respective navies, should not be overlooked by our own Government, which cannot, in this respect be too much on the alert: France is trying every experiment, not only in the instruction and constant practice of exercising a large body of seamen, but also in the building of ships, which, in the event of war, will, to say the least of it, give us more trouble than we have ever experienced in either single or general engagements with the French afloat. A reference to the work of M. Paixhams, entitled "Nouvelle Force Maritime," published six years ago, will give some idea of the progress which France has made, and doubtless continues to make against the event of a new maritime struggle.

The naval measures of America are not so extensive as those of the French, but we know from experience that their system of naval architecture has already been sufficiently successful, and, as it seems only inevitable that they will pursue their plans to a more complete development, we ought no longer to hesitate about taking steps to meet them on equal terms. It is well known that the chief features of what may be called the Naval Reform, consisted in building vessels of a much larger size than is usual in the class from which they derive their designation.

Their frigates are larger, and of heavier metal than ours; and their sloops have had the same mechanical superiority over our sloops. To meet them fairly in action, we should meet them in ship-building; and having built as they build, we should make experimental cruises with the vessels thus newly constructed, in order to ascertain the rate of sailing and other qualities as "men of war." But instead of this, we are not only perpetuating our old sailing vessels, but even creating other ships inferior in size and force to those which constitute their respective classes. We are building and employing small frigates and increasing the number of ten-gun frigates, instead of those of eighteen, although we know that other powers have no small vessels which are not more than a match in size and metal for the former.

Our frigates must either ingloriously engage sloops, such as the "Wasp" of the United States, or be beaten by any of the recent additions to the fleet of the Macedonian, Guerriere and Java. "But the case of the ten-gun frigs is even worse; they cannot fight nor fly—prevent a convoy in war, or prevent smuggling in peace."

Captain Pettman a post captain in the navy challenges any officer who has ever sailed in the class of vessels to make a comparison between the correctness of his assertion that they are perfectly safe and very superior sea-boats, and exceedingly well calculated for packet service.

What? attach a signature to a professional opinion without a fee?—Is there a full-wigged attorney in the land who, on any subject, would even "ship his spectacles" to open Blackstone, or consult Coke, under at least twenty-four pounds? Why, then, should any "sea-lawyer" so commit himself as to make his mark to an opinion in opposition to the recorded testimony of the "signing-officer" in the Constitution, and who by the by, in thus coming to-es,inexorable conclusion, has rescued him from such a miserable doom?

Captain F. congratulates himself on his "reports" on vessels, who have commanded these vessels corroborate his testimony as their "superior qualities as sea-boats."

It is true, that favourable "reports" are made by commanders of these vessels; but to say nothing of the official form in which these reports are embodied, neither Captain Pettman, nor any other defender of this defenceless class can deny, that the officers in question may be induced to forego any manifestation of their opinion out of an ill-grounded apprehension, that any unfavourable account of these brigs might induce the Admiralty to substitute vessels fitly adapted to the duties of the "sea-boat,"—the Dutch dogger, with its broad bow, high stern, flat floor, large lee board, may be considered as the safest vessel that swims the sea.

But there are many properties which a vessel of war ought to possess, to which it will be presently shown, the "Charity Brig," can lay no possible claim.

A ship of war is required to be a good sea-boat to sail fast—to stow, at least, two months' water and three months' provisions under hatches,—to carry her guns well out of the water, and more especially to have room to fight from a low quarter, or rather to afford proper and healthy accommodation for the crew out of the quarters, well up under her canvas—"to stay in a head sea—"claw off" a lee shore—and, above all, to scud out of, as well as to lie in, a hurricane. None of these qualities, with not one of which any naval officer thinks it possible to dispense, let us see how many the ten-gun brig was expected, in order to be ready to do it.

If it be required of a ten-gun brig to perform a voyage of any distance or probable duration, she must, of necessity, carry above hatches, an extra quantity of provisions and water, both of which will so much encumber the deck, as the proper weight, beyond her proper bearing," as to render her anything but a "safe vessel, and superior sea-boat."

As to carrying her guns well out of the water, or having room to fight them, the probability is, that the brig's battery will become totally useless (not so much on account of the constant suction of air likely to be shipped upon opening the ports in an ordinary double-reef to sail breeze), as from the equally probable circumstance of a butt, or at least a pincushion of water being dashed between two guns on her upper and only fighting deck—comfortable and healthy accommodation for the crew of a vessel of this description.

The lower-gun deck of a ten-gun brig is hardly five feet high, and from her 'tween decks, during a "stiff breeze," a free circulation of air is totally excluded, from the circumstance of the fore and main hatches being battened down, in order to prevent the lower deck being flooded fore-and-aft. So that for five or six weeks of a winter's cruise, the "watch below" is doomed by day to suffer nearly suffocation from the smoke of the galley fires, and by night to inhale the most noxious vapours, not only occasioned by the cribbed and bunged up condition of the brig below, but from the foul defects of every precaution, will issue from the pump-well of these contemptible craft.

In support of the foregoing assertions, an extract is here cited from the log of one of these "superior sea-boats," whilst making a voyage from Spithead to Newfoundland in company with the "Tamar" (23.)

"Extract from the Log of His Majesty's Sloop Drats."

"A. M. At six strong breezes and cloudy; wind S. E. Tamar bearing N. W. by W. by 4 miles. At 8, wind increased to a strong gale, hauled the top-sails, reefed the main and majeage.

"As in the case of the "Delight," Captain R. Hay, when sailing from Spithead for the "Cape station" in 1822, and which vessel has never been heard of since. It is supposed she foundered off the Isle of France.

"The galley of flush-deck vessels stands on the ower deck."

"Sail lost on the coast of Newfoundland."
ed the fore-sail, scudding with a heavy sea running; not having seen the Tamar since 6 o'clock. At midnight strong gales.

"April 27th, A. M.—Wind S. E.—At 2, blowing a tremendous gale of wind; took in the main-top-sail—scudding until day-light. Finding it impracticable to repair any part of the fore-sail, and brought to, with her head to the southward, and lightened ship of her top," (a strange phrase, by the by), "as much as possible.

At noon high gales, with a high sea running—P. M. 1 h. 30 m.—Wind hauled to the N. E.—At midnight gale increased to a very high pitch, and several heavy seas struck the ship.

"April 28th, A. M.—A heavy sea struck the ship, and carried away the weather-hammock-rails and stanchions, stove in the weather ports and part of the bulwarks. It was found absolutely necessary to lighten her, which we commenced by throwing overboard the lee-bower anchor and the six-pounder long-gun; also a quantity of stores we were taking to Newfoundland, and part of the ship's stores and provisions, which were on the lower deck.

At noon strong gales.

Now by the foregoing extract it will be seen that this safe and efficient man of war was compelled to carry "above hatchets" a proportion of the provisions necessary to victual a ship for the voyage, under which ordinary circumstances, calculating for adverse winds, &c., seldom exceeds three weeks, or a month at most. Consequently, for want of room in her hold, her lower deck already too low and confined, was lumbered fore-and aft with cumbersome casks, which, to "lighten" the ship, and save her from foundering in the first gale of wind she encountered in crossing the Atlantic, was together with "the less-bower anchor and long six-pounder" all hove overboard, and in the deep bosom of the ocean buried.

It might have been said that a vessel of a larger size might have been similarly situated in the hold; but this argument will tell against the "Tenny." The Tamar (23), a vessel, though herself comparatively a wretched man of war, apprehended nothing of that imminent peril which we are led to infer by the brig's log-book the Drake experienced. Though the Tamar in proportion to the size of the vessel, carried a much greater quantity of stores than the Drake, yet the frigate's log-book is silent on the subject of being reduced to the alternative of "cutting away anchors, or throwing overboard guns, stores and provisions." And here it may be necessary to advert to the circumstance of the lumbered condition of the Drake's lower deck, because, had the brig not shipped at Spithead, "supernumerary stores" for Newfoundland, her "tween-decks would have been equally encumbered with the extra quantity of provision casks which she was compelled to carry "above hatchets" for the voyage.

It may be urged that these vessels have distinguished themselves in battle. With the exception of the capture of the Manly Dutch gun-boat by the Oney, which gallant achievement was chiefly attributable to the dexterous skill evinced on that occasion by the British commander in command of his vessel, the writer is not aware of any instance in which a ten-gun brig has captured her opponent in single combat. It is true that the "Tenny" participated in the untoward event of Navarino. In that affair one of these vessels, commanded by a young nobleman, is represented as having sunk her adversary and frigate immediately! But of what description was her adversary? If we are correctly informed, a "miserable craft," fitted out as a fire vessel, being in fact fit for nothing else, and which a line of battle ship's launch might have sunk, with equal facility.

With respect to the opinion advanced by Captain Pettet, that ten-gun brigs are very superior fighting vessels, and "exceedingly useful in the coasting trade," it only becomes necessary to observe that two of them, which in 1827 sailed in that capacity for Falmouth have never since been heard of. Of one of them was commanded by Lieutenant Jewry, of the navy, an excellent seaman, and an officer who had been long accustomed to the management of that class of vessels.

(WASHINGTON CITY; THURSDAY APRIL 21, 1836.)

To Correspondents.—"Mack" renews his request to publish "Garrison Chat, No. 1," and says he has several other numbers written. If he will forward them to us by a private conveyance, we can then better determine whether we will insert them, or not. The publishing of No. 1, would be no guarantee that we will publish No. 2, or any subsequent number, or any article in fact that we have had no opportunity to examine. The objection which we made before, to Garrison Chat, No. 1, still exists.

If our correspondent in Alexandria will favor us with a call when he visits the city, we will state our objections to his communications.

R has our thanks for his account of a "Fire at Sea;" but the incident has gone the rounds, and its repetition would have little interest.

Compliment to Col. Henderson.—We have had an opportunity to examine the cane, presented to Col. Henderson, by the Officers of the Marine Corps. It is made of a piece of the original timber of the Corvette Cyane, captured in 1815 by the U. S. frigate Constitution, under Commodore Stewart. Col. Henderson commanded the Marine guard on that occasion.

The cane has a gold head and a silver ferrule, and a sword about nine inches in length. On one side of the blade is the following inscription:

"To Col. Archibald Henderson, Commander of Marines, Commander of the guard on board the U. S. frigate Constitution in the capture of H. B. M. Corvette Cyane and Levant."

On the reverse side:

"This cane, being a piece of the original timber of the Cyane, is presented by the Officers of his Corps, Jan. 1st, 1836."

On the head are the words:

Col. A. HENDERSON, U. S. Marine Corps.

The cane is a very neat and chaste specimen of workmanship, and the present is a manifestation of the respect and esteem entertained by the Officers of the Corps towards their Colonel.

Colonel DODGE, of the regiment of Dragoons, it is thought, will be the Governor of the new Territory of Ouisconsin.

Captain W. H. Chase, of the Engineer corps, was invited to a public dinner by the citizens of Pensacola, on his return home from Washington, but declined the compliment until the works of improvement now in progress should be completed.

The correspondence will be inserted hereafter.

French Fleet in the West Indies.—Vice Admiral Baron de Macau arrived at St. Pierre, Martinique, on the 6th March, in the ship Jupiter, as Governor of the Island and commander-in-chief of the French Naval forces in the West India seas; the frigate Terpsichore was in company. On the 8th, the line of battle ship Algiers and frigate L'Artémise arrived. The squadron on that station consists of two ships of the line, four frigates, two sloops of war, and two gun brigs.
NAVAL SKETCH BOOK, Second Series: 2 vols. 12mo.
—CARY AND HART, Philadelphia, 1836.

This work is attributed to Captain Chamier, of the British Navy, from whose pen we perceive another work—"Ben Brack, the last of the Agamemmons"—has just been issued by the same enterprising publishers. We have looked over these Naval sketches; they have not much method or arrangement to boast of, being a species of Olla Podrida, skipping from prose to poetry, and from poetry to prose,

"From grave to gay, from lively to severe."

There is nothing in the edition before us to show whether it is a reprint from an English copy, or a collection of essays written at various times by Captain Chamier for the periodicals. If the writer had any object in view, beyond profit or fame, it was that of endeavoring to effect by satire what reasoning would fail to accomplish.

Forecastle dialogues are occasionally introduced to show the opinions of sailors upon naval matters. Opinions could be advanced in this way with much more freedom than by a laborcd effort at argument, and it is frequently resorted to. The absurdity of Cabinet measures may be more forcibly illustrated by the broad humor of the unsophisticated sailor, than by wire-drawn rhetoric of Statesmen or critics.

As a specimen of the author's graver style, and as containing food for reflection for our legislators and Naval officers, we insert part of a chapter on the value and efficiency of 28-gun ships and ten-gun brigs. The conclusion will be given next week.

ORGANIZATION OF THE NAVY.

In another column will be found the bill, reported by Mr. Southard, Chairman of the Naval Committee, in the Senate on the 12th inst.

It is only by mutual concessions from all the grades that any bill can pass through both Houses of Congress. One thing is certain: that no bill can possibly be framed, which will not meet with opponents, many of them arising perhaps from personal considerations. We hope every minor prejudice will yield to the all pervading desire for the general good. That same organization should be given to the Navy must be admitted by all—

in or out of the service. Whether that organization shall be limited to the present wants of the country, or be commensurate with the rank we ought to take and maintain as a naval power, is a question which may admit a diversity of opinion.

The bill before us makes a liberal provision for the navy, and should it become a law, will give to every grade below that of admiral a prospect of promotion—now and for some years past dismal and remote.

Some time since, a letter, said to have been written by an officer of the U. S. Ship Natchez, was published in the Alexandria Gazette, reflecting upon the inhabitants of Buenos Ayres, and which caused much excitement when it became known there. We do not remember to have seen the letter, which was in all probability the production of a young, inexperienced officer, and never intended to meet the public eye.

When this letter reached Buenos Ayres, Commodore Renshaw very promptly and properly tendered an apology to the authorities through the American Consul, for the act of indiscretion and injustice, and promised if the author should be discovered, to report him to the Secretary of the Navy.

The correspondence which passed on the occasion was inserted in the "British Packet," of the 16th December, a newspaper published at Buenos Ayres in the English language, and will be found in another column; also an article on the same subject from the Fredericksburg Area of the 8th ulto.

We have heard officers frequently complain of the indiscretion of their friends in communicating to the press extracts from their letters, which were designed only for the family circle.

Extract of a letter from an officer of the army dated FORT MITCHELL, ALA.

27 March, 1836.

"I attended a meeting of the chiefs of this nation [the Creeks] on the 15th inst. and made all the enquiries about the number of Indians that have gone from this nation to the Seminoles; and from what information I can get, the number is very small. The chiefs will not admit there are even twenty absent. I have made enquiries from different sources, and am of the opinion that when the war is terminated, it will be known there are not one hundred Creeks among them.

"Mr. Flournoy and Mr. Watson went from this place to Florida, to see Gen. Scott, and returned with a letter from the General, stating that he would receive 500 warriors from the Creeks, if they presented themselves. I called on the chiefs, and found it was a very unpopular thing among them. They thought (and very justly) that should they meet west of the Mississippi, it would create feelings towards each other, that could not be settled without the loss of lives. In consequence of the poor encouragement these two gentlemen received from the chiefs, they gave up the expedition.

"Lient. Deas and Dr. Randall have returned to this place."

ARRIVALS AT WASHINGTON.

Lt. R. S. Dix, 7th Inf. Gadsby's.
Col. H. Dodge, Dragoons, do.

WINTER IN THE WEST.—By letters from Fort Armstrong, dated 10th March, we learn, that the winter had been extremely severe, the mercury on the morning of that day being 2° below 0, and no prospect of the ice leaving the river. Rock river, it was supposed, would not be clear before the 1st April, and the post would be abandoned about the 20th. The troops are under orders for Fort Snelling, at the Falls of St. Anthony, on the Upper Mississippi.

At Fort Crawford, Prairie du Chien, the thermometer stood, March 2—6° below zero
5—5° below
7—zero
10—6° above zero
11—6° below
12—16° below

The last day was the date of our letter. Our correspondent wishes us to suggest to the War-Department to grant an additional allowance of fuel for the months of November and March; from the foregoing statement, it is evidently as much needed then as in the months of December, January, and February.

As a contrast, we present the following from the Mobile Commercial Register of the 2d inst.:

We have the pleasure to acknowledge the present of a fine dish of ripe strawberries, grown in the garden of Capt. B. Vincent, of this city.

EDITOR'S CORRESPONDENCE.

"U. S. Ship Warren,)
"Hacone, 23 March, 1886.

"MY DEAR SIR:—After being detained at Pensacola, by contrary winds, for a whole week, we got under way on Sunday last, the 20th inst., with a Norther, and we were so fortunate as to bring it with us to this place, where we anchored at noon to-day. We were 75 hours in making the passage, thus averaging about six and a half knots per hour, and I assure you the "Warrens" think this is "not slow"—if you will excuse a common expression.

"We exchanged salutes with the Port, and Spanish Admiral, and received a visit of ceremony from a French man-of-war brig, lying near us.

"We shall sail for Key West in a few days, to remain until the 10th April, and then for Pensacola again; and it is supposed, for Norfolk early in May.

"All well on board. The officers remain unchanged, with the exception of Lieut. G. G. Williamson and Mid. W. Reid, left at the Pensacola Hospital, sick.

WASHINGTON'S BIRTHDAY IN FLORIDA.—Amid the bustle and turmoil of the camp, the officers of our army and the volunteers in Florida did not forget the natal day of the 'father of his country.'

A correspondent of the Augusta, Geo., Sentinel gives a long and vivid description of a celebration by the "Richmond Blues" at Fort Drane, and the toasts offered, for which we regret that we cannot find room at length.

"On Monday morning, as usual, reveille was beat at half past 6 o'clock, when we all answered to our names, and were dismissed. Till that moment no plans had been concerted for the celebration of the 22d of February. But little time is required for preparation when undertaken with the proper spirit. After a little consultation in groups, it was unanimously agreed to call the men together immediately, and make the preliminary arrangements for the proper celebration of the day." [A committee of three was appointed to select an orator, and another committee of three to make the necessary arrangements.] In accordance with the understanding, the named committee waited on Lieutenant E. Starnes, who very promptly consented, at only four hours notice, to furnish us with an oration. In the mean time the committee of arrangements were actively engaged in the performance of the duties assigned to them, in the execution of which they acquitted themselves with great credit. In fact we were all a little astonished at the number of arrangements—every one interested himself, and if our celebration was not exactly equal to the great centennial in Philadelphia, it was not because we were tardy in our preparation, or wanting in patriotic spirit. Ten or a dozen set themselves about purchasing, killing, dressing and roasting several choice sides of pork, erecting a table—others brought our field piece into the parade ground, and on it prepared a forum for our orator—while as many more busied themselves in scouring up our dishes, baking soaked bread, roasting sweet potatoes, &c. On enquiry we were sorry to learn that there was no "hahnin" allowed by the "liberty pole"—among the regulars having been left at Fort King. What was to be done? It was impossible to celebrate the day without the banner of our country. There was but one course for us to remedy the evil, and that was to manufacture one. Accordingly we set ourselves about it, and our efforts contributed to an splendid arch, which example was soon followed by others, and in a very few moments we were in possession of ample materials for the construction of a banner. The handkerchiefs, blue, white and red, were placed in the hands of some of our number who were more handy with the needle than the rest, and in a very short time our banner was complete. Six men, each with his musket in his hand, one of the number having an axe, repaired to the woods in search of a "liberty pole." They shortly after returned, bearing upon their shoulders a beautiful pine, as straight as an arrow, and measuring between fifty and sixty feet, having literally taken it from the est "et ars." This beautiful pole was soon divested of its rough exterior, and prepared for the flag—a hole was dug as 'twere by magic, and the next moment we hailed with three hearty cheers our "liberty tree," being the first banner that ever floated above the pine pickets of Fort Drane. It was impossible to expend much time in fitting up the banner; we had been so busy with other matters. But this we did not desire. It was agreed that eachmess should bring their rations to the same table, that we might enjoy a social repast, and have the opportunity of inviting the officers of the army, and other volunteers at the post, to dine with us. In addition to our usual allowance of meat, there was a free hand with which to treat our friends, and drink a few toasts, which the occasion must necessarily call forth. About one o'clock the Blues were formed in line, with all the other troops at the post, and marching from the parade ground to the gates of the pickets, escorted Gen. Clinch and his officers, with other invited guests, to the arch which had been fixed up for the delivery of the oration. Soon after, the committee escorted Lieutenant Starnes to the forum, where he delivered us an oration on the subject of the birth day of Washington. I will not pretend to express the general approbation with which it was received. From the time allowed to prepare the address, it was perhaps unavoidable to expect every one to judge of our agreeable surprise, when we were all ready to pronounce it equal to any, and superior in some respects to most of the orations we had ever heard, when weeks of time had been occupied in producing them. Its application was truly beautiful, and the many words of approbation from the officers were sufficient evidence to me at least, that their opinions did not vary much from my own. I will hereafter take occasion to give you some extracts, from my notes taken at the time. After the oration, the corps was dismissed to prepare for dinner. At about half past 3 o'clock, the pre-
Army and Navy Chronicle.

Preparations for dinner were completed, and so soon as the guests had arrived, we proceeded to its organization, by calling Capt. Robertson to preside, and appointing Lieut. Martin to fill the place of Vice President at the foot of the table.

At the roll of the drum, the Blues were formed and marched in proper order to the table; where after the invited guests were pointed to a stand, (not a seat,) we partook of a sumptuous dinner, our table being laden with the best the land could afford, consisting of half roasted shoo, sweet potatoes, not much better roasted, and heavy bread, which certainly was not injured by ever-baking. Notwithstanding, our general attention was given to the crumb; and, judging from the frequent "pass the word for bread," another small cargo of the same quality would have met with the same reception from our voracious banqueters.

"At the tap of the drum, having no cloth to remove, our table was cleared of the fragments, when the following toasts were given.

By the Committee of Arrangements.—"The memory of Washington."—In silence.

By the same.—The Orator of the Day.—Hastily called to the performance of his duty, he has acquitted himself in a manner highly satisfactory to the company, and equally creditable to himself.

By the representatives of the United States army, stationed at Fort Drane.—Their officer-like and gentlemanly deportment has secured to them our confidence and esteem.

By Capt. F. M. Robertson, of the Blues.—To the memory of our Revolutionary Fathers—Though ages have passed since they unfurled our proud banner to the world, their sons are now ready to defend it, either from European insult, or savage dishonor.

Gen. Clinch being unable to attend in consequence of domestic afflictions, (recent death in his family,) sent the following sentiment, which was read by Lieutenant Jones.

By the Richmond Blues.—Their strict military discipline and martial bearing, gives the best guarantee, that should they meet the savage foe, they will realize the highest and best hopes of their friends, and justify the future historian in inscribing their names high among the defenders of their country.

The following toast was handed to the President by Lieut. C. Graham, who, not having recovered from a wound received in the chin at the battle of Wathacochee, was unable to read it:

"The noble spirits of Georgia, who have so opportunely come to our aid—

"A friend in need, is a friend indeed."

By Lieut. F. L. Jones.—When called in the day of strife to beat the savage foe, let our motto be that of the gallant Col. Miller, "I'll try, sir."

By Lieut. Brooks, U. S. army.—The Richmond Blues. They return from the battle field, crowned with victory, and enjoy among their friends the honors which their bravery will have conferred upon them.

By Lieut. Dancy, U. S. A.—The Orator of the Day.

"Heavenly writings as well as he postures the virtues of Washington.

By Lieut. Prince, U. S. A.—The oration in the wilderness, on the birth day of Washington. It was a glorious exhalation out of the bosom of nature.

Communications.

The New Infantry Tactics. No. II.

Mr. Editor—Of Nos. III., V. VI., and VII. of the 'Defence' we have little to say, except, what is doubtless apparent to every reader, that their contents do not convince one of the superiority of the book of 1835, notwithstanding its great volume. Argument! Sir, argument is wanted in such an undertaking. Not what the Commission did—not what the Ordinance did, nor, that the Ordinance and Commission disagreed on certain points. Everyone knows that a diversity of opinion as to the merits of different Infantry Maneuvres nearly always obtains, but, we have never known such general approbation of, and satisfaction with, any work of the kind as the Tactics of 1835; and such universal dissatisfaction as with that of 1835, its successor.

But to the 'Defence.' In a paragraph of No. III., Hindman makes it appear to his mind that the writer of the "Defence" sees nothing of beauty in mere order and simplicity. It delights to lose itself in the mazes of involution, and finds a subject grand or sublime in proportion to its bulk and incomprehensibleness. Now, as we have not been very much delighted either in wading through the masses of its military system of 1835, or the "bulk of incomprehensible" nonsense in the "Defence," we conclude logically, that our mind is not "perverted." As to that of Clarefait, his has spoken for itself. Had Hindman observed the same "order and simplicity," which characterize Clarefait's productions, these remarks would not have been considered necessary.

On the subject of firing in extended order, &c., we have reasons for coinciding in every respect with Clarefait. For although our people are excellent marksmen, and our light Infantry active and intelligent, it follows not that they can execute all that is required of them, when called on to face forty-five degrees. It seems to us that the proper fires are not always returned with the same facility and promptness as if they were independent of each other, and the orders of their superiors. The utmost confusion and the worst consequences would flow from a want of that uniformity which Clarefait has thought so desirable, but which Hindman deems it unnecessary. Such thought, we think, is self-evident to every practical officer that it needs no demonstration. None therefore is given.

If Hindman thinks, (as we are induced to suppose from the citing of the classical anecdote at the termination of No. VII.) that Clarefait and others believe the new Tactics to be the production of an "American pen," and criticised accordingly, he errs greatly, we assure him. We know the work to be a bad translation of a French work, with occasional "interpolations," some for better, and some for worse. And such being the case, we make free to remark, that the printed title page is not so full and explanatory as it ought to be, for those who know not whence it (the Tactics) came.

In this number, Hindman quotes the following from Clarefait: "Some cases important fundamental exercises are omitted which are subsequently referred to, as though they had been learned.

And therefore: "No recapitulation is given." Clarefait, no doubt, like ourselves, deemed this unnecessary. But, as there are some gogunards, who need proof positive that they possess no brains, we presume an explanation is indispensable. In paragraph 721, in inspection of Arms, the recruits are required to face to the right of the company, a half of the company, and paragraph 729 is seen the direction: "Each man in this, will half face to the right, &c."

"Now as half-facing is not taught or explained among the facing, we repeat, that an important fundamental exercise is omitted, and subsequently referred to. To this Hindman himself agrees; but, at the same time, says: 'The greater including the less, when recruits have once learned to face to the right or left, they will have to face to the front, in the circle, as in No. 109, no particular instruction was needed to enable them to face twenty-twof and a half, every movement of the feet being the same.' Granted, most 'learned Theban.' When a recruit has been taught to face forty-five degrees, he has been taught to half face; but, when he has yet to learn, as paragraph 109, referred to above, directs an entire face, that is, ninety, and not forty-five degrees, as Hindman supposes, there should be an extra paragraph for that purpose, to supply the omission mentioned by Clarefait, and which Hindman says was a "useless interpolation made by General Scott." We have only to say, it is to be regretted, that the General did not continue in his old ways, and interpolate the half face, back step, side step and balance step, into "our book" of 1835. The same remarks on the back step might'
made, as on the half-face, it being referred to, in a sub-
side of the system. As to "arms port," which was omitted entirely in the first printed copy, Clairfait only adverted to it, because in it was a motion required by the old and new Regulations, from the sentiments on being relieved, without saying a word on the effect a change from arms port to shoulder arms might have on a line of troops.

We next find Clairfait accused of making a "shame-
less assertion," when he says that the three rank forma-
tion is the basis of the new work, to which every thing is 
sacrificed,—and then asks "What is sacrificed?"

Why, my "weak brother!" the explanations of the ma-
nœuvres for two ranks are sacrificed to those for three, 
and to prove this we cite the following, which, if we 
misplace not, appears in more instances than one.

"If there be no centre rank, the foregoing move- 
ments will be executed by the same arms and the same 
principles, except &c.

"Thus buttressing the mind with two arrangements for 
the same movements, one of which is not in use, but 
which is considered the principal in theory, and to which 
"all is sacrificed," we contend.

"As to the long rigamole about colors,—what General 
Scott did in 1814—and the presumption that the Presi-
dent will order the extra color, of each pair now in use, 
it should be well known that, but for this ordering 
the colors of our regiments into depôt, reminds us of 
the cook's recipe which begins,

"First catch a Turbot, &c.

COMMANDS.—Of these, and their inordinate lengths, 
which Clairfait condemns, and rightly too, we shall only 
say, that they speak for themselves, (we wish this were 
the case on the field) and we have heard it mentioned 
that a British battalion could form square against caval-
ary, whilst the command according to our Tactics, for 
such movement was being issued, even, if it were "spit-
tered out like buck-shot from a musket."

From the frequent cries of "specification!" "specifi-
cation!" we were induced to believe brother Hindmarch 
and a matter of fact character, in some degree; but, when 
we got into the poetical mazes which ornament the lat-
ter part of the "Defence" instead of reading

"Tarry, dear Cousin Suffolk!"

we said to ourselves, how it is to be regretted that the 
Translator did not avail himself of the services of this 
imaginative friend, when the work was being pre-
pared, with a view to introduce some of the orthography 
also of Shakespeare, so well suited to a military work, of 
the present day.

With these few crude remarks, hastily thrown to-
gether, we beg leave to close the discussion of a subject, 
by no means interesting, but which was resumed, solely 
to satisfy readers, not the most attentive, that Clairfait 
has not misquoted, nor given statements without being 
able to substantiate them, if necessary. Whether, in 
in the absence of our friend, we have accomplished this, 
is left to the judgments of your readers.

PHILO-CLAIRFAIT.

REVOLUTIONARY INCIDENT.

An old gentleman, one of the few survivors of Lee's 
celebrated partisan legion, gave me the following ac-
count of a charge made by a detachment of that gallant 
comp, as the best means of making a battery give it ever 
made. If you think it worthy of a place in your jour-
nal, Mr. Editor, please give it an insertion.

We were lying near Fort Granby, said he, watching 
the movements of the British army, and seeking daily 
for opportunities to cut off its supplies, or any detached 
parties that might be pushed out. Early one morning, 
our men, most of them mounted on horses and at least 
a splendid fellow of our corps, was detached with twelve 
men, on a reconnoitring expedition, and during the after-
noon of the same day, Captain Eggleston was sent out with 
a party of eighteen on the like errand in a different di-
rection. Towards evening the parties met, and having 
formed a junction, retired into a piece of wood which 
skirted the road, and which though prostrated, apparently 
by a tornado, yet afforded sufficient cover to hide us
from casual observation, when dismounted; while at the 
same time, it enabled us to see every thing passing on 
the road. We threw ourselves on the ground, under the 
broad canopy of heaven, as was our usual custom, not 
being possessed of tents, and slept soundly, having first 
fastened the bridles of our horses to our hands. At break 
of day, having aroused ourselves from sleep, while some 
were already lighted about their business of dressing, 
in groups, a woman, wrapped in a red cloak, and moun-
ed on horseback, passed by. Some of the men, for want 
of better employment, kept following her with their 
eyes as she rode along. Presently she turned into a 
road which intersected the one that ran in front of our 
position, and led to the British camp. There were too 
high fences on either side that terminated at the woods 
in which we were. As they continued watching her pro-
gress, their eyes fell suddenly upon a party of sixty Br-
tish dragoons, who were approaching her from their 
camp, on a foraging expedition. They rode up to her, 
and during their conversation, her pointing frequently 
towards the woods, there were several intimations that 
we convinced us that she had discovered our position, and was 
impacting her knowledge to them. Well aware of what 
was likely to ensue, we all, without waiting for orders, 
mounted our horses, and sat in silent expectation. 
"What shall we do?" said Eggleston, turning to Armstrong. 
"For God's sake," was the only answer he received. 
"At the same time mounting his horse, called out, "twelve men 
molive, and dashed down the road towards them at full 
speed, without stopping a moment to weigh the chances 
or hazard of an encounter, with a force so vastly his su-
perior. The enemy, seeing two bodies of cavalry issue 
from the road, drew up his line facing us, and sat firmly, 
pistol in hand, waiting our approach. As Armstrong 
rudely up, they fired at his party, but so hurriedly that no 
shot took effect, and before they had time to draw their 
sabres, he burst in upon them "like a thunder clap," 
overturning whole ranks, and cutting them down in ev-
ei, direction.

Eggleston now joined, and the slaughter became terri-
ble; for they trusting, in the first instance, that the fire 
of their pistols would either check or repulse us, had 
made no attempt to draw their swords, until we were 
hand to hand with them. Such attempt when made was 
in most cases rendered of no avail by the ardo and gal-
mer of the party which had attacked them, who had 
left its sheath, or dealt a blow in defence of its wearer. 
Resistance was now changed to flight, and 
while pressing their flying ranks, in the chase, we were 
fitted to cut down many who had ceased to resist, as a 
regard to our own safety, and their numerical strength, 
which had made them think left us unprepared. In order 
us injury, in the rear. Hemmed in on both sides by 
fences, and mounted on sorry horses, this last resource 
availed them so little, that but one of the whole party es-
cape captured or death, and so hotly did we pursue him, 
that the outer line of sentinels was passed, and one of 
them was captured, before we reined in. The detachment 
captured, formed a part of the army, under the command 
of Lord Rawdon.

General Lee has mentioned the circumstance in his 
Memoirs, but is incorrect in the minor details. He says 
Eggleston was detached with 80 dragons, to join Arm-
strong, who had been pressing on with a party — 
and that 45 only of the enemy's dragons were taken.

The fact is we numbered in all but 30 men, and captur-
ed or killed 60 of the enemy, including the sentinel.

Capt. Eggleston was thanked in general orders; but the 
glory of the achievement belongs manifestly to Arm-
strong. The former was of a cautious disposition, and 
probably had not the courage to push on in such an 
attack, unless compelled, as in the present instance, by 
the necessity of supporting his daring comrade.

TOMPION.

AN IMPROMPTU—and a good one, by a traveller—a 
better description of a sea voyage than volumes could be:

Two things break the monotony
Of an Atlantic trip:
Sometimes, alas, you "ship a sea,"
And sometimes see a ship.
DOMESTIC INTELLIGENCE.

FLORIDA CAMPAIGN.

The latest accounts from the south favor the impression that the Indians have scattered, and would retreat into the everglades, where it will be impossible to follow them until the rainy season is past. They may possibly be induced to comply with the terms of the treaty to remove to the west; but as nothing short of this will be listened to by our government, should they obstinately refuse to be removed, the war must be protracted through the summer and fall, at much expense and suffering.

We gather the following particulars from the latest southern papers we have seen.

On the 26th March, Gen. Eustis took up the line of march for Fort Drake and proceeded three miles where he encamped, and started early on the 27th. Major Gates is left in command of Volusia, with about 300 regulars and volunteers, the greater part of whom are invalids.

A straggling party of Indians, immediately after the departure of Gen. Scott from Fort Drake, stole 6 horses and mules which were grazing in the immediate neighborhood of that post. They also stole and carried off a valuable stud of 600 cattle belonging to Gad Humphreys, Esq., at Fort Micanopy.

It would seem from the information received from Fort Drake, that they mean to continue in a state of hostility and not abide by their propositions to Gen. Gaines. They have retreated further south into the Peninsula, and it turns out, as was suspected, to be a mere use of their past time to transport their families into their strong holds.

GEN. MACOMB.—We are gratified to observe that this distinguished officer did not find it necessary to interfere with the plans of Gen. Scott. Gen. M. was conveyed in the Dolphin on board the U. S. Cutter Jefferson, Capt. Jackson, last Wednesday, and intended to proceed from St. Augustine with that accomplished seaman, to Tampa Bay, Pensacola, and New Orleans. We presume that he will also touch at Key West.—Savannah Georgian.

The Augusta Geo. Sentinel of April 8, says:—"We have a rumor, whose foundation we cannot trace, that Gen. Eustis has been killed in Florida, in an Indian ambuscade." The same paper contains the following intelligence from Florida:—"Col. Strong, attached to the Staff of General Pope, arrived in this city yesterday afternoon. He left Pocotala on Saturday last, and passed through Jacksonville at 10 o'clock on Sunday. We have not seen Col. S. but understand that Gen. Pope and Staff are on their return home—Gen. Macomb deeming their services unnecessary. We learn further, that Gen. Macomb would not assume the command, but leave Gen. Scott to carry out the campaign; and that it was supposed all the troops from Georgia would shortly be discharged, as the recent movements of the army would probably terminate the war."

FROM MAJOR GEN. SCOTT.—We are put in possession of some interesting information from Florida, by a gentleman of the Louisiana Volunteers, who left Fort Drake on Monday. Gen. Scott marched to the OIGHLACOOCHEE on the 25th ult. with his whole force. The Louisiana Volunteers were ordered to stop where they were to be disbanded. We regret to learn that 100 of this gallant brigade were on the sick list.

It was generally believed when our informant left that the Indians had retreated to the everglades, and many were known to be in the rear of Gen. Scott's army. It was very well ascertained that Oseola alone, of all the Indian Chiefs, was for continuing the war. No hope was entertained of getting the Indians to stand another engagement.—Tallahassee Floridian, 2d inst.

From the Savannah Georgian, April 11.

"PICOLATA, Florida, April 6th, 1836."

I did intend to write you at some length by the Florida, but she comes, and is off, giving us no time to write. We have no news whatever from the army since it left Fort Drake, and are therefore apprehensive that our troops have gone to Tampa without finding the enemy. One thing is certain, the passage of the OIGHLACOOCHEE has not been disputed, nor has any battle been fought in that vicinity, or we would have been apprized of it.

The centre of the army marched from Fort Drake in two columns, with the provisions, &c. between them—the right column composed of the command of Gen. Smith, of Louisiana, and the left commanded by Col. Bankhead. Every precaution was taken to guard against surprise. Gen. Eustis's column marched from Volusia, and Col. Lindsay's, from Tampa, about the same time that the army left Fort Drake.

Florida is the worst country in the world to make war in. No supplies, no means of transportation.

If I can get any thing authentic, I will write you by next boat.

From the Jacksonville Courier, April 7.

THE WAR.

Nothing definite has been heard from Gen. Scott since the report of his cannon announced his arrival at the OIGHLACOOCHEE, on the 29th ult. Shortly after the troops left Fort Drake, the Indians burnt the place of Mr. Brooks, about five miles from Fort. From the latest accounts, it would appear that the Indians are scattering. Trails have been discovered leading in different directions from the nation. They recently stole four or five horses from Col. G. Humphreys, near Micanopy, and have driven off several cattle. Should the Indians separate into straggling parties, it will be impossible to remove them this spring, and we shall be the prey of a roving enemy, driven to desperation by the prospect before them, by hunger and starvation, or death. Total ruin must await the citizens of Alachua, unless Government come to their relief.

Mr. Lowe, who arrived from Alachua last evening, brings the news that Col. Lindsay met the Indians a few miles the other side of the OIGHLACOOCHEE, before he had joined Gen. Scott. Col. Lindsay fired upon the Indians, who, after returning the fire, fled to the hammock.—Thirty Indians were found dead. Only one white man was killed. Further particulars, and the consequences of this engagement, will be sent in our next.

The steamer Sanctus reached this place last night. She left Volusia Sunday morning. Nothing had been heard from General Eustis since the day after he left Volusia.

Three divisions of the army must have met ere this; the consequences we are unable to learn.

Some invalids, who arrived a few days since from Volusia, report that of seven hundred men belonging to Col. Brisbane's regiment, three hundred were unable to proceed on the march, through sickness, occasioned by the hardships to which the men were accustomed, and the prevalence of the measles among them. Poor fellows, they doubtless find it hard to believe the Indians is not "what it was cracked up to be."

Brigadier Gen. Pope has been honorably discharged from the service of the United States by Major General Macomb, there being no need of so large a force from Georgia as a brigade.

We learn, moreover, that Col. Dane is instructed to discharge likewise the battalion of mounted infantry under Major Ross, which reached Newnan on the Tuesday evening, and is daily expected at Picolata, from the same State, as soon as it shall arrive. Its services in the estimation of the commanding officers in Florida not being required.

Gen. Pope, with those of his staff, who have not all-
ARMY AND NAVY CHRONICLE.

BUENOS AIRES.

From the Fredericksburg, Va. Arena, March 8.

A friend on board the United States ship Ontario, in a letter, dated Rio Janeiro, Dec. 6th 1855, sends us the following translation of an article which appeared in the Gazeta of Buenos Ayres, in consequence of the publication in the papers of this country, last year, of the letter of an officer of the U. S. ship Natchez, in which the writer spoke disrespectfully of the character of the Argentine constituted authorities and of the mass of the Argentines. Our friend's letter is printed here in the Arena, and seems to be under the impression that it appeared there originally. This is not the case; we copied it from a northern paper. It gives us great pleasure to insert the comments of the Gazeta, not merely as a simple act of justice, but as illustrating, in a remarkable manner, the sensibility of a people in a remote quarter of the globe, differing from us in language, laws and religion, but connected by the ties of commerce.

"It is an invertebrate infirmity of foreigners to speak of us at random, and without the least respect to propriety. This frailty so often exhibited by writers abroad, is common enough to those who have spent a long time in thought and lay claim to impartiality."

It is not long since we read, in a Spanish Journal, a reproach similar to the above, which appears to have been prompted by the same feeling of just indignation which the Argentines are frequently led to entertain, from the ungrateful return made by some foreigners to whom it has been their ill-fated lot to concede an asylum.

After refusing the duties which appeared in some French Journals, we have perused a New York paper containing a letter from no less a personage than an officer of the U. S. sloop-of-war Natchez, written from this place, under the name of a friend in Alexandria. Accustomed as we have been to see, in foreign newspapers, the most ridiculous absurdities and revolting calumnies against this country and its principal citizens, we had, by this time, acquired a certain degree of impassiveness in this respect; but we must confess that the perusal of this officer's letter has operated to re-animate our indignation, in which we doubt not, our readers will partake on being acquainted with the infamous libel in question. It is in compendium as follows:—The writer in the first place, speaks of our public men, and vents the most atrocious calumnies against our brave volunteer Brigadier Lopez, Governor and Captain General of Santa Fe. He next delivers, with an admirable tone of self-satisfaction, his opinion respecting political affairs, and prognosticates no very propitious consequences from a certain fancied revolt of the troops without the walls (!)—He then announces the departure of the Commodore to avenge some disturbances in Montevideo, (!!) in the same manner as the Captain of the Erie had previously quelled all insurrection of the inhabitants of Bahia (!!!)—and finally concludes with a description of this country and its inhabitants, by uttering the following barased and inordinate abuse:--

"This is a delightful place, and would be a perfect paradise, had they proper persons to people it; but the present inhabitants are a blood-thirsty set. The ladies are very numerous and beautiful, the average is six females to one male, and a more licentious set never breathed. The more sweethearts a married lady has, the more respect she is paid."

Is this not the acme of the most refined and brutal malignity? * * * However, we are not surprised that these indecorous aspersions have been penned; for we are aware that, although the writer follows a profession which is honored by many men who cherish the most noble feelings of an officer, and laws of seducibility, are not always synonymous terms. We can likewise conceive how a man, after receiving in our social circles the obsequious attentions so characteristic of Argentines in urbanity, and after enjoying all the benefits of
the kindest hospitality—we can, we repeat, conceive how such a man could turn round and revile the very people to whom he was indebted for those unmerited favours; for we know too well, that, to such a degree of baseness can some depraved minds descend. But, what we cannot satisfactorily comprehend is, that men of acknowledged acquirements, and who, moreover, discharge a delicate trust, which supposes in those who exercise it good sense and correct judgment, should lend themselves to be the organs of the vile productions of any malicious or presumptuous doct, who may wish to occupy their columns. We are more surprised at this conduct on the part of those editors, as they have ever evidenced the most keen sensitivity on the subject of national respect, and have deprecated in the most just and energetic terms, the exaggerated tales of some foreigners who have visited their shores. Still, neither Mrs. Trollope nor Fanny Kemble, whatever may have been the freedom in which they indulged, never went so far as to stigmatize so atrociously the character of a whole people, as the editors have done, to have so much warmth, when they themselves were immediately affected.

These proceedings cannot but create a deeply marring feeling. This, however, is somewhat assuaged by the reflection that the generality of the citizens of the United States, in like manner as the French, resident in this city, are among the first to condemn and deplore the abberations of a few infatuated or malignant individuals, which so manifestly tend to involve a whole community.”

* The following is the text of the imputation to which the Gaceta alludes:—The people are in constant dread of being attacked by General López, a great outlaw, and should they receive an attack from that quarter, there will be some bloodshed. Lopez and his followers have no family here, and he is represented as being a very cruel and tyrannical man.

From the British Packet, Dec. 19.

In consequence of an article which appeared in the Gaceta Mercantil of the 18th ult., (and which we copied in our No. 462,) in reprobation of the aspersions contained in the Alexandra Gazette, the Consul of the United States resident in this city, has published the Consul of the United States squadron on this station, have officially noticed the subject; the particulars thereof will be found amongst the official documents in our journal of this day. The Gaceta Mercantil of 12th inst., contains the following article upon the occasion:

“The Consul of the United States of North America, and the documents to which it refers; which are alike honorable to the Consul, and to Commodore Renshaw, Commander of the naval forces of the United States on the coasts of Brazil.

A statement appears to have been received in the hope which we entertained at the time of noticing the unpleasant publication which appeared in the Alexandra Gazette against our country, that both the authorities and the citizens of the United States would depurate this production; and that it appears from the satisfactory documents to which we allude, and which constitute an honorable act of justice.”

(TRANSLATION.)

Consulate of the United States of America, Buenos Ayres. 7th December, 1835.

To His Excellency D. F. B. Aruma, Minister of Foreign Relations.

The undersigned, Consul of the United States of America, has the honor to transmit to H. E. translations of a note directed to the Commander-in-Chief of the naval forces of the U. S. on the coasts of Brazil, &c., by the subscriber, and of the communication received in reply.

Having thus received a confirmation of his information that the letter which has been the subject of the above-mentioned notes, cannot have been the production of an officer of the U. S. navy, and considering that the failings and cunnings of the said letter are too palpable and extravagant to require, or even to admit of a circumspect refutation; the undersigned conceives it to be his duty to offer to H. E., on his own and the part of all his fellow-citizens resident in this city, known to him, assurances of their having felt the greatest annoyance and displeasure from the publication referred to, and that an Editor of the United States should have permitted himself to become the dupe of an imposture so gross.

The undersigned renew to H. E. the Minister of Foreign Relations, assurances of his high respect and consideration.

EBEN RITCHIE DORR.

Consulate of the United States of America, Buenos Ayres, December 5, Commodore James Renshaw, commanding the U. S. naval forces on the coast of Brazil, &c. &c. &c.

SIR,—I have seen with much regret, in the “Gaceta Mercantil” of this city, of the 18th November, a notice of a letter said to have been originally published in a newspaper of Alexandria in the U. S., and which purports to have been written by an officer of the U. S. ship Natchez.

The said letter appears, from the notice, to be singularly abusive of the Government and people of this country; and, although in itself deserving only of contempt, has been made so much a matter of notoriety by its contents having been thus commented on, that I am desirous to do whatever may be in my power to counteract the unfavourable impression which has been thus produced.

Confident of your readiness to aid in this endeavour, it is the object of this note to request you will furnish me, in reply, such communications as may think fit on the subject, with a view to lay the same before H. E. the Minister of Foreign Relations.

I have the honor to be, sir, your obedient servant,

E. R. DORR, Consul U. S. A.

U. S. Ship Erie, Buenos Ayres, 5th December, 1835.

DEAR SIR,—I am at this moment in receipt of your letter of this date, in relation to the notice of a letter in the “Gaceta Mercantil” of this city, said to have been originally published in a newspaper printed at Alexandria, in the United States of America, and purports to have been written by an officer of the U. S. ship Natchez, one of the vessels attached to the squadron stationed on the coast of Brazil, under my command.

I hasten in reply to assure you, the subject of the letter becoming a matter of so much notoriety at this place, it has been no less regretted by me than myself; nor can you, my dear Sir, be more desirous by all proper means to remove the unfavourable impression said to have been produced by it, than I am. I am yet at a loss to find the writer of the offensive and anonymous letter, amongst the officers of the Natchez. An association of upwards of fifteen months with the gentlemen of that ship, and knowing full well that they, with myself, have properly appreciated the many kind attentions received from the Portenos, and foreigners resident at Buenos Ayres, forbids the belief that it is the production of any one of them. Still, should I hereafter find I have estimated my friends in the Natchez too favorably, and discover the author of the letter of which I have complained of, the offence will be brought before the Hon. the Secretary of the Navy, by whom justice will be properly and promptly applied.

I am, Dear Sir,

Your obedient servant,

JAMES RENSHAW,
Commanding the U. S. naval force on the coast of Brazil.

To E. R. DORR, U. S. Consul, Buenos Ayres.

RESIGNATIONS.
2d Lieut. F. H. Smith, 1st Artillery, 1st May.
2d Lieut. T. A. Morris, 1st Artillery, 13th April.

NAVY.
The Erie, Commodore Renshaw, was at Bucayos Ayres on the 17th. Following is a list of her officers:

JAMES RENSHA W, Esq. Commandant of the Squadron.
Lieu tenants.—Henry Eagle, James H. Rowan, Alfred Taylor, (acting,) and John R. Goldsborough, (acting, and flag.)

JACOB ZELLA, Jr., Commanding Marine Officer.
Mr. Torry, Professor of Mathematics.

CROCKETT, W. PHILLIPS, acting Quartermaster, N. B. Feed, sailmaker. D.rape, acting carpenter.

List of officers ordered to the frigate United States, prepared for New York, in the Mediterranean.

Purser A. McD. Jackson, ordered for duty to the Navy Yard, Gosport, Va.
Passed Midshipman Geo. R. Gray, to the Navy Yard, Gosport.
Passed Midshipman A. S. Worth has permission to report to Commodore Warrington, as Assistant to Professor Rodriguez at the Mathematical School, Gosport.
Assistant Surgeon H. S. Reindolls, ordered to the Naval Hospital at Pensacola.

The ship St. Louis was at Pensacola on the 2d inst. to sail in a day or two for Vera Cruz, and would carry as passengers the Hon. Powhatan Ellis, our Minister to Mexico.

DEATHS.
At the Marine Barracks, Head Quarters, Washington, on the 8th inst., RICHARD BRINCKERHOFF, aged 46, a private in the U. S. Marine Corps.
At West Point, N. Y., on Sunday, 10th inst., of scarlet fever, MARY, eldest daughter of Z. J. KINZLEY, aged 9 years and 1 month—the third of five children victims to this disease within a fortnight.

REVOLUTIONARY SOLDIERS AND PATRIOTS.
In Boston, EPHRAIM THAYER, Esq., aged 87.
In Cumberland county, N. C., 1st inst. in the 82d year of his age, Mr. WILLIAM CARVER, Sr., a soldier of the Revolution. He was the last surviving signer of the Cumberland association, which was formed early in 1776 for the defense and joy of the liberties of the people, of the then Colony of North Carolina.
In Davidson county, N. C. recently, JOHN PLUMMER, aged 75.
In Rutherford county, N. C. recently, JOHN ELLISON, aged 70.
FOREIGN MISCELLANY.

TWENTY-EIGHT GUN SHIPS AND TEN GUN BRIGS.

[CONCLUDED.]

Since the foregoing remarks originally appeared, much controversy has taken place on the subject of naval architecture. The most evident views of the matter seem to have been entertained by Mr. Henry Chatfield, of H. M. Dockyard, Plymouth; who says:

"The proceedings of the last few years have evinced a great desire, on the part of government, to improve the system of naval construction in this country; and it may be judged from circumstances, it is not too much to assume that a similar feeling still continues in the higher departments. In other words, the imperfect state of the theory of English naval architecture has, for some time, been publicly and openly avowed."

If it were not so, how is it that so many architects in naval architecture have been permitted to construct ships for the Royal Navy? Had it been with a view to settle some disputed points, or to discover some new facts, as a means of supplying fresh data to principles already established, we might be wrong in assuming that there has been a want of confidence in our theoretical resources; but the experiments we have been gone into, had nothing of this character about them. If particular objects had been sought after, there would have been a close conference, and an unreserved communication between the whole of the constructors; first principles would have been acquired, and constructive deductions admitted, and all would have given - in short, the accomplishment of the whole object - the extension of naval science. But how different was the fact! There was a competition of entire systems, and, consequently, a division of interests; and the termination as a whole, a very inconclusive triumph of individual merit, (on which opinions are very various) without developing a single novel truth.

Without venturing an opinion, or intending to offer the most remote insinuation, as to the relative merits of the competitors, which must put forth by modern competitors in ship building, it will be our endeavour to show that the present habits of construction are a sufficient reason why those productions could not be made extensively useful; and it is from a belief that this opinion may be fully substantiated - that the remedy is perfectly practicable - and that it will be found in the following remarks, that the discussion of the subject is now engaged in.

It is not necessary to the argument which it is proposed to adopt, to know whether Captain Hayes can build better ships than Captain Symonds, or whether Mr. Santé (the late eminent yacht-builder) has proved himself to be a superior constructor to either, or both of them; nor is it all material to the question, whether the above projects have, or have not, planned better vessels than those designed by the surveyors of the navy, and by Professor Inman. We will not, therefore, anxiously ask, how the ships have respectively behaved, or we should only operate to embarrass us in our decisions upon the general question. The more simple way of proceeding will be to put a few direct interrogatories like the following: viz. - What has Science been doing all this time? - Can we, with our present means, take the design of Mr. Santé, or that of Captain Hayes, with confidence, their comparative excellencies or inferiorities? - Are we habituated to do so? - Or are we too conscious of the poverty of our own resources to attempt it? The best supply to these questions is the plain truth - that the ships belonging to the experimental squadron, did not undergo any kind of analysis, or comparison, of their peculiar properties; and the tendencies of their characteristic features were never scientifically discussed. Under the same reasoning, that is invariably followed in matters of science generally. This is a tacit acknowledgment of our incompetency to make a critical comparison of ships' properties upon understood principles; and the reason is, that we have not been accustomed to take up naval architecture as a branch of study, but have regarded it as an imposing subject of greater obscurity and accompanied with more difficulties than really belonged to it; and having thus neglected to analyze its principles, in a manner commensurate with the extent of the subject, we now find ourselves but imperfectly acquainted with a science, above all others important in the common interests of this country.

If the theory of construction be at all dependent on the principles of science, it is obvious that it cannot be properly understood, unless it be taken up as a study to the extent to which science may be applied with advantage to the purposes of ship-building.

Individuals of talent and observation, untroubled in first principles, may furnish valuable suggestions, and offer correct opinions, on certain points; but a few detached hints, however judicious those hints may be, cannot, we apprehend, be allowed, on reflection, as a basis for a general knowledge of naval architecture; for it must be evident that the conclusion, which we arrive at from isolated principles, to trust to isolated facts, we place naval architecture on a very speculative, and therefore a very perilous, basis.

It was remarked in the third report of the commissioners of naval reorganization, that "we have built exactly after the form of the best of the French vessels which we have taken, thus adding our dexterity in building to their knowledge in theory, the ships, it is generally allowed, have proved to be the best in our navy: but, whenever our builders have been so far misled by their imperfect acquaintance with naval architecture, as to depart from the model before them in any material degree, and attempt improvements, the true principles on which ships ought to be constructed, being imperfectly known to them, have been mistaken or counteracted, and the alterations, according to the information given us, have only been carried to a worse extremity."

Occasional - but brilliant success may, for a time, attend an incomplete method of design, but the partial application of principles will ever be subject to disastrous consequences; and practices which are not founded on a sure and perfect method, must eventually be remodelled, as a case of expediency, and therefore as a thing of course; and any observations which tend to show, that, without a well digested system, we shall always incur the risk of "doing harm," when we deviate largely from known models, are borne out by experience and by reason. Experience, undoubtedly, teaches many things which may never have been communicated in a tangible form to the fountain head of construction; or which, having been communicated, have not been rightly taken advantage of. This only points out (without absolving) the necessity of putting all experimental knowledge in an available form, so that communications between the experimentalist and the theorist may be as perfect as possible.

But, to whom should we look for a definition of the kind of communication which it may be proper to establish between those who design ships, and those who navigate them? Shall it be to him who makes use of the instruments of navigation, or to him who offers it? We do not; for a moment apprehend that any one will insist that no communication is necessary. If those who have devoted themselves to first principles were to reject the suggestions of the experimentalist, they would betray their ignorance in disavowing that naval philosophy is a mix-
ed science; and it would be equally incorrect on the part of a practical seaman, to say—I am master of many inductive principles; I have seen ships of a vast variety of forms, and having habituated myself to notice with particularity the peculiarities of their bodies—their mode of masting—their behaviour under canvas, &c. I have learnt so many useful facts, that I desire no other knowledge for the purposes of construction than experiential philosophy.

Now the accidental circumstances which attend naval computation are so numerous, and of such a nature that their effects are very apt to mislead; and it is to be feared that much injury has accrued to the theory of ship-building, when the subject has been under discussion from not having rejected those considerations which have nothing to do with the permanent properties of a ship's body. The quantity of sail a vessel carries—the proportions of the masts and yards among themselves—the position and rake of the masts—a ship well or badly rigged—the cut of the sails—the trim—bad stowage—bad management, &c. severally affect a ship's behaviour, in no inconsiderable degree; consequently, naval experiments accompanied with all these intricacies, may just as well be said to decide the comparative effect of differences in any of these points, selected at pleasure, as to determine exclusively the relative merits of ships' bottoms!

Here it is so easy a thing for a good ship to behave badly, without our being able to assign the exact reasons, that when we make a comparison of the effects that arise from the complex causes which affect a ship's behaviour at sea, it is often purely hypothetical to say to which of the causes the result is attributable.

The simple experiments that can be made require that some conditions should be given, otherwise it is no experiment at all, in a scientific sense; but in the experimental ships to which allusion has been here made, both the moving forces and the bodies moved were so extremely dissimilar, that it would be the very spirit of speculation to draw any specific inference, from what we know of their performance, as an accession to our knowledge of naval construction.

To lay the ground-work of an improved system of naval architecture, would be an elaborate undertaking, but it would also be a very important one; and the only way in which experiments accompanied with all these intricacies, may just as well be said to decide the comparative effect of differences in any of these points, selected at pleasure, as to determine exclusively the relative merits of ships' bottoms!

1. The first thing would be to obtain the calculated properties of the whole of our ships, commencing with those in actual service, so that we might turn to any ship on the list of the navy, and find her qualities properly described.

2. The position of the centre of gravity, of at least one ship of every class, should be determined by experiment, whenever it can be done without inconvenience to the service.

3. We should have tables of the weights of masts and yards, sails, cordage, guns, anchors, cables, ammunition, and every other article included in the equipment, so that their general effect, as well as the effect of any proposed alterations, may be properly investigated.

4. The angles of the edges of the sails are also necessary, to show the capacities of the holds, store-rooms, &c., and to estimate the effect of great weights by their known dispositions.

5. We ought to have accurate plans of sails (or rigging drawings,) to show the comparative powers of canvas, and to estimate the effect of any proposed alterations of spars.

6. The height of the centre of effort of the sails should be shown, also its position longitudinally.

These are the outlines of the leading objects of an office of construction, and tasks of such magnitude could only be achieved by the exclusive energies and attention of a plurality of persons.

To assist them in their labours, it would be desirable to form a professional library, and to take in such periodical works, English and foreign, as immediately relate to naval affairs; for it is indispensable that individuals engaged in the advancement of naval science should prosecute the study of mathematics, have opportunities of research, and watch the progress of professional literature, and to petition our Parliament.

8. The benefit of such a library might be extended to naval officers and others under the sanction of the Admiralty.

9. The instruction now given in nautical science, at the school of naval architecture, might be confined as before; and the professor could be the lecturer by members of the office of construction.

10. The instruction in the scientific branches of naval architecture, hitherto given to the students during their course of study, might in future be afforded with increased advantage.

11. The transactions of an office so constituted would be carefully recorded, and its journalized proceedings regarded as public property; and all its documents should be so preserved, that they could at any time be submitted to investigation.

12. A limited correspondence might be kept up with the heads of naval establishments, with a view to collect, and ultimately to make a good arrangement of every species of useful information.

13. The members of such an office might be called upon occasionally, to join in reports on any new plans, or improvements, which may be under consideration, and which may come within the character of their pursuits.

14. When the operations of the office became organized, part of its attention might be directed, with advantage perhaps, to the state of naval science and nautical economy in other countries.*

"It will be recollected that M. Dupin, whose writings have produced so great a sensation, not only in this, but in almost every other country, devoted himself for no less a period than five years, to the three great sources of our national means—the Commercial, Military, and Naval Force of Great Britain. It has been remarked that "it was not his object to instruct us, but, from us, to instruct his country;" and the conclusion of the Institution of those endless studies was, France what to follow." This was a very natural wish on the part of M. Dupin, in which he certainly succeeded; and to this end, in an address to the Academy of Sciences at Paris, (1819), forbidding further instruction in French to the members of that establishment, to prevent them transferring their services to foreign powers; and then he observes, "Ce passage qui contrarie si fort avec les vues généralement raisonnées, des comités du parlement, merite d'etre cite et medite." The knowledge of a foreign tongue appears to have been of great service to M. Dupin, and it is not quite obvious that the learned language may some day be similarly instrumental in rendering useful services to this country; besides the French abroad in scientific works, and nothing would be so effectual a check to improvement in naval science as not to be able to read them.

16. Experimental science, to which we owe so much, and from which there is yet much to expect, would claim the attention considerable of an office of construction; it would, therefore, be an object of great importance to report the reports on ships' sailing qualities, so that they may be made available to scientific views.

THE SHIP LIVERPOOL—This is a ship of 2,000 tons, and fitted to carry 74 guns. She was built in 1826 in the English yard at Cowes, under the direction of Mr. Teak, and was presented by the Imman of Mussau to the King of Siam, through Captain Sir Henry Hart, in February, 1828, when that officer was sent in the Imogene frigate, on a mission to his highness, at Zanzibar, in consequence of
a treaty which the Imaun ('in a fit of ill humour, arising out of a neglect, or a supposed neglect, on our part') had concluded with the Americans, who had two ships of war on his coast, permitting the Africans to carry on trade in Zhobbar. The object of the mission was to discover the terms of the treaty, and it was perfectly successful in restoring his Highness to good humour and a friendly intercourse with us, which was exhibited by his presenting this most magnificent gift for his Majesty's acceptance, a fine Arabian horse, Captain Hart, and presents to most of the officers of his Majesty's ship Imogene. His Highness the Imaun is particularly attached to the water, and for his amusement he has now a 50-gun frigate, two others of 36 guns, three or four corvettes and brigs, and a small yacht, all of which were built at Bombay or Cochin. He is now thirty years of age, is a clever, intelligent man, and married to a daughter of the Shah of Persia. In his younger days he used to go to sea, is much attached to the English, and once, in assisting them against some pirates in the Gulf, was wounded in our service. The Liverpool is commanded by Captain Cogan of the Bombay Marine; she is under the Arab flag (red), sails well, but appears short; she is manned with 33 Englishmen, and 220 Lascars, has on board two horses and a mare, which foaled on the passage, of the purest Arabian breed, with buffaloes, and white bullocks, also, as prescribed to his Majesty, and is fitted up with a dockyard. The Dockyard the Liverpool left Bombay on the 4th of October; the Cape of Good Hope, the 10th of December; and St. Helena on the 2d of January. She is now in Portsmouth Harbour.—United Service Gazette.

From the London Athenæum.

ANOTHER EXPEDITION TO THE ARCTIC REGIONS.

ROYAL GEOGRAPHICAL SOCIETY.—Feb. 8.

Sir John Barrow in the chair. A communication was read from Dr. Richardson, R. N., on the subject of further Expeditions to the Northern Shores of America,—prefaced by a letter from Dr. Fitton, pressing, in his own name, and that of other members of the Society, the expediency of another enterprise of this description.

Dr. Richardson's paper commenced with observing, that the remarkable drift of the ice in Baffin's Bay, which had lately released so many of the imprisoned whalers, by carrying them 600 miles to the southward in sixty days,—together with captain Back's recent observation of a constant current of ice along the north shore of America,—and the similar observations made ten years ago by Sir Edward Parry,—all rendered the existence of a passage from sea to sea, in this direction, so extremely probable, that we may be certain (interested as England has shown herself in its discovery for above three centuries) that she will never entirely give up the investigation until the issue is certain. She may be more or less active, at any given period, according to circumstances; but successive generations will again and again revert to the inquiry, till either it be crowned with success, or the indefatigable discoveries will become discouraging. Of the last of these circumstances, then, and diligent as the present generation has been in this search, it seems a duty, on the part of the officers who have been trained in it, to record their deliberate views and opinions on the subject, for the guidance of the present, or some following generation.—and he is willing to set the example in his own person, in hopes it may be followed by others.

The great question, he proceeds to observe, resolves into two separate and distinct ones, viz. 1. Whether a practicable passage exists for a ship along the whole line of the northern coast of America, from Behring's Straits to Baffin's Bay; and, 2. Whether there are means readily at his disposal, by which, waiving this inquiry for the present, at least the entire line of coast may be traced, and its outline and character determined with reasonable precision? Between these two inquiries there is no necessary connexion,—on the contrary, it is, perhaps, impossible to combine them: but, at the same time, there is no necessary rivalry either; nor is it worthy a thought which is the very interest of both. Dr. Richardson, convinced, observes, and he is persuaded, both will yet obtain, more investigation; if not now, at some future time; and of the ultimate answer to both he has himself no doubt; for he is confident that there is such a passage, and, also that there are at least two ways, if not more, by which, with very little effort on his part, Dr. Richardson, confident, and I, may certainly make to our present knowledge of the coast. But as, from the nature of his past experience, his opinion on the second of these questions may be considered of more value than on the first, he confines himself, in his present communication, to that with which he is most conversant. His opinion, as above stated, regarding the other also, but trusting that he leaves it in better hands.

With regard to the examination of the coast, then, he thinks it right first to advert to the utility of its prosecution—not that, generally speaking, scientific research should be thus weighed, for its uses generally appear, only when its results are made known, and are often not susceptible of being predicted; but that, on the present occasion, much may be said in favor of further inquiry, even on the data already in our possession. To the attempts already made to discover a north-west passage, English enterprise, English energy, English experience, and the power of its own country itself, pregnant with consequences beyond human calculation; together with the Hudson's Bay fur-trade, the Newfoundland cod-fishery, the Davis's Straits whale-fishery and all the other similar results directly flowing from it. At the same time, England has also contractual obligations by the same means, with the sovereignty of a number of native tribes, whom her merchants employ, as they find requisite, in their commerce; but of whom the country at large is also bound to take occasional cognizance with the view of allaying their feud, instructing their ignorance, and improving their moral and economical condition. Their country also is more worthy of minute investigation than is usually thought; and may reward this even pecuniarily. Inexhaustible coal mines skirt the Rocky Mountains through twelve degrees of latitude; beds of coal also crop to the surface in many other places along the Arctic coast, of the chain also of large lakes, some fresh, others salt; copper is found on the banks of the Copper-mine; and whales abound off Cape Bathurst. In a word, it is the duty of England to visit this coast from time to time, and it may be her interest to explore it thoroughly; nor, in making the attempt, will she be without the example, which may at least be called the rivalry, of active and stirring neighbours.

The government of the United States systematically, of course, of course, of course, perfectly comprising its policy, both on the northern shores of Asia and northwestern America; one of their most distinguished naval officers, Babu Wrangel, commanding on both coasts, for the purpose of securing the peace to the latter; and his war constantly at that country for this very purpose.

The motive for exertion in this quarter being thus before us, the next inquiry is as to the means, and most favorable direction; his observations on which, Dr. Richardson prefaced with a brief view of the actual state of knowledge of this coast, and the magnitude of its acquisition.

The entire northern coast of America, from Behring's Straits to Baffin's Bay, extends, in round numbers, to 103 degrees of longitude; of which, about six are unknown between Cape Beechy's and Bering's. The coast is discovered above ten more between Sir John Franklin's and Capt. Jas. Ross's: and about one between the latter and Capt. Back's; besides nearly 200 miles east from these to the south extremity of Gent's Inlet. With these exceptions, the whole has been
mapped on two, or, including Capt. Back's expedition, (which yet from circumstances, to some extent, deducts from the usually known coast line,) in three boating expeditions, each occupying but a few weeks of a single summer, and each accomplished without any material accident. There is no room, therefore, for despondency, or even much anxiety, regarding the issue of either of similar enterprizes, for the information thus derived on this point, of what has been done, and what yet remains to do, offer themselves spontaneously for consideration, each holding out fair prospects of even brilliant success.

One was pointed out by Sir John Franklin as far back as 1826, and is indeed, a mere modification, and improved the information thus derived, by the voyage of Capt. Beechy's, which was sent to execute in 1824, and which was defeated by the accident of his passing towards the southward, instead of to the northward, of Southampton Island, and being afterwards unable to beat up to Sir Thomas Roe's Welcome. It is to send a ship or ships to Wager River, to examine especially its northern shore, where it is possible that there may even be a passage into Regent's Inlet, as its present delineation rests on no sufficient authority; and supposing that a passage were thus found, the discovery would be at least highly interesting, and might be not less important. It is supposing that there were no passage, still there could not be any difficulty in proving the right of claim across the intervening land; and then with the ships remaining in Wager River as depots for supplies, any extent of investigation, both north and west, might be accomplished with little or no risk. If a practicable passage to the westward exists south of Boothia, as seems probable, even Point Turnagain might be thus reached; and to the northwest, the magnetic observations made by Captain James Ross on the supposed site of the Magnetic Pole, might be verified and completed.

But in conjunction with this, Dr. Richardson thinks there is a ground for a still more interesting start an expedition also from the westward; and to have sworn on this head, he next invites attention. A party leaving England in the Hudson's Bay Company's ship, which sails in the beginning of June, might, he thinks, with proper exertion winter on the Arctic coasts, and thus result in the following season. It should consist of two officers, and 16 or 18 men, artificers, yet accustomed to use the oar, such as could easily be supplied from the corps of Marines, or Sappers and Miners. Previous notice being sent to the Hudson's Bay Company's posts, there would be no difficulty in providing the requisite supplies of pemmican; and two boats, built of white cedar, for lightness, might thus be certainly launched on the McKenzie, in sufficient time to descend in it to the sea, and complete the interval between Sir John Franklin's and Capt. Beechy's extremes the same season. Thus would be about half of the whole remaining task accomplished, and in some respects, the most interesting half, because it is so near the Russian posts, that if not soon accomplished by us, it will almost certainly be traced, at so distant interval, by them, and the honor thus lost to us in accomplishing the whole single handed.

In this way, the whole equipment for the ensuing year should be forwarded, by other hands, to the east end of Great Bear Lake, where a winter residence should be erected, to which, as a rendezvous, the coasting party should proceed on their return. As soon as possible the following season, the whole should again proceed; but now down the Copper-mine; and making direct for Point Turnagain, to which extent it has already been surveyed by Sir John Franklin, they should coast thence to the eastard, the prevailing wind and current insuring a rapid progress. If, contrary to expectation, the bottom of Regent's Inlet should prove unsuitable for the purpose of a passage to the south of Boothia, the party would, at all events, connect Point Turnagain with James Ross's western-most land; and should circumstances prove favorable, may even pass the point assigned by him for the Magnetic Pole, and detect the outline of coast to the northward of it. At all events, navigating this sea in the summer, (which Capt. Ross only visited in successive winters,) it would remain to determine, beyond dispute, the practicability of a ship passing through it, on which the greatest doubt yet remaining, is of accomplishing the whole passage by sea, now hinges. And if, as is most probable there be a passage to the southward of Boothia, and a simultaneous expedition with this, were sent to Wager River, it would not be necessary, for the party to return to the Copper-mine and Hudson's Bay territories; but, proceeding boldly to the south-east, it would be certain of meeting friends and shelter on Hudson's Bay coast.

Such are the extensive views embraced in Dr. Richardson's paper; and it was afterwards announced from Sir John Barrow, Sir Edward Parry, Sir John Franklin, Captains Beaufort, Back, Macanochie, Dr. Richardson, and Mr. Woodbine Parrish,) was appointed to take the whole subject into consideration, and report specially on it to the Council. The result will be communicated to a future meeting, and, meanwhile, Dr. Richardson's paper will be printed for circulation. Sir John Franklin added a few words concurring generally with Dr. Richardson's conclusions, but with some further explanations. The meeting was numerous, notwithstanding the inclemency of the weather, and took much interest in the proceedings.

From the United Service Journal, Feb. 1836.

INTERNATIONAL COURTESIES.

The following documents appear to us so creditable to all parties, and so encouraging to the Service, that we take the first opportunity of giving them insertion:

ADMIRALTY, 7th September, 1835.

SIR:—I am commanded by my Lords Commissioners of the Admiralty to transmit to you herewith a copy of a letter from Sir Charles Vell, addressed to His Majesty's Lord High Commissioner for America, to express their Lordships' approval of your conduct, and the satisfaction with which they have received this testimonial of the manner in which your services in this matter have been appreciated by the American Government.

I am, your most humble servant,

JOHN BARROW.

COMMANDER TROTTER, 17, Orchard Street.

49, YORK TERRACE, 8th September, 1835.

Upon the receipt of the two notes which the Right Honorable Lord Viscount Palmerston, &c. did the undersigned have the honor of addressing to him on the 18th June and 6th July of last year, the undersigned hastened to communicate to his Government the information they contained respecting the apprehension by His Majesty's ship Curlew, on the coast of Africa, of several individuals formerly of the Spanish schooner Pansa, on suspicion of having been concerned in an act of piracy against an American vessel. That information having been laid before the President, together with the report of the trial which led to the conviction of the individuals referred to by the Circuit Court of the United States sitting at Boston, the President has perceived, that as the lives of the accused persons are involved, the undersigned, with the advice of Mr. J. HENRY DUNDAS TROTTER, of his Majesty's Service, then in command of the Curlew, was led to effect the seizure of the Panda, and the gallantry and persevering zeal which characterised his agency and personal exertions in the pursuit and ultimate capture of the pirates. Impelled by a high sense of approbation of the conduct of that officer, and in justice to him individually, as well as to the service to which he belongs, the President has caused the undersigned to be instructed to express to his Majesty's Government the satisfaction he has derived from the gallant and praiseworthy services rendered by Captain Trotter and the crew of the Curlew, and from the manifestation afforded by his conduct of the readiness of the officers of His Majesty's Naval Service to lend to general commerce on the high seas that protection in which the United States have so deep an interest, in common with all other maritime nations. In performing this pleasing duty, the undersigned, with further com-
ARMY AND NAVY CHRONICLE.

All that have been turned back have failed, more or less, in most, if not all, the trial observations, excepting Nos. 1 and 5.

If the observations are gone through in a manner that a willing learner might teach himself to accomplish, on shore, in less than a month, it is deemed enough.

But when there is decided imperfection in all or most of the observations, and it is clear that the person neither has made any of them at sea, nor could make them at sea, (after a short time even,) if called on, he has been rejected.

J. INMAN, Professor.

PROJECT FOR MANNING THE NAVY.—The following plan for manning the Navy has recently been suggested:—Let every seaman, before he can be admitted (by law) eligible to demand the pay of such, on board any merchant ship, or be admitted to be counted as an able seaman in any such ship’s crew, be obliged to serve an apprenticeship for a certain number of years, not less than five, concluding with his 21st year; let it be a condition of such indenture of apprenticeship (and so more solicited as entered into than at present) that he then joins his Majesty’s service for three years, into which he is to be received with the rating and pay of an able seaman. A substitute may be allowed here, to enable superior education and abilities to get on direct in the merchant service, for to such the service in the navy would be an unnecessary loss of time; after which the man (as well he who has found a substitute as the one who has served) provided he can satisfactorily show that he has been serving in the merchant service, and then as something more than before the mast) is to be admitted an able seaman; his indenture of apprenticeship endorsed, with his subsequent services then registered: he is then a free young fellow of twenty-four years, never to be subject to serve again, either in the navy or any public service whatever, short of that which demands every one—a levy en masse. “The man, after his service in the merchant service” continues the proposer of the plan, “has laid the foundation, upon which with three years practice and discipline in the navy have operated to make him a good, orderly, and obedient sailor; will then become, when rejoining the merchant service, what is rarely to be found now, a seaman who has learnt to respect his superiors, one who has had such a training as is all peculiar to him, from evil habits for the rest of his life, without having been a drudge amongst crimps and sea lawyers.”—United Service Gazette.

NAVAL FORCE OF RUSSIA, IN 1838.—The Russian navy, in active service, consists of three squadrons: the
FRENCH OFFICERS.—The sons of the greatest and richest families in France, of Dukes and Peers, have not disdained to arrive at the rank of an officer, by passing through the duties of a common soldier; and this, not in opinion merely, but in reality. Many are the instances that could be cited of these young gentlemen doing their duty in every respect as a private of the ranks; supporting the severest fatigue and privations, carrying their horses, cleaning their stables, and carrying the forage on their shoulders; nor is it extraordinary to meet, in a soldier's room, the descendant of a noble family, and the bearer of a good name, sharing his bed with the son of one of his domestics. These examples were frequently under the restoration, more so immediately after its overthrow; not so frequently at the present time.—H. L. Bulwer's Monarchy of the Middle Classes.

DOMESTIC INTELLIGENCE.

FLORIDA CAMPAIGN.

Georgian Office, Savannah, April 17, 12 M.

FROM FLORIDA.—The Santee, Capt. Brooks, arrived this morning from Picolata, Black Creek, &c. via Jacksonville, &c. We learn from an officer of the Army, a passenger on the Santee, that when the boat left the above places, not the slightest intelligence had been received of the movements of Gen. Scott and the forces under his command. A letter dated 8th or 9th inst. had been received at Black Creek, from Capt. Lincoln, commanding at Fort Durance, which was enclosed a note received by express from Capt. Gates, the commandant at Fort King, stating that intelligence had been received from Gen. Eustis, who, with the left wing of the Army, had reached Flakikhana, (about thirty miles from Tampa) without encountering any of the enemy, except a small party, which, after an irregular fire, dispersed, leaving two or three of their number killed, one of which was a Chief (Euehhe Billy.)

This engagement is double the same as that already noticed as having occurred at Vosula on the 22d ult. in which the loss of white men was stated at three, and the Indians five (among them Billy Hicks or Euehhe Billy.)

Gen. Eustis states that he has with him a large number of famishing horses.

Information has reached Black Creek that five hundred Creeks, under Gen. Woodward had passed through Tallahassee on their way to Tampa.

About forty-five volunteers, on the sick list, were left at Vosula. We must await the arrival of the Florida to furnish more definite information of our gallant army. The Florida, we are informed, left St. Marys last Thursday for Picolata via Jacksonville.

From the Jacksonville Courier, April 14.

INDIAN AFFAIRS.

Since our last, nothing of importance has been heard from any division of the army. By an arrival from Fort Durance, we learn that on the 1st inst. an express reached there, from Gen. Eustis, stating that he was destitute of corn and forage for his horses. He has about seven hundred mounted men in his division. Having no corn or forage at Fort Durance to send him, they have suffered exceedingly. Gen. Eustis was then about 25 miles from Fort Durance, and four or five days march behind Gen. Scott.

It has now been sixteen days since Gen. Scott reached the Ouiatlaocoocheee. Considerable anxiety is felt with regard to the outcome of affairs; and the Indians fear the result. They cannot doubt that Gen. Scott has marched to Tampa Bay. It is possible, that the Indians, on seeing his force, deemed it best to give themselves up, and that he has gone to escort them to Tampa Bay. It is far more probable, that the Indians have eluded him, and he has been compelled to go there for provisions. With so large a force, it is scarcely possible, that any other disaster should befal them, than a scarcity of provisions.

The Georgia volunteers, under command of Maj. Ross, were mustered into the United States service Tuesday last. Their services not being required by the commanding officer, they were discharged by Col. Crane, and are on their way home. We have often heard them spoken of as well mounted and efficient men.

Nearly every day discloses new indications that the Indians are scattering. The last week, several families from Alachua, have come to this place. They began to despair of being able to plant this season. They believe they shall be constantly exposed to the depredations of this marauding foe, and that when the troops retire to the south stations, their situations would be intolerable and never have been. When information is received of the movements of Gen. Scott, we hope the condition of their affairs will assume a more favorable aspect.

ACCIDENTS.—A Quartermaster Sergeant, by the name of Miller, was drowned in a pond near the encampment of the Louisiana volunteers, about five miles from Fort Durance. He shot an Alligator, and wading into the pond for it, was drowned before assistance could reach him, though the camp was not more than one hundred yards distant. His time of service in the regular army having just expired, he had joined the Louisiana volunteers.

Two of the guards at Fort Durance, to terminate a dispute, concluded to try a few "knock down" arguments. On going to the field and preparing for a "regular fight," one of them killed the other the first blow.

At the barracks in St. Augustine, there being some noise in the soldiers' quarters, the sergeant of the guard went to one of them and told him if the noise was not stopped, he would order him under guard. The soldier followed him, till he came to a gun, which he took and shot the sergeant through, so that he died the next day.

From the Pensacola Gazette, April 9.

Arrived yesterday, the U. S. Revenue Cutter Washington, Ezekiel Jones, commander, with despatches for Mr. Chandler of Dallas. The Washington left Tampa Bay on the 5th instant, at which time nothing had been heard from the army since Gen. Gaines' battle with the Indians.

On the 5th ult. a small party left Fort Brooks and proceeded about one and a half miles into the country, when they were fired on by the Indians, scattered in search of cover, was killed and scalped one of the party (a corporal) and wounded two others—none of their names recollected. Major Sands, the commandant of the Fort, on hearing the firing, sent out a detachment of 100 men to sustain the attacked party; but on their arrival they found the enemy had retreated. The next day another party was sent out into the immediate vicinity of a detachment of about 120 men pursued them through the hammock, but could not overtake them. Captain Andrew Ross of the Marine Corps, was a volunteer in the last mentioned detachment.

We understand that Captain R. (thence prevented from
assuming his rank on shore, has been unceasing in his
endeavors to be useful at the cantonment, and we doubt
not that the presence there, of an officer of his known
gallantry and experience has been of great importance.

The U. S. Cavalry, Capt. Green, and a large boat
expedition, and the U. S. M. S. A. Cousens, under com-
mand of Lieut. L. M. Powell, sailed for Charlotte Har-
bor on the 2d inst. for the purpose of attacking a party
of hostile Indians at the mouth of the Myaca river.

The U. S. Transport Moto, arrived in Tampa Bay
on the 4th inst. from New-Orleans.

Naval Academy.—Probably no class of our citizens
would be more useful in the communication of intelli-
gence respecting the arts and sciences of foreign na-
tions than the different officers of the Navy. Much has
been alone already, yet we anticipate a great deal more.
The time is far too early to fully judge of the succes-
posed of the able and accomplished youth of the
country. In other words, the qualifications for admis-
sion into either service will be such, that favoritism
shall be heard of no more, and merit alone have play.

The West Point Academy has effected much in elevating
the character of the army, and the public voice even now
calls for a similar institution for the navy. It is not
enough that we have talented Professors of Mathemati-
cs— they are admirable as connected with the service
aboard; but the junior officers of the navy ought to be as
regularly assigned to a naval academy in the enlarged
measures of the country. This is one instance where
such a policy will be adopted before a great while we
have no doubt; and its beneficial influence may be fairly
inferred from the acknowledged worth of our officers
even under the present defective plan of study. Let it
be remembered that our country is known abroad only
by her navy, and we owe it to prudential considerations
alone to provide that it be a fit and proper representa-
tive.—Norfolk Beacon.

Dry Dock.—Since noticing a few days since the exhi-
bition of a model of a Dry Dock, which is to be seen at
the Exchange in New street, we have more particular-
ly examined its construction, and adaptation to the pur-
pose for which it is designed. We were struck at once
both by its simplicity, and the comparative cheapness
of its construction, and feel warranted in expressing our
opinion of its superiority over every thing of the kind
of which we have seen or heard. The model, however,
the general idea of this Dry Dock is not wholly origi-
nal; it is in the application of the plan of Canal Locks,
to this important branch of our maritime interests, for which
its ingenious inventor deserves the thanks of his country.
Its perfect simplicity in the operation of Dry Docking,
assured its entire safety from vessels of any size; and
from injury by straining timbers or bolts, is peculiar;
and we see no objection to making use of this plan for
the purpose of launching large vessels directly from the
stocks, thereby precluding the possibility of what is
technically termed hogging; an accident which we are
instructed, frequently happens to vessels of the larger
classes, and for which we believe there is no remedy
applicable to the usual mode of launching.

The plan of this dock, is similar to that of a canal
lock. A lock of the required capacity is built on or
near the shore of any navigable water, made of hewn
stone, lined with water cement. Two gates are placed at
its entrance, opening inward. At the other end of the
lock, is an excavation of earth, the bottom of which is
a little above high water mark, its sides sloping and of
sufficient height. This is the whole plan—and now as
so to the operation of docking.

In the dry dock, two gates, haul in the vessel,
close the gates, introduce water enough to float the
vessel into the excavation or chamber; place her on a
cradle, prop her with the necessary supports, let off the
water from the chamber, and she is in dry dock, high
and dry out of the reach of tide, and ready for the
covering of masts, spars, application of rigging, and
launch her in the same way. The requisite quantity of
water to float the vessel into the chamber, can be intro-
duced by streams, chain-pump, or better, while it can be
obtained, by the aid of a running stream.

There may be two, three, or more chambers connected
with one lock, radiating from a basin common to all, of
sufficient size to turn, or wind your vessel.

The expense of making the lock is, (so to say) the
entire cost, as the excavations for the chambers will be
a mere trifle, comparatively.

In conclusion, we invite the attention of our naval
gentlemen and merchants to this model, feeling assured
that this will be in the opinion of the public and the
invention of B. D. Hull, inventor of the steam-
water. The inventors are Mr. John Wm. Holly, of Stan-

Burr Monument.—At a meeting of the Perry Monu-
ment committee, held on Thursday evening, the 7th inst.
the following gentlemen were appointed sub-
committees to carry this laudable object into effect,
and we sincerely hope that their efforts will be ap-
preciated and seconded by our citizens. Let all contributo
wards the erection of this tribute to departed worth, and
make it, as it ought to be, the pride of the city.

Committee on Subscriptions—Samuel Wilkenson, Chair-
man, Alanson Palmer, Pierre A. Barker.

On Finance.—Stephen Champlin, Chairman, John W.
Clark, Reuben B. Hoatcock.

On Building.—Benjamin Rathburn, Chairman, James
T. Homans, Benjamin Caryl.

On Assembly.—Gerry W. Haskins, Chairman,
Henry R. Stagg, Jacob A. Barker.

Treasurer.—Stephen Champlin.—Buffalo Journal.

Charles ton, S. C., April 19.

Charleston and Ohio Rail Road.—Capt. Wil-
liams of the U. S. Engineers, arrived here in the Steam
Boat from Norfolk on Saturday. The officers to be ac-
quainted with him in the survey of the proposed Rail
Road.—(viz. Lieuts. Drayton, White and Reed, and
Mr. Featherstonhaugh) reached this place a short time
ago, so that the Brigade is now full, and we are grati-
fied to learn, that these officers will enter upon their
work on the great work. Capt. Williams, who is at the head
of this corps, is we understand a gentleman of distin-
guished talents, of much experience, and admirably
qualified for conducting the surveys about to be made;
and all the officers under his command, are gentlemen
of high repute, and will be found for the important duties
which will devolve upon them.

We understand that Col. Gadden and Capt. Williams
—as the chief, civil and Military Engineers, will with
Gen. Hayne, Chairman of the Commissioners, constitute
a Board to arrange the measures to be adopted for the
early and safe completion of the necessary exami-
nation, surveys, and estimates, to enable the Knoxville
Convention (which will assemble on the 4th of July,
next) to act efficiently upon the subject. Capt. Wil-
liams will leave here with his party (indeed two of his
officers have already gone) for the mountains in a day
or two, and will enter upon his work as soon as the ne-
cessary arrangements can be made.—Patriot.

Colonel Long, with a corps of engineers, will com-
mence an instrumental survey in May next, for the con-
templated rail road between Quebec and Balfour, Maine,
which will open a communication between Quebec and
the navigable waters of Penobscot Bay. Arrange-
ments are on foot to ensure concert of action between
the American and Canadian corporations concerned in
this work. The people of Maine anticipate a goodly
slice of the western trade from this road in conjunction
with the improvements on Wellim Canal, and those
around the rapids of the St. Lawrence.

Passengers Arrived.

New York April 20.—per ship Calhoun, from Charles-
town, S. C. C. J. L. Ring, of the Navy.

Charleston, S. C. April 16—per steam packet
South Carolina, from Norfolk, Capt. W. G. Wiltia, of
the Army.
WASHINGTON CITY; THURSDAY, APRIL 28, 1836.

To Correspondents. - "Falconer," and "Barney" in reply to "Grampus," next week.

Captain George D. Ramsay, of the U. S. Army, was presented by Ms. Vail, our Chargé d'affaires, to the King of England, at a levee held on the 2d ult.

The British Brig of War Pantaloons, Commander Cory, which brought out the offer of mediation between this country and France, arrived at Portsmouth, Eng. on the 3d March, in 20 days from Norfolk.

Temple M. Washington, to be a Lieutenant in the Navy from the 12th January, 1836.

Lewis G. Keith, to be a Lieutenant in the Navy from the 17th March, 1836.

We understand that this work—the result of much research and reflection, embracing a view of all the military details, and of every point of duty, in all the varied situations of soldier and officer,—was dictated by the author from a sick bed, to which he has been confined for years. "—with a wish (as he said to a friend) to make some return to his brother officers and soldiers, for not being with them on duty."

It needs not appear strange that in so very small an army as ours, the varied and complicated duties of our officers, calling for every moment of their time, and allowing of no relaxation or intermission, few professional works have been produced. There is less occasion to regret this, as from identity of language we can, with little or no variation, adapt to our own use the productions of the English press.

We are sure that such a work as the one whose title is given above—a good manual, directory, or general guide book—was wanted; and there is much reason to believe that this will be well executed and well received.

Arrivals at Washington.

April 18—Capt. J. H. Sibley, ord. do. do.

Capt. P. H. Galt, 4th arty. do. do.

Major H. K. Craig, ord. do. do.

Lt. W. Maynard, 1st arty. do. do.

Mrs. Eveleth's do. do.

Major T. Stanford, 2d inf. do. do.

Lt. J. E. Kingsbury, do. do.

Major T. F. Smith, 1st inf. do. do.

L. T. H. Holmes, 7th inf. do. do.

24—Col. H. Stanton, Qr. Mr. Gen. Macomb's
INCREASE OF THE ARMY.

You say well, Mr. Editor, when you pronounce the new "Bill to increase the present Military Establishment of the U.S. States" to be "loosely drawn up." "Defective in many points," I say, "but add, redundant too, in many others! Redundant in that very department, which, even on our present "skeleton system," is objectionable for its excess. I allude to the department of the Regimental Field and Staff.

Here is a Bill, framed to meet what is considered as a public exigency,—the necessity of more troops for the defence of the country. It is not to be denied that such necessity exists. We need an increase of our effective force;—more bayonets to bristle on our frontiers. But how is this want to be supplied in the Bill before us? It needs but half an eye to perceive, that under the plan of enlistment, by which the Bill is to be enforced, the object is to make new places in the List of Regimental field officers:—eye to fix upon our military establishment an addition to the number of those who are already in supererogation,—and for whom, it has long been a difficult problem with the department, to find place and employment. I refer here more especially to the artillery branch of service. We want more field officers. The forts on the coast are rarely garrisoned by more than one company, and the presence of a field officer over so small a command is not only supererogatory, but absolutely disparaging in many instances, to the general interests of discipline and the service.

There is scarcely a captain in the artillery who has not, some time or other, been ready to concur in this declaration:—and there is certainly one, who from age and experience is not as well able to command his company and his post, without, as with, the auxiliary aid of this sinecure senior.

The artillery is a peculiar arm. In field or in garrison it always serves in detachments. Its most natural organization, therefore, would seem to be that of one aggregated corps,—similar to its former arrangement,—with as many companies as the service might require, and field officers in due proportion. Why the old organization should ever be set aside, unless by a most pressing necessity to any one until it be recollected that the candidates for field officers were more numerous than there were vacancies to gratify them withal. And now we have a Bill before us calling for a fresh increase, but drawn up as if the same paramount interest,—the same specific aim, were all that actuated the spirit and guided the pen. I doubt much if Congress will not see it in this light,—and though willing to give more bayonets because more are necessary,—may hesitate somewhat, before they admit the sword uselessly, to be altogether a sufficient substitute.

If more artillery be required, we need more companies. The Bill before us, with its addition of four companies to our present number of four, but reduces the actual number of companies in the Regiment, from nine to eight. Thus we are promised a liberal accession of Regimental field and staff, while the mainly efficient,—the real duty officers of the service,—the captains and lieutenants, are to be reduced,—and are we to know, disbanded? Such is the program offered in the Bill reported by the Military Committee of the Senate.

If an increase of the artillery be desirable, as was before remarked, let it be effected by adding new companies. Four regiments are sufficient. Make the number of companies to a reasonable extent,—the best number for sub-division in the whole arithmetical scale:—and this, with the projected increase of rank and file to a company of artillery, will prove a sufficient augmentation for this line of service, and an organization in all respects equal,—in many respects superior, to that reported in the Bill. At least such is the opinion of your friend.

SLOWMATCH.

INSTRUCTIONS FOR BROWNING GUN-BARRELS.

The following are the instructions, which have been prepared by the British Board of Ordnance for browning Gun-Barrels, and for repairing and retaining the brown upon the barrels.

The following ingredients:

- Nitric Acid
- Sweets Spirits of Nitre
- Spirits of Vine
- Blue Vitriol
- Tincture of Steel

are to be mixed together, the Vitriol having been previously dissolved in a sufficient quantity of water to make, with the other ingredients, one quart of mixture.

Previous to commencing the operation of browning the barrel, it is necessary that it be well cleared from all greasiness and other impurities, and that a plug of wood be put into its muzzle, and the vent well stopped;—the mixture is then to be applied with a clean sponge or rag, taking care that every part of the barrel be covered with the mixture, which is then to be exposed to the air for 24 hours after which exposure the barrel must be rubbed with a hard brush or rag, to remove the oxid from the surface. This operation must be performed a second and a third time (if necessary) by which the barrel will be made of a perfectly brown color;—it must then be carefully brushed and wiped, and immersed in a small quantity of alkaline master has been put, in order that the action of the acid upon the barrel may be destroyed, and the impregnation upon the water by the acid neutralized.

The barrel, when taken from the water, must, after being perfectly dry, be rubbed smooth with a brusher of hard wood, and then be heated to about the temperature of boiling water;—it will then be ready to receive a varnish made of the following materials:

- Spirits of Wine
- Dragon’s Blood Powder
- Shellac bruse

are to be one ounce each, and after the varnish has perfectly dried upon the barrel, it must be rubbed with the preparer to give it a smooth and glossy appearance.

The barrel, with the socket and neck of the bayonet only are to be browned;—they should be rubbed over either with a fine file, or with coarse emery paper, previous to their browning liquid, in order that its effects may be greater.

In removing the oxid from the surface of the barrel, &c., a steel scratch brush will be found more effectual than the hard hair brush;—the use of the steel scratch is
therefore adopted; this part of the operation must be done with great care, as upon it depends the proper browning of the barrel.

In moist weather the operation of browning must be performed in as dry a situation as possible, for humidity upon the surface has its effect, which must be carefully guarded against.

To repair and retain the brown upon barrels.

When the barrel is much rubbed from use, a little vitriolic acid may be applied to it, and then it must receive the treatment that barrels undergo in browning, care being taken to deaden the action of the acid, by means of boiling water.

Barrels, when in constant use, the brown might be continually kept perfect by means of the application of vinegar, which should remain upon the surface for a day, and then be well washed with boiling water.

If this operation be repeated monthly, a barrel which has been properly browned in the first instance, will continue in a perfect state for many years.

From the Mobile Commercial Register.

CORRESPONDENCE.

IN RELATION TO THE ALABAMA VOLUNTEERS.

The letters which passed between Governor Clay, General Scott, Colonel Lindsay, and Captain Harding, on the subject of the requisition made by the General Government on the Governor of Alabama, for a Regiment of Volunteers, and the Creek Indians in check, are published in the Flag of the Union, on the 19th inst. We noticed some days since that the troops which rendezvoused at Vernon, in obedience to the orders of the Governor on the 10th instant, were discharged on the 14th for want of arms, provisions and equipments;—and also, because no officer of the U. S. Army appeared at Vernon to muster them into the public service. It will be seen from the correspondence which we have transferred to our columns this evening, that the letter addressed by Gov. Clay to Capt. Harding on the 20th February, calling on him for the necessary arms, &c. and also a subsequent one of the same tenor, did not reach Mount Vernon in time, as Captain Harding states, to enable him to reach Vernon before the 15th, at evening. Captain Harding is a gentleman of high character, both as an officer and a citizen; and it is impossible to suppose that he did not harmonise in feeling with the acts of the Government, or that his failure to arrive at the place of rendezvous can be justly attributed to any intentional neglect on his part.

We consider the failure exceedingly unfortunate, but we are not willing, without better evidence than we have yet seen, to bestow censure on an officer of acknowledged merit and approved gallantry.

But whatever opinion may be formed of the part Captain Harding has borne in this matter, a perusal of the correspondence will satisfy every one, that Governor Clay throughout the whole affair, was actuated by that zeal, efficiency and promptitude in the discharge of his responsible duties, which have ever characterized his public life; confirmed as he was to a sick bed, his orders were all promptly issued, and that nothing might escape attention, he made arrangements, and attempted to be conveyed in a carriage, to the place of rendezvous, to superintend the organization of the regiment. The exertion was beyond his strength, and he was compelled to abandon it.

The Flag of the Union in commenting on this subject, observes:

We have thought it due to Governor Clay to make these explanatory remarks. His fellow-citizens must perceive, that although he was confined to his bed, by severe bronchitis, and when our requisition was made, and for more than a fortnight afterwards, he performed his duties with the scrupulous fidelity, which has distinguished his whole public life. He issued his orders for the regiment of observation, on the day the requisition was made by Col. Lindsay.

Two days afterwards he wrote to Captain Harding for arms, &c. and requested him to attend, and muster them into service. Not receiving an answer from him, he again wrote to Capt. H. on the 2d of March repeating his former request. On Saturday preceding the day of departure of the troops, he sent out to Vernon in his carriage, not being to travel on horseback, for the purpose of superintending the organization of the regiment, and rendering them all the aid in his power. His low state of health and the extremely bad weather, rendered it impossible for him to proceed, after getting forty miles on the 4th, and the 6th, a storm compelHing him to return by express from Gen. King, that there were no arms received on the 10th, and that it was believed he would not come, he directed the discharge of the troops on the 14th, (4 days beyond the day of rendezvous) if arms should not have been received, or any satisfactory explanation from Capt. H. for the very conclusive reason, that it would not do for troops to take the field without arms. No arms were received, nor was any explanation whatever received from Capt. H. at Vernon, or even at Tuscaloosa, until the evening of Tuesday the 15th—the day after the troops had been discharged.

To the charge that we understand has been made, by some of the Governor's generous friends, that he had no provisions for the support of the troops at Vernon, it is a sufficient answer, that he had no special power, and no money, either of the State, or General Government, for that purpose; that the troops were to have received and been supplied with every thing necessary for the effective service of the United States Army, as appears expressly by the requisition of General Scott, and Col. Lindsay; and that the Governor had no ground to suppose that the troops would be detained at Vernon, more than one day, beyond the day of rendezvous. The troops, however, did not arrive, there were among us generous and hospitable fellow citizens, as could be found in any other county of the State; and they had their own field officers, and their own Quarter Masters, whose duty it was, to supply their wants. In fact, the duties of the Governor ceased, strictly, with ordering the troops to the place of rendezvous, and appointing an officer to organize the regiment.

We do trust and believe, that our fellow citizens will not suffer this disappointment to chill the ardent and patriotic devotion, which they have manifested on this occasion; and that they will never hear their country's call, without obeying the summons, with the same cheerfulness, the same alacrity, and the same laudable and patriotic enthusiasm.

MOUNT VERNON ARSENAL.

February 8, 1836.

To His Excellency, C. C. Clay, Esq., Governor of Alabama.

Sir:—I am directed by the Government of the United States to issue on the requisitions of the Generals, or officers commanding any portion of the forces operating against the hostile Indians, such arms and munitions of war as may be required for this service. Having notice through the public press, that the Creek Indians are likely to become troublesome, I deem it proper to communicate to you, as the Chief Magistrate of the State of Alabama, the orders of the War Department to me, in relation to this matter.

I have the honor to be, sir,
Very respectfully, your obed't. serv't.

E. HARDING, Capt. Ordinance.

N. B.—It is proper to acquaint you what kind of store we have on hand—10,000 superior new muskets, with buck shot and ball cartridges, and 10 pieces of field artillery, completely equipped.

Extract from a letter to his Excellency, the Governor of Alabama, from Major General Winfield Scott, dated Jan. 31, 1836.

"In respect to the Creek Indians, on the borders of Georgia, I will beg your Excellencey to confer with Col.
Lindsay, to whom I shall give such instructions as may be deemed necessary. If, after conferring with him, force should be deemed necessary, to obtain and hold in check the Creeks, I have to request that you will furnish that force, and place it in the position that may be determined upon by that conference. The force shall be mustered and taken into the service of the United States.

Copy of a letter from Col. Lindsay.

TUSCALOOSA, Feb. 18, 1836.

Sir:—In obedience to instructions received by me from Major General Scott, commanding the Army of Florida, directing me in case of evident necessity, to request your Excellency to place a regiment of Infantry in the field, to be called the Creek Indians, I have to request that a regiment of Infantry be raised, and ordered to such point on the eastern frontier of this State, as your Excellency may deem best for effecting the object contemplated, where it shall be mustered into the service of the United States, armed and equipped by an officer of the U. S. Army, appointed for that duty.

I have the honor to be,
Very respectfully, your obedient serv't.

WM. LINDSAY, Col. 2d Arty.
His Excellency, C. C. CLAY.

EXECUTIVE DEPARTMENT.

TUSCALOOSA, Feb. 18th, 1836.

Sir:—Col. Lindsay, of the U. S. Army, having by authority vested in him by Major General Winfield Scott, made a requisition upon me for a regiment of Infantry, to be mustered into the service of the United States, and to serve as a regiment of observation upon the Creek Indians, you are hereby ordered to cause your command to be assembled by regiment, without delay, and to accept of volunteers, to the number of — companies, and if such number do not volunteer, you will make up the deficiency by drafting. The companies must be of mounted infantry, and each company to consist of one Captain, one Lieutenant, one Ensign, four Sergeants, four Corporals, one Bugler, and sixty-four privates, and will be required to serve three months, unless sooner discharged. Companies being raised, you will cause them to be rendezvoused at Vernon, Autauga County, by the 10th of March. They will there be furnished with arms and accoutrements, and all necessary equipments by Captain Harding, commanding the United States Army, and be mustered into the service of the United States, to act thereafter under my orders. If a majority of the companies which compose a regiment should be volunteers, their regiment will be suffered to elect its own officers, consisting of a Colonel, Lieutenant Colonel, and Major, to whom special commissions will be issued.

I am, sir, very respectfully,
Your obedient servant,

C. C. CLAY.

A second communication from the Governor to Captain Harding:

EXECUTIVE DEPARTMENT.

TUSCALOOSA, March 2d 1836.

Sir:—I wrote to you on the 10th ult., by mail, that I had on the requisition of Col. Lindsay, under the authority of General Scott, ordered into the service of the United States, a regiment of Infantry (to be mounted) to act as a corps of observation on the Creek Indians; that this regiment, on the 10th inst., was ordered to rendezvous at Vernon, Autauga County, Ala., on the 10th inst., where it was expected to receive its arms, equipments, and be mustered into the service by you. I also requested you to cause the arms &c., to be transported to Vernon, and that you would attend at that place on the 10th to perform the service suggested.

Not having received an answer, as I fear in consequence of the failure of the mail, and aware of the bad consequences which may result from a disappointment in any respect, I have taken the liberty to address you this note by the Choctaw, and repeat my request. It would perhaps be better to carry up a thousand or more muskets, and other necessary accoutrements—as they will probably be required in some of the new counties above Montgomery.

I am very respectfully,
Your obedient servant,

C. C. CLAY.

Note—This letter, though intended to have been sent by the Choctaw, when written, was sent by the Courier.

Letters from Gen. E. D. King, who was superintending the organization of the regiment at Vernon, to the Governor.

HEAD QUARTERS, Vernon, Ala. March 10th, 1836.

DEAR SIR:—The most of the companies have arrived, and there is no preparation made for their reception. Capt. Harding has not as yet arrived with the arms and accoutrements for the troops, and it is believed he will not. I have requested the Captains of companies to take care of their companies until to-morrow, 11 o'clock, at which time they are requested to assemble and elect their field officers. This is a poor place, and the troops cannot remain here long, as provisions are not forthcoming from others, or from some other quarter. I think it would be best for them to march up to Montgomery, where they could get supplies. You will please let me hear from you as soon as possible.

I am your obedient servant,

Answer of the Governor to General King.

GREENE COUNTY, Alabama. March 11th, 1836.

DEAR SIR:—I have just received yours of the 10th, instant, from Vernon. It is now near 12 o'clock at night, but I hasten to reply to you as far as may be in my power, that your express may return without loss of time.

I am astonished to learn that Capt. Harding of the United States Army has not arrived, nor any arms, accoutrements &c., been forwarded to Vernon. I was expressly assured in the requisition of Col. Lindsay, that the regiment, when raised, should be mustered into the service of the United States Army, equipped by an officer of the United States Army, “appointed for that duty.” Col. Lindsay being at Tuscaloosa, when the order was agreed upon, and in fact when it issued, we had a conversation on the subject, in which Capt. Harding was the only officer spoken of for that duty; he was the officer who held the custody of the arms, and by whom (as well as by Col. Lindsay) I had been informed, that any number required for the contemplated service would be furnished; and I have not to the present moment received any notice, or intimation to the contrary. Very shortly after issuing my orders, calling for the
regiment of observation now assembled at Vernon, I addressed a note to Capt. Harding apprising him of what I had done, requesting the transportation of arms, and other accoutrements, to that place by the 10th inst. which I informed him, was the day of rendezvous; and requested him to attend at the time and place named, for the purpose of mustering them into the service of the United States. This note was sent by mail. Fearing, however, that he might have forgotten to deliver the letter, as I had received no reply from Capt. Harding, about the 8d inst. I addressed him another note by the steaaboat Courier, Capt. Cleveland, in which I repeated the substance of my former note and renewed my request for the arms &c., and for his attendance at Vernon, on the day of rendezvous. I have received the substance of both notes to Capt. Harding from Capt. Murphy, not having the copies with me; that Mr. J. M. Withers, now at Vernon, is fully apprised of their contents, and can state them.

I have made the foregoing explanation for the satisfaction of yourself and the officers and men composing the Regiment; but in reply more immediately to your enquiries and apparent difficulties, I desire you to change the position of the regiment to any other place, you may deem more eligible in the vicinity; if it may be changed to Montgomery, or the neighborhood of that place, if you think proper. You remark that Capt. Harding has not as yet arrived with arms and accoutrements for the troops, and it is believed by some that he will not come. The troops cannot take the field without arms and equipments, and they must be mustered into service. If the arms, &c., shall not have arrived when this reaches you, and you shall not have received any satisfactory explanation from Capt. Harding, or assurance that he will be at Vernon, in a very few days, I know of no proper course but to discharge the troops and suffer them to return to their homes. You will consider yourself, authorised to exercise a sound discretion, but I cannot perceive the propriety of continuing the regiment together, longer than Monday morning, if to arms are received, and no satisfactory assurance from Capt. Harding in the meantime.

I am, Sir, very respectfully,
Your obedient servant,

C. C. CLAY.

Conformably to the authority given him in the above letter, General King dischaged the troops, at Vernon, on Monday last. The following letter to the Governor was received in this place the day after the troops were disbanded, from Capt. Harding,—dated the 19th,—post marked the 9th inst.

Mount Vernon Arsenal,
March 10th, 1836.

To his Excellency, C. C. Clay, Gov. of Ala.

Sir:—Your letter of the 2d instant, per steamer Choctaw, advising me you had written on the 1st ultimo, reporting my service at Vernon, Autauga county, and on the authority of General Scott, to musteer in the service of the United States a Regiment of Alabama mounted Infantry, was received this morning.

As this is the first official information I have received on the subject, I need scarcely add, your call has caught me somewhat unprepared. Although your communication is not such as I feel would justify me with the Government of the U. States, in leaving my post, yet as one portion of our country has of late been wantonly desolated by the Seminole Indians, and the exigencies of the times appearing to call for haste, to deliver the troops in time, I do not hesitate to obey your summons; and must rely upon your Excellency for authority, in quitting my important trust at this place.

I have the honor to be, Sir,
Very respectfully, your ob’t serv’t.

E. HARDING, Capt. Ord.

The following additional letters have been furnished to us for publication.—Ed. A. & N. C.

Mount Vernon Arsenal,
March 12th, 1836.

To his Excellency, C. C. Clay,
Governor of Alabama, Tuscaloosa.

Sir:—Owing to some unaccountable delay on the part of the mails, your communication of the 20th ult. was not received until my letter to you of the 9th inst. had been despatched.

I perceive that your Excellency did not send me the written authority of Colonel Lindsay for calling the Vernon Regiment into service, which paper will be necessary in order to legalize the muster, and ought to accompany the rolls to Washington City.

I will, however, waive this objection, and on the 14th you may depend on my being at Vernon, to musteer the men into service, and in the meantime, you will please forward the order of Colonel Lindsay to my address at this place.

Respectfully, &c.

E. HARDING, Capt. Ord.

By the blowing up of the steamer Ben Franklin on the 13th March, Capt. Harding was necessarily prevented from being at Vernon on the 14th March, as stated above,—as this boat had engaged to take him and the stores to Vernon.

Mount Vernon Arsenal,
March 20th, 1836.

To his Excellency, C. C. Clay,
Governor of Alabama.

Sir:—I returned to this Post yesterday, from Vernon, Autauga County, whither I had been called by your communications of the 20th ultimo and 2d instant, for the purpose of mustering into the service of the United States a Regiment of mounted Infantry, to be used as a corps of observation on the Creek Indians.

On the 18th I reached Vernon in the steamer "Iberia," with the arms and ammunition for this object, but thence learning that the troops had been dispersed by your order, on the 14th, and finding no orders whatever for myself, I deemed it most prudent to return immediately to my station with public property which I had charge.

You are already informed of the late date on which your letters of the 20th ultimo and 2d instant, were received by me, to which cause alone the failure of the expedition is to be attributed.

Respectfully, &c.

E. HARDING, Capt. Ordinance.

PROCEEDINGS OF CONGRESS,
IN RELATION TO THE ARMY, NAVY, &c.

IN SENATE.

Mr. Southard, from the Committee on Naval Affairs, reported the bill making appropriations for the naval service, with several amendments, which were read.

Mr. Southard, from the same Committee, reported, without amendment, the joint resolution of the House, referring the petition and papers of the heirs of Robert Fulton to the Secretary of the Navy, with instructions to report thereon.

On motion of Mr. Swirt.

The resolution directing the Secretary of War to cause a survey to be made, for the purpose of ascertaining the most eligible site for a fortress or fortifications on the east coast of the Mississippi, on the Gulf of Mexico, was taken up, and after a slight discussion.

Mr. Walker moved to amend it by adding a provision directing a survey to be made, for the same purpose, of the west coast of that State: the question was taken on his amendment and lost.

The resolution was then adopted.

TUESDAY, April 18.

Mr. Benton presented the petition of John Gardiner of Washington, praying to be compensated for the detention of his life preserver, to prevent people from drowning, referred to the Committee on Naval Affairs.

Mr. Benton submitted the following resolutions, which were considered and agreed to:
Resolved. That the Senate at War be directed to inspect the Senate, what is the maximum amount which can be beneficially expended annually, upon the construction of fortifications; Provided, the Corps of Engineers is increased in accordance to the bill which has passed the Senate, and that the commission for each of the objects of expenditure with the Ordinance Department, as detailed in the report of that Department of March 8th, 1836: Provided, the appropriations for each object be made at once for a series of years, to be drawn for annual instalments, as required by the progress of the work: Also, that he inform the Senate what is the maximum amount which can be beneficially expended annually, towards completing the necessary preparations for the Ordinance and ordnance stores; 2, gradual increase of the navy, and collection of materials; 3, repairs; 4, navy yards and docks, and other incidental heads of expenditure; Provided, the appropriations for the expenditure be made at once for a series of years to be drawn from the Treasury annually as needed.

Mr. WALKER submitted the following resolution, which was discussed:

Resolved, That the Secretary of War be directed to advise the Senate as to the most eligible sites for fortifications on or near that portion of the coast of the State of Mississippi, bound along the coast of Mexico, from the islands in the vantage, suitable for the defense of that section, and of the commerce that exists there, especially that commerce which is carried on between New Orleans and Mobile, or between New Orleans and the aforementioned cities, and that he cause to be made the proper estimates of the expense necessary for the erection and armament such fortifications; and that he make report thereof to the Senate at the next session of Congress.

HOUSE OF REPRESENTATIVES.

FRIDAY, April 15, 1836.

[CONTINUED.]

GENERAL APPROPRIATION BILL.

The House, pursuant to the special order adopted on Thursday last, took up the bill making appropriations for the army and navy, and all other purposes of the government for the year 1836.

Mr. CAMERER asked the right to increase the item for compensation to the clerks and messengers in the office of the army, from $2,300 to $3,300, and explained that the amount was less than the law authorized, though not as much as was asked.

Mr. HAWES moved that the committee rise; negative; yeas 34, nays 51.

The amendment was then agreed to.

Mr. CAMERER moved a further amendment, "For the expense of medals and swords to Col. Croghan and others, $5,000," which was agreed to; yeas 113, nays 60, not a quorum.

Mr. CAMERER then moved further to amend the bill by adding the following item: "For the survey of the coast of the United States, $80,000." Mr. C. explained that this branch of the service had been recently transferred from the Navy to the Treasury Department.

Mr. HARDIN inquired whether the mine-sweepers were included in this appropriation, because, if so, he was dead against it.

Mr. CAMERER replied in the negative, and the item was then agreed to.

WEDNESDAY, April 20.

The CHAIR, by leave of the House, presented the following communications:

A letter from the Secretary of War, transmitting a report from the Topographical Bureau, in reply to a resolution of the 4th of April, relative to the progress and present condition of the improvement of the navigation of the Tennessee river; which was referred to the Committee on Roads and Canals, and ordered to be printed.

Mr. CASBY, from the Committee on Public Lands, reported the bill to abolish the distinction in ports of entry, and extend the privilege of drawback; which was read twice and committed.

Mr. GILDER, from the Committee on Commerce, reported a bill to abolish the distinction in ports of entry, and extend the privilege of drawback; which was read twice and committed.

[This bill places all ports in the United States on the footing of the most favored ones, and also permits goods in original packages to be landed for the benefit of drawback to all places, whether immediately adjoining the United States or not, or whether carried from port to port by sea or otherwise. This will place the counties to the north and south of the United States in the same condition as those places lying to the southward and southwest of Louisiana. It will allow goods in original packages to be carried from the Atlantic to the lakes, and vice versa, and be exported for the benefit of drawback to all places. Accompanying the bill is a report of considerable length, reviewing the present laws on this subject, and stating the principles upon which the proposed alterations are based.]

The SPEAKER laid before the House two communications from the War Department; the first transmitting a report of the Commission of General Subsistence, in relation to the emigrating Choctaws and Chickasaws, and the second, a report of the Engineer Bureau, respecting the national road west of the river Ohio; which were appropriately referred.

In motion of Mr. STOKES, the House, at a quarter past 5 o'clock, P.M., adjourned.

CONGRESSIONAL DOCUMENTS.

BILL REPORTED.

APRIL 6, 1836.

Read twice, and committed to the Committee of the Whole House on the state of the Union.

Mr. GLASCOE, from the Committee on the Militia, reported the following bill:

A BILL.

To provide more effectually for the national defence, by organizing, arming, and establishing a uniform militia throughout the United States, and to provide for the discipline thereof.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That every able-bodied white male citizen of the United States, between the ages of eighteen and thirty-five, inclusive, shall constitute the militia of the United States, and be enrolled and mustered as herein after provided for: Provided, That the Government of each and every State and Territory may extend the age of the militia of such State and Territory, in such manner as it shall deem necessary for its internal defense, or the preservation of its internal peace, not to exceed forty-five years, to be termed the reserve, or the militia reserve.

Be it further enacted, That the militia of the several States and Territories shall be designated as cavalry, artillery, infantry, light infantry, and riflemen, and shall, within twelve months after the passing of this act, be arranged into companies, companies into battalions, battalions into regiments, and divisions, as the Legislature or Government of each State and Territory may direct. And a division shall consist of not less than two, nor more than four brigades; a brigade of not less than two, nor more than four regiments; a regiment of not less than two, nor more than four battalions, of four companies each, with one colonel, one lieutenant colonel, and one major; a battalion, when organized as such, shall consist of not less than two, nor more than four companies, of each having an officer of the rank of captain, and be entitled to one adjutant, one quartermaster, with rank of lieutenant, one assistant surgeon, one sergeant major, one quartermaster sergeant, and two principal musicians. Each second and third company of artillery, infantry, or riflemen, shall consist of one captain, one first lieutenant, one second lieutenant, four sergeants, four corporals, two musicians, and sixty-eight privates. And each division shall be severally numbered in regular sequence.
ficial progress, from the first to the maximum number of divisions of the militia of each State and Territory, and from the number of each regiment of any division, each regiment of any brigade, or in any army company, or the number of any regiment or battalion, shall be respectively numbered from the first to the maximum number of such divisions, regiments, companies, or battalions, respectively. And the regiments of militia of the several States and Territories, respectively, shall be severally numbered in regular numerical progression, beginning with the number one, in the rank of lieutenant, and to be kept separate and distinct, according to their particular arm of service.

Sec. 3. And be it further enacted, That the Governors of each State shall be entitled to aids-de-camp, with the rank of lieutenant-colonel.

Sec. 4. And be it further enacted, That to each division there shall be assigned, one major, one captain, one ensign, one aide-de-camp, with the rank of captain; and the aids-de-camp shall perform the duties of acting assistant adjutant-general. And the regiments of the militia in each State and Territory shall be constituted as follows: General staff, to wit: One adjutant general of militia, who shall be inspector general and chief of the staff, one quarter-master general, with the rank of brigadier general, for the whole militia of the State and Territory, one assistant quarter-master general, with the rank of major, and one judge advocate with the rank of major, and one adjutant inspector general, who shall act as assistant inspector-general of the militia, with the rank of major, and one quatermaster with the rank of captain. Regimental staff, to wit: One adjutant and one quartermaster, one ensign, one major, one captain, one ensign, one surgeon, one assistant surgeon, one quartermaster, one quartermaster sergeant, and two principal musicians, to each regiment. And all commissioned officers of the militia, to wit: One colonel, one major, one lieutenant-colonel, and one captain, as the Legislature of each State and Territory, and the commanding officer, according to the custom of the service in like cases, to wit.

Sec. 5. And be it further enacted, That the duties required to be performed by the several officers of the general staff of the militia, shall be as follows: To issue and purchase, and to receive and pay for, all money, or money values, necessary for the support and maintenance of the militia; to receive and pay for the hire of all horses, carriages, and other vehicles, used for the service of the militia; to purchase, and pay for, all food, forage, and necessaries, and to issue the same to the officers and men of the militia; and to have charge and control of all the arsenals, barrack, and store houses, and to superintend and direct all the property and stores belonging to the militia.

Sec. 6. And be it further enacted, That it shall be the duty of all military officers, except the adjutant general or his deputy, of each regiment, squadron, or battalion, when received from their captains, as enjoined by the fifth section of this act, and shall transmit the same to the general of brigade; and the general of brigade, in like manner, shall transmit the same to the major general of his division; who shall annually make, or cause to be made, condensed abstracts according to the plan established by the Secretary of War, and transmit the same to the adjutant general of the State or Territory, on or before the first day of each year.

Sec. 7. And be it further enacted, That the militia of the several States and Territories shall be furnished with arms and accoutrements by the Government of the United States, every citizen who shall have been warned to train, or shall be employed in the service of the United States, shall provide for himself with a good musket, of a bore suited to carry a ball of the eighteenth part of a pound, a sufficient bayonet and belt, two spare flints, a priming wire and brush, a knapsack, and a good cartridge box, with four cartridges suitable to the bore of his musket; or, instead of a musket and cartridge-box, with a good rifle, shot-pouch, powder horn or flask, and shall appear so armed and provided when called out for exercise, inspection, and review, or actual service; and every citizen so furnishing himself with arms, accoutrements, and equipments required by this act, shall hold the same excepted from all suits, distresses, and executions, for debts or other causes.

Sec. 8. And be it further enacted, That the duties required to be performed by the several officers of the general staff of the militia, shall be as follows: To issue and purchase, and to receive and pay for, all money, or money values, necessary for the support and maintenance of the militia; to receive and pay for the hire of all horses, carriages, and other vehicles, used for the service of the militia; to purchase, and pay for, all food, forage, and necessaries, and to issue the same to the officers and men of the militia; and to have charge and control of all the arsenals, barrack, and store houses, and to superintend and direct all the property and stores belonging to the militia.
decisions in the arms, accoutrements, equipments and the uniform of those present, and deliver a true return of such deficient equipments as well as a return of such absent, to the commanding officer of the battalion or regiment, and of the commanding officers of the several states and territories, to which they belong, at such times, and in such manner, as the Governments of the several States and Territories shall specify and direct; the brigades inspector shall examine the files of such returns, and divide the battalions, regiments, or brigades, to which they belong, at such times, and in such manner, as the Governments of the several States and Territories shall specify and direct; the brigade inspectors, and the division inspectors shall prepare and complete abstracts of such returns, which shall be carefully transmitted by them to the adjutants general of the several States and territories, before the first day of annually; all returns and abstracts shall be made according to such forms as shall be established by authority of the Secretary of War.

Furthermore, the said inspectors shall be such as the Secretary of War shall, from time to time, by rule or regulation, authorize; and the said inspectors, as herein before provided for; to be instructed, reviewed, and inspected together, by such rules and regulations as may be prescribed by the Secretaries of State and of War, to which the said inspectors shall submit.

And be it further enacted, That when the United States may require the service of any portion of the enrolled militia, the Governors of the several States and Territories shall, on requisition therefor, in writing, to the President of the United States, prescribe, and the said officers, as herein before provided for; to be instructed, reviewed, and inspected together, by such rules and regulations as may be prescribed by the Secretaries of State and of War, to which the said inspectors shall submit.

And be it further enacted, That when the United States may require the service of any portion of the enrolled militia, the Governors of the several States and Territories shall, on requisition therefor, in writing, to the President of the United States, prescribe, and the said officers, as herein before provided for; to be instructed, reviewed, and inspected together, by such rules and regulations as may be prescribed by the Secretaries of State and of War, to which the said inspectors shall submit.

And be it further enacted, That when the United States may require the service of any portion of the enrolled militia, the Governors of the several States and Territories shall, on requisition therefor, in writing, to the President of the United States, prescribe, and the said officers, as herein before provided for; to be instructed, reviewed, and inspected together, by such rules and regulations as may be prescribed by the Secretaries of State and of War, to which the said inspectors shall submit.

And be it further enacted, That when the United States may require the service of any portion of the enrolled militia, the Governors of the several States and Territories shall, on requisition therefor, in writing, to the President of the United States, prescribe, and the said officers, as herein before provided for; to be instructed, reviewed, and inspected together, by such rules and regulations as may be prescribed by the Secretaries of State and of War, to which the said inspectors shall submit.

And be it further enacted, That when the United States may require the service of any portion of the enrolled militia, the Governors of the several States and Territories shall, on requisition therefor, in writing, to the President of the United States, prescribe, and the said officers, as herein before provided for; to be instructed, reviewed, and inspected together, by such rules and regulations as may be prescribed by the Secretaries of State and of War, to which the said inspectors shall submit.

And be it further enacted, That when the United States may require the service of any portion of the enrolled militia, the Governors of the several States and Territories shall, on requisition therefor, in writing, to the President of the United States, prescribe, and the said officers, as herein before provided for; to be instructed, reviewed, and inspected together, by such rules and regulations as may be prescribed by the Secretaries of State and of War, to which the said inspectors shall submit.
form as to exhibit the same by States and Territories respectively. And it shall be the duty of the Adjutant General of the army, under the direction of the Secretary of War, to give such instructions to the adjutants general of militia, as shall be necessary to ensure an uniformity of action, with respect to the returns and other matters relative to the militia, as well as the importance of a strict conformity with the provisions of this act. And it shall be the duty of the Secretary of War, from time to time, to correspond with the Governors or commanders-in-chief of the respective States and Territories, to elicit from them and send all information which may be of the improvement of the militia, and, especially, to ascertain the geographical position of the several divisions, brigades, and regiments, in each State and Territory respectively.

And be it further enacted, That all acts, and parts of acts, which may conflict with the provisions of this act be, and the same are hereby, repealed.

TO MARINERS.

From the Philadelphia Herald.

We have been favored by the French Consul in this city with the following notice, important to navigators, which we translate for the benefit of our commercial readers:

NEW LIGHT HOUSE OF PENMARCK, (Finistere.)—Navigators are informed that from the 20th of the current month—the small eclipse light, which marks the tower of Saint Peter's church in the village of Kerity, Penmarck, department of Finistere, will be suppressed, and replaced by a light of the same character, but larger size, which will burn during the whole night in the tower recently built near the said church (lat. 47 deg. 47 min. 36 sec. N.—long. 6 deg. 43 min. 44 sec. W.)

The new light is placed 41 metres, (1344 feet) above spring tide high water.

Its successive appearances will be at intervals of half a minute.

In fine weather it can be seen at the distance of seven leagues, (17 miles) and the eclipse will not appear total beyond that of four leagues.

Direction General of Bridges and Causeways, Nov. 1835.

Consulate of the United States.
Cape Town 7th December, 1835.

Sir—I have the honor to transmit for publication the enclosed Government Notice, thinking it may be of service to Masters of American vessels who may be cruising on this coast.

Respectfully, your obedient servant,

ISAAC CHASE.

United States Consul for the Cape of Good Hope.

In consequence of several commanders of vessels having mistaken Cape St. Francis for Cape Recife, and thereby caused much delay to vessels bound to Algo Bay, His Excellency the Governor has caused to be erected on the highest land (known by the name of the Hummocks) bearing N. N. W. 3/4 miles from Recife, a Beacon, (called Selwyn Beacon,) It is a spar, painted white, with a black cask on the top. There not being any tree or other landmark near the point, Cape Recife cannot now be mistaken.

H. G. DUNSTERVILLE, Harbor Master.

Post Office, Port Elizabeth, Algo Bay, November 21st, 1835.

NEWLY DISCOVERED ROCK IN THE CHINA SEA.

—Rock seen from on board American Ship Hercules, Capt. Wood, on her passage up the China Seas. October 7th, 1835.

At a point 2 miles, position 108° 41'—E. Lat. 8° 24' North. The yawl on deck under repair and could not examine it.

ARMY.

RESIGNATIONS.

NAVY.

Ship Warren, Capt. Wm. V. Taylor, arrived at Kay West from Havana on the 1st inst. in three days passage. Schr. Grampus, Lieut. Com'dt. Boarsman, went to sea from Hampton Roads, on Saturday 16th inst.

Ship Ontario, Capt. Salter, from Montevideo for Rio Janeiro, was spoken 20th Feb., lat. 29° 58'—lon. 42° 49' W. Officers on board the Ontario.

WM. D. SALTER, Esq. Commander.

Frigate Constitution, Capt. Elliott, was at Lisbon on the 8th March, and the vessel would be arrived.

Officers on board the Frigate Constitution.

Jas D. Elliott, Esq., Commodore.

Commodore's Secretary—J. E. Dow.

Captains' Clerk—Holland.

Schr. Shark sailed from Lisbon for Gibraltar on the 21st March; in going out over the bar, in a heavy swell, rolled away her forecastle, which took with it the jib boom; she proceeded, however, on her voyage under foresail alone.

Frigate Potomac, ship John Adams, and schr. Shark, were at Gibraltar 31st March—all well.

Ship St. Louis, Capt. Rousseran, sailed from Pensacola for Vera Cruz, on the 8th inst., having on board, the Hon. Phoewallat Ellis, as passenger.

Ship Concord, Capt. Miss, arrived at Tampa Bay on the 22d—sailed on the 6th—and arrived at Pensacola on the 8th inst.

Ship Vincennes, Captain Allick, at Vevaco, in Oct.

MARRIAGES.

In Kittery, Maine, on the 20th February, Mr. William McNally, Gunner U.S. Ship Concord, to LOU, eldest daughter of the late Antonio Coretti, of the U. S. navy.

At Fort Wimansago, on the 22d ult. by the Rev. Henry Gregory, Lieut. HORATIO P. VAN CLEVE, of the 5th Iny. U.S. N.A. Miss Catarina CONLON, daughter of the late Bvt. Maj. N. CLARK, U. S. A.

In Georgetown, D. C., on the 21st inst., Lieut. THOMAS JOHNSTON, of the 2d Iny. U.S. A., to Miss MARGARET JOHNS, daughter of ROBERT JENKINS, Esq.

At Albany, on the 14th inst., Lieut. THOMAS KING, of the U. S. Engineer Corps, to ELLEN E. daughter of ROBERT ELLIOTT, Esq., of Albany.
OFFICIAL REPORT
FROM THE SECRETARY OF WAR.

The following is the Report of the Secretary of War, transmitted to the Senate by the President of the United States on the 8th April, in compliance with Resolution No. 15 of the 13th February, requesting information of the probable amount of appropriations that would be necessary to place the land and naval defences of the country upon a proper footing of strength and respectability.

DEPARTMENT OF WAR. April 7, 1836.

Sir: In conformity with your instructions, I have the honor to transmit reports from the Engineer and Ordnance Departments, furnishing so much of the information required by the resolution of the Senate of February 13, 1836, as relates to the fortifications of the country, and to a supply of the munitions of war. The former report is in the nature of a statement of the part of the officers charged with that duty; and their report has therefore been longer delayed than, under other circumstances, would have been proper, but the whole matter was too important to have the interests involved in it sacrificed to undue precipitation. The report of the Ordnance Department, received on Friday last, and I have embraced such positions of the intervening time as other official calls and a slight indisposition would allow me to devote to its examination. I did not consider that any suggestions I could make would justify a further delay at this advanced stage of the season, and at the same time, I am aware that this letter will call for all the allowances which these circumstances can claim for it.

It is obvious that, in the consideration of any general and permanent system of national defence, comprehensive views are not only necessary, but professional experience and a knowledge of practical details: such information, in fact, as must be obtained by long and careful attention to the various subjects which form the elements of this inquiry. Although, therefore, I do not concur in all the suggestions contained in these reports, nor can I concur in those which relate to the nature and extent of some of our preparations, still I have thought it proper to lay them before you, rather than to substitute any peculiar views of my own for them. Both furnish facts highly interesting to the community; and if they anticipate dangers which it may be thought advisable to adopt precautions against, which future exigencies will not probably require, they are still valuable documents, presenting the necessary materials for the action of the Legislature. The report from the Engineer Department, in particular, evinces an accurate knowledge of the whole subject, while, at the same time, its general views are sound and comprehensive. I consider it a very able document.

Under these circumstances, I have thought it proper to submit some general remarks, explanatory of my own views, concerning a practical system of defence, and which will show how far the plans and details are in conformity with my opinion. I feel that this course is due to myself. I shall confine my observations to the maritime frontier. Our inland border rests, in the South west and Northwest, upon the possessions of civilized nations, and requires defensive preparations to meet those continuations adapted, by their very nature, to the maritime frontier. It is my duty to make any reasonably anticipate. In the existing intercourse of nations, hostilities can scarcely overtake us so suddenly as not to leave time to move the necessary force to any point upon those frontiers, threatened with attack. I cannot enumerate all peculiar combinations of circumstances, which demand the application of the principles of separation which commands the application of the same in all respects to the country, or whose possession would give us superior to any invading or defensive force. In fact, the division is, in both cases, an artificial line, through much of its extent, and a portion of the natural defences. But it is very essential that our defences should be so constructed as to control the streams, and which would leave the surrounding country penetrable in all directions. Without indulging in any improper speculations concerning the ultimate destiny of any portion of the country in juxtaposition with us, or looking for security to any political change, we may safely anticipate that our own advance in all the elements of strength will be at least equal to that of the powers who adjoin us; nor does the most prudent forecast dictate any precautions, founded upon the opinion that our relative strength will decrease and theirs increase. The lake frontier, indeed, presents some peculiar considerations; and I think the views submitted by the Engineer Department, relating to Lake Champlain, will be of much weight. This long narrow sheet of navigable water opens a direct communication into the states of New York and Vermont, while its outlet is in a foreign country, and is commanded by a position of great natural strength; and the present populous and prosperous portion of Canada, and open to all its resources and energies. With a view, perhaps, to possible rather than to probable events, it may be deemed expedient to construct work at some proper site within our boundary which shall close the entrance of the lakes to the same time. I am aware that this work, however, would be an advanced post, and, from circumstances peculiarly liable to attack, its evident and defences should be in proportion to its exposure.

There is already a considerable commercial marine upon the four great lakes, Ontario, Erie, Huron, and Michigan, which will be at least equal to that of the people who live on them; and this will increase with the augmenting population which is flowing in upon the regions washed by these internal seas. It is obvious that, from natural causes, the physical superiority will be found upon the southern shores of these lakes. The resolution of the Senate of 13th February, demands an inquiry into the expediency of constructing permanent fortifications in this quarter.

And this inquiry properly divides itself into two branches:

1st. The policy of fortifying the harbors upon the Great Lakes.

2d. The policy of commanding, by permanent works, the communications between them.

Both of these measures presuppose that the naval superiority upon these waters may be doubtful. But it is difficult to foresee the probable existence of any circumstances which would give this ascendancy to the other party. It is unnecessary to investigate the considerations which bear upon this subject, as they are too obvious to require examination. They are to be seen and felt in all those wonderful evidences of increase and improvement which are now in such active operation. A victorious fleet upon these lakes could disembark an army at any point. If a harbor were closed by fortifications, they would only have to seek the nearest beach, and land their men from boats, so that no defenses we could construct would secure us against invasion; and temporary block houses and batteries cannot be found already established. Although the attacks of any vessels seeking to enter the narrow harbors upon the lakes, if we could foresee the existence of any circumstances which would induce an enemy to endeavor to force an entrance into them.

As to the communication between the lakes, the inquiry from geographical causes is necessarily restricted to that from Lake Erie to Lake Huron, and to the straits of Michilimackinac. Of the former, almost sixty
miles consist of two rivers, completely commanded from their opposite banks, while the entrance into one of these, the river St. Clair, is impeded by a bar, over which there is but about eight feet of water. No armed vessel could force their way up these rivers while the shores were in an enemy's possession, who might construct batteries at every projecting point, and who, in fact, might in many places sweep the decks with musketry. As to the straits of Michilimackinack, they are too broad to be commanded by stationary fortifications; and to protect the construction and equipment of a hostile fleet upon the bleak and remote shores of Matchedaska bay, in the northeastern extremity of Lake Huron.

I am therefore of opinion that our lake frontier requires no permanent defences, and that we may safely rely for its security upon those resources, both in the personnel and material, which the extent and other advantages of our country afford to us, and which must give us the superiority in that quarter.

It may, perhaps, be deemed expedient to establish a depot for the reception of munitions of war in some of the peninsula of Michigan, and to strengthen it by such defences as will enable it to resist any coup de main which may be attempted. From the geographical features of the region, I do not think a position should be chosen from which the natural points of support, and are placed in immediate contact with a fertile and populous part of the neighboring colony. In the event of disturbances, the ordinary communications might be interrupted, and it would probably be advisable to have in deposit a supply of all the materials for offensive and defensive works, to be opened and to place these beyond the reach of any enterprising officer who might be disposed by a sudden movement, to gain possession of them. The expenditure for such an object would be comparatively unimportant, even should the contingency be judged sufficiently probable to justify such preparations.

I had the honor, in a communication to the chairman of the Committee on Military Affairs of the Senate, dated February 19, 1836, a copy of which was sent to the chairman of the Committee on Military Affairs of the House of Representatives, to suggest the mode best adapted, in my opinion, to secure our frontier against the depredations of the Indians. The basis of the plan was the establishment of a road from some point upon the Upper Mississippi to Red river, passing west of Missouri and Arkansas, and the construction of posts in proper situations along it. I think the ordinary mode of construction ought not to be departed from, Stockaded and of sufficient height to overlook the country. Four or five posts would probably be necessary for the purpose which I propose. These should be made as strong as circumstances will allow, with necessary stores, and the ruder indigenous tribes of that region. I think, therefore, that no works of a more permanent character than these should be constructed upon our frontier. A station at proper distances upon such a road, with the requisite means of operation deposited at the posts, would prevent collisions between them, and would, probably, afford greater security to the advanced settlements than any other measures in our power. The dragons should be kept in motion along it during the open season of the year, when Indian disturbances are most apt to be apprehended, and their presence and facility of movement would tend powerfully to restrain the predatory disposition of the Indians; and if any sudden impetus should operate or drive them into hostilities, the means of assembling a strong force, with all necessary supplies, would be at hand. And as circumstances permit, the posts in the Indian country, now in the rear of this proposed line of operations should be abandoned; and the garrisons transferred to it.

But it is upon our maritime frontier that we are most exposed. Our coast for three thousand miles is washed by the sea, and it is the jealousy of this, which has made the highest advances in all the arts, and particularly in those which minister to the operations of war, and with whom, from our intercourse and political relations, we are most liable to be drawn into collision. If this great medium of communication, the element at the same time of separation and of union, is left to the capricious and capricious obstacles to the progress of hostile demonstrations, it also offers advantages which are not less obvious, and which, to be successfully resisted, require corresponding arrangements and exertions. These advantages depend on the economy and facility of transportation, on the rapidity of movement, of intelligence, of information to threaten the whole shore spread out before him, and to select his point of attack at pleasure. A powerful hostile fleet upon the coast of the United States presents some of the features of a war, where a heavy mass is brought to act against detachments which may be cut up in detail, although their combined force would exceed the assailing foe. Our points of exposure are so numerous and distant that it would be impracticable to keep, at each of them, a force competent to resist the attack of an enemy, prepared by his naval ascendancy and his other arrangements, to make a sudden and vigorous attack upon our shores. I am bound to inquire how the consequences of this state of things are to be best met and averted.

The first and most obvious, and in every point of view the most proper method of defence, is an augmentation of our naval means to an extent proportioned to the importance of the place, and the necessities of the nation. I do not mean by the actual construction and equipment of vessels only; the number of those in service must depend on the state of the country at a given period; but I mean the collection of all such materials as may be preserved without injury, and a due encouragement of those branches of industry which are useful. I refer to the great increase which may be properly brought about by the Government so that, on the approach of danger, a fleet may put to sea, without delay, sufficiently powerful to meet any force which will probably be sent to our coast.

The great battle upon the ocean is yet to be fought, and we shall gain nothing by shutting our eyes to the nature of the struggle, or to the exertions we shall find it necessary to make. All our institutions are essentially, pacific, and every citizen feels that his share of the common interest is affected by the derangement of business, by the necessities, and by the uncertain result which may be produced. This fact impresses upon us our connection with the Government, and is a sure guaranty that we shall never be precipitated into a contest, nor embark in one, unless imperiously required by those considerations which leave no alternative between resistance and submission. Accordingly, all our history shows that we are more disposed to bear while evils ought to be borne, than to seek redress by appeals to arms; still, however, a contest must come, and it behoves us, while we have means and the opportunity, to look forward to its attendant circumstances, and to prepare for the consequences.

It is no part of my object to enter into the details of a naval establishment. That duty will be much more appropriately and ably performed by the proper department; but as some of the views I shall present on the subject of our system of fortifications must be materially affected by the plan of naval operations which, in the event of hostility, may be adopted, I am necessarily led to submit a few remarks, not professional, but general, upon the extent and employment of our military marine.

There is as little need of inquiry now into our moral as into our physical capacity to raise and train a navy, and to meet upon equal terms the ships and seamen of any other nation. Our extended commerce, creating and created by those resources which are essential to the building and equipment of fleets, removes all doubt upon one point;
and the history of our naval enterprise, from the moment when the colors were first hoisted upon the hastily prepared vessels, at the commencement of our revolutionary struggle, to the last contest in which any of our ships have been engaged, is equally satisfactory upon the other classes of naval properties, as well with reference to the execution of the work as to the manner of condition of the materials employed. And the costly experiment made by England, when she too hastily increased her fleet, about thirty years ago, by building ships with improper materials and bad workmanship, quite to forestall any prudence in this respect. We must act accordingly to our principle, and not be afraid to foresee and guard against any prudence in our own interest. The shattered character of the vessel is the highest eulogium which can be pronounced upon it.

With ample means, therefore, to meet upon the ocean by which they must approach us, any armaments that may attempt to force their way through any prudent consideration to do so. In the first place, though all war in which we may be engaged will probably be defensive in their character, undertaken to resist or repel some injury, or to assert some right, and rendered necessary by the conduct of other nations, still the objects of the war can be best attained by its vigorous prosecution. Defensive in its causes, it should be offensive in its character. The greater injury we can inflict upon our opponent, the sooner and the more satisfactorily will be the redress we seek. Our principal belligerent measures should have for their aim to attack our antagonist where he is most vulnerable. If we are to receive his assaults, we abandon the vantage ground; and endeavor, in effect, to compel him to do us justice, by inviting his descent upon our shores, and by all those consequences which mark the progress of an invading force, whether for depredation or for conquest. In this direction to the enemy must our force be directed, till once it is sailed, and by the ocean only can we seriously assail any Power with which we are likely to be brought into collision.

But independently of the policy of making an adversary feel the calamities of war, it is obvious that, even in a defensive point of view alone, the ocean should be our great field of operations. No one would advocate the project of endeavoring to make our coast impervious to attack. Such a scheme would be utterly impracticable. A superior fleet, conveying the necessary troops, could easily accomplish such an enterprise by disembarking on our shores, even if the best devised plan of fortifying them were consummated. And, from the nature of maritime operations, such a fleet could bring its whole strength to bear upon any particular position, and, by threatening or assaulting various portions of the coast, either attract or annihilate our antagonist where he is most vulnerable. The effect of this concentration, or render its object the move or concentration, or render it necessary to keep in service a force far superior to that of the enemy, but so divided as to be inferior to it upon any given point. These dangers and difficulties would be averted or avoided by the maintenance of a fleet to be disembarked on our shores. It is the duty of a fleet to be disembarked on our shores. It is the duty of a fleet, if at all, when it shall be detached from the coast, its coast, the coast, it will thus be defended on the ocean, and the calamities of war would be as little felt as the circumstances of such a conflict would permit.

As to the other advantages of a Navy, in the protection of commerce, they do not come within the scope of my inquiries; and are not therefore adverted to. Nor is it necessary, or indeed proper, that I should present these considerations of distance, of exposure, and of station, which would render a fleet numerically inferior, in the aggregate, to that of the enemy, yet still sufficiently powerful to prevent any attempt to undertake any armament which could probably be sent here.

It seems to me, therefore, that our first and best fortification is the Navy. Nor do I see any limit to our naval preparations, except those imposed by a due regard to the public revenue from time to time, and by the prudent maritime policy of our country. Much of the material employed in the construction and equipment of vessels is almost indestructible, or, at any rate, may be preserved for a long series of years; and if ships may be thus kept without injury upon the stocks, by being built under proper supervision, I do not see that should they be from the needful stock, as many as may be deemed necessary, and as fast as a due regard to their economical and substantial construction will permit, and to collect and prepare for immediate use all the munitions of war, and other articles of equipment not liable to injury or decay by the lapse of time. Nor do I see that these preparations should be strictly graduated by the number of seamen who would probably enter the service at this time, or within any short period. To build and equip such vessels properly, as well with reference to the execution of the work as to the manner of condition of the materials employed. And the costly experiment made by England, when she too hastily increased her fleet, about thirty years ago, by building ships with improper materials and bad workmanship, quite to forestall any prudence in this respect. We must act accordingly to our principle, and not be afraid to foresee and guard against any prudence in our own interest. The shattered character of the vessel is the highest eulogium which can be pronounced upon it.

But whatever arrangements we may make to overcome any naval armaments sent out to assail us, we are liable to be defeated and to be exposed to all the consequences resulting from some one of our enemies. And the practical question is, What shall be done with a view to such a state of things? As I have already remarked, any attempt by fortifications to shut up our coast, so that an entering foe, with a victorious fleet conveying a competent force, and disposed to encounter all the risk that might not serve to protract the enemy, would be useless in itself, and would expose to just censure those who should project such a scheme.

And on the other hand, the Government would, if possible, be still more censurable, were our important maritime places left without any defensive works. Between these extremes it is important to determine where it lies we must briefly look at the various considerations affecting the subject.

What have we to apprehend in the event of a war? Is it within the limits of a reasonable calculation, that any enemy will be able and disposed to debark upon our coast any bodies of troops? What are the consequences to our fortifications, and to endeavor, by this slow and uncertain process, to obtain possession of them? I put out of view the enormous expense attending such a plan; the distance of the scene of operations from the points of supply and recuperation with the consequent difficulties and dangers, and the possibility that the conveying fleet might be overpowered by a superior force, and the whole expedition captured or destroyed. All these are considerations which no prudent statesman, directing such an enterprise, will overlook. But beyond, there is a question bearing upon the military or naval point of view. Is there any object to be attained, sufficiently important to justify the risk of placing a body of land troops before one of these works, too strong to be carried by a coup de main, and endeavoring to destroy its defenses by a regular investment? I think there can be none.

I take it for granted that no nation would embark in the chimerical enterprise of conquering this country. Any army, therefore, thrown upon our coast, would push forward with some definite object, to be attained by a prompt movement, and by grave consequences. More than a century ago, demonstrated that an invading force could command little more than the position it actually occupied. The system of fortifications adopted in Europe is not applicable to our conditions. There military movements must be made upon.
great avenues of communication, natural or artificial, and these are closed or defended by a fortress constructed with all the skill that science and experience can supply, and with all the means of strength and power that can be used. A searching array must carry the posessions by esca rade or by siege, or leave sufficient detachments to blockade them, or must turn them and move on with all the difficulties attending the interruption of their communication, and with the dangers which such a force in their rear must necessarily occasion. The other is known to many of the European states, whose political safety depends upon their preservation. Their possession enables their government to meet the first shock of war, and to prepare their arrangements, political or military, to resist or avert the coming storm. And, although, in times of peace, it may not so much enhance a nation's military power as it did before the French Revolution, when, from causes which history is now developing, the armies set at defiance the received maxims of military experience, and, justifying their apparent rashness by success, reduced, with unexamined facility, or carried on their operations almost in contempt of, the strongest fortifications, yet it is still a character of importance which can never apply to the United States.

The possession of a capital in the eastern hemisphere is too often the possession of the kingdom. Habits of feeling and opinion, political associations, and other causes, combined to give to it an unrivalled importance. Internal parties contending for superiority, and external enemies aiming at conquest, equally seek to gain possession of the seat of Government. And the most careless observer of the events of the last half century must be struck with the fact that the fate of the case has been neither with the possessions of the states, nor with the generous magnanimity of their citizens, nor with the states, nor with the states, nor with the generous magnanimity of their citizens, nor with the states, nor with the generous magnanimity of their citizens. Under such circumstances, it may be prudent by powerful fortresses to bar the approaches to these favored places, and frequently to construct works to defend them from external attack, or to maintain their occupation against internal violence.

But the subject of this in our country, nor can there be till there is a total change in our institutions. Our seats of Government are merely the places where the business of the proper departments is conducted, and have not themselves the slightest influence upon any course of measures, except that is due to public confidence in the conduct of those departments. If the nation itself were willed, the result would be precisely the same. Or, if, by any of the accidents of war or public safety, the proper authorities were compelled to change their place of convocation, the change would be wholly unobserved, except by the few whose personal convenience would be affected by the measure. Nor have our commercial capitals any more preponderating influence than our political ones. And although their capture by an enemy, and the probable loss of property and derangement of business, which would be the result, might seriously affect the commercial community, yet it would not produce the slightest effect upon the social or political systems of the country. The power belongs to all, and is exercised by all.

It follows, therefore, that an enemy could have no inducement to hazard an expedition against any of our commercial places, or to make their possession lead to political results favorable to them. Washington may indeed be taken again, and its fall would produce the same emotion which was everywhere felt, when its former capture was known. But an enemy would lose from it with as few advantages as marked its first acquisition. It is, if it did produce the same, with as few losses as he won by its possession.

I make these remarks, because it seems to me that some of the principles of the European system of fortifications may possibly be transferred to this country, without sufficient attention having been given to these circumstances, both geographical and political, which require a plan exclusively adapted to our own condition.

I consider some of the existing and projected works larger than any existing or probable, and calculates for emergencies we ought not, with their expensive balance to anticipate in the attempt. It is the fact, the construction and preservation, but also to the greatest difficulty of depleting them, that the increased garrisons which must be provided and maintained, and the extent of land which must be devoted to the purposes of their management, is the increased garrisons which must be provided and maintained, and the extent of land which must be devoted to the purposes of their management, is that, they may be exposed to invest, both seaward and landward, and that they ought to be capable of resisting a combined attack; and in other words, that their water batteries should be sufficient to repel an assaulting squadron, and that their land defenses should be sufficient to resist the attack of the enemy.

It is certain that whatever works we erect should be so constructed as to be beyond the reach of any coup de main that would probably be attempted against them. And this capacity must depend upon their exposure and upon the facility with which they can be relieved. But this proposition is far different from one to construct them upon a scale of magnitude which presupposes they are to be formally invested by powerful land force, and which provides for their ability to make a successful resistance. A strong military or naval officer may be willing to risk something to get possession of an insulated post, and to hold it long enough to establish his enterprise before his adversary can be prepared, or succor obtained; and this, even when he looks to so other advantage than the capture of the garrison, and the effect which a brilliant exploit is calculated to produce, and when he is aware that he must abandon his post long before he can make any effectual attacks on the islands, and the islands are the only object of the operation. If there is such a work, it will be a question of calculation whether it is better to attack and carry it, or to seek another, though more distant point of debarkation.

I think there can be little doubt but there are few, if any, positions in our country which an enemy would not under such circumstances, avoid. He would be aware of the facility of communication which our rivers, canals, and rail roads afford, of the powerful force we should be prepared to make of steam in its various forms of application, and of the immense force which, in a short time, could be concentrated upon any one point, and it is certainly within the limits of possibility that he would venture, formally, to besiege one of our forts, or, if he did, that he would not repel his rashness. Neither the co-operation of his fleet, nor the nearer proximity of the place of landing to the object of attack, would induce him to undertake a perilous enterprise the slow process of besieging a fort, when by removing to another position, he would land in safety, and save in time, in promptness of movement, and in his escape from the peril of a doubtful contest, more than he would lose by the difference in distance. It is certain that any one were aware that the weakness of a work might tempt an enemy to attack it, and that it may be supposed the power of some of our fortifications to resist a siege may hereafter furnish the true reason why they may not be compelled to encounter one. Certainly the stronger a work is, the less will it be exposed to da-
country has been so often described by other travellers, and particularly by Mr. John T. Irving, in a late work, entitled "Irving's Indian Sketches," that I shall pass it over, merely to indicate a few of the most important events connected with the march to the Ottau village.

In consequence of the heavy rains which commenced falling nearly simultaneously with our leaving Fort Leavenworth, all the little prairie creeks, which in ordinary seasons contain little or no water, had become swollen to a remarkable extent, and the ford at the mouth of the Platte was now useless. At least a few inches of water might have been expected anywhere in the immediate vicinity of the Platte, but instead there was entire lack of water, and the ford was therefore rendered almost impassable. As the cold rain continued, the river rose in the most alarming manner, and the ford, which had been used at least ten years, was now found to be entirely useless. The country presented a truly frightful aspect. The great question then was, how are we to get our ordnance and wagons across the river? Various modes were suggested, but all seemed objectionable. At length a raft, or jam of logs, was found in a short bend of the river, which extended completely across the stream, and was said to be solidly embedded in the mud at the bottom. To throw a bridge across at this point, making the raft serve as a foundation, seemed the most feasible, as well as the most speedy and safe, mode of crossing. Accordingly we purchased the raft from each company, which, under the direction of Lieut. Steen, Lieutenant of Engineers, timbers were cut and laid about half way across the river, as a foundation on which to place puncheons. In less than three hours the bridge was half completed. In the mean time the river continued to rise rapidly. All engines were called in, and men were sent across the bridge to cut up the timbers, and to work among the logs, fishing in the Nemahow. Such a scampering had probably not been seen since the flood. Happily, all reached the shore in safety.

After the disaster of the morning, it became necessary to cast about for some other mode by which our baggage and equipment could be conveyed to the other side of the river. As good luck would have it, some one suggested the possibility, that the body of a small wagon belonging to one of the officers, might be so altered and equipped as to serve the purpose of a raft. Accordingly, I proceeded to the place of the raft, and on board the raft, and found to ride upon the water as though it had been its natural element, and by attaching ropes to each end of the boat, it could be drawn from shore to shore with great facility. While these preparations were going on, our entreprenur friend Capt. G---, who accompanied the expedition as guide, was employed in constructing another vehicle which, to me, was equally novel. This second non-descript was manufactured from the hide of an ox, which that morning had been butchered. Within two hours from the time the ox was quietly grazing upon the luxurious pastures of the prairie, his skin was upon the waters of the Big Nemahow, and conveying from shore to shore a burthen of six hundred pounds. In one day the command crossed in these boats with all its baggage without the slightest loss or accident, after which, the horses and mules were made to swim the stream.

The Jardian traders, Messrs. O'Fallon and Winter, who accompanied the expedition, were not equally fortunate in crossing the Nemahow. After crossing their goods in skin boats, and while they were engaged in swimming their homes, one of their men was drowned. After attempting to save him, he turned his back; and in endeavoring to regain his seat, the horse struck him with one of his feet upon the back of his head with such violence as is supposed to have deprived him of sense. He instantly sank, and owing to the swiftness of the current was seen no more.

A march of twenty-five miles brought us to the Little
DOMESTIC INTELLIGENCE.

MASSACRE ON BOARD A WHALE SHIP AT THE FEEJEE ISLANDS.—The New Bedford Mercury furnishes the following particulars of a massacre which took place on board the whale ship Awashonks, of Falmouth, at the Feejee Islands, by which Prince Coffin, of Nantucket, master, Alexander Coffin, and Mr. Swain, mates, and three seamen, whose names are not given, lost their lives. The margin is not cut.

The Awashonks while in the vicinity of the Feejee Islands ran near the shore, when a large number of natives came on board in the most friendly manner, bringing bread-fruit, yams, &c. which they presented to the captain and officers. They showed immediately on coming on deck a great curiosity to inspect everything they saw, particularly the harpoons, lances, and spades in the boats; and without the least suspicions of their intention, capt. Coffin, took these instruments out of one of the quarter boats and showed the chief who came on board, the manner which they were used in killing whales, and while he was employed in doing this, he had occasion to step forward a moment, and the instant his face was turned, a savage who had the boat-spade in his hand, aimed a blow at the unsuspecting captain which severed his head from his body. A general rush was now made by the savages when the crew, some of whom fled below, others aloft, and a part prepared themselves to sell their lives as dearly as possible. The mate after a desperate struggle wrested the spade from the native who had killed the captain and laid him dead on the deck; when (he the mate) went below for a moment, but returned on the deck and fought until overpowered by numbers and killed. The 2d mate jumped overboard and was killed while in the water.

The savages had now entire possession of the ship, and the chief took the helm and steered for the shore, where he undoubtedly would have grounded in a short time, had it not been for the presence of mind of a young lad by the name of Wood, belonging to Nantucket, who was wounded and had fled to the cabin at the commencement of the massacre. He judged by the known character of the South Sea Islanders, that if he could succeed in destroying their chief, (who was at the helm) his followers would flee. The plan was no sooner formed than executed, by discharging the pistol through the sky-light, which instantly killed the chief; at the sight of which, the ship was instantly deserted by the savages. Those of the crew who had hid themselves, now made a desperate effort, and sailed for Sandwich Islands, where the ship arrived in safety under the charge of the 3d mate as stated above—Three of the crew were killed on the deck, nobly defending themselves.

It is to be hoped (says the New York Commercial Advertiser) that commanding officer of the town, and war Vincennes, who was at the last accounts on his way to the Feejee and the adjacent islands, may have heard of the massacre of Capt. Coffin, of the ship Awashonks, and a portion of his crew, previous to leaving the South Pacific ocean, that he may avenge the deaths of those valuable officers and men.

KEY WEST, April 16.

On Monday, the 11th inst. the Cutter Jefferson, Capt. Jackson, arrived at this port, from St. John’s River, having on board Major General Macomb, and his Aid de Camp, Capt. Cooper; and Wednesday the 18th, she sailed again for Tampa Bay.

INDIAN AFFAIRS.—The Jefferson, from St. John’s brought no very important intelligence of the movements of the army. It appears to be the opinion of Gen. Macomb and other officers, that the propositions made by the Indians to Gen. Gaines for a cessation of hostilities were that the comest of the corn which was by the Indians, be sold to the Government for the supply of the army. It is said the Indians have expressed their belief that in the several engagements with that officer, they were the conquerors. Gen. Scott is moving down upon them in three bodies and we understand it is his intention, should the war not be over before the rains commence and the mosquito season sets in, to take possession of that depôt that the corn being nutriment to savages, and effectually confine them to the vergelades and morasses of the interior until the season for operation again comes.

The Army Medical Board which assembled at Baltimore on the 21st March, in pursuance of orders from the War Department, examined and approved the following named persons, applicants for admission into the Medical Staff of the Army:

Dr. BERNARD M. BYRNE, of Maryland.
" AUGUSTUS C. TURTELTO, of N. York.
" THOMAS R. JOHNSON, of Maryland.
" FRANCIS L. SEWALL, of Alabama.
" E. H. ABADIE, of Pennsylvania.
" RHEITT J. MOTTE, of South Carolina.

They will be nominated for appointment in the order in which they passed the examination, as above.

From the Albany Evening Journal of April 20.

FUNERAL HONORS TO THE REMAINS OF THE LATE GENERAL WILLIAM NORTH.

In pursuance of arrangements made by Committees appointed by the legislature, the common council, the Military association, Burgesses corps, and the Union Guard, whose province was placed under the charge of the Army, by the Union Guards, at half past 12, at 1 o’clock the procession was formed under the direction of Col. W. J. Worth, as Marshal, assisted by Capt. Ringgold, both of the U. S. army, in the following order:

Union Guards.
Albany Burgess Corps.
Hearse, flanked by the Military Association.
Eight Pall Bearers in Barouches.
Governor of the State.
Chancellor, Supreme and Circuit Judges.
Members of the Cincinnati.
State Officers.
Senate, preceded by its Officers.
Assembly, preceded by its Officers.
Corporation preceded by its Officers.
Citizens and Strangers.

At half past one the procession moved through the principal streets to the westerly bounds of the city, where the remains were received by trial officers who were to convey them to the family vault in Dunsburgh.

Minute guns were fired by Capt. Strain, and the bells tolled during the movement of the procession.

From the Washington Mirror.

We wish to express a pleasure in perusing a late number of the Cincinnati Advertiser, the following just account of the merits of Mr. REILLY’S Vapor Bath, from the pen of Mr. Dawson, the veteran editor of that paper. Mr. Reilly has made Washington his residence for nearly four years, during which time his deportment has been such as to gain the entire confidence of this sick, and, as he has been placed under the advice of physicians, and the esteem of all who have had the pleasure of his acquaintance. As to his baths,
there appears to be but one opinion respecting them among the army and navy, the medical gentlemen of this place, and the numerous persons, members of Congress as well as citizens, who have used them. Although differing from the editor of the Cincinnati Advertiser in some matters, we most cordially hope, with him, that the benefits of this important application will shortly be extended to our bold defenders by land and sea.

VAPOR BATH.

We are much pleased to observe by the Report of the proceedings of the Senate of the United States, that our fellow citizen, Boyd Reilly, is likely to be last rewarded: for his perseverance and assiduity in inventing and improving his Vapor Bath, from the use of which we have received important advantages, and among others, we can say that we have experienced great relief from a severe rheumatic affection in both our arms, which a few applications entirely removed.

Mr. Reilly has spent a long time in improving his apparatus, so as to make it available in the sick chamber, without removing the patient from the bed-side, and without the smallest inconvenience from the vapor. In this he has succeeded most completely.

The bill granting him compensation for his services to the army and navy, and for the right to use the bath in both, passed the Senate unanimously, and we hope he will be equally successful in the House of Representatives on Friday, 22d ult: That the Committee on Naval affairs, to which was referred the resolution of the Mayor and City Council of Baltimore in favor of the establishment of a naval yard at that city, with instructions to inquire into the expediency of making such an establishment, have had the subject under consideration, and report;

That there are already two naval yards established within the coves of the Chesapeake, viz: those of Washington and Norfolk, which are abundantly sufficient for all the purposes of the Navy in this quarter, and the Baltimore yard is:

Resolved, that it is inexpedient to establish a Naval Yard at Baltimore.

MILITARY.—The following appointments in the Brigade of City Guards, have been made by the executive of Maryland:

Samuel Smith, Brig. General and Commander.
Colonel William Steuart, 1st Regiment.
Colonel Columbus O'Donnell, 2d Regiment.
Lieut. Colonel E. P. Starr, 1st Regiment.
Lieut. Colonel Samuel Manning, 2d Regiment.
Major John Esterly, 3d Regiment.
Major William Pinkney, 2d Regiment.
Capt. C. C. Jamison, 7th Company, 2d Regiment.
Capt. Charles R. Barney, 9th Company, 2d Regiment.

The following is the reply of Captain Chase:

PENSACOLA, March 19, 1856.

SIR: The undersigned have been deputed by the citizens of Pensacola and its vicinity, to tender you their cordial congratulations upon the safe arrival of yourself and family from your recent visit to the north.

Your great talents in the arts and sciences extend far into the whole southwestern section of our country, by projecting works of Internal Improvement and procuring the means for the prosecution and completion of those works, have been witnessed by its citizens with the liveliest feelings of gratitude. To your intelligence, perseverance, activity, enterprise and weight of character, are we indebted for our present and prospective prosperity.

During your residence in Florida for six years and upwards, in the discharge of your important public duties, your intercourse with its inhabitants as an officer, and in private life as a citizen has ever been such, as to call forth your unqualified admiration.

The citizens of Pensacola and its vicinity, through the undersigned, beg leave to tender you, as a slight manifestation of their esteem and gratitude, a public dinner, at such time as will suit your convenience.

The Committee assure you, that individually, it affords them great pleasure in being the organ of this communication, and beg that you will accept their best wishes for your health and happiness.

We are, with great respect,

Your friends and fellow citizens,

ROBERT MITCHELL, Henry Heye, HENRY MICHELET,
FR. T. COMMMING, HANSON KELLY, JOHN CAMPBELL,
JOSEPH SERRA, JOSEPH GONZALEZ,
FRANCO MORENO, JUAN BRONSHAH,
W. A. BELL, PEDRO FRINTER,
HENRY ABERS.

To Captain W. H. CHASE,
U. S. Engineer, Pensacola.

The following is the reply of Captain Chase:

PENSACOLA, March 19, 1856.

To Robert Mitchell, Esq. and Committee of the citizens of Pensacola.

GENTLEMEN: I acknowledge the receipt of your note of this date, which you did me the honor to present in person, inviting me, in the name of the citizens of Pensacola, to partake of a public dinner, at such time as will suit your convenience.

It is with feelings of honest pride that, on this occasion, I have received from the citizens of Pensacola, assurances that my residence, amongst them, during the last six years, has not been altogether unproductive of some good, although their partiality has greatly magnified it. I am, however, only too apt to take a deep interest in the prosperity of Pensacola, and trust that the praise-worthy exertions which its citizens have made and are now making to add to its national advantages by the assistance of art, may be crowned with complete success. Looking to that period, then, as one of great rejoicing to all whose exertions shall have contributed towards it, I will venture to decline the
ARMY AND NAVY CHRONICLE.

honor which the warm heartedness and liberality of my fellow-citizens have prompted them to offer me, by a public dinner, and to suggest that any festivities of the kind be postponed until the work is done, in order that the throngs might have the opportunity to express to the citizens of Pensacola, the assurances of my great respect and esteem, and for yourselves my best wishes for your individual happiness and welfare.

W. M. H.

CHASE.

A REVOLUTIONARY BELLIC.—On the 19th of April, 1776, a band of patriots, known as the Massachusetts Congress, and over whom the lamented Warren presided, had assembled at a church in Bellingham, a few miles from Boston, to deliberate upon the aims and condition of the colony. Among the number were the selectmen of the town, a minister of the parish, and the leading and most respectable citizens. In the midst of their deliberations, a King’s officer came dashing up to the porch, and suppose the meeting to be of a religious character, called out the Chairman of the Selectmen, and informed him that the Sheriff had ordered warrants to issue for the Selectmen, and thereupon, placing a letter in his hand containing the precept for that town, he again galloped away. The Selectmen returned to the conclave, and after some further deliberation it was determined to join the colonists and openly strike for liberty.

The next day news arrived of the disastrous conflict at Lexington, and the murder of American citizens by British soldiers. “To arms! to arms!” was the cry that ran through every hamlet and kindled the patriot fire in every breast. From this moment important events followed each other in rapid succession. The brave Warren, true patriot, more man than a child, in the old church, led his injured countrymen on to victory, but unfortunately found an early grave amid the slaughter of Bunker Hill. Years rolled on, liberty triumphed, and peace once more smiled upon the land. But where were they who had given their all for their country? The men who had perished on the 19th of April, 1775? Scarcely one remained to tell the story of that meeting, and among the absent, the Selectmen, like Warren, had laid down their lives for their country. Forty years afterwards the Selectmen of Bellingham were forgotten, or remembered only in the literary love of the times in which they lived.

The church had been appropriated by their hands, and doubly consecrated to political and religious freedom, to liberty and to God, was still standing. At this time, the population becoming dense, it was deemed necessary to enlarge the church to accommodate the growing congregation. The cost of the repairs was submitted to a person then attached to the church, but at present a resident of this town. The enlargement of the building rendered it necessary to remove the pulpit to another part of the house, and on raising the pedestal from a base it had occupied for about sixty years, what was the surprise of those present to find between it and the flooring - revolutionary papers, and, among them, a letter superscribed “to the Selectmen of the town of Bellingham,” with the seal unbroken, and over the superscription the significant note of authority—on his majesty’s service. On opening the letter they found the plan of the usual design of authorising the Selectmen “to hold an election of Representatives to his Majesty’s Great General Court, to convene at Boston, on Wednesday the 8th day of May, 1776.” It was dated at Boston, the 19th of April, and was signed by Stephen Greenleaf, Sheriff of Suffolk county, desiring the Selectmen to be filled up with the names of the Representatives elect, signed by the Selectmen and Constable, and returned to the Sheriff two days previous to the meeting of the General Court. Here had it reposed in silence for forty years, and might have still slumbered on had it not been discovered by an old man who found a box upon a forgotten floor. The ancient document is now before us, just as it was issued sixty-one years ago: and when we look upon its antiquated letters, its capitalizations, and the great reverence it manifests for his Royal Majesty, we cannot but select—Where now is your Royal Majesty, with all his cruelty and oppression to the suffering colonists? Where is his vengeful hand to strike down the rebels? They have all gone down to the grave, and are alike forgotten. And where are the Selectmen of Bellingham? They too are gone, and so are most of those who fought for freedom; and while their descendants are divided and quarrelling among themselves, the sons of liberty are unmourned and unnoticed. They were the temple of freedom, and if unchecked, will soon succumb in prostrating it with the earth.

BRITISH NAVY ESTIMATES.

A London correspondent of the New York Journal of Commerce, under date of March 7, gives the following account of a debate in the House of Commons respecting an increase of the naval force, asked for by Ministers.

The navy estimates were brought forward on the 4th, which led to some discussion relative to the proposed increase of the marine force, as alluded to in the King’s speech. The total excess of the estimates over those of the last year is £246,000, which has arisen from the necessity of augmenting the number of seamen and marines to the ordinary or yard craft. The increase in the vote of the present session is £254,000, and the number of new hands 6500 men and 1000 boys, making the whole number of seamen 20,000, and marines, and 2000 boys. England has only ten line-of-battle ships afloat, whilst Russia has 18 in the Baltic and had 23 more at the review at Cronstadt, independent of the frigates, small craft, and armed steamers. Mr. Hume objected to the proposed increase, though he admitted that the present naval estimates were the best and most complete it had ever been his fortune to see. He contended that the American commerce was quite as extensive as the British; it visited every part of the world where the British flag had access; and yet the force which the Americans considered ample for the protection of their commerce, was one tenth of that required by this country.” Sir James Graham, a former First Lord of the Admiralty, read that portion of the President’s message which suggests the employment of boys in the navy, “as a means of strengthening this national arm,” and congratulated himself on finding so powerful a weapon in the hands of his party.

One passage from Sir Robert Peel’s speech is worthy of profound attention, for it proves that the right honorable baronet has an idea that we are sleeping on a volcano; ‘he was bound to give credit to government and not call for the precise basis on which this vote was made.’ Mr. Peel pointed out that the building up of the navy was the only way to make the United States a reason for maintaining our navy in a state of great efficiency. Though there was no immediate apprehension of danger, yet considering the peculiar position of these countries, and the importance of maintaining our own naval pre-eminence, he did think that if these countries took steps to augment their naval force, it was but exercising a provident circumspection on our part that this country should not remain idle, or be necessary to resort to sudden and comparatively insalutary expedients for supplying the deficiency.

“Notwithstanding Sir Robert tried to evade the real point and, as usual, to substitute an argument for the augmentation of the navy on the quarrel between the United States and France, yet I am glad that Lord John Russell placed it on its right footing. ‘He did not mean,’ said the noble leader of the Commons, ‘to say that the disposition of Russia was other than peaceful; but still, the diminution of our means of defense is a cause for alarm.’”
Circles, is stated to be a very strong and indignant one. The occupation of the Republic by the troops of Austria, Prussia and Russia must be considered as a direct infrack of the treaty of Vienna, but what is to be thought about the transportation of all proclaimed persons to the United States, I shall leave to you and your government to determine. After a vote of 110,302 pounds had been agreed to for salaries of officers connected with the Admiralty, the Committee rose, thus agreeing, unanimously, to the proposed increase. I have been requested to insert in the above, because at the present moment, and under all circumstances, it cannot fail in proving interesting to your readers.

WASHINGTON CITY;

THURSDAY, MAY 5, 1836.

To Correspondents.—The Address of the Temperance Society of Fort Snelling, and the communication signed ‘Justice,’ in relation to Politics and Officers, are received, and will appear next week.

A new Theoretical and Practical Treatise on Navigation; in which the auxiliary branches of Mathematics are examined, Logarithms, plain and spherical Trigonometry, the motions of the Heavenly Bodies, Tides, variation of the Compass, etc., are treated of. Also the theory and most simple methods of finding Time, Latitude, and Longitude, by Chronometers, Lunar observations, single and double altitudes, are taught. Together with a new and easy plan for finding dist. lat. dep., course, and distance. By M. F. Maury, Passed Midshipman, U. S. Navy.

Naval Administration, Key and Biddle, Minor street, 1836.

We have a mortal antipathy, such as some men have to cats, to all long titles, because, nine times out of ten, Mike Macbeth’s ‘Weird Sisters,’ they hold out hopes and promises, that are never consummated, in the sense understood. Mr. Maury’s book, we are happy to say, furnishes an honorable exception to our general experience in these matters; and, though his title page might almost pass for a catalogue raisonné of the exact sciences, it is in reality nothing more than a true bill of the fare, which the reader, who sits down to the perusal of the work, will find faithfully spread before him, in its proper form and order. We can remember the time, not very distant, when a book, issuing from the gun deck of one of our men-of-war, would have been regarded as a prodigy—a thing entirely “out of the course of nature”; but thanks to the “march of mind,” in this age of steam, our ships now seldom return from their periodical cruises, without bringing with them some evidence, that our naval glory is not limited to mere deeds of heroism. The country owes as much to the younger officers of the navy, for their valuable services in the cause of literature, as it does to their gallant elders for the laurels they have gathered in many an ocean fight.

The system of examination to which midshipmen are subjected, conducted as it ought to be, and no doubt is, with rigorous and impartial severity, and often in cases where the youthful candidate for promotion has just returned from long service at sea, probably without a “schoolmaster,” and still more probably without books of instruction, or what amounts to the same thing, with books that required the explanation of a teacher before they could be understood, must necessarily render such a work as this of Mr. Maury’s peculiarly acceptable to the service. It is true, as he modestly avows, that his book contains neither new theories nor new principles; but it is the more valuable, perhaps, on that very account, since it brings together, in convenient form and compass, all the elementary information necessary to the student, to enable him to comprehend established theories and principles; which necessary information he would otherwise have been compelled to seek in various works, not always easy of access, and still seldom sufficiently perspicuous to reward the labor of research. He, who can make the results of his own experience serve the purpose of facilitating the progress of those who follow him in the same path of life, may perhaps be considered as much a benefactor, as the inventor of new theories, or the discoverer of new systems: it will, at least, be granted, that his labors are more immediately useful, and to a much wider extent.

The work has been executed with great neatness, and much care seems to have been bestowed to render it accurate, not only by the author, but by the printer, upon whose fidelity, after all, much of the value of every such work must necessarily depend. It gives us great pleasure to be able to subjunct the following testimonials of the estimation in which the work is held by those having “authority” to bestow substantial fame.

Naval Department,
April 9, 1836.

Com. John Rodgers,
President of the Board of Navy Comrs.

Sir:—I have to request that you will add the “New Theoretical and Practical Treatise on Navigation,” by M. F. Maury, Passed Midshipman, to the list of books furnished vessels of the Navy going to sea.

I am respectfully yours,
M. Dickerson.

Sir:—I have had much pleasure in the perusal of your “New Theoretical and Practical Treatise on Navigation,” the plan and arrangement of which are original: it contains little or nothing superfluous, and every part of it appears to be as clear and intelligible as the nature of the subject will admit. Such a work has long been wanted in our Naval Service, and, I am happy to think, is about to find its way to this Station, and I recommend it to be used by all the Professors of Mathematics and Nautical science in the Navy of the United States.

I am, dear Sir, your respectfully,
Edward C. Ward,
Prof. Math. U. S. N.
Passed Mid. Matthew F. Maury,
U. S. Navy.

U. S. Navy Yard,
Gosport, 7th March, 1836.

I have examined a Treatise on Navigation, written by M. F. Maury, of the U. S. Navy, and have no hesitation in recommending it to students of that science. The explanations are clear, the views are illustrated by many examples, and the new arrangement of some of the tables exemplify the calculations of the Navigator.

Mr. Maury is deserving of great credit for that work, and I wish him every success.

P. J. Rodriguez,
Prof. Math. U. S. N.

A Summer on the Prairie.—We are indebted to an officer, who accompanied the detachment of the U. S. Dragons under Col. Dodge last summer, for a journal of the expedition; the first number will be found in this paper, and the series will be continued from week to week until completed.
CRUISE OF THE VINCENNES.—We are happy to learn by a letter from Captain Aulick to the Secretary of the Navy, a copy of which we have obtained, that this ship arrived at Lintin on the 2d January.

The letter is dated on the 6th Jan. and the following are extracts from it.

"In the course of my passage across the Pacific, I visited the Washington or Northern Marquessas, the Friendly islands, and the Navigator islands; Wallis's island, Rotumah, Guam, Lord North's, and the Pellew islands. From the last named I brought off, after considerable difficulty with the Chieftains, the only remaining man (two) of the crew of the Mentor, left there as hostages by Capt. Barnard in 1832. Of the six of his crew, which he left on North's island, four died, and two made their escape in a passing vessel some months ago.

"I have taken, off the different islands I have touched at, in all twenty American seamen, who had been left on shore, in a destitute condition, by different whalers and traders; the greater part of whom I have put on board, by their own consent, of various American vessels that were in want of hands.

"We have all enjoyed remarkably good health, and there are this day but five on the surgeon's report, and those with but trifling complaints. I had but a few days since anticipated the gratification of being able to report this interesting cruise had been thus far accomplished without the occurrence of a single casualty or accident of any description whatever; but unfortunately on the very day we entered the China Sea, William Williams (O. Sea.) fell from aloft overboard, and although the life-buoy was dropped near him, and every effort promptly made to save him, he was so much injured by the fall that he almost immediately sank and was lost.

"I shall leave here for the West coast of Sumatra, by way of the Straits of Malacca, as soon as I have put my sails and rigging in order, and taken in the necessary supplies of provisions and water, which will probably be about the 25th inst., and I hope to arrive in the United States in all June.

The Norfolk Beacon of Friday says:—"We learn that the U.S. frigate Columbia, recently launched at Washington, will leave that place in a few days for the Navy Yard, Gosport, where she will be fitted out. Her destination is said to be the coast of Brazil, where she will hoist the broad pennant of Commodore Ballard." Upon enquiry, we cannot find that any orders have yet been given as to the removal of the Columbia to Norfolk; but there is no doubt that she will be sent down there shortly.

The impression out of doors, among Naval gentlemen, is, that her destination is the Pacific.

FLORIDA CAMPAIGN.

Public anxiety has been relieved by advices from Gen. Scott, who reached Tampa Bay, with the forces under his command, on the 5th ult.

Although no general battle was fought, many combats and sharp skirmishes took place. The horses were much reduced, and many broke down on the march. The measles and mumps had considerably reduced the effective force. Further operations will depend upon events not yet developed. During the march of the several columns, 13 men were killed and 28 wounded. The number of Indians killed is supposed to be 24.

Three hundred and ninety-nine friendly Indians (one-third warriors) were reported to be on board the transports, for their destination in the west.

We have not room for further particulars this week.

We make room for a portion of the Report of the Secretary of War on the national defence, from the importance of the subject, in preference to other public documents of older date. This report will be concluded in our next, or in the number succeeding.

In another column will be found a list of the unfortunate men, forming the detachment under the command of Major Dade, killed by the Seminoles on the 28th December last. There are two or three others, whose names could not be ascertained with certainty.

Also a list of those killed on the 21st December, in the action on the Withlacoochee, between Gen. Clinch and the Seminoles.

PILOTAGE OF VESSELS OF WAR.

An act, entitled "an act to amend the several acts, concerning pilots," was passed by the Legislature of Virginia on the 23d March last, one of the sections of which is as follows:

"Be it further enacted, That the rates of Pilotage for vessels of war shall be as follows:—to wit: from Sea to Hampton Roads, two dollars and seventy-five cents per foot; from Hampton Roads to Sea, two dollars and seventy-five cents per foot; from Hampton Roads to Norfolk or Portsmouth, one dollar and twenty-five cents per foot; and from Norfolk or Portsmouth to Hampton Roads, one dollar and twenty-five cents per foot; and for every day a pilot shall be detained on board a vessel of war, three dollars.

This act went into operation on the 1st May, 1836.

ERRATUM.—In the sketch of the late Major General Brown, in our last, the first sentence of the paragraph commencing at the foot of page 264, should read thus:—"There is a moral grandeur in the efforts of unaided intellect forcing its way by its own intrinsic powers over the conventional barriers of custom and prejudice to the commanding eminence of society."

COMMUNICATIONS.

THE ARMY—OFFICERS' MESSES.

Major Editor.—I have observed in the Chronicle of the 23rd of March, an article on the subject of Army Officers' Messes, signed Pike; the first part of that article published in some former number, I have not seen; but that portion of the article which I have seen shows plainly that the object of the writer is to have a mess system established in the army, for the benefit of the officers, and to take from the Commandants of Posts, the extra allowance, now made to them in the shape of double rations, and to apply the same to the use of establishing Regimental or Post messes. I am myself in favor of such messes, provided they are formed by the mutual consent of the officers, and that they are so established, and properly managed, conducive to the personal comfort and convenience of the individuals composing them; and are often even creditable to the Post, or to the Corps in which they exist. But I am entirely opposed to the interference of the Government, or of the General Officers, in the control and management, in any shape, as proposed by Pike; or to any other control, other than by such rules as the officers themselves may establish for the government of their mess. But with a view to uniformity, the hour for eating, both for the officers and soldiers, should be established by the Government, as it is in the Army Regulations, and an observance of that rule should be strictly adhered to, by every member of the army in camp or garrison. Thus far I, for one, will placidly consent and agree to a rigid control by Governmental authority, on messes; for, if not necessarily bad, it is not well regulated messes which require but little time or trouble, to set an extra plate and chair to a visitor, and I am of the opinion that it is rarely the case, that a Post mess have to entertain strangers. Every officer of the army, on arriving at a military Post, has a right to the hospitality of the Post, with the means within his own control; and if the individual should decline the offer, on account of preferring to receive such hospitality or entertainment from some other officer of the Post, with whom he may enjoy a stranger-partaking equitable and friendly intercourse, I can see no reason why he should not be allowed to enjoy that preference. Citizens also, on arriving at a military Post, look first to the commanding officer for civilities, as such, when it is his duty as an officer and a gentleman, to extend it to them; this will remove the case, why they should be subjected to double rations or not; and the commanding officer, being thus expected to entertain, and being in honor as well as duty bound to support the credit of the Post, in that particular, I say—give him an extra allowance for such purpose, and if he should from parsimony, or other cause, neglect so important a matter, let him bear the shame and disgrace, consequent thereon.

Pike, by the way of showing the delinquency of commanding officers of Posts, on the foregoing subject, aludes to two commanders, of whom he appears to have some knowledge, one of them (a Major, he says) has never been observed to extend to his officers, even once a day, a compliment such as is due to his officer; and the other, who dines twice a day; and all that I can see to be objectionable in the matter is, that the Major does not take his meals, at the hour prescribed by the Army Regulations, and consequently neglects his duty in that particular.

The other commander alluded to by Pike, it appears does not entertain strangers and visitors arriving at his Post, as becomes his station and duty; but takes them for their entertainment to a mess of officers of which he is a nominal member; but Pike has not told us that this commanding officer does not contribute to the support of that mess, with the agreement on the part of its members, to whom it is charged, to bring to their table. If he does not make such contribution, and does intrude his visitors upon a mess of officers, in the manner above mentioned, he must be considered by every honorable man, to be highly culpable,
and justly merits an appropriate punishment; but in place of publishing his conduct to the world, as Pike has done, through the medium of the public press, much to the prejudice of the character of the officers of the American army, his name should have been brought before the army alone, in the shape of charges of ungentlemanly and un-officer-like conduct, and an action would bear before a General Court Martial, in all such cases.

Again, it would appear from Pike’s story that the messes usually provided with the single officers of the Post to which they belong, and do not make any extra contribution to the mess, on account of entertaining strange visitors. In this matter I am again constrained to disagree with him in opinion, for I cannot think that there is a commanding officer in the army of the United States desirous of principle as to lay himself liable to any such charge.

In another place, Pike says that in some instances officers’ messes are reduced to the necessity of using clothless tables, and tin cups. In this particular I also differ with him in opinion, for I do not believe that there is a mess of officers, at any regular garrison in the army, reduced to any such necessity; or they must be poor indeed if they cannot supply themselves better than that, when a plain set of table furniture, for a mess of five or six officers, would not cost at any Post in the army, more than it would cost them to replace a set of cups, that are very generally used by officers in field service, and it is, there, the most appropriate cup that they can use.

I have neither time nor inclination to follow Pike through the whole range of his long and labored argument, on the subject in question, and therefore in conclusion I will say that in my judgment, Pike will be justified by almost every visitor arriving at a military Post, to be entertained by the commanding officer, as has been shown above—and as his expenses on that account must consequently be much greater than that of any other officer or association of officers at the Post; he should have an allowance made to him by the Government, adequate to the expenses incident on entertaining such persons as may, from time to time, call upon him in an official or public capacity. The necessity of such an allowance has been long recognized in our service, and I can see no just grounds for any material reduction of the amount at present allowed; and if any officer to whom such allowance is made, should be known to make an improper use thereof, or not use it as necessary, in the manner for which it was made, he should be held to account for his delinquency.

It has not been my intention, in the course of the foregoing remarks, to cast any ill-natured censure upon Pike, for I expect that he is honest in his intentions; but Heaven avert that he should be considered portraying the feelings and conduct of the officers of the army generally on the subject of entertainments; for if I thought so, I assure you should not soon again look a visitor in the face, to whom it might be my duty or inclination to extend civilities.

It will be borne in mind that the writer of the foregoing is an unmarried officer, and is a member of a mess at a Post, where the officers entertain many strangers, and are entertained by officers at any military Post in the United States.

JUSTICE.

EXAMINATION OF MIDSHIPMEN.

Mr. EYTON.—I have read with attention the remarks of a “Post Captain,” together with the accompanying extract, signed by “A Father,” that appeared in your last number relative to the examination of midshipmen; and in submitting a few observations upon the same subject, I will for the present confine my remarks principally to the examination of a Post Captain. He has touched upon a subject, which, although it interests all others, interests the midshipmen most, and very naturally it should, for upon the result of their examination, depends in a great measure their future prospects in this world; for if, after six or more years of hard duty and anxious toil, they are finally rejected by a board of examiners, they are obliged to relinquish their adopted profession, unless they accept in it some situation below that which they formerly occupied, and this their professional friends are not in a condition to offer, yet the change of their ill adaptation to commence anew in business or any other profession, they too often despair of ever after meeting with success; their disappointment coupled with mortification, the severest pang of all to a sensitive mind, often leads to a state of despondency, which if not removed at this period results in a man of the highest notions of the real character of the applicant—which the former necessarily must, from an examination—I leave it for all who take an interest in this subject to decide, whether each of these examinations should be left in the hands of the Post Captain to the young officer, and promote the welfare of the service.

So far as my opinion is involved, I must say that, notwithstanding I can never forget the mortification which I felt upon first witnessing my number, still were it not to be determined, I would rather it should be done upon a hearing and by a board of experienced officers of my own profession, than that it should be left altogether to chance, or the influence that I might wield in obtaining an appointment early in the year, in preference to the thousand applicants who I understand remain registered for one or two years longer.

Again, the writer adds:—“great injustice may be done by putting one (officer) below another, whose chief merit is perhaps is derived entirely from inferior (superior), we presume he means) advantages afforded him for the acquirement of professional knowledge,” etc. True it may, but I would ask if the same rule does not apply to the unfortunate lad, who from his being preferred to other applicants, must necessarily rank them, whether upon examination he be found better qualified or not? Rather is not the same injustice done in withholding from one a title which he merits, because he was an unfortunate applicant, and would not be a great check to the ambition of a young officer to know beforehand, that however well he may pass, it does not advance him one inch nearer promotion, and if he be the last appointed in the same year, that he is continually to remain at the bottom of his date?

In conclusion, I agree with the writer that there is no much harmony of opinion among the officers of our profession upon professional superiority; and from many individual cases, can affirm upon my own knowledge, that there is much force in the common expression, that “an examination is not an examination,” yet there are exceptions to the general rule, that do not conflict with the principle which I wish to maintain—that upon the grand fundamental principles of the profession on which the young officers are particularly examined, there can be but little diversity of opinion. Therefore I am glad to see the examination that a competent and experienced board of examiners, where sufficient attention is paid to these principles, and the naval character of the candidate, each being considered in relation to that of others examined, there need be but little difficulty in estab-lishing a very correct criterion of worth. As to the ad-mission of the plan, more probably in reallie circumstances, it is useless always to expect justice. The thousand little ills that are ever watchful over the fate of man, often warp the best intentions and mar the brightest anticipations. We must admit our incapability of deciding for ourselves, as well as our reluctance to submit our fate to the chances of a lottery, while a
ARMY AND NAVY CHRONICLE.

FALCONER.

April 16, 1836.

FORWARD OFFICERS IN THE NAVY.

Mr. Editor: From the conclusion of my remarks on forward officers, I was led to believe that those whom it concerned ("the worthless and depraved") would not, in open display of public scorn, have made an attempt to prove what wrong, in right, or dissipation commenda-

ble to them; afterwards, finding none to assail and destitute of feeling, to take any of the reasons to himself, makes a virtue of necessity, throws aside the martinet, fistic the quill, and censures me for exposing the faults of a class of men to the public, one of which he is kind enough to supply me with.

There is no bad impression pre-existing against forward officers. It is almost superfluous for me to state that all persons in the Navy are treated as they deserve, and the rules will not admit of any dereliction from duty, or course of conduct that does not strictly accord with propriety and uniformity. I do not know that captains are in the habit of treating forward officers otherwise than as they deserve; to the contrary I have ever seen them treated according to their merit and behavior. If not Grampus seen, or known, one forward officer on board of a ship in the Navy, that I have never known to deprive others of? and would not similar indulgences have been extended to all, had all been alike worthy? Many of the boatswains and gunners prefer sea service, and apply for orders accordingly. The Secretary never orders a forward officer to sea before the expiration of his three months' leave of absence, unless at his own request.

There are no "fixtures" in our Navy yards;" the forward officers attached to them deserve the preference, as much from a professional experience as their gentlemanly deportment; and were they to be removed, I would not object, but there are others, on the reverse, as present, equally competent to fill their places, and the only advantage that they have is the society of their friends. The pay of the gunner of a schooner or sloop of war is the same as that of the oldest gunner in the service, now at Norfolk, (exclusive of house rent) and on board of a frigate or ship of the line it is much greater.

It is absolutely necessary to give acting appointments, and if a favorable report is made of a man's conduct at the end of twelve months, he will in nine cases out of ten receive a warrant. The deficiency in the number of boatswains and gunners is not due to the want of persons to confer them on; and not from any illiberality of the Secretary.

When an officer is serving under an acting appointment, he is upon trial, and if he sets decency and decorum at defiance by violating every rule of social order, he has no cause to complain, if he meets with the punishment he deserves.

Appointments are not procured by any seaman who chooses to apply; there is no Cabinet or Congressional influence in the selection of these men; none but the most experienced and meritorious of the petty officers are recommended, but when promoted, they do not always answer the expectations formed of them. These acting appointments are easily taken away, and it is better to have it so, than to be so compelled to call a court martial to punish every incorrigible officer.

Court martial is an expense to the government, and injury and disgrace to the service; the jack is out place at the mizen.

I have not said, (nor has any one else that I am aware of) that all boatswains' mates and quarter gunners would make good boatswains or gunners; but it is from among these rates that the necessary officers must be found. I regret as much as "Grampus" that there is not a greater number of this class of officers, and have given, what I presume are the reasons for there being so few.

I am not ignorant of any thing connected with the Navy; for the last ten years I have only been master of my time, five weeks. This will not receive a pretty good apprenticeship, and if Grampus has told the hauzer of his "Social Friendship," from 1d a day service, and my durn from this, that uncle may be pretty well stretched.

I gave a "cost" to no individual, but openly disavowed any personality in my remarks; but Grampus knows the proverb: "if the garment fits him he may wear it," and it is no fault of mine if it pinches. At all events, I presume Grampus will not speak again on this subject; if he do, I think it will be blood. A word at parting; his appeal to the naval officers was very in-

judicious, as they are a jury that will be sure to decide against him, in favor of BARNEY.

PROCEDINGS OF CONGRESS,
IN RELATION TO THE ARMY, NAVY, &c.

IN SENATE.

THURSDAY, APRIL 21, 1836.

The bill from the House making appropriations for the civil and diplomatic expenses of the Government for the year 1836, was read twice and referred to the Committee on Finance.

HOUSE OF REPRESENTATIVES.

Thursday, April 21, 1836.

Mr. Mercers submitted the following resolution; which, by consent, was considered and adopted.

Resolved, That the Secretary of War be directed to lay before this House a statement of the various surveys made pursuant to the act of April 30, 1830, specifying therein, as nearly as practicable, their respective cost; the date of the commencement, and, where already completed, of the report of each survey; and distinguishing such as have had their entire expense defrayed out of the general fund, appropriated by that act, and the several appropriations subsequently made for the same object, from those surveys which have been made at the joint cost of this Government, and various States, Corporations, or associations of individuals.

On motion of Mr. Riple.

Resolved, That the Committee on Roads and Canals be instructed to inquire into the expediency of authorizing the Secretary of the Treasury, by commissioners (subject to the approbation,) to select sites and prepare reports and estimates of highways, to be built upon the western rivers and lakes, for disabled sick seamen and boatmen on said waters.

Mr. Haws asked the unanimous consent of the House to submit the following resolution:

Resolved, That the bill presented on the 7th day of January last, authorizing the appointment of a Select Committee to inquire into the expediency of reporting a bill for the reorganization of the Military Academy at West Point, be made the special order of Tuesday next, between the hours of twelve and one o'clock.

Objection being made, Mr. Haws moved to suspend the rules for the purpose indicated; which was decided in the negative—yeas 106 nays 67; two-thirds being necessary.

Pursuant to order, the House went into Committee of the Whole on the state of the Union, Mr. Mehlberg in the chair, on the state of the Treasury, the President of the United States to accept the service of volunteers.

Mr. McKav moved to amend the bill by restricting the power proposed to be conferred on the President to the same limitations provided by the act of 1793—namely, that volunteers should be received only on the eve of invasion, insurrection, &c. In a time of profound peace, Mr. McKav thought this limitation necessary and proper.

Mr. R. M. Jounk, in the Clerk's table a letter from the Secretary of War in favor of the provisions of the bill, which was read. The passage of the bill, Mr. J. believed, would be a saving of expense, and would at
ARMY AND NAVY CHRONICLE.

Mr. Sevier was opposed to any restriction, and gave a brief description of the present position of the western and Mexican frontiers, as proving the necessity of the immediate passage of the bill.

Mr. Reynolds, of Illinois, stated, that he considered it a duty to apprise the committee of the restless and even hostile disposition of the Indians on the northwestern frontiers. He knew the matter was a difficult one; he knew that a change of the Indian laws had been in contemplation for a great many years. He thought the matter would reflect for a moment on the condition of the western frontier, it struck him that they would retain the maximum of numbers in the bill.

Mr. Canfield, of Kentucky, said; Mr. Speaker, I entirely concur with the gentleman from New York, (Mr. Cambrong,) in the necessity of strengthening our military force on the western frontier—for himself, he should vote for an increase of our force in that quarter, as well as account of the danger which we had a right to apprehend of a rupture with the Indians, as from the events which are occurring in the province of Texas. Sir, said Mr. C., if our information does not deceive us, a most blood-stained war is waging on our borders, between the Texans and Mexicans—a war which, for its cruelty on the part of the Mexicans, is without an example in the history of savage nations—a war in which the Texians are almost broke in the rules of civilized warfare—shall we not prepare to see at least, that the bloody flag shall halt at our border?

Mr. C. said he did not desire to embarrass the administra-
tion, in the present condition of the country and Mexico, by any hasty movement of his—nor would be on the present occasion, inquire how far it might be the duty of this Government to compel the Mexicans, under the provisions of their own government, to withdraw their troops.

He wished to say to the administration, that in such an ef-
fort, they should have their cordial support.

Mr. Mason, of Virginia, did not understand that this bill, in any way proposed to enlarge the size of the military forces of the United States, but merely authorized him to relieve the States, by accepting, in lieu of the force to be furnished by them, the services of volunteers.

Mr. W. of Virginia was opposed to an increase of the army; nevertheless, he felt constrained by the highest considerations of duty, to support a measure for the protection of our frontier. He believed that there were causes now at work, which would make it necessary to prepare for an Indian war on our western frontier, of an extent and ferocity which had not been witnessed.

As to the invasion spoken of, he thought no sensible man would entertain such an idea for a moment; and as to that fellow, Santa Anna, if the House and the Government were of the same opinion Mr. T. was, they would cut off all diplomatic intercourse with such a wretch.

Mr. Canfield, of Kentucky, said, he did not say there was any fear of an invasion by a Mexican army; what he said was that the Mexicans might reach our frontier, and that circumstance might be the cause of stirring up the Indians to hostility against the United States.

Mr. Thompson would give the bill his warm support, if it was amended so as not to call the troops into service unless in case of an actual Indian war, or good reason to ap-
proach.

He considered five thousand men sufficient, and six months long enough period of time.

Mr. Harrison said it was the part of wisdom to prepare for a difficulty with those western Indians while they could be prevented from getting away to arms.

He considered it best to have a good and sufficient force to put down the war at once if one should break out, and therefore hoped the bill would pass.

The House again went into Committee, Mr. Muhlenberg in the Chair. The final bill was again taken up.

The amendment of Mr. McKay was agreed to as modified.

The question recurring upon the amendment of Mr. Ash-
by, which proposed to raise an additional regiment of dragoons.

Mr. Ashby said infantry were of little use to put into the woods against Indians, but they were serviceable, and were necessary to occupy the posts; and in case of a war
ARMY AND NAVY CHRONICLE.

as fall back and protect the frontier. The war in Florida showed the truth of this assertion. Mounted men were the only kind of troops to put into the field against the Indians, but it must not be supposed that one little regiment, however brave and skillful they might be, could protect the frontier extending from the lakes to the Gulf of Mexico.

Mr. GRANGER rose to give his assent to the general purposes of the bill, but particularly to the amendment of the gentleman from South Carolina. One word in relation to what had been said by his colleague, (Mr. Camblee,) it seemed that a war panic must be kept up somewhere, and he supposed an army would next be raised to protect us from the invasion of Savannah in Augusta. 

Mr. CAMBLEE observed that he had said nothing about invasion by Savannah. What he had said was that the army raised for the purpose of the变更, it might stir the Indians to commit depredations. Mr. GRANGER regretted that his colleague should have connected Savannah's name even with our frontier Indians. He said, if his blood-stained flag should ever be brought so near our territory that its folds could be seen, the valley of the Mississippi and Ohio and the whole western country would be poured upon that frontier, and his colleagues as well as himself, would know, that the hordes of Kentucky and the Tennessee riflemen were in the field, the enemy had better look out. 

Mr. RIPLEY addressed the House at some length. He made the same point of the gentleman from Missouri would prevail. It was substantially the same as Mr. W. himself had proposed to another bill some eight or nine weeks ago, and which, if adopted then, would have saved the Government at least half a million of dollars.

Mr. MANN, of New York, expressed his surprise that this bill should be embarrassed by gentlemen coming from the district in which he lives, in it, with those positions which he conceived to be highly objectionable; such as the one pending, to incorporate a new force in the regular army of the United States: in other words, to increase the standing armies, in the minds of the people of Georgia and Alabama, and the effect of this amendment, if adopted, would go far to secure the peace and tranquillity of that quarter.

Mr. HAMREY replied to Mr. MANN, and supported the amendment to the bill. He said he had heard the voice of the temper of the Indians at present on the western and southwestern frontier, from whom apprehensions were justly entertained. He disavowed the fact, that the American Government has been long always well mounted, and that the prairies afforded ample forage for their sustenance, as also for the existence of our own horses. As Texas had been allotted by the laws of the nation to the American Government at this moment under his control, he went to the army with all the energy of a man to do the business with success, and the presence or absence of the Indians was a question of such magnitude that it would be of the greatest importance to the Government of the United States to have a force at its command.

Mr. GILLET moved to insert the following words in the amendment: "if the President shall hereafter deem such expedition necessary," to which Mr. ASHLEY accepted as a modification. 

Mr. GILLET would notice the additional force for the western frontier should be provided for.

Mr. ASHLEY then withdrew his acceptance of Mr. GRANT's modification, and accepted that of Mr. WITTERS of Florida, "or instated riflemen." Mr. MANN, of New York, said a few words in rejoinder to the gentleman who had replied to him. He was not opposed to the bill, but he could not bring himself to consent to the expediency of raising all at once so large a body of cavalry as ten thousand men. He was in favor of limitation, and of not to the utmost extent they could go, especially without any information having been furnished to prove its necessity.

The debate was further continued by Messrs. ASHLEY, WHITE, of Florida, MCKEON, EVERETT, THOMPSON, of S. C., HOAB, R. M. JOHNSON, ADAMS, BOND, and WILLIAMS. The amendment of Mr. ASHLEY was then adopted—yeas 96, nays 40.

Mr. HARDIN moved to amend the first section by adding the following: "In the same manner as the militia of the several States and Territories are now appointed and commissioned, and such must be mounted men, when in service, shall be considered." Agreed to.

Mr. ADAMS moved to insert a specific appropriation of $300,000 for the pay of the troops to be employed under the provisions of the bill. Agreed to.

Mr. McKEE contended there was no necessity for a special appropriation, because the number of men was provided for and their pay was regulated by the bill.

Mr. ADAMS could not subscribe to that doctrine. He thought they might as well throw out all the special clauses in the civil list bill and make a general enactment for so much as was required for that branch of the service, as leave this bill without specifying the precise sum to be expended in the object of it.

Mr. R. M. JOHNSON was willing to accept the amendment.

The motion was then agreed to.

Mr. ADAMS moved a proviso to the bill, that nothing therein contained should be construed to deprive the persons so called into the service of the United States of any privileges belonging to the militia, when called into the service of the Government, which was agreed to.

Mr. WITTERS moved to strike out the fourth section, providing for the payment of horses lost in the service: agreed to.

Mr. EVERETT moved to limit the term of service from twelve months to "six or" twelve months; agreed to.

The bill was then laid on the table, and the committee took up the bill to provide for the better protection of the western frontier.

Mr. SIEVER proposed an amendment to the bill, pending which the committee rose and reported the first bill and amendments; and the latter asked leave to sit again.

The House then adjourned.

List of Soldiers killed in the battles on the Withlacoochee in Florida, on the 25th and 31st December, 1833.

* Died 8th January, 1836, of wounds.

ARMY.

First Lieut. I. P. Simonson, Dragoons, now in Florida, ordered to Washington for duty in the Indian Department. Second Lieut. H. Swartwout, 3d Infy., assigned to temporary duty at West Point.

REINSTATED.

Captain B. L. E. Bonner has been re-instated by the President, by and with the advice and consent of the Senate, as Captain in the 7th regiment of Infantry, to take rank from 4th Oct. 1835, and ordered to proceed immediately to Fort Gibson and report for duty.

RESIGNATIONS.

NAVY.

*Officers of the Schooner Shark.*

Wm. Boerum, Lieutenan Command.

Recent orders and changes.

Asst. Surgeon R. M. Balzer, to the Hospital at Philadelphia.

Asst. Surgeon L. W. Minor, to theREADME at Baltimore.

Lieut. W. M. Armstrong to the command of the Resemblance Ship at Norfolk, vice Lieut. A. Fitzhugh, relieved.

Lieut. G. C. Nokes, on Coast Survey, to be attached to Sehr. Experiment.

Mid. W. Scandrett Smith for duty at the Resemblance, Norfolk, in place of P. L. C. H. Poor, promoted and relieved.

Ship Warren, Captain Taylor, sailed from Key West on the 10th ult. for Havana and Pensacola.

Ship Vincennes, Capt. Allrick, was at Lissington about the 10th Jan. from the islands in the Pacific.

MAILS.

For the Mediterranean will be made up, as usual, on the 10th and 25th of each month, by sea or land, for New York.

For the Pacific, on the 6th, to be forwarded as usual by packet from New York on the 10th, via Kingston, Jamaica. Letters may be also forwarded by the brig Uto, to sail from Baltimore, in about fifteen days for Valparaiso.

MARRIAGE.

At Charleston, Mass., on the 16th ult., N. A. PRENTISS, of the U.S. Navy, to Miss ABBY WELSH, daughter of SAMUEL PAYTON, Esq.

DEATHS.

At West Point, of scarlet fever, on the 18th ult., CATHERINE, aged 6 years and 7 months; on the 17th, JAMES, aged 4 months; and on the 24th ult., of Dr. W. W. WHITTON, U. S. Army.

At Fort Gibson, on the 25th March, WASHINGTON, eldest son of Lieut. W. S. WOOD, of the U.S. Army, in the third year of his age.

REVOLUTIONARY SOLDIERS AND PATRIOTS.

In Baltimore, on the 19th ult., after a few days illness, Mr. JOHN WILLIAMS, in the 75th year of his age. He was in the army at the south, at the battle of Eutaw, commanded by Col. Josy Eagan Howard. He lived and died respected by all who knew him.

Near Yanceyville, Caswell county, N. C., the 2d ult. Mr. JONATHAN STARKIE, aged 76 years.
REPORT OF THE SECRETARY OF WAR ON
NATIONAL DEFENCE.

(CONTINUED.)

To apply these remarks to the plan of fortifications partly completed and partly projected. Fort Monroe, on the beach of the James, is an inland fortress, and requires, by the estimates of the Engineer Department, two thousand seven hundred men to garri-
sion it in time of war. Its full armament consists of 412 pieces of different descriptions and calibers. I have been desirous of comparing its superficial extent with some of the better known European fortresses; but the available information could not be obtained within the short time that could be allowed for the inquiry. I understand from General Gratiot, however, that it is probably larger than almost any of the single works in Europe which do not enclose towns within their circuit. Drinkwater, in his history of the siege of Gibralter, states that 372 guns were mounted upon that fortress.

The object to be attained by Fort Monroe, in conjunction with Fort Calhoun, intended to mount 228 guns, is to prevent an enemy from entering Hampton Roads, a safe and convenient anchorage, because this bay is perfectly land-locked, and has sufficient depth of water for the largest vessels, and is, withal, so near the capes of the Chesapeake that it fur-
nishes the best station which an enemy could occupy for annoying our commerce, and for committing depreda-
tions upon the shores of that extensive estuary. In case of war, the Commandant would not command the entrance into the Chesapeake; nor is Hampton Roads the only safe anchorage for a hostile fleet. Their possession, therefore, does not exclude an enemy from these waters, though they will compel him to resort to less convenient positions from whence he may, if he wishes it, annoy our commerce.

The object to be attained by Fort Monroe is that of a land fortress, and it is that of the Chesapeake, and finding the entrance into Hampton Roads guarded by sufficient works, though much less extensive than those at Fort Monroe, would necessarily consider whether the possession of that road-
stead is so important as to justify the disbanding of a large portion of our military force to attack it by regular approaches; and this in the face of the strenuous efforts which would be made to relieve it by all the aids afforded by the most improved facilities of communication, and by the light and heavy steam batteries which, upon the approach of an enemy, would be disposed on the beach in which, during periods of calm or in certain winds, could approach the hostile ships, and drive them from their anchorage or compel them to surrender, and most of which, from their draught of water, could take refuge in the inlets that other armed vessels could not enter.

And even if the works were carried, they could not be maintained without the most enormous expense, nor in fact without ef-
forts which no government, three thousand miles of coast, and all this while Lynnhaven bay, York bay, the Rappahannock, Tangier Island, the mouth of the Potomac, and many other places, furnish secure anchorage, or land from which an enemy, hav-
ing the superiority, could not be excluded, and while, in fact, a great part of the Chesapeake may be consider-
ed as affording good anchorage ground for large ships.

Nor is it only equal to Hampton Roads, but most, or all of them furnished stations for occupation and obser-
vation, and it would be unnecessary to purchase the inferior advantages of Hampton Roads, by the sa-
crifice and hazard which would attend the effort. The occlusion of this roadstead does not secure Norfolk, im-
portant as it is, from its commerce and navy yard; it only prevents the access of the enemy to the interior line of defence, which may be considered as necessary to, and, if necessary, independent of the other. And a land force, deeming the destruction of the navy yard at Norfolk a sufficient object to justify such an expedition, would not set down before Fort Monroe, if its scale of defence were far inferior to what it now is, but would debark at Lynnhaven bay, where there is no impediment, and march in five or six hours through an open country to Norfolk.

New York is our most important harbor, and its defences should provide for every reasonable contingency. The Engineer report recommends three classes of works: an exterior one for the protection of the harbor; an interior one to shut up Raritan bay; and a third to prevent a hostile fleet from approaching the city through the Sound, nearer or on the vicinity of Throgs Point. The importance of the first class cannot be doubted. That of the second depends on the value of Raritan bay to an enemy as an anchorage, and on the utility of excluding him from a landing at Graves end looking to the task of Long Island, whereas a fort at New York, would, by land, and would find no works to prevent his approach. The two forts proposed to be erected at Throg's Neck and Wilkins's Point, eight miles further up the Sound, would compel him to debark beyond the reach of his guns, and would thus add one more distance, which, in this climate, and while the Harlem river would be interposed between him and the city, on the Long Island side there would be no difference but that occasioned by the distance.

It is obvious, then, that, in the consideration of this plan, involving an estimated expense of $3,450,000, and sufficient garrisons, in time of war, of nine thousand men, a close investigation should be made into all the circumstances likely to influence the operations of an enemy. Is the anchorage ground between the Narrows and Sandy Hook of sufficient extent to make it safe to land from the coast of New Jersey? Is the anchorage ground from the coast of Long Island, if a convenient one exists, so great as to require these preparations? The same ques-
tions may be asked respecting Wilkins's Point. The work at Throg's Point is in the process of construction; and as the pier is only about three fourths of a mile wide at this point, I think its construction would be suffi-
cient for this line of defence, till the proposed general ex-
amination can take place.

The situation of New York affords a fine theatre for the operation of floating batteries; and whether a suf-
cient number of them would secure it from the designs of an enemy before the full completion of the ex-
tensive system of permanent fortifications recommend-
ed, is a question deserving investigation. Such an in-
vestigation I recommend: and after all the necessary facts and considerations are presented, the Government should proceed to construct this commercial metropolis of the country in state of security.

The works at New port cover about twenty acres, and will mount 38 guns, and will need for their defence about two thousand four hundred men. I cannot, my-
self, foresee the existence of any city in the United States that would be a more secure point of land in the heart of New England, constructed, not merely to com-
mand the harbor of Newport, but to resist a siege which would, probably, require nearly twenty thousand men to carry it on. I am at a loss to conjecture what ade-

ARMSY AND NAVY CHRONICLE.

quate motive could induce a foreign Government to de-
tach a fleet and army upon this enterprise. The ex-
 pense would be enormous. The French army that in-
vaded Egypt was less than 40,000 men, and required
for its protection and transportation between 500 and 600
vessels. The army that conquered Algiers was about
equal in force, and required, it is said, about 400 trans-
ports, besides the ships of war. This scale of preparation
for such a movement as this is one of the main reasons
may enable us to form some conception of the arrange-
ments that would be necessary to send across the ocean to
this country, in the present-day of its power, an expedi-
 tion strong enough to form an establishment upon our
shores, and to equip it with supplies necessary to its
subsistence and operations.

It may be supposed, indeed, by the Board of Engi-
eers, that an army would find sufficient reason for the
occupation of Rhode Island in the consideration that it
would afford a secure lodgement whence expeditions
could be sent to every part of our coast. But it is to be
observed that no part of Narragansett Bay is necessary
for the safety of a hostile fleet, watching that part of our
coast. Gardiner’s Bay, in that vicinity, is a most safe
and convenient station, which was occupied by the Bri-
tish during almost the whole of the late war and it is
probable it cannot be detached from any of the plan for
fortifications that can be constructed. If it can, by float-
ing batteries, so may Narragansett Bay, and the enemy
thus be prevented from occupying the latter also, with-
out these extensive arrangements, requiring, after Fort
Adams shall have been completed at an expense of one
million dollars and two and a half million for the other
forts, and a sea-wall to be constructed and ele-
vember hundred and fifty seven thousand dollars to be ex-
pended.

I did not think that the most prudent forecast ought
to lead to the supposition that an army would
seize such a position would be sent to our country, or
that any circumstances could enable them to maintain it
in the face of the vigorous efforts that would be made
to recover it, and in the midst of a country abounding
in all the means to give effect to their exertions. But
perhaps the most striking objection to the conceptions
of this extensive plan is, that under no possible cir-
cumstance, can it effect the desired object. That ob-
ject, if I understand it, is not the mere exclusion of
an enemy from Rhode Island, but it is to prevent him from
taking possession of a safe and convenient position, with
which he can menace his means of naval superiority, to
any other part of the coast which would thus be exposed to his depredations.

The value of Gardner’s Bay as a place of naval ren-
dezvous, I have already described. Block Island, in its
neighborhood, might be occupied only for a lodge-
ment; and so could Nantucket Island and
Martha’s Vineyard, and these are only a few hours’ sail
from Narragansett Bay. Buzzard’s Bay is also a safe
and capacious harbor which cannot be defended, and
Martha’s Vineyard sound affords commodious places of
anchor. A fleet riding in these mouths would have
under its command all the islands in this group,
and could secure its communications with its land forces,
encamped upon them, which would thus be enabled
at any proper time, to throw itself upon other parts of the
coast. Moreover, if there were not a can-
non mounted upon Rhode Island, however acquainted with the topography and resources of this
country, would select it as his place of arms, if I may
so term it, when there are islands in the neighborhood
which would answer this purpose nearly as well, and
which, either raised to the same shore of the Mediterranean
or not, he could maintain his naval ascendency; and longer than that he
could not, under any circumstances, occupy Rhode
Island. And if I rightly appreciate the strength and spi-
rit of that part of the country his tenure in any event,
would be short and difficult. I do not mean to convey the
idea that it would be easy to resist such attempts, but it should be;
but I do not think that precautions should be taken against events which are not likely to happen.

As there is no naval establishment here, it is not necessa-
ry to enter into any question concerning defensive ar-
rangements exclusively connected with that object.

I am inclined to the opinion that it is proper to fortify
Mount Desert island, on the coast of Maine, and
that the expense is estimated at five hundred thousand
dollars, and the number of the garrison competent to
maintain it at one thousand men. This proposition
is founded, not on the value of this harbor to us, for it
possesses little of that, but rather on the account of its importance to the enemy. Were there
no other secure position they could occupy in that
quarter, and which could not be defended, I should think
the views submitted upon this branch of the subject en-
sure any measure. But the circumstances of the
expedition upon this coast, according safe anchorage and which are
are either not capable of being defended, or from their
great number, would involve an enormous expense,
which I need not sound views of the subject could justify.

An enemy, therefore, cannot be deprived of the means of
stationing his men upon this coast. I do not suppose that this expenditure of Mount Desert island is encountered, it
ought to be clearly ascertained that the difference, in
its practical advantages to an enemy, between the occu-
pation of Mount Desert island and that of some of the
other roadsteads in this quarter, incapable of defence,
will not be a strong reason for such measures. My present impression is, that it would not.

And on the subject of the roadsteads, generally, with
a few exceptions, depending on their local positions,
I am inclined to this opinion that any attempt to fortify
them would be injudicious. I do not speak of harbors
which can be defended by means of a number of mere anchorage grounds, deriving their value from
the shelter they afford. If all could be defended, and
an enemy excluded from them, the advantages would
justify any reasonable expenditure. But this is imprac-
tical. A number of these roadsteads are of so much less
danger that they may not give such marked superiority to
those we can defend over the others we cannot, as to lead
to any attempt to fortify them, in the first instance, and
to maintain garrisons in them during a war.

I have adverted to these particular cases, in order to
represent the difficulties the commission would have to
meet for the number of general observations; certainly not from the remo-
test design of criticising the reports and the labors of
the able professional men to whom the subject has been
referred, nor of pursuing the investigation into any fur-
ther detail.

Considering the duty of the Government, to afford ade-
quate protection to the seacoast, a subject of paramount
obligation; and I believe we are called upon by every
consideration of policy, to push the necessary arrange-
ments as rapidly as the circumstances of the coast and
the speed of the means of execution of the work will allow.

It will be perceived, that the amount of an enemy,
should be defended by works fixed or floating, suita-
ted to its local position, and sufficiently extensive to
resist such attacks as would probably be made against
it. There will, of course, after laying down such a gen-
eral rule, be much latitude of discretion in its applica-
tion. Upon this branch of the subject, I would give
the opinion of the engineer officers great and almost
controlling weight, after the proper limits are es-
ablished. These relate, principally, to the magnitude
of the works; and if I am correct in the views I have
formed on this point, I am persuaded that the report pre-
tended is necessary. Works should not be pro-
ected upon the presumption that they are to be exposed
to, and must be capable of resisting the attacks of a Eu-
ropean army, with its battering train, and all its prepa-
rations for a regular siege. Neither our relative cir-
cumstances, nor our means of resistance, are such as we
shall probably be brought into conflict, can justify us in
an anticipation.

All the defences should be projected upon a scale
proportioned to the importance of the place and should
be calculated to resist any naval attack, and any
assault that a body of land troops may make upon
them. But further than this, it appears to me we ought
not to go. The results at Stonington, at Mobile Point,
at Fort Jackson, and at Baltimore, during the late war, show that formidable armaments may be successfully resisted with apparently inferior means. These indeed do not furnish examples to be followed, as to the scale of their enterprise. They might have shown that stations and batteries have done in our country against ships of war.

It is to be observed that the great object of our fortifications is to exclude a force from our harbors. This end they ought fully to answer; and in this problem the defense is the primary object.

1st. That they are able to resist any naval batteries that will probably be placed against them; and

2nd. That they also be able to resist any coup de main, or escalade which might be attempted by land.

An open battery, under many circumstances, might fulfill the purposes of an intermediate part; and before these works should be closed and regularly constructed. It is not to be denied that the proper boundary between the magnitude and nature of the works necessary to attain the objects indicated, and those required to resist, successfully, a formal investment, will, in its result, become a matter of doubt; any that instances may not be stated which might induce an enemy to open his trenches against one of these works, because its capacity for defense was not greater. That capacity, however, with relation to the question under consideration, has a far more intimate connexion with that of the enemy, and if unnecessarily large, they entail upon the country a serious evil in the increased means for their defence, independently of the additional expense in their construction. It is principally, therefore, in the latter part of this paper that I have presented the doubts which I have expressed upon this point.

Among the hypothetical cases herebefore stated by the Board of Engineers, was one which supposed that an army of twenty thousand men might be assembled upon one of the flanks of our coast, and that we ought to be prepared at every important point, to resist the first shock of such a force. I have already glanced at the reasons, geographical, political, financial, and prudential, which, in my opinion, leave little room to expect that any enemy will, hereafter, project an enterprise of this magnitude, so certain in its expense, so uncertain in its result, and so calculated to do us more harm, when it is in the power of others to produce as much good. The Board of Engineers, in their report, state that the defenses at New York are so numerous and so powerful that an attack by that city, is considered as no longer a danger; and, indeed, that the enemy, in an attack on this city, will be certain of no advantage, and that the victory must be in our favor. This opinion is shared by all the military leaders; and it is certain that we cannot do better than have confidence in our own resources, and hold out as a hope to our men, that they shall be able to resist the attack of an enemy, when we have the advantage of taking the first step.

During the period which I have observed since the last war, we have had a great deal of care in our population, and all our other resources have probably increased in a still greater ratio. Certainly some of the facilities and means of defence are augmented beyond any rational expectations. The power of transporting troops and munitions of war is already a matter of daily increase, and the new inventions are found necessary at this time, still this does not bring into question the wisdom of the original measure. And as it is, they are the most valuable and useful; but the experience we have acquired may be profitably employed in re-examining the plans proposed for the prosecution of the system, and inquiring whether the change which has taken place in the condition of the country will not justify a corresponding change in the nature of our preparations, and whether we may not depend more upon floating, and less upon stationary defences.

During the period which I have observed since the last war, we have had a great deal of care in our population, and all our other resources have probably increased in a still greater ratio. Certainly some of the facilities and means of defence are augmented beyond any rational expectations. The power of transporting troops and munitions of war is already a matter of daily increase, and the new inventions are found necessary at this time, still this does not bring into question the wisdom of the original measure. And as it is, they are the most valuable and useful; but the experience we have acquired may be profitably employed in re-examining the plans proposed for the prosecution of the system, and inquiring whether the change which has taken place in the condition of the country will not justify a corresponding change in the nature of our preparations, and whether we may not depend more upon floating, and less upon stationary defences.

The improvements which are making in the application of steam, have furnished another and most important agent in the work of national protection. There can be but little doubt that floating batteries, propelled by this agent, will be among the most efficient means of coast defence. In our large estuaries, such as the bays of New York, of Boston, and of Chesapeake, they will be found indispensable; and one of the most important advantages to be anticipated from the works at Old Point Comfort is the security they will afford to the floating batteries co-operating with them, and which will find a secure shelter in Hampton Roads. A hostile battery about the Chesapeake. We had just come out of a severe struggle, and calculated the means of annoyance to which it would be exposed by these formidable vessels. During a calm they would take a distant position, insuring their own safety, while, with their heavy guns, they might cripple and destroy the enemy; and their position on the batteries which can be brought to bear on the fleet, and to receive, when necessary, that they could not be purposed. I think it doubtful whether a squadron would anchor in the Chesapeake, or proceed up it, if a competent number of these batteries were maintained and placed in proper positions.
A SUMMER UPON THE PRAIRIE.

No. II.

Delegation from the Ottos—arrival at their village—its situation—the Chief "Jutan"—his character—quarrel with his brother "Blue Eyes"—kills "Blue Eyes"—"Jutan’s" vices—death of his favorite—her burial—a delicious dish.

About 1 o’clock on the evening of the 8th of June, the bright waters of the Platte river could be seen in the distance, rolling on in the direction of the mighty Missouri. A march of ten miles would bring us to its banks and halted for the night. We had hardly pitched our tents when several Indians were discovered galloping towards us. The arrival of several Otto Chief’s announced our proximity to their village, from which we were distant about ten miles. They had previously been advised of our approach and had come out as a delegation of their tribe to meet us and bid us welcome to their village. Upon their signifying their intention to camp with us for the night, and accompanying the command on the morrow, they were invited to seat themselves and partake of our fare. This invitation was accepted with little unnecessary ceremony, and indeed it might be, for it is doubtful whether either of our guests had tasted of fish, flesh or fowl, for a month previous. For some length of time, beef, bread and codde disappeared from before them as by magic. The repast having been finished the inmates of the house retired to their piths and gave a "cack" and after exhausting all topics of conversation, they quietly rolled themselves in their blankets to dream of the morrow.

At 9 o’clock in the morning of the 9th, we took up our line of march for the Otto village. We had not proceeded more than five miles, when we were literally surrounded by Indians; some dressed from head to foot in all the gaudy colors of the rainbow; while others could boast of nothing but a small piece of cloth or strutting about the loins. The deficiency of clothing, however, was generally made up in red paint, with which they were completely covered, and a great many men destitute of their skins. Many of their horses had evidently been decorated for the occasion, some with eagles’ feathers tied to their tails, fore-top and mane, with a scalp hanging from the bits of the bridle, and their bodies fantastically painted with various colors.

As soon as the command came in sight of the village, the male Indians, old and young, were seen rushing out to meet us. Those who could raise a horse of any description were mounted; while those who could not, hastened towards us on foot. Upon passing their village the command became general. The tops of their dirt houses were literally covered with women and children, while a thousand measles, half starved dogs kept up an incessant yell below. Two miles west of the village we encamped.

The Otto village is situated about one mile from the right bank of the Platte river, upon a beautiful bluf, or second bank. It commands a full view of the surrounding country and the river with its hundreds of islands, covered with cotton wood and willow. The Elk-horn, a large stream falling into the Platte, is just about a mile and a half west of the village, stretching out to the North West, its banks studded with timber, until the dark green line which marks its course is lost in the distance. Much military skill is displayed, both in the location and internal arrangement of this village, the credit of which belongs to the Chief of the Ottos, "Jutan." The village is of a conical form, both in and above the ground; the ground appears, in the first instance, to have been excavated to the depth of two from three feet. The roof is supported by several sticks of timber which are forked at the top; these are from ten to fifteen feet long, and so arranged as to form a circle. Upon the forks of these timbers other timbers are laid, and upon these are arranged long poles, one end resting upon the ground and the others coming together at the top. Around the village a high fence of brush is woven, work a netting of willows, bound together by strips of bark, is placed. Over the whole, dry grass is thrown, to prevent the dirt from falling through. The roof is then covered with dirt to the thickness of from two to three feet. These lodges are from fifty to seventy-five feet in diameter. The Indian is but little troubled with flies as they escape through the aperture left for that purpose at the top. Around the fire mattrasses, manufactured from willows or rushes, are placed upon the ground, which serve as apologies for chairs. A camp kettle or two, together with a few spoons made of wood or buffalo’s horns, complete the cooking utensils of these remoter abodes.

The Chief Jutan is at this time, probably, the most noted and popular Indian belonging to any tribe under the protection of our Government. His stature is somewhat above the ordinary size and well proportioned. His countenance indicates much good humor, while his mien is dreaming with his next sleep should be the sleep of death. Either disdaining to take advantage of his victim, while thus unconscious of his danger, or wishing more fully to wreak his vengeance upon his offending brother, he awoke him and informed him of his murderous intention. His brother then had a chance to speak with him; but, as usual, he was unconcerned; his only request being that Jutan should sleep one night; and then, if no change was wrought upon his mind, he would submit to his fate as became a brave man. Jutan could not be moved, and plainly told his brother that his determination was formed; that he had committed an injury which time could never repair that nothing but his blood ever could or would atone for it; and, without allowing a reply, he deliberately levelled his rifle and sent a ball through his heart.

This deed of savage revenge, for a time, rendered Jutan extremely odious to his tribe; so much so that it became necessary, for his personal safety, that he should seek protection from a neighboring tribe. His active mind now devised a plan which, as he rightly calculated, ultimately resulted in his recall and restoration to favor. By exciting the neighboring tribes to make constant inroads upon his people, he now bestowed his favors by giving them corn, &c., Jutan saw plainly that his tribe would soon feel the want of his advice and influence in their councils, and his skill and bravery at the head of their war parties. The Ottos, from the success which attended his stratagems, were greatly troubled. They were in constant fear of their enemies, while, for want

*This is a substance used by all Indians in the place of tobacco for smoking. It is either a weed which grows after having been killed by the frost in the fall; or a kind of weed, found only in the vicinity of the Rocky mountains, called Mountain Tea.
of a suitable chief, their was great commotion and much
divil discord among themselves. The nation
became divided into separate bands under different petty
chiefs, each of whom was jealous of the other. A council of
the principal men of the nation was finally called,
which decided that a deputation should be sent to
Jutun and ask him to come to them and try to
induce him to return. Jutun received them with great
apparent cordness and treated their proposition with con-
tent. After much persuasion and many highly flattering
and advantageous promises on the part of the deputa-
tion, he finally consented to accompany them back to
his village. He was accompanied with a number of
people, whom he had so successfully duped. Dog feasts
and dancing became the order of the day. Their trou-
blesome neighbors became civil and friendly, which was
of course attributed to the fear of the great war chief,
Jutun; and the old rogue is to this day the idol of Chief
of the palmetto land and exercises almost unlimited influence
over his subjects.
In the fall of 1832, Jutun sustained a severe loss in
the death of his favorite among six wives. She was young
and beautiful, and accompanied him the year previous to
Washington, where she of course attracted much attention,
and received many presents, but which were partly owing
attributed to her personal charms. At her death he refused
to go to his former residence; the whole nation was put into mourning
by blacking the upper half of the face of every man,
woman, and child. After the usual time for mourning
and preparing the body for burial, it was conveyed to.
A deep grave was dug upon a prominent hill, a short dis-
tance from the village, in which she was deposited, to
gether with every article belonging to her while living, in-
cluding many articles of great value, which had been
 Presented to her at Washington City. The grave was
then filled in, and a heavy stone set upon it. The horse,
strong enough to bear the weight of the stone. The head
which had honored his covering, he was thrown
upon a large fire. After the hair had been completely
singed off and the carcass allowed to roast until its
whole surface began to crack, it was taken from the
fire; and deprived of these hungry staves, with all tral
relish and avidity with which a hungry board of Alber-
denmen could demolish a green turtle or a fine lobster.

Oseola, the Seminole chief, it is said, shot General
Thompson, in revenge for having once put him in irons.
To show that this savage is not entirely destitute of
generosity in his disposition, the following statement is
given by the New York American, on the authority of the
brother of the officer to whom it relates.

In the fight between Gen. Clinch's troops and the
Seminole men, some directions were given by Oseola to
his Indians to avoid shooting Lient. G , though leading his men into the front and thickets part of the fight—because he and Oseola
had been friends, and he had been kind to the poor Indian.
The order was strictly obeyed amid chances liable to
ruin the gallant youth escaped with life, through the generosity of an
Indian foeman.

DOMESTIC INTELLIGENCE.

SEMINOLE CAMPAIGN.

PENSACOLA, April 23.
The U. S. Transport Motto, Capt. Armstrong, arrived
here on Wednesday last from Tampa Bay, with
about fifty disabled and wounded volunteers, mostly
from the Georgia troops under General Scott; a
brush with the Indians on the shore of the white
(three of them Louisiana volunteers) were
killed and several wounded. The Indians fled into
the swamps, and are supposed to have retired to the south.
Among the wounded on board the Motto, is General
Benton, of the South Carolina volunteers. We under-
stand that he was wounded in Ingenious fight with an
Indian chief. General S., who served as a private, in
Col. Butler's regiment of mounted men, was in ad-
ance, and seeing the Indian at a distance, dashed into
the woods in pursuit of him. He fired, and mortally
wounded the Indian, who, in the act of falling, fired
at his pursuer, and his shot took effect in the head of Gen.
S. The wound is severe, but we learn that it is not
dangerous. Col. Butler, of the South Carolina volun-
tees, also came passenger in the Motto.

Gen. Scott had arrived at Tampa Bay, and remained
there when the Motto left. The wounded volunteers
and some other forces have been sent to Charlotte Har-
bor. It would seem from all we can learn, that most of
the suffering of the campaign has fallen upon the Louisi-
ana regiments. They have borne themselves on all oc-
casions with undaunted gallantry, and what was less to
be expected, they have displayed the cheerfulness
of veterans, to the fatigues of the campaign—suf-
ferring more than once, from that worst of all evils, the
want of a sufficient supply of provisions.

It is gratifying to learn that Gen. Clinch has invari-
ably shown himself in caution and to his friend, and in battle the bravest of the brave."—Gazette.

DIRECT FROM FLORIDA.

From the Mobile Mercantile Advertiser, April 23.
Maj. Gen. Macomb, and Capt. Cooper, his aid; of
the United States Army, arrived in town yesterday from
Pensacola, which place they reached night before last,
in a United States cutter from Tampa Bay. Dates from
Tampa are down to the 15th inst.

Three divisions of Indians, under the command of
Generals Scott and Eustis, and Colonel Lindsey,
concentrated at Tampa Bay on the 3d and 4th instant
by different routes. Colonel Lindsey had marched up
the Withlacoochee, and failing to meet with General
there, as he expected, returned to Fort Brooke.
He was fired upon and forced to retreat, while the
Indians concealed in hammocks. The division of Generals
Scott and Clinch crossed the Withlacoochee at Camp
Fard, on the 27th and 28th. They were also fired
upon by small parties of Indians. They burnt Oseola's town.
On the evening of the 29th they discovered a number of
Indians, and the next morning an engagement took
place, in which four whites were killed and eighteen
wounded. Three of the Indians and a negro were found
dead, and it was evident, from the marks of blood, that
many more had been killed and wounded, but carried
off by the Indians. The Indians had driven them into
the Clearwater, or the Withlacoochee. Major Cooper of the Georgia volunteers was left
in their nation with a battalion, and the rest of the
army of about 4,500, under Scott, Lindsey, and Eustis,
met at Tampa Bay on the 4th inst. On the 11th Gen-
eral Smith, of the Louisiana volunteers, was sent with
500 men, to capture the Ste. Clair and to capture all the Indian families supposed to be
secreted there. Another force, consisting of about 200 mounted
cavalry, was despatched to drive Indians in that direc-
tion.

General Scott shipped off, on the 12th, about 400 Sem-
inole men, women and children. They were Black
Dirt and his tribe. On the 15th the army returned to
return on both sides of the Withlacoochee.

There are 400 now sick at Tampa Bay, and the clis

Digitized by Google
mate is getting worse and worse for the army. It is said to be the design of General Scott to discharge the volunteers, and send them home before the first of May, and to select the most healthy points compatible with the service, to establish posts of regulars, of whom there are about 1300, to keep the Indians in check until the hot season shall have passed.

Mack and Aid left here last evening for New Orleans, on their return to Washington City, via the Mississippi.

There are several of the wounded and sick volunteers now in our city, and among them is former General Shelton, of the South Carolina volunteers.

ST. AUGUSTINE, April 28.

Our Army Operations.—It is a long since we have had any definite information from our army, but we are bound to believe that it is usefully employed, and that when we shall next hear from it, we shall hear that the Indians have been subdued into an unqualified submission. Fears have been expressed however, by those who know more of the Indian character than we do, that the campaign will end without effecting anything. It is supposed by them that the Indians have been enabled to elude the vigilance of our forces, that they will move away when in a situation where the necessity process can be used against them. We are obliged to say that there is some evidence to sustain this impression, and that there have been recent signs of Indians, in the rear of which our army is supposed to be; but we have no means of knowing whether they are many or few.

We learn also that Indian signals have been seen recently at Spring Garden, but of this we have no intelligence that can be relied on; and it is also stated that several of them were seen on the west of the St. Johns, near Bayard, a few days ago, but until we learn more on this subject, we are disposed to doubt it.

From all the recent circumstances we cannot sanction the efforts that are making to impress the public mind with the belief that East Florida is free from the enemy; and that the planters may return to their homes.

The danger as long as the Indians are in the country. As an instance of this we can state, on the authority of Mr. Bartolomo Solano, that on Thursday morning last, whilst on his way to his place in the country, and near the three mile post on the Tomoko road, he discovered the tracks of five Indians, who had left his place the night before, and had endeavored to intercept him in coming into town from his place at Deep Creek.

Added to these evidences of the presence of the enemy, the steamer Dolphin has just returned from Mosquito, where no troops have been seen or any of provisions that had been left there by Major Kirby. And by her we learn that these provisions had fallen into the hands of the Indians, and had been removed. Evidently all the Indians that have been engaged in the mischief south of St. Augustine are still there, and will remain there until ferreted out and compelled to leave the country. These Indians appear to have no particular connexion with the great body west of us—they have been looked upon as an insignificant body, and thus have suffered to remain, to send out their marauding parties to prowl about and ruin every plantation, and every planter in the country.

The only force east of St. Johns, except at Volusia, is now at St. Augustine, where is stationed one company of regulars. In this situation, is it to be expected that the people can feel secure? Are those to whom the defense of the country is committed doing their duty in levying in as thorough a manner as is possible from them? Why have they not been met and conquered? When a sufficient force had penetrated so far as to be within reach of the Indians, and when the government was put to great expense for transportation, and when large quantities of provision had been collected at this point, why has every man been suddenly withdrawn, and not even a corporal's guard left to protect the Government stores?

Does not this look like a capricious movement, and like the abandonment of East Florida to her fate?

TERMINATION OF THE INDIAN CAMPAIGN.

Lieut. Van Burden, Asst to Gen. Scott, and Capt. Finley, Asst to General Grant, received a dispatch from Colonel Piccolas, via Savannah, in the Steam packet William Seabrook, from Savannah. We have conversed with both these gentlemen, who have politely imparted to us all the information they possessed.

Lieut. Van Burden states, that owing to the conclusion of the war with Spain, this campaign has been brought to a close. The regular forces had gone into summer quarters at St. Augustine. There were supposed to be about 200 on the sick list at Tampa Bay, and 50 at Volusia.

Capt. Finley has communicated to us the following intelligence:

From the Pensacola Gazette, April 16.

A private letter gives us the following particulars relating to the affair hinted at in our last. Speaking of Capt. Ross, of the Marines, our correspondent says:

"It appears he made quite a narrow escape a few days since and probably the circumstances have not yet reached you. The Capt. with some of the officers of the steamer, were in the habit of taking a ride every day; but on the day I speak of, they had declined riding for walking, which had not been done for several weeks. After they had left, two young men, (citizens) the Clerk of the Commissary's Assistant, and a corporal, I think, took the horses and went in the same direction together with the officer. They had been a mile from the garrison when they were suddenly fired upon by some Indians in ambush; one was killed, another had his arm broken, the third was shot through the shoulder, and the fourth escaped uninjured. The horses turned immediately on the report and fled to the cantonment, leaving only one victual to the scalping knife of the savages; one of the horses fell dead on his arrival, another died of his wounds. Major Sands was on a mount a short distance from the stockade at the time, and hearing the war whoop of the Indians, made immediate pursuit, but would not return to the settlement in time.".

"Next day a detachment of one hundred and fifty men were tendered Capt. Ross, who scoured the country, but without the success anticipated."

The following has been politely handed us for publication:

U. S. SHIP VANDALIA. Tampa Bay, April 12th, 1836.

"Sir: Since last I had the honor to communicate to you, I have received important intelligence from Lieut. Powell, in command of the expedition sent from this place to look for Mr. Zotte Harbor on the 80th ult., which I hasten to lay before you, together with the movements of the Army on that and other exigencies."
Lieut. Powell arrived with his force at Charlotte Harbor on the 3d inst., and found the inhabitants flying in every direction to escape the fury of the Indians.

The Collector's House is burnt to the ground and himself supposed to be murdered, as he had not been heard of. Acting Sailing Master Rowan was immediately dispatched, who, on his return, informed General Simonds, whom he came up with about daylight, attacked them, and succeeded in killing two, and capturing one; the rest took to the woods, and his force was too limited to pursue them.

Major General Scott arrived at Fort Brooke on the afternoon of the 4th inst. with his whole force; and on the 11th Col. Smith with the Louisiana Volunteers proceeded to Charlotte Harbor, by water; and at the same time a body of mounted troops to the source of the Myacca, to march down the river to its mouth. The rest of the Army will march in a day or two for the Withlacoochee.

Two of my boats under Lieut. Powell, and Mr. Rowan, are at Charlotte Harbor, co-operating with Col. Smith, and two with the Revenue Cutter Dexter at the Withlacoochee, co-operating with Gen. Clinch.

The friends of the Army, as a branch of the public service, but above all, the friends and relatives of the individuals of every grade of rank, and of every arm, who compose the little Army of the United States, will rejoice at the decision of yesterday, in the House of Representatives, on the motion of the Delegate from Arkansas, to break up (at last) the military post at Fort Gibson—that charnal-house of the Army—so long the reproach of the service and the abridgment of the frontier line of defence. As friends of the Army ourselves, we acknowledge our obligations to the worthy Delegate for his motion, and to all those members of the House who voted in favor of it.—National Intelligencer, May 5.

We understand Gen. Gaines has despatched Capt. Hitchcock to Santa Anna, to ascertain whether he has invited the Indians from this side the boundary line between the United States and Texas, to assist him in the war he is waging with the Texians. He goes of course with the flag of the United States to protect him. Should that not be respected, Santa Anna's days will be numbered, and their sands but few. Mobile Advertiser, April 19.

The massacre at the Feseee Islands.—The Nantucket Inquirer has the following remarks in relation to the massacre of the officers and part of the crew of the ship. The inhabitants being in a state of insurrection at the time of the massacre, the individuals who have thus fallen victims to the ferocity and treachery of those South Sea demons were all natives of this town, and have numerous near and dear relatives to lament this melancholy event. The commander, Prince Colin, has left parents and one orphan child, his wife and one child having died since the commencement of this voyage; the first officer, Mr. Alexander Gardner, was a young man of high promise, son of Albert Gardner, Esq., to whose family this loss is irreparable; and the second officer, William Swain, was a son of Capt. Frederic Swain, of ship Susan of this port—formerly in the Pacific Ocean; he was a short time previous to his departure on the voyage, and is a truly estimable young man. The Awashonks belongs to Falmouth, and had 650 bbls oil at the time of the massacre. She will probably not pursue the voyage, but return home forthwith.

Among the passengers in the steam packet South Carolina, Captain Rollins, arrived on Saturday morning last, from Charleston, were Capt. Canfield, of the U.S. engineer Corps; Lieuts. Van Buren, aid to Gen. Macomb, (Commander-in-chief of the U.S. Army,) Beall, Burnett, Blair and Capron, of the U.S. Artillery.

We regret to learn from the officers, that they left at Tampa Bay, between 500 and 600 of the volunteers sick.

—Norfolk Beacon.

We regret to learn that the venerable Governor Bennett, of Delaware, died at Wilmington, on Saturday evening, in the 78th year of his age. He was a soldier of the Revolution, and a man in every way estimable.

By the ship Shepherdess, from Bombay, arrived at Salem, we have received letters and newspapers to the 22d Dec. At that date, U.S. ship Peacock and her in company were at Colombo, Isle of Ceylon, where they had put in for water, &c. The officers and crews of both vessels were in good health, and not a death had occurred since the commencement of the cruise.—N. Y. Gazette.

We find the following correspondence in the Bombay Gazette, of the 8th of February.

MESSRS. EDITORS,—Assured that you will not object to publishing the enclosed copy of a letter from Commodore E. P. Kennedy to Sir Charles Malcolm, I forward it to you, to show that we are not unmindful of the kindness and attention received from the officers of the Government during our stay in Bombay.

I am sure that the friendly feelings produced by our visit to this Presidency, will be long cherished by us. Very respectfully, yours obediently,

C. K. STRIBLING.

U. S. ship Peacock, Bombay, Dec. 2d, 1832.

Sir,—I cannot leave Bombay without expressing through you, the obligations which I feel to the Master Attendant and the officers of the Dock at this place for the prompt and efficient assistance which I have received in the repairs of this ship, and the she'r Enterprise; without such friendly aid and assistance, our reft would have been attended with increased expense and delay. I would at the same time, desire to express, in the name of my country, the obligations I feel to the Governor in Council for his ready compliance with every request which I have had occasion to make; and I shall take care that the Government of the U. S. is duly informed of the same. Permit me also to say, that for your continued personal attentions, I cannot express myself in terms equal to my feelings. I am sir, with great respect, yours obediently.

E. P. KENNEDY,

Commanding U. S. Naval forces.

To Capt. Sir CHARLES MALCOLM, R. N.

Superintendent of the Indian Navy.

Correspondence of the Boston Morning Post.

MALTA, Feb. 9, 1836.

Arrival of the Frigate Constitution.—Mr. of the H. M. Steam Yacht Hermes, with Commodore Hull on board, met between this Officer and Capt. Dacres, now in command of the "Edinburgh," seventy-four.

At daylight, on the morning of the eleventh of January, from the observatory of the Palace, a large American ship was seen lying off the harbor of Valletta, under easy sail, with the ensign hoisted, and the flag of the Commodore of this station flying at the fore-royal masthead.

It was not long before she was made out as the Constitution, with Commodore Elliott on board, which was not altogether uninteresting, although it might not have been at all agreeable news to Capt. J. R. Dacres, who is now in our port, in command of the Edinburgh, seventy-four.

No American man-of-war has arrived at our island for a length of time, which has created so much interest among the English commanders, as this ship of which we are now speaking. So much interest did she excite the attention of this people, that during the few hours she remained in sight, while her boat was on shore, crowds collected on the heights of La Valette, and on the terraces of the different buildings, to view "Old Ironsides" slowly tacking to the westward—both the old and currentONists strongly against the course whither she was bound.

There is no better position for observing the ships which may be in sight off Malta, than on the ramparts
of St. Elmo; and it was on this spot that a British Post-Captain was seen with his spy-glass, attentively gazing at the "Yankee Frigate," which, as was truly remarked by him, is the pride of our nation, and as fine a ship of her class as could be seen in any navy.

Not many days after the departure of the Constitution from this scene the collection of her visit was fresh in the minds of those who had been to see her, His B. M. Steamer Hercules arrived from Gibraltar, and among the passengers was Commodore Hull.

Hardly had the ship come to anchor, before Capt. Dacres manned his boat, and called to see his old friend, "Mr. Hurry," as "he very, very well knew, in Constitution." The meeting was a very pleasant one; and Capt. Dacres has, since the liberation of the Commodore from quarantine, been almost daily to visit him, carrying his brother commanders, at all times, to introduce them. If the English are of a proud spirit, they have this natural trait of character, that whenever they see a brave man, they respect him; and it matters but little whether they were the once defeated or not, they still show the same attentions, and pay the same deference to such a character, whether it is found in their countrymen, among their friends, or in an enemy.

A good character can be approved by the treatment which Commodore Hull has received since his arrival in our city. Rear Admiral Sir Thomas Briggs informed the writer that he respected Commodore Hull for his courage as shown to Europe, and should take the first opportunity to call upon him. This wish he has fulfilled with the officers of these two distinguished officers comparing notes, it was found they were both on this station, and in command of men of war, upwards of thirty years since, and at the time we were engaged in the Tripoline war.

Among the distinguished men here, we may name Vice Admiral Sir Josias Rowley, who is in command of the English fleet; the Hon. Capt. Percy, of the Canopas; Capt. Martin, flag captain of the Caledonian; Capt. McKerby, of the Vernon frigate, known as the one-armed captain of Trafalgar; Capt. Wise, of the Thunderer, and Capt. J. R. Dacres, Sir Frederic Hankey, Chief Secretary to Government, and indeed at this moment acting Governor of the Island; all of whom, but more particularly the last, have been very attentive to Commodore Hull and his family during their tarry among them.

Sir Frederic Hankey took the Commodore to the Garrison Club, where are enrolled the names of all the distinguished persons who have passed through this Island since it was a British possession; and also on the pages of the catalogue will be found the names of several Dukes, as also many of the distinguished of the European nobility and gentry. Commodore Hull was made an honorary member while a resident in La Valletta, and it gives me much pleasure to state as a countryman, that this gentleman has received all the attention which it was in the power of those in office to show him. And furthermore, it is with much gratification I am enabled to state, that Capt. J. R. Dacres has always, previous to the arrival of Commodore Hull, and since, spoken of him in the highest terms, which may serve to correct the erroneous impression, prevalent in America during the last war, that after the death of the American frigate, had passed away, there was no such coolness between the commander of the Guerriere and his powerful adversary of the Constitution. Capt. Dacres was evidently much chagrined at his capture—he feels it to this day, and probably may never entirely recover from the mortification caused by the result of the action between the two, however brave man, of a jovial character, liked by his officers, popular with his equals, and last not least, a friend to the Bostonians, and a lover of their country. He never lets an opportunity pass, without mentioning the hospitality he received when a visitor and resident in the capital of New England.

I do not hesitate to say, that there is no frigate in our service which will create, on her arrival, half the sensation in our city, as the ship of which we are now speaking. This remark will shortly be verified to our numerous countrymen on board, as I understand that, ere long, it is the intention of Commodore Elliott to visit our island, and with the American squadron, to remain a short period anchored in our port.

**LETTERS ADVERTISED.**
Norfolk, Va., May 1, 1836.

**NAVY.**—Dr. Jno. A. Wedderburn; Lieutenants L. G. Keith, A. B. Pinkham, J. W. Cox; Midshipmen G. Grant, Wm. T. Cooke, Angus Wheeler, Eliha Ellis, G. R. Carroll, 2.

**PASSANGERS.**
WASHINGTON CITY;
THURSDAY........................................MAY 12, 1836.

To Correspondents.—If an officer of the Vandalia
will apply to the Purser of the Navy Yard at Pensacola,
he will find an answer to his communication.
X is too personal for our columns; there are portions of
his article which we would publish, if modified, or
divested of the offensive expressions.

A letter from Fort Dearborn, signed M, is unavoidably
defereed.

TEXAS.

The accounts from this distracted territory are various
and contradictory. It is believed that the inhabitants
are retreating as fast as possible to the limits of the Uni-
ted States, and two or three portions of the Texian
troops have been defeated and taken prisoners.
Santa Ana, the Mexican General, it is said, was at San
Antonio on the 5th ult., and Gen. Houston was at Gro-
ces, west of the Brasso, on the 9th, with 2,500 men.
Nacogdoches had been deserted.

Gen. Gimes has arrived at Natchitoches, Lou., where he
established his head quarters; he has called upon the
Governors of the States of Louisiana, Mississippi,
Alabama, and Tennessee, to furnish each a brigade to
consist of two or three battalions of volunteers, as
naby to be mounted as practicable—to repair to Natchi-
toches as soon as may be convenient, by companies or
battalions; to receive their arms and camp equipage at
New Orleans and Baton Rouge.

Governor White, of Louisiana, at first declined com-
plying with the requisition, upon the ground that he had
no fund at his disposal, but afterwards made arrangements
for the purpose, and at a public meeting held in New
Orleans, a committee of twelve citizens was appointed to
consult and advise with the Governor, as to the most
efficient means to protect our frontier.

Governor Cannon, of Tennessee, issued his orders
immediately for raising the quota of volunteers from that
state. What the Governor of the other two States
have done, we have not learned.

The Secretary of War applied to Congress, with the
sanction of the President, for an appropriation of one
million of dollars an account of the operations of our ar-
my on the frontiers of Louisiana.

Extract from a letter dated
"U. S. Schooner Shark,
Lisbon, April 3d, 1836.

"We arrived here about the 20th of last month, from
Gibraltar, having been absent from this place ten days.
We left at Gibraltar the Potomac and Adams, and are
expecting them here every day; they were waiting for the
arrival of a store ship from Mahon, which, we hear,
arrived there about the 17th ult.
"All in the squadron are generally well. The Prince
of Saxe Coburg will be here to day in the London
Steamboat, and his marriage with the Queen is to be
celebrated tomorrow. It is expected that our officers
will be presented on the occasion.
"We shall sail in a few days after the arrival of the
Potomac and Adams,"

Errors of the Press.—It is almost a fruitless task
to attempt a correction of the errors that will occur in
spite of all the care that can be used; it often happens
that in correcting one error, another is committed, and
this was the case in our last number; see erratum, page
283. In the last line, the word eminence should have
been in the plural.

While confessing our own sins of omission and com-
misson in this respect, we cannot forbear the opportu-
nity of pointing out two recent instances of a ludicrous
cast, which have come under notice:

Luit. Slidell, of the U. S. navy, author of "A year in
Spain," has published another work, with the title of
"Spain Revisited." A Baltimore paper, in allusion to the
book, calls it "Spain Reinstalled." It would be a
consolation to the friends of humanity and good order,
if that beautiful country could be reinstated in its for-
mer prosperity and tranquility.

Another Baltimore paper offered to insert sixteen lies
one year for ten dollars. Those who are inclined to be
hypercritical might say that this is done gratuitously
every day, in almost every city in the Union.

Morality in the British Army.—We find in a
London paper of the 28th March, the following state-
ment, under the head of 'lately military intelligence,'
respecting the 99th regiment of infantry:

"On the night of Friday, the 11th inst., Captain Ni-
ichols, Lieutenants Canny, Rook, and Beattie, and En-
sign Mowbery, with four girls of the town, (some of
the officers having previously changed clothes with the
girls,) went to Angelase, and amused themselves with
creating a disturbance, taking away the Knockers of
the doors, destroying gates, palings, &c. Captain Pre-
vost, R. N., hearing them wrenching the knobber of
his door, opened his bedroom window, and begged
them, as his daughter was very ill, to go away; but they
threw sticks at him until he closed his window. Next
day, one of the girls, who had been recognized, was tak-
en before captain Purvis, a magistrate, who took her
deposition to the above effect."

We would not offer this as an evidence of the state of
morals in the British army, any more than we would
adduce an account of the commission of a crime in any
community, as evidence of the wickedness of the whole
of that community; we would rather view it as an iso-
lated instance of moral depravity, which has in former
times and in other countries, brought the military char-
acter to a low standard.

One such instance of evil deportment in our own ar-
my would not only deprive the individuals of their com-
misions, but would arouse a feeling of indignation
throughout the Union, which would make the army un-
popular, if not forever after, at least for a great length
of time.

We are proud to believe and to state, that there is a
healthy moral tone pervading the whole corps, from the
highest officers down to the rank and file.

We note this occurrence now, that it may be referred
to hereafter, should any thing ever be said to our dis-
paragement.

The present number has been delayed two days by
the want of paper; a supply was ordered, but did not
arrive in season, and there being none of a suitable size
to be bought in Washington.
TEMPERANCE SOCIETY AT FORT SNELLING.—We would ask the reader's attention to the address of the Temperance Society at Fort Snelling, to their brother soldiers, which will be found in another part of this day's paper. This address is no doubt the production of one of the members of the society, and is alike creditable as a literary production, as it is to the correct state of feeling of the command.

We profess not to know from experience the state of morals, now, or in former times, among the rank and file, but we should feel inclined to doubt the truth of the charge of general intemperance; if such habits have prevailed, they were acquired before the entry of the persons into the public service, and the army may have been viewed by those as a derriër resort.

We may congratulate ourselves upon the evident improvement which has taken place of late years, and nothing will be more conducive to the order, discipline, and efficiency of the army, than the formation of temperance societies at every garrison.

The campaign in Florida against the Seminole Indians has been brought to a close by the heat of the weather and by sickness among the troops. The volunteers had been, or would be soon, discharged, and a line of posts established across the peninsula from St. Augustine to the Gulf of Mexico, to prevent the escape of the Indians into the interior or their communication with other tribes. The whole of the lower portion of the Territory would be exposed to their depredations, until active operations can be recommenced in the fall. The latest particulars, received at the time of making up our paper, will be found in another column.

NEHEMIAH TILTON, a native of Delaware, and formerly an officer in the Navy, was killed at Opequon, Lou., on Sunday the 3d ult., in a rencontre with ALTON YOUNGBLOOD.

Some officers of the army, lately attached to the command of General Scott in Florida, have arrived in Washington.

PROCEEDINGS OF CONGRESS.

IN RELATION TO THE ARMY, NAVY, &C.

IN SENATE.

FRIYDAY, April 22.

The Chair communicated a letter from the War Department, transmitting a report from the Engineer Department, in answer to the resolution of the Senate of the 19th inst. inquiring the maximum amount that can be profitably expended annually on fortifications, which was read; and, on motion of Mr. BENNETT, it was referred to the Committee on Military Affairs, and ordered to be printed.

SATURDAY, April 23.

Mr. SOUTHDARD presented the proceedings of a meeting of a number of officers of the Navy, on the subject of a naval academy; which was referred to the Committee on Naval Affairs.

Monday, April 25.

Mr. DAVIS, from the Committee on Commerce, to which had been referred the resolutions of the States of Tennessee, Illinois, Indiana, and sundry petitions on the subject of slave House and slave labor, together with a bill, in addition to the acts for the relief of sick and disabled seamen; which was read and ordered to a second reading.

On motion of Mr. SOUTHDARD, the bill was recommitted to the consideration of the bill making appropriations for the support of the navy for the year 1833; and the amendments reported by the Committee on Navy, were ordered to be read a second time.

Mr. WHITE said he would be glad if some member of the Committee would explain the objects of these amendments, and why so large an increase of the appropriations made by the House was deemed necessary by them.

The increase of expenditures for naval purposes is not recommended by the Executive at the commencement of the session, thereby incurring a great additional expense for the pay and subsistence of the officers and seamen. The increase of this item of expense had been recommended in a communication received from the Navy Department, since the receipt of the President's message at the opening of the session. It was also contemplated by the committee to employ Congress for the defence of the coast, and to fit up three of the ships of the line, to be used as receiving ships at each of the three navy yards at Boston, New York, and Norfolk; but so far completed as to be in a state of operation required for the protection of the defence of the country require it.

The other increased appropriations were for dry docks, completing a steam vessel, a navy hospital, and a powder magazine at Boston. A resolution passed for the purchase of barrack lots at Brooklyn, Gosport, and Pensacola, not provided for by the House of Representatives.

Mr. HUTCHINSON, said the amendments proposed by the Committee on Naval Affairs in the Senate provided for an additional appropriation to the bill as it had passed the House of nearly $2,000,000. It added simply to the pay of officers and seamen of the navy, more than half a million. He was unable to divine why this increase in expenditure was now to be made. When the bill was first taken up by the House of Representatives, our foreign affairs, in a highly critical state, seemed to require an increased expenditure, and the bill had passed the Senate to the committee of the House of Representatives; yet this was not enough. The Chairman of the Naval Committee, Mr. SOUTHDARD, who a few days ago made a speech in favor of distributing among the several States of the Union, portions of the navy, solutions of difficulty attended upon the appropriation of other millions to the naval appropriation. How gentlemen can vote for these extravaganzas, those uncalled for appropriations, at the same time they vote to distribute the surplus, is an inscrutable mystery. Mr. (H.) was aware the subject was not to be discussed. He was anxious to see who of this body were in favor of these extravaganzas—he wished the ayes and noes to be placed on the journal to the principal amendments proposed by the naval committee. It was indeed extraordinary that the Executive should not recommend these increased expenditures over and above what was recommended by the Executive three months ago, when the estimates were passed from the department provided for an additional appropriation.
for the suppression of Indian hostilities in Florida was read twice and referred.

Wednesday, April 27.

The bill from the House making appropriations for the Indian Department for the year 1836, was read the first time, and ordered to a second reading.

Mr. SOUTHERN moved to take up the bill making appropriations for the naval service for the year 1836; which motion was agreed to.

[Mr. BENNETT gave notice that as soon as this bill was disposed of he should move to take up the fortification appropriation bill.]

The following recommendations reported by the Committee on Naval Affairs having been read,

Mr. HILL called for the years and nays on concurrence with the committee in the first amendment, which appropriates $1,500,000, to be laid on the table, and the vote and acquiescence of a majority of the Committee in the votes and acquiescence of officers, petty officers and seamen, &c.; and the years and nays having been accordingly ordered, the question was taken and decided in the affirmative—yeas 41, nays 1.

So the amendment of the committee was agreed to.

The remaining amendments reported by the committee were then concurred in; when

Mr. HILL called for the years and nays on ordering the amendments to be engrossed, and the bill to be read a third time; which were accordingly ordered, and the question was decided in the affirmative—yeas 41, nays 1.

Mr. HILL then reported from the Committee on Military Affairs, reported, without amendment, the bill from the House making additional appropriations for the suppression of Indian hostilities in Florida, and moved that the bill be then considered ordered to a second reading.

The motion was agreed to, and the bill having been read the second time and considered as in Committee of the Whole, was ordered to a third reading.

The bill from the House authorizing the President to accept the services of volunteers, and to raise an additional regiment of light dragoons or mounted riflemen, was read twice and referred to Committee on Military Affairs.

Tuesday, April 26.

The CHAIR communicated a report from the Treasury Department, containing an estimate of the maximum amount that can be advantageously expended annually for naval purposes, navy yards, arsenals, dry docks, &c.; which was laid on the table, and referred to the Committee on Finance.

The bill making appropriations for the naval service for the year 1836; and

The bill making additional appropriations for the suppression of Indian hostilities in Florida, were severally read the third time and passed.

Friday, April 29.

Mr. BENTON submitted the following resolution, which lies on the table:

Resolved, That the President of the United States be requested to cause the Senate to be informed whether any branch of the public service has suffered or is likely to suffer from delay, accident, or delay, for want of timely and adequate appropriations.

Mr. BROWN submitted the following resolution, which lies on the table:

Resolved, That the Committee on Military Affairs inquire into the expediency of reporting a bill for the payment to North Carolina of certain sums of money and interest paid by said State for the prosecution of the late war with Great Britain, and which have been disallowed by the department, and particularly for the purchase, 1st, of ammunition, powder, and flints, &c., and for transportation; 2d, of clothing, &c.; 3d, of expenses in repairing forts, &c.; and which are necessary and subsistence of militia, and for such other expenditures as are justly chargeable to the General Government.

On motion of Mr. Brown, Alabama, the bill to provide for the payment of a regiment of Vermont militia, who served at the battle of Plattsburgh, was taken up.

The bill, Mr. K. said, had in the absence of some necessary information, which he believed was now in the possession of the Senate from Vermont, been laid on the table; and the motion, (Mr. K.'s) motion, and it was for that reason that he moved to take it up.

The bill was then taken up and considered as in Committee of the Whole, reported by Mr. Mowatt, Pranties and Goldsborough in his support, and from Mr. King, of Alabama, in opposition to it, on the ground that the evidence was not sufficient, the bill was ordered to be engrossed for a third reading.

HOUSE OF REPRESENTATIVES.

Saturday, April 23, 1836.

Mr. McCULLAY moved to suspend the rules for one hour, for the purpose of resuming the consideration of the bill authorizing the President to accept the service of volunteers, and for the better defence of the western frontier.

Mr. WHITFIELD called for the years and nays, which were ordered, and were as follows:

So the House refused to suspend the rule.

The House then went into committee of the whole, Mr. THOMSON of Ohio in the chair, on the following bill:

A bill making appropriations for the support of the army, by John E. Wool, Inspector General United States Army.

The committee rose and reported the bill to the House.

The SPEAKER laid before the House a letter from the Secretary of the Treasury, transmitting, in obedience to a resolution of the 11th inst., a list of the clerks, their compensation, duties, &c., employed in that department, laid on the table, ordered to be printed.

A letter from the Secretary of the Navy, in response to a resolution of the 11th January, 1835, containing an abstract and statements of compensation and allowances to officers of the navy, &c.; which was ordered to be printed, Monday, April 25.

Mr. CAMERON, from the committee of ways and means, on leave, reported a bill making a further appropriation for repressing Indian hostilities in Florida; which was read twice and committed to a committee of the whole.

Mr. ADAMS presented joint resolutions of the Legislature of Massachusetts, in reference to fortifications in Boston harbor—laid on the table, and ordered to be printed.

Mr. VAIL presented a memorial from the town of Ironville, requesting an appropriation for the erection of a monument in memory of Mr. David Williams, deceased, one of the captors of Major Andre, which was referred to a select committee of five.

APPROPRIATION BILLS.

In further execution of the special order of the 36th of January last, the House resolved itself into a committee of the whole on the state of the United States, Mr. SUTHERLAND in the chair.

Mr. CAMERON moved to take up the bill making further appropriations for the repressing of Indian hostilities in Florida.

Mr. MERCER inquired of the chair whether the special order embraced this bill, and whether the effect of that order was prospective as well as retrospective.

The CHAIR informed the House that the special order of January, and said it embraced all the appropriation bills for the expenses of the various departments of the Government.

Mr. MERCER merely made the inquiry, and should not press a question of order upon it.

The committee then took up and considered the bill reported this morning, providing for the repression of Indian hostilities in Florida.

The bill was read twice;—it appropriated the sum of $1,000,000, for the purpose.

Mr. CAMERON made a brief explanation, that of the former appropriation only $457 remained, when the bill was committed, was laid aside, and reported to the House without amendment.

Mr. THOMSON, of South Carolina, asked the consent of the House to lay on the table a resolution calling on the President of the United States for information in relation to the state of affairs in Texas; &c.; which was objected to.

Mr. THOMSON moved to suspend the rule to enable him to offer the resolution—which was negatived without a count Mr. T. gave notice that he should renew his motion to-morrow.

Mr. STROUD moved the consent of the House to present the proceedings of a public meeting in his district, in relation to the "troubles in Texas"; which, being objected to, Mr. S. moved to suspend the rule for the purpose stated, which was negatived without a count.

A bill making appropriations for the Indian Department, for annuities, &c., was read the third time.

On motion of Mr. R. M. JOHNSON the House then took up the bill authorizing the President of the United States to accept the service of volunteers, reported from the committee of the whole, with sundry amendments.

The question was on continuing with the committee in the Committee of the Whole.

The most material were the following:

Sec. 1. Limiting the term to "six or twelve months," and adding to the section the following words within brackets:

'Commissioned officers shall be appointed in the manner prescribed by law in the several States and Territories to which such company or companies shall respectively be.'
ARMY AND NAVY CHRONICLE.

long. [in the same manner as the militia of the several States and Territories are now appointed and commissioned, and as militia, said mounted men, when in service, shall be con-
sidered as under the direction of the President of the United States, and in the exercise of the powers committed to him by this act, shall be exercised only in the cases enumerated in the eighth section of the constitution, that the number of vol-
unteers whose services may be accepted, pursuant to this act, shall not exceed ten thousand rank and file, and that the act shall continue and be in force for two years from the end of the present session of Congress, and no longer. And provided also, That nothing herein contained shall be so con-
templated to deprive the officers and men who may have entered the service as volunteers under this act, of any rights, immu-
nisities, or privileges therein secured.]

Mr. Whistlesey had moved to strike out the fourth section, which was in the following words:

"After the 31st day of August, 1862, in all cases in which any volunteer above mentioned, while in actual service, shall sustain any damage, by injury done to his horse, or other equipment as shall be furnished at his own expense, or by loss of the same, without any fault or neglig-
ence on his part, a reasonable sum, to be ascertained in such manner as the President of the United States may di-
rect, shall be allowed and paid to such volunteer, for each and every such damage or loss.

These amendments were severally concurred in.

The following additional sections were reported by the Committee of the Whole.

"Sec. 7. And be it further enacted, That there shall be raised, and under the direction of the President of the United States, one additional regiment of dragoons or mounted riflemen, to be composed of the same number and rank of the officers, non-commissioned officers, mus-
ciiers, etc., as shall be present in the one regiment now in the service of the United States, who shall receive the same pay and allowances, b: subject to the same rules and regulations, and be engaged for the like term and upon the same conditions as are required of all commissioned officers, as respects promotion, etc., as are appropriated for the said regiment of dragoons now in service."

"Sec. 8. And be it further enacted, That the sum of three hundred thousand dollars, required to carry into ef-
effect the provisions of this act, is appropriated to the purchase of any money in the Treasury not otherwise appropriated."

On the question of concurring with the committee in this amendment.

Mr. Bovall said for the year one nays, as he wished to record his name against it; and on requiring them to be put, there appeared ayes 25, noes 61, no quorum.

Mr. Ashby moved a call of the House, which was ordered; and the call going through the first call, 123 members answered to their names.

After several ineffectual motions to suspend the call, and to adjourn,

The question then recurred on Mr. Howells's call for the attendance of the nays on the two additional sections; which were ordered.

Mr. Hawes then moved to add a proviso to the bill, providing that not more than one third of the officers of said regiment should be commissioned from the State at whose expense the said regiment is raised.

Mr. Ashby then moved to amend the seventh section, by adding after the word "riflemen" the following words: "If, in his opinion, the security of the western frontier requires the organization of said regiment," and after a few remarks from Messrs. Whistlesey, Mercer, and Mr. Hays, from the State of Florida, at the suggestion of the latter gentleman, Mr. Whistlesey modified his amendment by extending it to the "western or southern frontiers."

The amendment was negatived with a count.

Mr. Mercer moved to strike out the following words in the seventh section "for the like term, and," on the ground that they were an incongruity with other parts of the bill which after some remarks from Messrs. Mcassey, Thompson of Ohio, Ashby and Thompson of South Carolina, was lost.

The question recurred, on concurring with the committee of the whole on their previous amendments.

Mr. Marsden called for a division of the question on the two additional sections.

The question was then taken on the first branch of the amendment, and on the question of admitting to the bill, and it was concurred in by the House—yeas 144, nays 32.

The question recurred upon the second branch of the amendment, being the eighth section,

The question was then taken on the eighth section of the bill, and the question of adding the same by inserting after the word "enacted," the following: "That the President of the United States may disobey said regiment whatever, in his opinion, the public interest no longer requires its further existence."

Mr. Hanksan asked for the yeas and nays on this amendment, but they were not ordered; and the question being taken by tellers, was decided in the affirmative, 131 yeas, 103 nays.

The clause as amended was then concurred in without a division.

Mr. Thompson of South Carolina moved to strike out from the bill, the following words: "in cases enumerated in the 8th section of the constitution," and insert "in case of Indian hostilities, or good cause to apprehend the same."

Mr. Coggs asked that the motion to be out of order, on the ground that the passage proposed to be stricken out had been voted in by the House.

Mr. Chapin moved a verbal amendment to the first section, to strike it consistent with the seventh section, as to the period of the armed service thereof: agreed to.

The bill, as amended, was then ordered to be engrossed for a third reading to-morrow, and then

The House adjourned at 5 o'clock, P. M.
LAW OF THE UNITED STATES.

AN ACT making a further appropriation for suppressing Indian hostilities in Florida.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the sum of one million of dollars be, and the same is hereby appropriated, to be used for suppressing Indian hostilities in Florida, and that the same shall be expended in the manner already provided for by law.

Approved, April 29, 1836.

ADDRESS
OF
THE
TEMPERANCE SOCIETY OF FORT SNELLING,
(UPPER MISSISSIPPI.)

To the Soldiers of the United States Army.

FELLOW SOLDIERS:

The temperance Society at this post has been in operation since the 18th January last, and already it numbers sixty-eight members, including two officers. We are subject to jeering an institution of this nature, as essentially the same as that so cordially recognized by all societies of a similar nature throughout the Union - to arrest the desolating march of intemperance, with all its degrading and ruinous consequences. We deem it unnecessary to give you a synopsis of the abuses of the temperance laws and measures. With the exception of the "pledge" we have adopted, which is the following effect: "I solemnly pledge myself to abstain from, and discontinue the use of all ardent spirits, or intoxicating liquors, fermented or distilled, except when prescribed in sickness by a physician, or used for sacramental purposes."

The decided improvement which is becoming every day more apparent in all grades and conditions of society since the temperance reform has been in operation; and the cordiality with which it is everywhere received, renders it almost unnecessary for any further appeal to be made to the understanding of the public. The good effects, which must necessarily follow the triumph of the temperance reform, can no where be so fully appreciated as in the army; and humbling as the reflection must be to our feelings as men and soldiers, no where are we so well placed as to be enabled to produce felicitous results. The unpopularity of the army is in a great measure to be attributed to the intemperance for which it has always been so notorious. This vice has been the fruitful parent of many of those excesses, which have entailed an odium on the American soldier. What truth is there in the说法s of men who have decided personal exertions. Fully alive to this conviction, it becomes imperative on all of us to leave no scheme untried, no self-denial unpractised, that may tend in any degree to obliterate the unfavorable impression that is arrayed against us, and to rescue us to that rank in the estimation of our countrymen, to which we all aspire, and which ought never to have been forfeited.

The unpopularity of the army, we are fully aware, may be, in part, attributed to other sources than the one under consideration; but these are now being rapidly exhausted by that spirit of self-sacrifice, which, in all exalted professions, must always be associated in our remembrance with gratitude and esteem. It remains, therefore, with ourselves to complete the work begun under such favorable auspices; and as a primary step, we must shake off that mental lethargy which has so long enslaved and obscured our minds. It has been observed by an eminent writer, that "directly a man determines to think, he is well nigh sure of bettering his condition." Let us, therefore, begin with the determination to think; - let us no longer steep our senses in forgetfulness, and shut our eyes to the misery that awaits the intemperate - no amount of words, however well appropriate, can save our passions; but let us "be up and doing," ere the imbecility of the drunkard has gained possession of the citizen of the mind, blasted our hopes, and destroyed those fair prospects which are now rapidly opening to our view. The state of society, and the tone of the public mind are at present admirably adapted for the complete attainment of our object. Let not the opportunity be neglected; - let us seize the favorable moment, and coinfine the citizens of the United States, that the temperance cause may unite and stand firm, in support of their exertions in the struggle for temperance reform. Let the first impulse originate with ourselves - let us no longer be branded as an army of drunkards, and shunned as the miserable outcasts of society.

Those who have become soldiers from choice, and intend to spend the best part of their lives in the army, are peculiarly called upon to interest themselves in every circumstance that may affect the respectability of the profession they have chosen. It becomes a matter of imperious necessity with them, seriously and carefully to analyze the various and important relations with which their situation verity their; association intimately with an eye to their improvement, the characters of the men with whom they are associated. The old adage, that "example goes before precept," never was better illustrated, than by the influence which a temperate course of life in one man, possesses over the conduct of those around him. He is an influence in the most successful and temperate line of conduct, therefore, mark our own career, and the good that may result from our example cannot be estimated. Those of us who look forward to the time when we shall again assume the duties of citizens, and return to our friends, and to society, have, if possible, still more powerful motives to be strict in our conduct. Let us leave the army when we may, we will be regarded with suspicion for a time; our conduct will be carefully watched and scrutinized by our friends and neighbors; and if we swerve one step from the arbitrary line marked out by the suffrages of society, our characters will be afterward placed beyond the limits of social intercourse will be irrevocably pronounced. The respectable portion of the community will not consent to employ us, all will avoid us, a few may pity us, but we will be objects of sur- prise, points out to none; and the story of our deeds, and confirm them in the belief that the army is a school of iniquity. To prevent this revolving picture from being realized, let us begin now and pursue the course that will ensure us a favorable reception by our friends; let habits of temperance be practised now, and the strong, benevolent feeling of sympathy, which we can only produce, will be a return to intemperance when we leave the army. This desirable object is attainable by all; at least by all those who are determined to think. A moment's reflection must convince us of the delusive and unprofitable nature of indulgence in the excesses of drunkenness. What practical result can be expected from a de- cided personal exertions. Fully alive to this conviction, it becomes imperative on all of us to leave no scheme untried, no self-denial unpractised, that may tend in any degree to obliterate the unfavorable impression that is arrayed against us, and to rescue us to that rank in the estimation of our countrymen, to which we all aspire, and which ought never to have been forfeited.

The unpopularity of the army, we are fully aware, may be, in part, attributed to other sources than the one under consideration; but these are now being rapidly exhausted by that spirit of self-sacrifice, which, in all exalted professions, must always be associated in our remembrance with gratitude and esteem. It remains, therefore, with ourselves to complete the work begun under such favorable auspices; and as a primary step, we must shake off that mental lethargy which has so long enslaved and obscured our minds. It has been observed by an eminent writer, that "directly a man determines to think, he is well nigh sure of bettering his condition." Let us, therefore, begin with the determination to think; - let us no longer steep our senses in forgetfulness, and shut our eyes to the misery that awaits the intemperate - no amount of words, however well appropriate, can save our passions; but let us "be up and doing," ere the imbecility of the drunkard has gained possession of the citizen of the mind, blasted our hopes, and destroyed those fair prospects which are now rapidly opening to our view. The state of society, and the tone of the public mind are at present admirably adapted for the complete attainment of our object. Let not the opportunity be neglected; - let us seize the favorable moment, and coinfine the citizens of the United States, that the temperance cause may unite and stand firm, in support of their exertions in the struggle for temperance reform. Let the first impulse originate with ourselves - let us no longer be branded as an army of drunkards, and shunned as the miserable outcasts of society.

Those who have become soldiers from choice, and intend to spend the best part of their lives in the army, are peculiarly called upon to interest themselves in every circumstance that may affect the respectability of the profession they have chosen. It becomes a matter of imperious necessity with them, seriously and carefully to analyze the various and important relations with which their situation verity their; association intimately with an eye to their improvement, the characters of the men with whom they are associated. The old adage, that "example goes before precept," never was better illustrated, than by the influence which a temperate course of life in one man, possesses over the conduct of those around him. He is an influence in the most successful and temperate line of conduct, therefore, mark our own career, and the good that may result from our example cannot be estimated. Those of us who look forward to the time when we shall again assume the duties of citizens, and return to our friends, and to society, have, if possible, still more powerful motives to be strict in our conduct. Let us leave the army when we may, we will be regarded with suspicion for a time; our conduct will be carefully watched and scrutinized by our friends and neighbors; and if we swerve one step from the arbitrary line marked out by the suffrages of society, our characters will be afterward placed beyond the limits of social intercourse will be irrevocably pronounced. The respectable portion of the community will not consent to employ us, all will avoid us, a few may pity us, but we will be objects of sur- prise, points out to none; and the story of our deeds, and confirm them in the belief that the army is a school of iniquity. To prevent this revolving picture from being realized, let us begin now and pursue the course that will ensure us a favorable reception by our friends; let habits of temperance be practised now, and the strong, benevolent feeling of sympathy, which we can only produce, will be a return to intemperance when we leave the army. This desirable object is attainable by all; at least by all those who are determined to think. A moment's reflection must convince us of the delusive and unprofitable nature of indulgence in the excesses of drunkenness. What practical result can be expected from a de-
more than any other institutions, are calculated to watch over and direct the moral and social relations of society. They strike at the root of all evil. Volumes have been written on the subject, to argue against many of our vices, but these have only served as a sort of nourishment for the tree of immorality, while the roots below have enjoyed an immunity from attack. These have selected and prepared nourishment for the trunk and branches, still vigorous and nourishing with crime, disease, and death. But if these vices are to be stamped out, the roots must be destroyed.

From drunkenness all else evolves. nothing is so revolting, no crime too heinous for the drunkard to perpetrate. A man was allowed to choose one of three evils: drunkenness, robbery, or murder; he selected the first of those as being the least revolting and most easily committed; and in the exercise of his choice, he committed the other two. This is not a solitary case; you can all, probably, bring to recollection many of a similar nature. Resent then, seriously, on the dangers that haunt the path of the intemperate, and resolve to be the dupe of the monster no longer; start from his embraces, and with a bruised spirit, begin a new and reformed chapter of your lives.

Nothing is farther from the intention of the writers of this paper, than the wish to address you in terms of dictation. We would grieve to think that our motives should be misconstrued. We would endeavor, in a spirit of humanity, to speak to you as we would be spoken to by you, by the force of argument. We would appeal to your own judgments, and call upon you to exercise freely the powers of that reason which has been bestowed upon you for wise and noble purposes; and we feel convinced that if free and fair and unprejudiced views into whose subject, you will come to the same conclusion that has resulted from our own reflections; and join with us in denouncing intemperance, not only as an evil in itself, but the cause, the immediate cause, of all the evils that have befallen and shall befall our cause; that we have been and still are a burden to the nation; and that only by the most abhor—abashed to the degree of being ridiculous—to commit our characters and lives for one hour longer to its destructive guardianship;—that it becomes not only a matter of policy, but of stern duty, for each and all of us to use every exertion to suppress the vice, to strangle the monster ere he becomes too powerful to be resisted by our weakened energies. Hesitate not one moment in adopting that course which experience has shown to be so eminently calculated to effect this desirable end. Pledge yourselves solemnly and publicly, and with the serious intention of keeping that pledge inviolate, to "turn not, God forbid!" the enemy of the human soul with the advice of those who wildly attempt to covert and ridicule the temperance cause; let not their pernicious counsels abash you, nor another the praiseworthy desire which still lingers in your bosoms, of returning to the paths of duty, from which, in evil hour, you unconsciously strayed. Turn your backs indignantly upon their insinuations, and treat them not only as your personal enemies, but as advocates for intemperance, at war with the whole human race.

It would require more space than can be conveniently appropriated to this subject, to lay before you the best of arguments that could be brought forward in favor of temperance, and refute those which its enemies have arrayed against it. But fortunately this is not necessary. The press teems with information on the subject; and the immense circulation of this information conclusively proves that the whole matter is not pleading the cause of temperance societies, you are all aware, have met with opposition; what institution ever escaped it? But temperance is great and must prevail; the infant form of this leveller of drunkenness is rapidly expanding into the vigour and maturity of manhood; and its once gigantic enemy, with all its withering and demonizing agencies, is dwindling before it into contemptible insignificance.

Those men who conceive that temperance institutions are designed to introduce and patronize artificial forms of society, have carried the subject to a higher degree of refinement, than the subject admits of. It is unnatural, say they, it is contrary to the native inde-
strictly speaking, they bear the same relation to the rank and file of the army, that the higher classes of society in civil life bear to the more humble; and we need scarcely premise, that the higher classes have, in all ages, and in all communities of late, been more attentive to the fine and inventive spirit of society, which it could never have possessed without their influence. Those who tread the more humble paths of life, are, and must be, influenced by their example. Any change to be effected in public sentiment, whether for good or evil, must originate in that grade of society which would be most instrumental; and we would grieve to think that our officers should look on at the present crisis with tacit indifference, when so much is to be gained or lost for the army. We cannot believe that such will be the case, and we only advert to the subject to assure our fellow soldiers that they may rely with the utmost confidence in the co-operation of their officers in the cause of temperance, not by precept only, but by example. This will be found the most efficacious, and certainly the mildest method to free the army of intemperance. We wish to convince the citizens of the United States, that the army is worthy of their good opinion; and we look up to our officers with full confidence, in the plenitude of their will and power to benefit us, to give strength and respectability to our exertion.

The profession of arms has always been a respectable one, and it will continue so unless our own conduct render it otherwise. If the U. S. Army has fallen under a temporary unpopularity, it is to be hoped it will again rise in the estimation of American citizens. This is not the proper place to enquire into the various causes that have led to this unpopularity; but the subject is worthy of investigation. If inconstancy be one of the causes, let it be so no longer. Let each and all of us determine that the odium shall no longer be attached to us. Let the same feeling pervade every bosom, let every nerve be strained, and every voice be raised, and let us drive intemperance forever from our ranks. Nothing can harm the Mediterranean coast of France—The Point de Berck, in the department of the Pas de Calais. On the Mole of the Port de Palais in Belle Isle, department of Morbihan. On Haddie Island in the same department. On the Mole of St. Nazaire, in the department of the Loire Inferieure. The following particulars will describe the position and character of each of these lights: Provisional Light of the Port de Berck. On the point called the Haut Banc de Berck, the northern shore of the mouth of the river Authie, in lat. 50° 23' 50" N. and long. 2° 32' 32" E. of Greenwich. This light being elevated fifty-six feet above the level of the sea, at high water of equinoctial springs, may be seen at the distance of six marine miles. The light of the Port de Palais, in Belle Isle, is on the head of the new Mole of St. Nazaire, and on the northern shore of the mouth of the Loire, in lat. 47° 16' 17" S. and long. 2° 11' 44" W. of Greenwich. This light being elevated twenty-six feet above the level of the sea, at high water of spring tides, may be seen at the distance of six marine miles. It has been substituted for the reflecting light established two years ago on the new mole. Since the 10th of February a fixed light, visible at the distance of six miles, has also been shown at the port of Grand Canp.—

[United Service Gazette]

DONAGHADDIE PIER LIGHTHOUSE.—On Tuesday, a light was for the first time exhibited in the tower at the end of Donaghadee Pier, which light will henceforward assist vessels continued their progress on the coast from the dawn of day until the evening. The lighthouse is shown given by Mr. Halpin, inspector of Irish lighthouses.

The lighthouse erected on the Pier-head of Donaghadee harbour bears by compass, (Var. 27° 30' W.) from Copeland lighthouse, S. W. by S. distant 21 sea miles; from Deputy Rock, S. S. W. 4° W. distant 7 sea miles; from Mull of Galloway lighthouse, W. N. W. 4° N., distant 24 sea miles; from Sculmartin Rock, N. N. E., distant 7 sea miles. The tower is circular and of a light greyl colour; the lantern elevated 56 feet over high water level, and 68 feet over the mean level of sea.—Ibid.

From the New York Commercial Advertiser.

OBITUARY.—The following very eloquent memorial is quoted from a new work, now in the press of Leavitt, Lord & Co. to be published in the course of the present week. Its title will be “A visit to Constantinople and Athens,” and the author is the Rev. Walter Coltson, of whose previous volume, “Silip and Sheere,” we have intimated our high estimation; the book is published at a low price, the author has been invited to remain in the East as long as he pleases, and is expected home in a short time, the visit to Constantinople is a production of higher and graver cast; more full and definite in plan, and as we think of more sustained interest. It will be found, however, not less rich in those animated and beautiful descriptions which formed the principal charm of its predecessor. The subject of the very touching and admirably wrought obituary notice which we now proceed to copy, is not named; but we think there can be little hazard in declaring it can apply to no other than the lamented Miss Harriet Patterson, daughter of Commodore Patterson, who died, as we learn from some lines of sorrow upon the hearts of a wide extended circle—relatives and friends—in whose affections she was, but a little while ago, an object of the tenderest and most absorbing interest.

OBITUARY SKETCH.—There was one—who often accompanied us in our diversions along the shores of the Meditrranean; whose name brings associations an interest beyond the object which lured our steps—one who would light up the most common themes with her sparkling gems of thought, or supply the worm topics with others, brilliant and fresh from recognition and fancy—one who made others happy, without seeming to be conscious that she was the source; and who ever delineately evaded, if misplaced, the admiration her youth, genius, and beauty awakened—who now, alas! has left us for ever! She has gone from the circle of our friendship, and the hearth of her fond father, to return no more! Over the singing youth of her grave, and the retaining force of her affection, death has sadly triumphed!

The delicate virtues that had bloomed, and those that were timidly expanding to the light, have perished from the earth! The form that moved so lightly; the eye that seemed to beam with a light that ever breathed the accents of gentleness and truth; the ear on which music never sacrificed its charm; the rich locks, that rendered the cheek still more transparent, in the relief of their raven darkness; and the face filled with the expressions of sweetness and beauty, and where no foam ever cast its shadow, have all gone down into the silent recesses of the grave.
The ship in which she had traversed the ocean where she had seen the wonders of God displayed in the deep—had returned from its long absence; the green hills of her native land were again her portion; the morning day, and she would tread that beloved shore. Many were gathered there to whom she was tenderly allied, and who waited to embrace her with a sister's yearning love; she had redeemed the pledge in which they parted; and often beguiled their lonely hours with the graceful beauty of her pen; they now waited to enthrone her in their arms, and half blamed the breeze that brought the ship so slowly to her anchor.

They were the first on board, and sought first the one they most loved! Alas! the pale form was there, but the spirit that gave it light and animation had fled! Still the form of Groove the hills of Groove; the sweet composure of her face; the calm brow was still written with thought; the cheek softly tingeed with the dreams of her rest. They had come to greet her, to hear her speak, and welcome her home; but the only office that now remained, was to consign to the earth the beauty that was, till the long anxious roll of the barge came to her grave on the banks of that stream where she strayed in her childhood, and where long the melancholy wave will murmur the music of her name.

What avails it now that she so widely surveyed the scenes which lend attraction to other shores? that she wandered on the bright ies of the Aegean?—that she lifted her eye to the solemn dome of St. Sophik, and walked in the deep shadows of the Colosseum at Rome?—that she saw Venice emerging in splendor from the wave, and Etna still sending up its steep columns of cloud? that she gazed through the gay saloons of Persian pride, lingered along the banks of the Nile?—that she surveyed the pyramids of mouldered Egypt, and made her pilgrimage to the desolate city of David? that she stood in the garden, where persecuted Love resigned itself to the billows, and that monarch who suffered, that the guilty might live—and by that tomb, which once sepulchred the hope of the world?

Ah! these availed her; for these mementoes of a dying Saviour's affection, and of his triumph over death, were themes upon which her latest and fondest thoughts dwelt, and that length that her hour had cost her confidence in the faithfulness of this Redeemer made her a stranger to dismay: she felt that she was passing beyond the assiduities of mortal friendship and affection, but she cast herself resolutely upon the love of this co-passionate Jesus; her last faint accents were that of the Cross and of that land where tears and farewells are unknown.

Shall we see one dying so young, and with so many objects to attach her to life, and not be reminded of the hastening hour when we must follow her? Shall the adoration, that tenderly speaks from her grave, be lightly regarded? Shall the Seraphic look in which she died be soon forgotten? Shall the religion, displaying the sight of her resignation and triumphant hopes, continue to be a stranger to these hearts? If one so faultless could not die without the light of a Saviour's love, how shall we in our sins of deeper shade, meet the King who will be to those the being that can sustain in that last hour of need, only one that can furnish, in this extremity of nature, a refuge for the soul. This one has long been near us, waiting to be gracious; he has tarried without, suing for admission to our confidence, till his locks are white; the drops of the night. Happy he who admits this Saviour to his inmost heart; death may then break down and lay in ruins this mortal form; but the spirit will have given it "the wings of the dove, that it may fly away and be at rest."

The Norfolk Beacon, in copying the above article, remarks:

"The following sketch will be read with interest in this place where the remains of the woman, whose accomplishments merit it so truly depict, reposed in their final resting place. It was but yesterday that we saw in our beautiful bury-
REPORT OF THE SECRETARY OF WAR ON NATIONAL DEFENCE.

[CONCLUDED.]

These considerations may well lead us to doubt the necessity of such extensive permanent works, while their non-existence at the time the system was adopted justified us in supposing the public would not be warranted in devoting any rash conjecture, we may anticipate such improvements in this branch of the public service as will make it the most efficient means of coast defence. These vessels, properly constructed, may become floating forts almost equal to permanent fortifications in their power of annoyance and defence, and in other advantages far superior to them. Being transferable defences, they can be united upon any point, and a few of them be thus enabled to protect various places. We have been brought by circumstances to a more rigid investigation of our means of defence, and to a re-examination of the whole subject. After an interval of twenty years of tranquillity, public sentiment and the attention of the Government were, by unexpected circumstances, more forcibly directed to this matter.

The result cannot fail to be advantageous. The whole subject has now been re-examined by Congress, with all the benefits which much experience has brought, and with the advantage of adapting the system to the advanced state of the country.

There are two bills for fortifications now pending before Congress. One before the House, amounting to $2,130,000, and intended to complete works already actually commenced. The estimates for this bill may therefore be considered necessary in themselves, under any view of the general subject, and not unreasonable in amount for the present year, because they include the operations of two years.

The other bill, before the Senate contains appropriations for nineteen new works, and for the sum of $800,000, to be expended for steam batteries. The estimates on which this bill was founded were prepared at a time when prudence required that arrangements should be made for a different state of things from that which now exists. An examination of the general system of defence was not then expedient; and the means of testing the most exposed points, agreeably to information previously collected, were asked of Congress. It was no time then to stop, and, instead of prosecuting established plans vigorously, to lose the period of action by surveys, and examinations, and discussions. But the opportunity is now afforded, without danger to the public interest, of applying the principles suggested to the works under consideration.

It cannot be doubted but that fortifications at the following places, enumerated in this bill, will be necessary: At Penobscot bay, for the protection of Bangor, &c. At Kennebec river. At Portland. At Portsmouth. At Salem. At New Bedford. At New London. Upon Staten Island. At Soller's Flats. A redoubt on Federal Point. For the Barancas. For Key West. For St. Philip.

These proposed works all command the approach to places sufficiently important to justify their construction under any circumstances that will probably exist. I think, therefore, that the public interest would be promoted by the passage of the necessary appropriations for fortifications made, such of these positions as may appear to require it can be examined, and the form and extent of the works adapted to existing circumstances, if any change be desirable. The construction of those not needing examination, can commence immediately, and that of the others, as soon as the plans are determined upon. By this proceeding, therefore, a season may be saved in the operations.

The other works contained in this bill are—

For Providence.—And this proposition may be safely submitted to the public, as the probability of excluding an enemy from any shelter in Massachusetts Bay, a matter of deep interest, and as a work at Providence, are closely connected.

For Rhode Island, Narragansett Bay.—This work may avoid the result of the views that may be eventually taken on the subject of fortifying this bay.

For a work at the Delaware outlet of the Chesapeake and Delaware Canal.—This may be postponed without injury till next season, and, in the meantime, a project for the floating defences of the Delaware considered, and perhaps the size of the proposed work reduced.

For a work at the Breckenridge.—Until the effect of the deposits which are going on in this important artificial harbor are fully ascertained, I consider it injudicious to erect a permanent work for its defence. Another year will, perhaps, settle the question, and if the result is favorable, an additional fortification should be constructed here without delay.

For a fort at the Patuxent river. Both of these

For a fort at Cedar Point. Works are liable to some of the objections stated, and I think they had better be postponed for more mature consideration.

For fortifications at the mouth of the St. Mary's, Georgia.—This proposition may also be safely submitted to examination.

The estimate for steam batteries may be reduced to $100,000. That sum can be profitably employed.

If these appropriations are early made, most, if not all these works can be brought into operation this season, and the money usefully applied, as fast as their progress will justify; and I think the measure would be expedient. But it is to be remembered that the power of the department to push them during the present year, will depend on the re-organization of the Corps of Engineers. If that corps is not increased, it will be unnecessary to make the appropriations in the bill before the Senate, as the objects contained in the other bill will be sufficient to occupy the time of the present officers of the corps.

Should it be deemed proper to re-examine the subject generally, I would then recommend that an appropriation of $80,000 be made to defray the expenses of a board, including surveyors, &c.

My reflections upon the whole subject lead to the following practical suggestion on the great subject of the measures for the defence of the country:

1. An augmentation of the Navy, upon the principles before stated.

2. The adoption of an efficient plan for the organization of the militia.

3. The cultivation of military science, that we may
keep pace with the improvements which are made in Europe, and not be compelled to enter into contest with an adversary whose superior knowledge would give him pre-eminent advantages. War is an advancing science. Many an original genius, and many an acute intellect are at all times at work upon it; and the European communities have such a relation to one another that each becomes the mirror of the other, and whatever is added, and every effort made to place their military establishments, not at the highest numerical point, but in the best condition for efficient service, both with respect to its morale and matériel. It is not by the mere reading of professional authors that the necessary in- crease of knowledge of which mention has been made there must be study and practice; a union of principle and details which can best be obtained by a course of education directed to this object. This, I think, is one of the greatest advantages of the military academy. It cannot have escaped the recollection of those who were upon the theatre of action at the commencement of the last war that the first year was almost spent in a series of disaster, which, however, brought their advantages. We were comparatively ignorant of the state of military science, and we did not fully recover our true position till we had received many severe lessons: at what a cost of our material treasures, and the lives of our men, was this accomplished! In the same way, the higher science of war cannot be taught in class, but must be learned through a series of experiences on them is deranged by the winter, when they must be properly secured; and the season for resuming labor al- ways finds some preparations necessary which would not have been required had no interruption happened.

But the political considerations which urge forward to great expense, are evident, and at once apparent. When once completed we should feel secure. There is probably not a man in the country who did not look with some solicitude, during the past season, at our comparatively defenceless condition, when the issues of our discussions with France was uncertain; and who did not regret the absence of some naval power, and the low degree of peace we had enjoyed, had not kept pace with our growth and importance. We have now this lesson to add to our other experience. Adequate security is not only due from the Government to the country, and the conviction of it is not only satisfactory, but the knowl- edge of its existence cannot fail to produce an influence upon other nations, as well in the advent of war itself as in the mode of conducting it. If we are prepared to attack and resist, the chances of being compelled to em- bark in hostilities will be diminished much in propor- tion to the strength of our preparation. An unprotected country is at all times in a condition of defenselessness, and a state of insecurity is necessarily inade- quate to the wants of our service, would indeed hold out strong inducements to other nations to convert trifling pretenses into serious causes of quarrel.

There are two suggestions connected with the proce- dure of the planks, which it is worth while to mention in this connection.

First. That the Corps of Engineers should be in- creased. The reasons for this measure have been here- tofore submitted, and the proposition has been recom- mended by you to Congress. I will merely add, upon the present occasion, that the officers of this corps are not sufficiently numerous for the discharge of the duties committed to them; and that if an augmentation does not take place, the public interest will suffer in a degree far beyond the value of any pecuniary consideration connected with this increase. And

Secondly. I think that, when the plan of a work has been approved, and the necessary appropriation for its construction authorized, the whole appropriation should be made at once, to be drawn from the Treasury in annual instalments, to be fixed by the law. This mode of appropriation would remedy much of the inconvenience which has been felt for years in this branch of the public service. It will enable the Government to take possession of the business, and the delay which biennially takes place in the passage of the necessary law, reduces the alternate season of operations to a comparatively short period. An exact inquiry into the effect which the pre- sent system of making the appropriations has been upon the expense of the works, would probably exhibit an amount far greater than is generally anticipated.
The report from the ordnance department, shows the quantity and nature of the munitions of war, estimated to be eventually necessary, and their probable cost, including all new establishments necessary for their fabrication and preservation. The conjectural amount is $294,965,857.

Believing it is not expedient, at present, to make any preparations upon a scale of this magnitude, I have deemed it proper to accompany this report with a brief statement of my own views, where I depart from the suggestions that are presented in this document.

As our fortifications are constructed, their armaments should not be allowed to lag behind the amount in department. At all times exceed the anticipated demand, to meet the casualties of the service. We have now on hand, 1,818 new cannon for sea-coast defence, most of which are either useless or of doubtful character. The works actually finished, or so far completed as to admit of a part of their armament being placed in them, require about 2,000 guns. They are calculated ultimately to mount about 600 more. Others in the process of construction will require about 1,400. So far we have certain data for our estimates; unless, indeed, which I am inclined to believe, it should not be found necessary ever to provide the full complement destined for the largest of these works; beyond this the subject is conjectural. And the quantity needed must depend upon the principles that may be adopted in the further progress of the system of fortifications. There are four private foundries at which the cannon and iron are made. These, if their whole attention were devoted to it, would be able to produce, at the rate of 1,500 annually. As to carriages and other supplies, the amount that could be procured within a reasonable period is almost indefinite. Iron carriages are now made for all the casemate batteries, and they have not only the advantage of indestructibility from the atmosphere, but requiring no seasoned materials, they may be supplied through the foundries through the country to almost any extent.

We have two armories for the manufacture of small arms, and there are seven private establishments which manufacture arms for the Government. All these supplies are in the best description, and are subjected to rigid inspection, which prevents imposition. The armories can at present turn out about 27,000 arms annually, and probably 11,000 or 12,000 could be made at existing private establishments. Should any exigency require larger supplies, the quantity can be much increased. We have now some 180,000 muskets, 18,000 rifles, 3,000 pistols, and 275 field cannon and carriages, under the act for arming the militia. If 100,000 of these muskets and rifles are preserved, there are in the country 800,000 of those species of arms belonging to the Conscription.

What may be considered a proper supply, is a question admitting much difference of opinion. It will be seen that the Ordnance Department fixes the amount at about 300,000, in addition to what are on hand, and including the number necessary to arm the militia. We had, at the commencement of the last war, 248,000 muskets, and during its progress 60,000 more were made and purchased. At its termination there were but 20,000 at the various arsenals. The residue were in the hands of the troops, or had been lost in the service. This consumption was greater, I think, than was necessary, or than would probably again take place. A plan of accountability has been introduced, by which the men are charged with the arms they receive; and if these are improperly lost or injured, the value is deducted from their pay.

The paymasters cannot settle with them till this matter is satisfactorily adjusted.

The stock of small arms in Great Britain, in depot, in 1817, was 818,352.

In the public service, 200,974

The number in depot in France, in 1811, was 300,000, not including the great number in service.

My own impression is, that 1,000,000 small arms may be considered a competent supply for the U. States; and so, a large deduction may be made from the estimate of the Ordnance Department, under this head of expenditure. Although the component materials of these arms are almost imperishable, still it is not expedient to keep a stock unnecessarily large on hand, because there is not only some risk and expense in their preservation, but, besides, like every article manufactured by man, they are no doubt susceptible of that kind of improvement that those now made may be superseded by an improved model, which, once introduced, must be adopted at whatever expense or inconvenience, by all nations. And the ingenious invention lately exhibited in this city, by which hundreds of bullets in separate charges are brought, by a rotary motion, through the barre, renders a diminution of the armory less improbable. The possibility of a revolution in the form of our fire-arms.

On the subject of armories for these arms, I accord with the general suggestions made by the Colonel of Ordinance. I think the number should be increased, and arms placed in every part of the country, ready to be used as circumstances may require.

It will be observed that in the estimate I have made, I confine myself to the armament for the public service, connected with the actual defence of the country, whether to be used by the army or militia in time of war; but I do not extend my views to a supply for arming the militia, in order to discipline them in time of peace. The extent of this policy is a question not necessary in the consideration of the subject before me.

As the arms in depot approach every number may be assumed as the proper maximum, the necessity for additional armories, or extending those already existing, and it may be once completed, the present armories, without any aid from the private establishments, will be able to supply the annual consumption. I think, therefore, the two additional armories, as suggested by the Ordnance Department, are not wanted. And, indeed, although there are considerations attending the transportation of the crude and the manufactured article, and other circumstances which would justify the establishment of a new armory upon the western waters at present, yet, if the measure is not carried into effect soon, its importance will annually diminish.

But a national foundry for cannon, both for the military and naval service, and perhaps two, in different sections of the country, should be erected without delay. The best interests of the public require it. But I have nothing to add to the suggestions made upon this subject last year. As to field artillery, the extent to which it shall be provided, must depend upon the views of the Legislature concerning the expediency of issuing it to the militia. If a more efficient organization does not take place, I think the expenditure on this account may well be saved to the commonwealth. The militia, under the best condition of the militia upon the present plan, as so nearly useless, that the whole system has become a burthen upon the public, without any corresponding advantage.

The principal benefit which results from the existing state of things, is the power to call into service such portions of the population as may be wanted. But this may be attained by a simple classification, without the cumbersome machinery which at present creates expense and trouble, and which, while it promises little, performs still less.

Very respectfully, sir, I have the honor to be, &c.

LEW. CASS.

The President of the United States.

This ORD FISH. A very singular aquatic animal was thrown on shore at Simeonset a few days since. Having no ichthyological treatise at hand, we are unable to classify it, if indeed it be not altogether a non-descript. Its length was about two feet, and its girth probably three—weighting perhaps ten to fifteen pounds. Some called it a lump of the mollusca, and it certainly was a medusa. It was exceedingly ugly; and for navigation over the shoals, nothing could be more inconveniently shaped.

Nantucket Inquirer.
IN SENATE.

MONDAY, May 2, 1836.

The Chair communicated a report from the Secretary of the Navy in answer to a resolution of the Senate, containing all the information in possession of the Department relative to the Dry Tortugas; referred to the Committee on Naval Affairs.

Mr. Porter presented the petition of Captain Charles G. Ridgely, of the United States Navy; which was referred to the Committee on Naval Affairs.

Mr. Rives presented the memorial of Captain Lewis Warrington, of the United States Navy; which was referred to the Committee on Naval Affairs.

The bill to provide for the payment of the Vermont militia, who served at the battle of Bladensburg, was read the third time and passed.

WEDNESDAY, May 4, 1836.

The Chair communicated a report from the Secretary of War, transmitting a list of contracts entered into by his Department for the year 1836.

Mr. Porter presented the petition of Captain Daniel T. Patterson of the United States Navy; which was referred to the Committee on Naval Affairs.

Mr. Wastier, from the Committee on Finance, reported, with amendments, the bill from the House, making appropriations for the Indian department for the year 1836.

Mr. Benton, from the Committee on Military Affairs, reported, without amendment, the bill to authorize the President to accept the services of volunteers for the defense of the frontiers, and said, that in the present condition of the country it was his opinion that the Senate then proceed to the consideration of the bill.

Mr. Erving of Ohio opposed the motion, on the ground that this was the day set apart for the final disposition of the business of the Senate, and that the Senate then proceed to the consideration of the bill.

Mr. Benton moved to take up the resolution, the motion of Mr. Erving being agreed to.

The resolution, as amended, was then adopted.

HOUSE OF REPRESENTATIVES.

WEDNESDAY, April 27.

Mr. Mercer, instructed by the committee on roads and canals, moved to take up the following resolution, heretofore offered by Mr. HARD of N. Y.:

Resolved, That there be printed 5,000 extra copies of Captain Williams's report of a survey of a canal route connecting the waters of Lakes Erie and Ontario, made by him during the summer of 1835, together with the accompanying maps.

Mr. Biddle, having agreed to take up the resolution, Mr. Mercer moved to amend it by striking out 5,000, and inserting 3,000 copies—which was agreed to.

The resolution as amended, was then adopted.

Resolved, That the Secretary of War be directed to lay before the House a copy of a recent report of Captain Turnbull, of the corps of engineers, on the survey and construction of the Alexandria aqueduct across the river Potomac in the District of Columbia.

Mr. Jones, from the committee on military affairs, reported the following bill: which was read twice and committed.

A bill for the relief of Major James H. Hook.

On motion of Mr. Tappan, the House proceeded to the consideration of the orders of the day.

The bill to authorize the President of the United States to accept the services of volunteers, and for raising an additional force of volunteer riflemen, was read the third time, and passed.

ARMY APPROPRIATION BILL.

On motion of Mr. Cambleleng, and in further execution of the resolution of the 26th of January last, the House resolved itself into a committee of the whole on the state of the Union, Mr. Mason of Virginia in the chair, and took up the "bill making appropriations for the support of the army in 1836."

The bill having been read through by the clerk,
